Driven by fear and hopelessness and self-pity, which were fostered and nurtured for political advancements, Pennsylvania has spent years of time and millions of dollars in hysterical experimentations which have accomplished but few of the benefits promised by their promoters, and instead have mortgaged our future, weakened the control of the people over their own government, and threatened us with chaos.

DETRIMENTAL EXPERIMENTS

We know now how unwise most of this conduct was. Instead of striving so hard to attain blessings which we had not, we would have been wiser to count the many blessings we had, the loss of which has been so seriously threatened by certain governmental policies and experiments.

One of the theme songs heard during this period was a hymn of hate against industry, sung into the ears of the men and women of this State until they were beguiled into forgetting that when we burn down the house of industry, we are burning down the house in which all of Pennsylvania lives.

Last November Pennsylvania voted for a more sane and helpful relationship between business and the State government. She voted for encouragement of job-giving industries and for an end to punitive taxation, overregulation, and other sprags in the wheels of industry.

But the men and women of this State accepted at its full face value an implied promise from industry and business and commerce—a promise that operators of business would do their share in helping find employment for the State's idle. Industry must contribute to, as well as benefit from, the resumption of normal activity in Pennsylvania.

Let there be no misunderstanding on another point: Business in Pennsylvania must not attempt to escape proper responsibility to its employees, proper methods, and proper working conditions; it must not try to dodge reasonable taxation.

Certain acts which have been passed in recent years, covering the relations between employers and employees, will have to be amended, but this is not because fault is to be found with the purposes of these laws nor with the protections they attempt to offer. Instead, the reason these laws must be changed is that as they now stand they not only are not workable but are so burdensome that they prevent the attainment of the very objectives for which they were enacted.

WARNS ALL OVERLORDS

I do not propose to weaken proper regulation of business, either by ignoring the enforcement of just and sound laws nor by placing my signature on legislation which in my judgment would weaken such proper regulation.

We will have no return to rule by overlords of industry during my administration.

But neither will we have rule by overlords of labor. The men and women of Pennsylvania have voiced in no uncertain terms their conviction that political bosses have no place in labor unions.

We have seen too many of the evils caused by the activities of politically inspired, power-seeking labor leaders—especially when their greedy enterprises are backed and subsidized with public money. Labor spokesmen of this type do not speak for the working men and women of the State but only for themselves and for the selfish cliques and purposes which they openly or secretly represent.

FAILURE TO COOPERATE

For too long labor and industry have suffered and in the end both have registered net losses from failure to cooperate with each other. The vote cast by the men and women of Pennsylvania last fall was an appeal for labor and industry to clasp hands in cooperation and to refrain from controversy at least until normal employment is reestablished.

The tyranny of either group can be tolerated no longer in Pennsylvania—and it is unmistakably to the advantage of those who make up these groups that they be led to work in harmony with each other, with the State government standing by as the impartial friend of both.

With cooperation of this type, Pennsylvania can take her present problems in her stride. Difficulties and hardships are nothing new to Pennsylvania. She grew great overcoming hardships. She kept her hand on the plow and her feet on the ground when all of her area except one small corner was rugged wilderness.

More than once she has seen part of her territory held by armed invaders, and has rallied to drive them out—courageous, steadfast, and serenely sure of her own power. Pennsylvania has taken disaster, loss, reversal, and crisis in her stride before; she can do it again.

LIVING UP TO NAME

More than that, again and again, when the Nation's fate has trembled in the balance, it has been Pennsylvania which turned the scales. She was a leader from the first—not for mere geographic reasons has she always been called the Keystone State.

The human resources of courage and hope and fortitude are still within our boundaries, just as are the mineral and other natural resources; our mines are still full of coal, our streams full of water, our valleys and hills still teem with productivity and fertile lands.

It is squarely up to the leaders of industry, of labor, of commerce, and of agriculture to band themselves into an army of progress. This is nothing new; our fathers before us did it, and so can we.

We have all the materials at our fingertips—mills and mines and factories; cities and hamlets and farmlands; a great sea port and a great lake port and a splendid network of rail and highway communication between. We do not even lack the funds with which to begin, for idle money is filling almost every bank in the State.

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay."

SCANNING THE HORIZON

As I take my seat in the conning tower of the Pennsylvania ship of state, and scan the horizon with anxious eyes, I am beginning to see the reefs and storm clouds around which we must steer.

Repeatedly during my campaign I said that no man could tell in advance what we would find when we entered the Governor's office, and never have I felt more forcefully the truth of that statement than right now.

The first job which the new administration faces is to take inventory, to determine what the financial condition of the State actually is. We must diagnose before we prescribe. The results of this inventory will be made public as soon as they are available, which probably will be within a few days.

We know already that there is a large deficit in sight before the end of the biennium, and that the State government has been led into a scale of living far from warranted by any income now in sight. We shall have to wait, however, for a detailed accounting before it can be determined just what is necessary for us to do to live within our means.

REPORTING ON STEWARDSHIP

At this time I want to make it clear that we propose to make a continuing rendition of stewardship during my term in office, so that the voters and taxpayers of Pennsylvania may know at all times the fiscal condition of their State.

This is your problem as well as mine. It is one in which are needed your suggestions, your cooperation, your loyalty, and your patience quite as much as are needed the determination of the executive and legislative branches of government to prepare and enact a program of solution. For your information about your government, I shall maintain an open-door policy in every office from that of the Governor down.

Part of the picture which must be clarified is the extent to which Pennsylvania is being called upon to carry the national burden. We must determine how much money is being taken out of Pennsylvania for the national coffers, and whether this State is getting its fair and proper return.

Much has been said about governmental spending, and Pennsylvania last summer and fall saw methods which raised grave doubts of the propriety and impartiality of the Federal disbursements. But the question of Federal taxation is quite as important to Pennsylvania. It may be that at the seat of Pennsylvania's financial problems lie national taxation policies which fall too heavily upon industrial States such as ours.

PROPER SHARE OF COSTS

Pennsylvania wants to pay her proper share of the national costs. She is more than willing, even anxious, to extend her helping hand to any other communities which may have more distress and suffering than Pennsylvania has. But in the present crisis, in which we have fallen far behind most other States in employment, in which we ourselves may be in grave need of help, it would be manifestly unfair for this State to be expected to pay a disproportionately large share of national costs without an equally large ratio of return.

At the proper time I shall submit to Washington Pennsylvania's requests for further P. W. A., W. P. A., and similar grants. There is no reason to expect anything but a favorable response to these requests, since it is my intention to do my full share in seeing that such moneys are expended for precisely the purpose for which they were raised—honestly expended for worth-while projects that will furnish employment to men and women who otherwise would have to be supported by relief.

It is to be hoped that Congress will see the wisdom of putting control of the W. P. A. back into the States and removing it completely from political domination.

We recognize the relief problem as one of the most pressing confronting us, and it shall receive our constant attention to the end that justice may be done to all concerned.

The vote of Pennsylvania last fall was an edict that politics must be banished from direct relief and from made-work relief as well. We have promised to divorce relief from politics, and I am glad to take the opportunity afforded by this address to carry out that pledge.

I have requested your new attorney general, as his first official act, to draw up a bill reenacting the antimacing laws which were secretly repealed 2 years ago. That new bill I now hold in my hand, and do hereby formally submit it to the legislature, with my earnest recommendation for its speedy enactment.

This bill makes it a penal offense for anyone to demand money for political purposes from any person who receives money from the State—whether a State employee, a person on relief or made-work pay rolls, a recipient of pensions, or anyone doing business with the State.

GETTING MONEY'S WORTH

That bill, once passed and enforced, will go a long way toward stamping out the political relief racket. Relief will come out of politics and politics will come out of relief. We will cure most of the relief ills by pulling out the teeth of politics.

It is common knowledge that a large share of the relief funds in this State have been diverted to political purposes. A survey will be needed to determine how much saving can be effected by confining relief expenditures to relief purposes, and I shall instruct the new secretary of public assistance to take such steps as are necessary to make such a survey and report its findings at the earliest possible moment.

In this connection, however, I want to repeat my pledge and that of the Republican Party, that every person in Pennsylvania who needs relief will get it; there is no though of curtailing relief to the unfortunate.

It is even more to the advantage of those dependent upon relief than to those who pay the bills that Pennsylvania get its money's worth out of these expenditures; to the end that waste, straw bosses, and political misuse of the funds be eliminated.

We must see to it that political drones improperly placed upon the relief rolls are ousted, and at the same time we must put on the relief rolls any unfortunates who were taken off or kept off for political reasons.

Relief must be humanized; it must be prompt and adequate, honestly and fairly administered; and it must come out of politics.

During the campaign repeatedly I pledged myself to restore the tripart form of government divided by the constitution into executive, legislative, and judiciary.

WON'T INTERFERE

I reiterate my pledge of not permitting the executive hand to interfere with the functions of either of the other two branches. I ask and shall accord full cooperation with those branches to the end that the best interests of the whole people may be served.

For the past few years we have seen executive interference and domination of the legislative and judicial branches carried to a point which put us on the brink of disaster. That practice here and now comes to an end, so far as Pennsylvania is concerned.

The objectives ahead of Pennsylvania are well known, and the voice of the people, as expressed in last fall's election, was unmistakable. I pledge my full cooperation with the legislature in working for those objectives. I am fully convinced that your senators and representatives will likewise strive to steer your government toward those goals.

I can pledge also the cooperation of that extension of executive authority, the new cabinet. The personnel of this body I submit to you as evidence of my good faith when I said during the campaign that I have no interest in the creation or furtherance of a political machine.

Those whom I have named are competent, experienced, and qualified for their duties. They have been chosen because of their character and ability, and because of their interest in seeing that the responsibilities of these departments are fully and properly met.

They are especially well qualified to do their full share in the huge task of running the State administration through the wringer—of helping to squeeze out waste and duplication and graft. This is the largest immediate task before us.

LEGISLATIVE SKIPS

Time will not permit me to review all of the problems lying before the new administration, nor to discuss in detail the program and pledges to which this administration is committed. The subjects which I have mentioned today I have taken up more from the point of view of policy than of new laws.

I have called for little in the way of new legislation, I do that advisedly, because I feel that Pennsylvania has hastily skipped too many legislative grades in recent years, I wish us to proceed slowly, to know in each case exactly where we are going before we plunge ahead.

My failure to mention in this address such problems as those of milk control, home rule, highways, coal, the liquor traffic, or other special issues is not intended to minimize their importance nor to indicate any intention not to carry out all the pledges contained in my own campaign speeches or in the Republican Party platform.

BETTERMENT AS GOAL

These problems will all receive attention, and my pledges will not be forgotten. I hereby reaffirm these pledges, and promise that steps will be taken to carry them out just as rapidly as is possible.

These pledges were not the fruit of mere political love; they were part of a sound and considered program which grew out of a sincere and honest purpose to work for the betterment of our State and the happiness of our people.

As I said earlier, I take office today not only as the chief executive, but also as the servant of 10,000,000 people. I want you to know that I take office with pride, with humility, and with a deep determination to do everything within my power to assist Pennsylvania as she marches forward through new frontiers toward the happiness and prosperity she so richly deserves.

RIGHTS AND LIBERTIES

What I have said before I say again—that today I feel responsibility to only two masters, my own conscience and the voice of the men and women of Pennsylvania.

That does not mean that I will blindly follow popular whims merely because they are popular; I have no such intention. What I do will be those things which in my heart and mind I believe to be for the best interests of the people in our State.

If there be times when my course of action displeases some, may you be so generous as to believe that I am doing my best as I see it. Far more than even the greatest prosperity for Pennsylvania do I desire that the human rights and liberties of our people be protected and maintained.

To quote Benjamin Franklin once more:

"They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

He wrote that of Pennsylvania and of Pennsylvanians, and never was more truly expressed the undying determination of the Keystone State to hew to the line of human rights.

I am deeply appreciative of the great honor you have bestowed upon me, but I am not unmindful of the fact that you have placed in me your confidence and your hope, and I in return will keep burning brightly the light that has been Pennsylvania for two centuries and more.

SPIRIT OF MERCY

My sincerest wish is so to govern Pennsylvania that I may complete my term of office with the approval of my own conscience, backed with an inner conviction that, whether success or failure crowns my efforts, I can still truthfully tell myself that I tried honestly and faithfully and diligently to do those things which I believed to be for the best interests of the whole people.

The spirit that shall guide my every act as Governor of this great Commonwealth was voiced more than 2,000 years ago by the prophet Micah: "To do justly, and to love mercy, and to walk humbly with thy God."

Florida Ship Canal

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM WASHINGTON HERALD

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an able editorial in yesterday morning's Washington Herald entitled "Florida Ship Canal."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Washington Herald]

FLORIDA SHIP CANAL

The kind of national-defense project which shows its value on its face, and what is more, can pay for itself, is the proposed Florida ship canal, the President yesterday asked the House Committee on Rivers and Harbors to resubmit to Congress.

Andrew Jackson was the first President to suggest this short cut for ships across the Florida Peninsula. Calvin Coolidge ordered a survey in 1927. Herbert Hoover approved another in 1932.

In 1935 President Roosevelt allotted $5,400,000 of W. P. A. funds for the initial digging to join the St. Johns River, emptying into the Atlantic Ocean at Jacksonville, with the Withlacoochee River letting out into the Gulf of Mexico.

This got into politics and had to be stopped. In 1937, after exhaustive surveys, the Chief of Army Engineers, Maj. Gen. Edward M. Markham, brought out a report recommending immediate construction of the canal as a sound project in the public interest.

The House Rivers and Harbors Committee drafted out a bill, based on the engineers' report, asking authority for construction at a cost of $197,000,000, to be recovered by tolls. It called the canal "a major element of national defense" and gave detailed evidence of extraordinary savings to commercial shipping lines, which would be able to escape the dangerous passage around the Florida Keys and save on fuel bills, also.

One look at the map argues more than a thousand words the value such a canal would be to the battle fleet this spring when it begins maneuvers in the Caribbean Sea. For one thing, it would provide a sheltered route from the Panama Canal to the Atlantic Ocean without risk of mines and submarines among the islands to the south.

The Florida ship canal, we firmly believe, can pay its way just as the Panama Canal has done. There is no coherent opposition to it. All the experts are for it. The quicker it is completed the better.

Investigation of the Silver Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

EXCERPTS FROM LETTERS

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from letters received by me with reference to Senate Joint Resolution No. 1, providing for the appointment of a special joint committee to investigate the silver program, and for other purposes.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

From a prominent Harvard University professor:

I am obligated to you for sending me your program for a joint resolution on the Government silver policy, and need hardly tell you that I am in hearty sympathy with the move. I have never been able to see an iota of justification for what we have done, and hope that you and those with you will succeed in undoing the bad business.

From a Butler, Pa., law firm:

We want to strongly urge that your committee support the resolution for investigation of the silver policy of our country.

We are strong of the opinion that paying out so much of our money to foreign countries for premiums on silver is unfair to our people when it benefits such a small group in our own country.

From a Rutgers University professor's letter to the senior Senator from New York:

You are doubtless familiar with Senator TOWNSEND's Senate Joint Resolution 1, calling for a reappraisal of the whole silver-purchase policy. I do not know a single special student in the whole field of monetary economics who is in favor of the continuance of our present silver policy, and I am hopeful, therefore, that even though your interests have been so successfully centered along other lines of social achievements you will find it possible to do what you can to help get the resolution through.

From a Washington lawyer:

Would you be so kind as to refer me to the justification for the present policy of the Government on the purchase of silver?

There have been so many unprecedented things done since the depression began that the silver-purchase program act didn't seem to be much stronger than some other things, but as time has passed it apparently has been so futile and costly that I would really like very much to know the supposed facts in its favor which were relied upon in the first instance and whether experience has since substantiated or discredited them.

From a Colorado economist:

Thank you for sending me a copy of Senate Joint Resolution 1, which I am very glad to have for my library of material on silver, and with the purpose of which I am in hearty sympathy. I hope that you are successful in having the silver policy reconsidered.

From a banker in Boston, Mass.:

I heartily approve of the above resolution introduced by Senator TOWNSEND to provide for investigation of the silver program by a joint committee of the Senate and the House.

From the executives of a Wisconsin business:

We wish to congratulate you and ourselves in that Senate Joint Resolution No. 1, as introduced by Senator JOHN G. TOWNSEND, JR., is to have your attention, and think the provision for a committee to take this matter up in an impartial way is certainly a step in the right direction.

I never could see the real purpose and advantage behind this silver-purchase bill, and believe that as the errors in financial policy are taken up and corrected, the business of the country will have a good deal more courage than they have had in expanding their business and taking up the slack in employment.

We wish to appreciate your efforts in the behalf of all citizens who wish to preserve our country and to get back to a normal prosperity.

From an executive of a Connecticut musical instrument firm:

I want to register my approval of your resolution introducing the investigations of silver program, and I trust the bill will have hearty support.

From an Illinois clothing manufacturer:

I am taking the liberty of writing you in reference to the Senate Joint Resolution No. 1 introduced by Senator JOHN G. TOWNSEND, JR., of Delaware, providing for a joint committee of 10 Members, 5 from the Senate and 5 from the House, "to investigate the silver program, and for other purposes."

I believe it is now widely recognized that the silver problem is one that should have early attention and that the purposes of the silver program have not been fulfilled, and are really a menace to our national financial set-up. I think it wise that the proposed committee should make an investigation at an early date.

From a New York lawyer:

I have been interested to read of the resolution introduced by you (S. J. Res. 1) providing for the appointment of a committee to investigate the Government's silver-purchasing program.

There can be no reasonable objection to a fair investigation of what the Government has been doing in this matter, which will result in a full disclosure of the facts and a better understanding of the situation both by Congress and by the country at large. This question is now as spectacular as some others which have been and are being made the subject of investigation; but it is undoubtedly of great importance to the country and you are to be congratulated for introducing the resolution. I sincerely hope that it will receive sufficient support to assure its passage.

From a banker in Peoria, Ill.:

I am happy to learn that you have introduced Senate Joint Resolution No. 1, providing for a joint committee of the Senate and the House to investigate the silver program, and for other purposes.

I sincerely trust that your resolution may be adopted and that a competent committee be appointed to investigate this exceedingly important subject.

From an internationally known professor of economics and finance:

I am delighted to know that you have introduced into the Senate a resolution to investigate the silver policies of the Government.

From a letter from New York:

Referring to Senate Joint Resolution No. 1, introduced by you, I strongly recommend this resolution be adopted.

From a Milwaukee investment concern:

It has come to my attention that you have introduced a resolution providing for a joint committee of members of the Senate Banking and Currency Committee and the House of Representatives to investigate the silver program, and for other purposes.

It seems to me that the present silver-purchase program is so indefensible that it is high time that the squandering of public funds on the purchase of foreign silver be stopped.

It seems to me that every person with whom I have talked regarding this program is opposed to it, and I would like to commend you upon your patriotic policy in introducing this resolution, which I hope will result in putting an end to the present indefensible silver program.

From a resident in Chicago, Ill.:

Your resolution for a silver-program investigation was a grand idea of yours. It is just swell, and it is just what the country needs. Press it hard. You will discover many strange things, doubtless.

From a resident in Chicago, Ill.:

I hope the Silver Act will be repealed, then demand that these silver people who have enjoyed the unhallowed high prices that they be forced to disgorge that extra 21 cents an ounce. They can get only 43 cents on the open market, so why not get that 21 cents back on the millions of silver that they sold the Government? Whatever you do to wreck this malodorous act I am for it and I am for you. You are making a good name for yourself.

I know a man can only do one thing at a time but you get after Congress and press it hard to strip the President of all those unnecessary powers which Congress so unwisely allowed him to take. There were really no emergencies and the time is now past. So take them back. Congress should never surrender any one of their rights, prerogatives, or powers which the Constitution has placed in their hands. Be a champion for the people and the people will never forget you.

Politics in Relief

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

EDITORIAL FROM CHRISTIAN SCIENCE MONITOR

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Christian Science Monitor of January 16:

[From Christian Science Monitor of January 16, 1939]

ELIMINATING POLITICS?

Much has been said about politics in relief. A look at the record will show that most of it has been there because Congress left it there. Congress had a chance to make W. P. A. a civil-service organization from the start but chose, instead, to do nothing about it, which meant making it subject to congressional patronage pulls. Congress could have attached the Hatch amendment to the W. P. A. appropriation last year if it wished then to forbid political activity by relief employees, but it did not.

The easy and popular thing is to blame President Roosevelt and Harry Hopkins—and they have let too much go under their noses—but a good deal of the politics has been played since the appointment of State W. P. A. administrators was made subject to confirmation by the Senate, which meant they must be acceptable to influential Senators.

Now the House of Representatives has given a sharp slap to the administration by cutting the amount of the deficiency appropriation from $875,000,000 to $725,000,000.

In doing this it has also written in clauses forbidding payment to any W. P. A. supervisor who attempts to influence the vote of persons on the work rolls, but it specifically nullified the one most significant and far-reaching move that has been made in any quarter to take politics out of relief. This was the Executive order of President Roosevelt last June to bring all W. P. A. administrative positions under the classified civil service.

At first the explanation was made that to give these employees civil-service standing might interfere with reorganizations that Congress on further study might wish to make. But, as Luther C. Steward, president of the National Federation of Federal Employees, points out, this does not in any sense make such positions permanent; Congress can at any time eliminate them, singly or wholesale, by withholding appropriations.

The objection also was made that this was a blanketing in of political appointees, but that is the only way substantial extensions of the merit system have been obtained. The House has placed something of an interdiction on political activities by relief personnel and the Senate may go further, as Senator CARL A. HATCH now proposes, by making it a felony for any person to offer work relief or other benefits or threaten to take them away as a bid for political support.

But something more even than this is in order now. To continue the political selection of relief administrative personnel and at the same time enjoin these people from political activity is to put them under a pressure to evade the very laws that are being written. If provision for work relief is to be made in a permanent bureau or department, as the report of Senator JAMES F. BYRNE's Special Committee on Unemployment now recommends, that agency should certainly be under civil-service regulations not only as to prohibition of political activity but also as to merit-system selection of new personnel so as to remove any political job obligations.

As respects an effort to bring expenditures into some relationship with revenues the cut in the relief appropration signifies a wholesome determination. Some kind of denunciation of politics in relief was overdue. But if Congress is in earnest about removing the influences of congressional patronage, its members must be willing as a test of good faith to put relief administrative officials under the classified civil service. Otherwise the action now taken is more important as a political and financial gesture than as evidence of a desire to take politics out of relief.

Deep Thinking

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

ARTICLE BY WESTBROOK PEGLER

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following article by Westbrook Pegler, which appeared in the Washington Post on Friday last:

[From the Washington Post]

FAIR ENOUGH

(By Westbrook Pegler)

DEEP THINKING

I have given deep study to many books, papers, and speeches by leading economists of the New Deal on the gradual reflation of quantitative reserves to combine deficit financing and collective bargaining with the liquidation of human rights. The corollary seems to be the social conscription of agriculture.

Mr. Eccles, Mr. Thurman Arnold, Mr. Leon Henderson, and, at times, Father Coughlin and Dr. Townsend have seemed to me to be in agreement on this radical proposal.

If I interpret them aright—and I sometimes doubt that I fully understand them, in some particulars—this position marks a dangerous departure from the traditional capitalistic concept of

social and industrial transition. Property rights inevitably abdicate to political commitments of imponderable force which everywhere conflict with tax relief and liberty of conscience.

Mr. Eccles, be it said, appears to favor the middle way, while Mr. Arnold's position seems to me to place him a little to the left of totalitarian wage levelism in the subnormal areas of intellectual orientation. That is my understanding.

So much for that, and I may say that I find myself in partial agreement up to the point where this theory defies the fundamental standpoint of economic tyranny in the intermittent cycles of politico-corporate finance. I have to dissent there, holding that the experience of the last half century provides ample proof and warning that a simplified control of constitutional alinements is no guaranty of nonproductive bimetallism. There is no proved formula in all economic knowledge for the absolute implementation of compulsory expansion and social competition.

The contrary, I insist, is just cockeyed. It simply doesn't make sense, and no cockeyed janissary can make it make sense.

Schultz of Vienna wrote, more than 200 years ago: "By creating wealth, the state revives the indispensable factor of fiduciary expediency which is coexistive with the judicial acceptance of private enterprise at an annual living wage."

That is as true today as it was then.

Every attempt to violate this elementary absolute of simple economics has proved a profound deterioration in the Federal Reserve, where there is always a wise tendency to discount industrial feudalism if accompanied by democratic guaranties and a fair volume of electoral resources. None but a visionary theorist will argue against the demonstrated realities of a field of abstract solecism conditioned by the fiduciary habits of human dignity.

Atheism, therefore, need be vitiated only by the simple pressure of international usury, as shown by the bloody ignominies of countless economic adventurers from Robespierre in the Middle Ages to Giuseppe Avanti, whose economic heresies wrecked the Milanese nobility in the famine of 1790. Whenever any considerable number of the people are caught between greedy dualism and the remorseless limitations of supply and demand you must have social and economic chauvinism, with all the terrors that that dread phrase implies. The master-and-slave equation in commodity consumption cannot be revoked by esoteric appeal to corporate enhancement or resort to artificial repudiation. One need only refer to the disastrous exploit of Bjornstrom, the economic edema who plunged Sweden into a maelstrom of amorphous baiting in the futile repercussions of the 27 years' war, for a complete answer to that which I understand to be Father Coughlin's remedy for existing inequalities.

As to Mr. Henderson's contention, if I comprehend his warning, it need only be remarked that the underlying view is not essential to an accurate conviction in advance of imperative reforms. To attempt any complete hypothesis of currency values in this apparent paradox, to gamble commodities against the furtive and, I think, fallacious parallel of sound money, is a vicious acceptance of international manipulation and the forerunner of a proletarian oligarchy.

The fatal delusion of raucous altruism controls the vexed problem of religious principle, while so-called experts argue and future events mock the struggle for an equitable flow of purchasing debentures.

That way lies chaos.

Appropriation for Work Relief

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. KITCHENS. Mr. Speaker, the joint resolution before us seeks an appropriation of $725,000,000 for Works Progress Administration to be used in relief work to June 30 this year. There are some who seek to increase the amount and others to reduce it. The committee having this matter in charge, and having had open hearings on the resolution, has determined that the amount set out in the joint resolution is sufficient. I shall accept the action of the committee reporting out the joint resolution and will vote for certain restricting amendments.

We are told that there are anywhere from ten to twelve million people unemployed in the United States. Congress has been appropriating billions each year to care for three or three and a half million. It thus appears that we are aiding directly about one out of every four of the unemployed. This situation is bound to create friction, dissatisfaction, and anything but contentment. I suppose it is considered better to aid, protect, and save one man, and let the other three go their way.

I am very much dissatisfied with the manner in which these work-relief funds have been used in certain localities. It is inconceivable to me that, after Congress appropriates all the money available, and some not available, for the relief of the unemployed and needy, some of these people were given more than a dollar per hour, while others were given as little as 18 cents per hour. The man drawing $1 per hour is not on relief. He is being given money that should be distributed among others, and, so far as I am concerned, and in the name of the people I represent, I denounce such unfairness and discrimination, since three out of four receive no relief whatever and are unable to obtain employment. There is evidence that in the administration of this work-relief money as high as $3.03 per hour has been paid certain people in the name of relief and relief assistance. This outrages my sense of justice and fairness. It is inconceivable to me, where only one out of four can be given any assistance whatever, that as much as $3 per hour could be paid to anyone, anywhere, in the name of relief work.

The unrestricted right in this joint resolution, as in former ones, to pay such an exorbitant amount for so-called work relief to anyone, anywhere, must be prevented. I shall vote to amend this resolution so as to avoid any such discriminations in the future. No such authority was contemplated in the relief acts heretofore. Certainly there was no intent or idea in the minds of Congressmen that as much as $3 per hour, or even as much as $1 per hour, would be given to anyone, anywhere, on relief for made work, when there were three others needy and anxious to get work at even 30 to 50 cents per hour, but who received no work and no relief.

The last Congress passed a wage and hour bill which limited hours and fixed a minimum wage applicable all over the United States. Yet, some of those in authority having to do with work relief in United States violated the principle of that bill by the most glaring and uncalled for discriminations, and I shall vote to correct that injustice by an amendment to the resolution.

There is considerable agitation over the United States to let down the immigration bars and permit aliens to enter because of most terrible conditions in other countries. For one, I am unwilling to let down those bars. On the contrary, I am willing to return to the countries from which they came every alien in this country who has not manifested a desire, and has taken no action, to become a citizen of United States. Having that opinion I cannot bring myself to agree to take money from the pockets of the American people to pay relief to such aliens. We have our own problems to solve and our own people must come first. Those aliens today add nothing to the welfare of America as I see it. So, aliens should be excluded by an amendment to the resolution.

For a good many years some of our industrialists have been bringing aliens to America for the purpose of exploiting and using them in industry at the expense of American-born citizens. I am opposed to that. We are suffering from it today and will continue to suffer so long as it is permitted. This does not mean I have no sympathy for aliens in distress, but I prefer to help brother Americans who are needy and unable to obtain jobs, and they come first in every vote I shall cast in this Congress. Therefore, I shall vote for the amendment to be proposed to this joint resolution to pay no relief to any alien so long as any American citizen is needy, has no job, and gets no relief.

I understand that under the present policy of the Works Progress Administration many people—aged people, widows, and children—have been and are being dismissed from the rolls. I can see no justification for this. These widows, dependent children, and aged people, I feel, should come first among all the people who are to be given relief. These helpless people deserve first attention regardless of every other consideration, and I shall vote to prevent the dismissal of such people from the rolls of the Works Progress Administration. In fact, I had rather vote for no bill at all than to see them removed from the rolls, and when I think of some receiving

from $1 to $3 per hour in the name of relief, I blush at the thought of such dismissals.

Mr. Speaker, our relief problem is too loose. We have too many agencies dealing in relief. I appreciate the difficulties in the administration of these enormous sums. I appreciate the urgency and the emergency and that here and there inequalities, injustices, and discriminations will occur because we are human. I appreciate that conditions differ in the localities. I am pleased, however, that no corruption has been shown to exist in the administration of these billions of dollars.

I do not like the word "relief" for the man who works for his pay. That word should be eliminated. It carries a stigma and creates a bad psychological effect. I feel that all of these agencies should be combined, and useful works and permanent structures should be built with the funds.

I have stated on a former occasion, Mr. Speaker, that we are merely scratching the surface so far as permanently relieving distress and permanent employment in this country is concerned. This condition is due to the periodic destruction of our medium of exchange. So long as three-fourths or four-fifths or more of our medium of exchange can be destroyed in a few months, as happens under our present monetary system, we will continue to have great distress and unemployment in America. These enormous appropriations by the Congress of borrowed money have been necessary to fill the vacuum of our destroyed medium of exchange. I am one still hoping that we shall be able to devise some scheme whereby our medium of exchange will be adequate and stable at all times. When this is done, and not before, the people of America will not need relief in this manner.

The St. Lawrence Seaway—It Will Give the United States 3,576 Miles of Additional Seaboard, and Make Us Impervious to Attack from Overseas

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

Mr. CULKIN. Mr. Speaker, the St. Lawrence seaway and power development is to my mind the most important power and navigational project that is before the country. It does four things:

First. It provides for the construction of a 27-foot waterway from the sea to all ports on the Great Lakes, increasing our coast line 3,576 miles.

Second. It cheapens the transportation of overseas goods and affords needed relief to the lake States and the Mississippi Valley area, both of which were marooned in the interior of the continent by the construction of the Panama Canal.

Third. It provides for a cheap and rational power development which will reduce the price of electricity to 40,000,000 domestic consumers without doing violence to existing investment.

Fourth. It is a substantial and needed contribution to the factor of national defense.

The first three of these issues have been amply and fully discussed in the House in the past by the proponents of this worthy measure. The factor of national defense has never been stressed. Today I desire to discuss the contribution the St. Lawrence seaway will make to that cause.

DEMOCRACY IN PERIL

Recent world events have greatly strengthened the demand for the Great Lakes-St. Lawrence navigation and power project. Happenings in Europe and Asia, the growing understanding between the totalitarian nations in their uniting against the democracies, the territorial and colonial demands of the totalitarian nations, and the disintegration of eastern Europe frontiers, emphasize the necessity for closer understanding and better defense cooperation between the world's great democracies.

Whether we like to hear it or not, the truth is that an air fleet could start from either Europe or Asia, cross either the Atlantic or the Pacific, bomb either Canadian or American cities, and return without landing to their original bases. This is the result of progress made in aeronautical science. Historic barricades of salt water and ice no longer protect the people of the North American continent.

So it is that the sharing of the North American Continent by two peoples who speak the same language, makes its defense a joint undertaking. Serving the ideals of democracy, we of the United States draw near to those who have an equal eagerness for the preservation of the same ideals. And they, likewise, draw near to us in the common cause of self-preservation.

Assuming the destruction of the Panama Canal by enemy forces, and the blockading of American ports by an enemy fleet of super proportions, the St. Lawrence seaway would afford an ingress and egress to the interior of America through a territory, which, while in part foreign, has been consistently friendly for more than 125 years. The completion of the seaway, almost finished by the Divine Architect, insures a permanent entry and exit from the Great Lakes to the Seven Seas. No matter what may come in the way of dictatorships, no matter what their powers and strength may be, the completion of this project, giving us as it does 3,576 miles of additional seaboard in the interior of the continent, makes all other schemes of national defense pale in comparison.

I repeat that this great undertaking, needed for continental as well as national defense, offers the United States and Canada a new, secure, and landlocked coast line, every foot of which is potentially defensible and provides a safe haven for airplane bases, submarines, destroyers, and other war craft. It further provides opportunity, if need be, of building vessels of all types within the security of the Lakes basin.

THE LESSON OF THE WORLD WAR

Had the St. Lawrence seaway been finished and open for seagoing vessels during the World War, supplies for the Allies could have moved much more rapidly than they did, possibly obviating the necessity of the United States entering that conflict. We know that the duration of the war would have been shortened and thousands of lives spared.

In this connection Julius S. Barnes, of Duluth, testifying before the Committee on Foreign Relations of the Senate in February 1933, stated:

> During the World War, as head of the Grain Corporation and invested with the duty and responsibility of the movements of cereals and cereal products for export to Allies and neutrals, I had occasion to join in the creation of certain bodies of control, port committees, railroad and transportation committees. I saw later the great blockade which manifestly jeopardized the allied cause. I saw the blockade of our Lake ports, which we tried to control that and did, I think, manifestly alleviate that situation of inadequate transportation in time of war. There is something I do not think we ought to forget, because if the St. Lawrence seaway had been open during the war it would have made the allied base of supply very much more secure than was possible under our congested ports and rail conditions.

Mr. Barnes is one of the outstanding citizens of America on the proposition of grain transportation and supply. He is a brilliant and patriotic American and his words are entitled to weight on this question.

It is a fact, and I repeat it, that had the Great Lakes-St. Lawrence seaway been finished and open for seagoing vessels during the World War, supplies for the Allies could have moved to Europe much more rapidly than they did. If the St. Lawrence had been open, it is entirely possible that it would have obviated the necessity of the United States entering that conflict. We are sure that the war would have been shorter and a great many lives would have been saved.

Presidents Harding, Coolidge, Hoover, and Roosevelt, looking at the St. Lawrence seaway from the national viewpoint, have been wholeheartedly for this development. Not more than a month ago former President Hoover, in a speech given at a civic reception in Toronto, said that the St. Lawrence seaway was close to his heart.

Mr. Hoover, who never had any illusions about the work a dollar should do, continued:

The whole thing has been disappointing. I came to Toronto quite a few years ago to negotiate a treaty with Canada over the St. Lawrence, and at that time we thought things would go ahead. It's so obvious an improvement to the North American Continent. Anything that cheapens the cost of transportation is at once a benefit to everybody. Most of the obstruction is coming from some of the American lake cities.

On the occasion in question Mr. Hoover also stated that the subject was nonpolitical and that he agreed with the present administration in Washington that the building of the seaway would be a great thing for both countries.

PRESIDENT ROOSEVELT'S VIEWS

Pursuant to the permission of the House, I append hereto a White House release of December 9, 1938, on the present status of the St. Lawrence. This includes a statement made to the President by the advocates of the seaway and his reply thereto. It brings the issue down to date. The statement follows:

The following statement was given the President today by Fred J. Freestone, president; John C. Beukema, chairman, executive committee; William George Bruce, vice president; and R. F. Malia, secretary of the National Seaway Council:

"The National Seaway Council, in session in Washington, wishes to convey to you its sincere appreciation of the efforts you are making to assure the undertaking of the Great Lakes-St. Lawrence seaway and power project. We feel that the proposed treaty which the Department of State submitted for the consideration of the Dominion Government last May provides a basis for ultimate agreement between two neighbor peoples, granting full consideration for the vital interests of both nations.

"It seems to us that at this moment in the world's history when nations appear so prone to consider only possible cooperation for the destructive purposes of war the joint undertaking by the Canadian and United States Governments of this project should prove an inspiring example of the cooperation of these Governments in an attempt to build a constructive enterprise. It would serve to amplify or continue the joint effort to increase the wealth of both peoples so successfully initiated through the reciprocal trade treaties.

"By its opening of a great industrial area of the United States to foreign and intercoastal trade it will prevent the drying up of important inland industries in the Great Lakes region, attract new industries there, and thus serve as a tonic for new and extensive employment. It will also confer incalculable benefits to the grain States of the Middle West, and generally stimulate the future growth and development of the entire continent.

"We are convinced that an undertaking so comprehensive in its conception, embodying the combined stimulus to economic growth involved in cheaper navigation and abundance of low-cost power, is bound to generate a new optimism which will bring hope to the hearts of millions now facing the future with a sense of uncertainty.

"We recognize the tremendous odds which you have faced in your splendid effort to secure the initiation of this project. The opposition has been marshaled by special interests seeking to preserve their opportunity to exploit the needs of the people for their own profit. Although representing only a small minority of the population, they control almost unlimited resources and influence on both sides of the border.

"We assure you, Mr. President, of our wholehearted cooperation in the continued endeavor to overcome such obstructive tactics which are delaying the restoration of prosperity in the country."

The President, speaking informally, replied as follows:

"I have always appreciated the support of the National Seaway Council in my efforts to assure the early undertaking of the Great Lakes-St. Lawrence project. History shows that it has been the grand persistence of such organizations as yours which has ultimately enabled the country's leaders to overcome selfish opposition to great undertakings.

"For many years it has been my sincere conviction that the St. Lawrence project would prove second to none in its direct contribution to the economic welfare of millions of people on both sides of the border. It has seemed to me a logical continuance of the cooperation between two peoples which has afforded an almost unique example of the possibility of achieving peace among nations.

"In my message of January 10, 1934, requesting consideration of the earlier treaty, I expressed the belief that fears the St. Lawrence project would work to the disadvantage of other transportation agencies were groundless. I am more than ever convinced of that fact today. In the vast system of interdependence of which we are all parts selfishness works inevitably to the disadvantage of any group seeking to preserve its special position by blocking the opportunity of others to enjoy the full use of Nature's resources.

"The economic story of this continent is an extraordinary record of the extent to which stimulus to economic growth in one region reacts to the benefit of all. Any area which has grown in economic importance becomes a greater market for the products of other regions. More products are exchanged and all transportation agencies participate in the growing prosperity.

"The two Nations, Canada and the United States, share a great water resource which is today only partially used. Removal of the barriers to its full use for navigation will release millions of horsepower of cheap hydroelectric energy in sections in which the rapidly growing market for power will soon overtake present sources of supply. Failure to take advantage of this cheap power will not only tend to cramp industrial development but will force the substitution of more costly power, with the resulting burden on consumers of electricity. In an age so dependent upon transportation and power serious consequences will follow failure to anticipate future requirements.

"In view of the importance of these considerations, I am hopeful of an early agreement between the Canadian Government and our own."

The treaty proposed by Secretary of State Hull, which I incorporated in the RECORD of June 3, 1938, page 10757, is now being considered by the Canadian Government, and the friends of the St. Lawrence project, who are all sound Americans and legion in number, are hopeful of early agreement by Canada and ratification by the United States Senate.

In the interests of a greater America, favorable action by both countries is a consummation devoutedly to be wished for.

Are They to Starve or Not?

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

Mr. GEYER of California. Mr. Speaker, such a grave problem faces this Congress today that even in the face of traditions and customs existing in this House of Representatives I, as a newly elected Member of this body, would not be serving the best interests of those who saw fit to send me here unless I expressed the prevailing opinion among them in regard to the subject now under discussion.

When our Constitution was created, the basic idea fostered by its framers was the equality of all men in this great Nation. By equality among men they meant not only political and social equality but economic equality as well. In other words, every man was entitled to maintain his own political and social beliefs without interference from those who governed him. But more important than this; every citizen was entitled to have a job at a decent living wage in order that he might provide the necessities of life for himself and his family. Due to a great diversity of circumstances, including wars, panics, and depressions, this right has been challenged many times before, and today we find it again challenged here on the floor of the House of Representatives.

Let us consider the development of this country since the formulation of our Constitution in a historical sense. Soon after the beginning of the nineteenth century the effects of the industrial revolution in Europe began to manifest themselves in this country, with a consequent development of our economic resources. Large centers of population arose around factory sites along the Atlantic seaboard. After a while the demand for labor reached a saturation point, and those who found themselves temporarily out of work turned westward. It was this class who served as pioneers and helped to settle the then existing backwoods. During the rest of the century there was a steady migration of people anxious to find new places in which to start life over. This was a healthy condition for the country as a whole, because it tended toward development of natural and economic resources in all parts of this great Nation. But the machine which had been the

original force behind this great developing method had become more powerful and efficient with each year. Gradually machines began to displace manpower, and there was a lessening in the demand for labor. Unemployment became the rule rather than the exception. Then the great depression came 9 years ago, and the numbers of men out of work grew so great that unemployment, for the first time in our history, was a national rather than a local problem.

The administration in power at the time this depression began sought in vain to effect remedial measures. Their efforts were futile, because unemployment was considered a local problem, and rather than attempt some national program, the Republicans were content to let the local agencies do the job. When the present administration came to power, they took the situation into hand immediately. Our great President knew that the local communities and States were practically bankrupt from carrying the relief load. They had doled out money and had received nothing in return. The New Deal decided to set up a national system of works programs, which curtailed unemployment and gave men and women constructive things to do. Today, there are landmarks all over the country which stand as evidence of the worth of this program. But in a larger sense, the greatest objective realized, has been the saving of the morale of millions of citizens. This statement is made with authority because California was one of the greatest relief problems in the United States. In my own district in many sections, a greater percentage of the people are dependent on some form of relief, and they are as good citizens as those who are lucky enough to have private jobs.

As my historical analysis has shown, business has improved production, distribution, and marketing methods. But business has failed to solve the plight of those forced from their jobs because of these improvements. Although every year more people are losing their jobs because of improved business methods, this very group has failed to offer a solution to the problem. Someone must provide for them. Business is not doing it. Local charitable organizations are unequal to the task. Cities and States have gone practically bankrupt attempting to help out. Therefore, the national administration has found it necessary to step in to prevent chaos and to keep alive the American spirit among those less fortunate than ourselves. I say this, knowing the thoughts of the average man and the feeling among those in my own district, because those who work on these works programs are anxious to earn their living on private projects. I would be the last to deny this right to them.

I therefore feel it my duty, in justice to those whom I represent, to make a plea for careful consideration of this bill before a final vote is taken. There are issues involved which are far more important than the amount of money necessary to keep on with this works program. Today we are deciding whether or not some people are going to have food and shelter during the next few months or whether they are to be left to the vague uncertainties which will befall them if we fail in our duty to them. What those uncertainties will be time alone can tell, but it will do no harm to describe a few possibilities. The probability of many people being in want has already been touched upon, but we cannot underestimate the dire consequences of those unfortunate enough to depend upon the action we take today.

Furthermore, what are we to do in regard to the leisure time of these people if they have no jobs to fill? Those of you who cry out the loudest about the danger of the various "isms" to our national political structure consider for just one moment how much greater is the danger when one has plenty of time to listen and read the literature of discontented group. Are they not fit subjects for those who thrive on the opportunity of influencing downhearted people on the futility of existence in this country? This chance of this becoming a reality is enough in itself to make us realize that no amount of money is too great when danger to our governmental foundation is at stake. For, as our First Lady has said:

Whenever democracy fills the needs of the people one need have no fear of "isms."

What are we going to do about our duty, then, I ask the Members assembled here today? This bill in its present form represents a figure $150,000,000 less than the President has set as a minimum for carrying us through to June. Our great leader has been entirely too modest when we consider the testimony of representative leaders and groups before the committee hearings. The Workers' Alliance has set a figure of $1,050,000,000 as necessary for relief. The C. I. O. has requested that Congress appropriate $1,000,000,000. The American Council of Mayors finds that $925,000,000 is the lowest amount possible to get by on. Yet from the $875,000,000 figure set by the President this body is considering a cut of $150,000,000.

If we are to allow the amount which the bill states as adequate, we know that it can mean only deprivation for almost a million people, with a consequent loss in purchasing power which will curtail rather than help the brightening economic picture. If we fail to heed the warning of our great leader, it is only fair that a test vote be made on the various estimates, at least that of the President, so the public may know in yeas and nays just how each one of us stands in regard to this vital issue. It is only fair that those who sent us here to Washington to perform a task know how well that task is being performed. If we confine our vote to only that amount reported by the committee, those who elected us will never know how we feel individually on the various estimates discussed during the past few days.

For my part, I wish to face the issue squarely and do not hesitate to make known my stand on the various estimates, for I will not condone starvation, misery, and suffering on the part of anyone if it be in my power to prevent. I therefore shall vote first for the Workers' Alliance request of $1,050,000,000; but if that fails, I shall favor the $1,000,000,000 which the C. I. O. has endorsed; that failing, I shall vote for the American Council of Mayors' estimate of $925,000,000; if that is unsuccessful, I shall support the President's proposal of $875,000,000; and lastly, the lesser amount which the committee recommends, which is the least we can do for our people.

I rest assured that I have done my duty, because I have considered many things in reaching my decisions. I have listened to the pleas of those who sent me here to perform a job. I have listened to the words of our great President. Anxious as I am to balance the "dollars and cents" Budget, I am still more anxious to balance the human budget.

Let every man consider as his vote is cast that the lives of human beings are in the balance.

Urging That the Gates of Palestine Be Kept Open for Jewish Refugees

---

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

ADDRESS BY HON. HAMILTON FISH AT MECCA TEMPLE, NEW YORK, NOVEMBER 2, 1938

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech I made at a mass meeting for the preservation of the Palestine mandate, held at Mecca Temple, in New York, on November 2, 1938:

I come here tonight not as a Republican or Democrat but as an American who loathes and abhors bigotry, intolerance, injustice, and persecution everywhere in the world.

I am glad, as the coauthor of the Zionist resolution that passed the Congress in 1922 urging a homeland for the Jewish people in Palestine, to join you in your demands that the refugees from Germany, Austria, and central Europe be permitted to enter Palestine.

The Congress has officially approved the policy enunciated in the Balfour resolution and the promises and pledges given to the Jewish people of all nations during the World War. We are asking the British Government to fulfill its promises and carry out its obligations. I am unwilling to believe that the British Government will by any lack of action on its part permit the Balfour resolution to become another "scrap of paper." I refuse to even consider the possibility of such a perfidious action.

Americans of Jewish origin have a right to use every influence in their power in urging our Government to persuade the British mandate authorities to keep open the gates of Palestine as a haven for the persecuted and terror-stricken Jews of central Europe. The plight of thousands of Jews fleeing from oppression and racial and religious hatred is a stark human tragedy, the worst and blackest example of man's inhumanity to man. Even the birds of the air and the wild beasts have their places of refuge, but persecuted Jews will have none if Palestine is closed to them. That ancient land of milk and honey, given by Jehovah to Abraham and his people, must be maintained as a homeland for the Jews, and we Americans propose to exert our influence openly to uphold this policy that Congress has approved.

The Jews have already shown that they can turn that land, despoiled by the Turks for centuries, into a new garden spot of foodstuffs, fruit, and fertility by their energy and labor. Vast sums of money have flowed from America, England, and other countries to buy and develop lands in Palestine for Jewish colonists on the assurances contained in the Balfour resolution.

The Arabs have vast territories for their people, much of which is undeveloped. They are one race that is not cramped for land, and they have benefited by the sale of their lands and the influx of money from America which has provided them with employment.

I urge people of Jewish origin in America to protest and continue to protest to the President and the State Department in behalf of their coreligionists in central Europe on the basis of justice, humanity, and pledges given. This is primarily your fight, although all Americans who hate injustice, persecution, and inhumanity will support you.

My advice to you is to be steadfast, continue to press the fight to the end, and if you are united you cannot fail. At all times remember you are Americans, and that the American flag is the flag of tolerance, not bigotry, class or racial hatred; of freedom, not compulsion or dictatorship; of a free ballot under free institutions, and not a government by the bullet and persecution.

We are familiar with the situation in Germany, where the Jewish people have been outlawed and declassed, but in Germany there were only 600,000 Jews in a population of over 60,000,000. The inhuman and brutal treatment of the Jews in Germany, Austria, and Rumania has shocked the American people. They are opposed to all forms of racial and religious persecution as being detrimental to humanity, justice, and world peace.

I believe the oppression and persecution of the Jews in central Europe is "so enormous as to impart to them an international character, in redress of which all countries, governments, and creeds are alike interested." These are the identical words used by my grandfather in 1872, when, as Secretary of State in President Grant's administration, he protested the outrages and intolerance practiced against the Jews by the Rumanian Government at that time.

The Jews in America have served our country loyally in time of peace as well as in war. No one has the right to impugn their patriotism or love of America. No group owes more to our country, and none should be more willing to make greater sacrifices to uphold and defend our free institutions and representative and constitutional government, under which they have found security, peace, and prosperity as in no other nation in the world.

With large parts of Central Europe aflame with violent anti-Semitism, I am proud of the fact that I introduced the Zionist resolution, which has already helped to provide a refuge for 400,000 persecuted Jews.

Large sections of Palestine have been restored and rehabilitated by these Jewish immigrants, from Dan to Beersheba. I hope and pray that the British Government will permit several hundred thousand of the exiled German, Austrian, and Rumanian Jews to find a place of refuge and a home in Palestine, that ancient land of their fathers.

A Critical Analysis of the Destructive and Creative Forces of Modern History

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, JANUARY 18, 1937

Mr. SIROVICH. Mr. Speaker, in view of the fact that I have received hundreds of requests for the speech I delivered in the House on January 18, 1937, entitled "A Critical Analysis of the Destructive and Creative Forces of Modern History," I have been given unanimous consent to have it printed in the RECORD, as follows:

The SPEAKER. Under the previous order of the House, the gentleman from New York [Mr. SIROVICH] is recognized for 1 hour.

Mr. SIROVICH. Mr. Speaker, for the hour that has been allotted to me to address the House I intend to analyze the destructive and creative forces of modern world history and shall endeavor to show the relationship between communism, nazi-ism, and New Deal democracy.

Mr. Speaker, only modern man has problems. The medieval man had no problems at all. Everything—his religion, his science, his economy, his art—was given to him by the church, the supreme authority of life. This happy idyll came to an end as a result of the break-down of medieval universalism, with its ideal of one church, one language, and one state, and was replaced by individualism, through the Reformation in the north and the Renaissance in the south. Then the real drama of modern man began. Man's age-old conviction that the earth is the center of the world was destroyed. Copernicus showed him that the earth and not the sun is moving. Columbus showed him that the earth has no edge or end. With the destruction of man's century-old cosmological and planetary views, man's old beliefs and convictions concerning himself, nature, destiny, and his position in life slowly underwent radical changes and burdened him with new problems. His new cognitions and convictions fired him to new ambitions. When his old cosmological views were shattered, his religious beliefs and intellectual superstitions were also shaken to their very foundations. In discovering new worlds he discovered himself, religiously in the Reformation and intellectually and artistically in the Renaissance. The Reformation led to a new alinement of social and political forces, to the creation of the united German nation as a result of the translation of the Bible, and to the founding of the British Empire as a result of England's emancipation from Rome and its tremendous sea victories over the Spanish Armada.

In the south, however, the discovery of man resulted in the creation of a new art, new philosophy, and new science and notably to a new mathematics which is the beginning of the technological age. Our entire industrial civilization would not be possible without the new mathematics. In the north the rediscovery of man through the Reformation led to a great religious crisis, which was terminated only upon the end of the Thirty Years' War in 1648, in the course of which Germany was nearly destroyed. It was only after that bloody war that the schism within Christianity developed into a new and permanent order, Catholicism on one side and Protestantism on the other. But no sooner was the religious issue settled than the political struggle against the growing despotism of the monarchy began on the European Continent. As a matter of fact, the French Revolution, with its doctrine of the right of the people to resist the despot, had its beginning in the last decade of the seventeenth century. It took almost 100 years for this theory to become the common possession of the masses, and it took all the stupidity of political absolutism to arouse the masses to resistance and rebellion. It can be said without fear of contradiction that to a certain extent the French Revolution, with its program of the political emancipation of man, was only the aftermath of the Reformation, with its doctrine of the religious emancipation of man. In the world in which man is religiously emancipated he also wants to be politically free. Thus the political crisis in the western world epitomized by the French Revolution, was only a logical aftermath of the Reformation, which had spent itself by the middle of the seventeenth century. From that time on western man became politically busy. It took him a hundred years to prepare himself for the political struggle. In 1789 the French Revolution broke out, and by the middle of the nineteenth century the energies which generated from it were exhausted. By 1850 the French Revolution was only a matter of the past. But no sooner had the political struggle come to an end than the economic struggle began.

In 1848, the year of storm and stress, which witnessed the last tremor of the French Revolution, Karl Marx published his Communist Manifesto, which, however, at the time of its publication made but little impression. A few years later Karl Marx published his Critique of Political Economy, which he described in a letter to La Salle, as a prelude to his work, Das Kapital. It was not before the eighties of the nineteenth century that the doctrine of Karl Marx became the driving force in political life on the European Continent.

From afar it may seem that Karl Marx in demanding economic equality for all men is, as a historical phenomenon, a logical consequence of Luther and Danton. Martin Luther demanded religious equality, Danton political equality, and Karl Marx economic equality. This, however, is only an optical illusion, for Martin Luther demanded not only religious equality but religious freedom as well. Danton, as the central figure of the French Revolution, demanded not only political equality but also political freedom, freedom from a static order; but Karl Marx abhors freedom. He emphasizes equality to the exclusion of freedom because to him the driving force in history is economics. Karl Marx's man is not a thinking, singing, painting, or in general a creative man, but is primarily an economic hungry man, always in quest of food. Marx's economic interpretation of history, which is the foundation upon which socialism and communism have developed, and upon which Marx's great reputation has been founded, is based upon the philosophical contemplation that the workingman has always been

exploited economically and that the final goal of history is economically satisfied masses because man's preoccupation in life is food.

As against this economic materialistic conception of history of Karl Marx, with the masses alone being visible on the stage, there is the individualistic conception of history of Thomas Carlyle and Friedrich Nietzsche. Just as to Karl Marx the economically satisfied masses are the objective of the historical process, so to Thomas Carlyle the great creative personality, the great man is the goal of history. Marx says that the masses make history; Thomas Carlyle contends that the personality makes history. How political history is made Carlyle showed in his biography of Frederick the Great. How international history is made he portrayed in his individualistic history of the French Revolution. It was made by personalities, not by the masses. How cultural history is made is shown in his Life of Goethe. But while Thomas Carlyle, the disciplined and refined Scottishman, was satisfied with the thesis that the personality makes history, Friedrich Nietzsche, the ruthless and eccentric German, insisted that the personality is history and that the masses are only a means of an end—to bring forth the great personality. Consequently Nietzsche maintained that the great personality has a right to use the masses as he pleases, for the masses are only the fertilizers of history. Just as Karl Marx is inspired by the masses, so is Friedrich Nietzsche inspired by the overpowering personality. His regard for the great personality is not limited to the conqueror, to the great ruler, or to the great artist, but also to the great revolutionist, to the great moralist. Hence Nietzsche's admiration for the Bible as a book of great heroes and overtowering personalities.

It is interesting to observe that these two contradicting philosophies of history, the individualistic of Carlyle and Nietzsche and the collectivistic of Karl Marx, drew their inspirations from two self-contradicting philosophies of nature. The individualistic conception of history took its cue from Darwin, with his doctrine of the survival of the fittest. Carlyle's development of personality anticipated Darwin's biological evolution of man. Nietzsche has applied this theory of Darwin to the historical process in the evolution of personality. The doctrine of the survival of the fittest is a biological doctrine; consequently, both Carlyle and Nietzsche took their inspiration from biological nature, of which the jungle is the highest form. In the jungle the overpowering animal personality alone rules, the strongest reigns supreme. But Karl Marx calls his philosophy of history materialistic, not only because of his conviction that material things alone move men to action but because he drew his inspiration, not from biological nature, but from inanimate nature, from the world of dead matter, which is governed by the law of cause and effect only.

Marx's philosophy of history was greatly influenced by that of the German philosopher Hegel. Change, says Hegel, is the form in which an unchanging absolute, which he calls "logos," reveals itself. Every true manifestation of the logos discloses itself in three stages. First, there is the creative idea or thesis, which being in a constant state of flux, leads irresistibly to the formation of its opposite idea, which Hegel calls the "antithesis." The thesis and antithesis battle with one another, and out of their conflict a new and higher truth emerges which he calls the synthesis. This synthesis, in turn, again becomes a thesis, giving rise to its counterpart, the antithesis, with which it battles to form a new and still higher idea, the new synthesis. This process continues to function unendingly, leading always to an ever higher and more developed synthesis. This philosophic conflict is known as the triadic rhythm.

Marx borrowed Hegel's triadic rhythm, but applied it in a restricted sense to materialism, and evolved what he calls his "dialectic materialism." Lenin called "dialectic materialism" the living soul of Marxism, "its fundamental theoretical root." Marx contended that labor is the thesis, capital the antithesis, and the classless society is the synthesis. But here the triadic rhythm ends, and it can be seen, therefore, that Marx's application of Hegel's formula has produced only a limited triadic rhythm. Although Karl Marx was a left Hegelian, he was much more anchored philosophically in the French materialism of the eighteenth century of Diderot and Lamettrie, who contended that man was a machine, than in German idealistic philosophy of the nineteenth century.

According to Karl Marx, the development of a system of production, based upon the notion of private property, divided society into classes and brought the state into being. The state is, therefore, a class organization organized for the protection of the interests of the possessing group against the nonpossessing classes. It stands for the protection of private property, and the power to continue to exploit the masses.

Karl Marx contends, however, that the overthrow of the exploiting class, the abolition of private property, the disappearance of class distinctions, and the establishment of a classless society will abolish the need for the state, and will make it entirely superfluous. The state will not be needed for exploitation, since this will be done away with. Neither will the state be needed to carry out economic functions, since these will be performed far more efficiently by economic organizations. Nor will the state be needed to exercise police functions, since private property and class inequality, the causes of crime, will no longer exist. The state will then wither away and a stateless, classless society will be born. Marx nowhere describes the new society which is to replace the old. He declares that each revolution will produce its own laws and systems.

Marx was one of the first men of the nineteenth century to raise the question of the historical destinies of man, and he answered it in his own way. The historical destinies of man are to make possible the economically satisfied masses. This satisfaction can be brought about only by collectivizing production and the distribution of goods and by taking out the private profit of all business. The intellectual reaction to Marx was Thomas Carlyle, and later Friedrich Nietzsche, just as the political reaction to Lenin was, first, Mussolini and later Hitler and Stalin. These speculations regarding man's historical destinies have fired the imagination of other notable contemporaries and have brought forth a number of other interesting philosophical interpretations of history which contradict both Karl Marx and his antagonists, Carlyle and Nietzsche. The great Russian writer, Leo Tolstoi, disgusted with Marxian materialism and Nietzschean sensuousness, proclaimed the doctrine of the pure and pious soul as the goal of history. To purify the soul and to become holy, man has to abandon both pleasure and the search for wealth. He must try to overcome his senses, and attain peace of mind and serenity.

This relapse into a mild Buddhism found its reaction in Freud, who proclaimed aloud that man is not primarily a food seeker, as is claimed by Karl Marx, or a holiness seeker, as maintained by Tolstoi, but that man is primarily a sensuous being, whose actions are motivated by sex and not by hunger or holiness. Man must satisfy his sexual urges—that is his first and last motive in all his actions. Wagner's doctrine of the primacy of force epitomized by the mythological deities, and Bergson's doctrine of the instincts and urges, are only corollaries of the personality doctrines of Carlyle and Nietzsche.

The primacy of hunger, power of personality, pure sex and antisex of holiness are the great motives of the modern philosophy of history, but none has made such a powerful appeal to the masses as that of Karl Marx, who today is the most disputed, the most discussed, and most contested figure in modern history. Today the modern world is divided into two groups—the Marxists and anti-Marxists. The anti-Marxists again are also divided into two camps—the Fascists and anti-Fascists. For the rise of fascism, Marx alone is responsible. The rise and development of this powerful force in contemporary history is solely due to the false prophecy of Karl Marx that the modern economic process will lead to the elimination of the middle classes and to the formation of two classes only—the working and the capitalist class. The working class will be the overwhelming majority and the capitalist class a negligible minority. It stands to reason, says Marx, that the vast majority will not permit the small minority to exploit it, and in the course of a revolution will take the power away from it and introduce, through the dictatorship of the proletariat, the Communist order of things. But what has really happened is this: The middle class, instead of decreasing in numbers as Karl Marx predicted, grew numerically stronger from decade to decade. Today it can challenge both capital and labor.

This middle class today, and not the small capitalist group, is disputing the position of communism in the world and is fighting communism. The middle class is more avaricious than the big capitalists. Its horizon is small and its perspective narrow. It is more afraid of losing what it has than is big capital. Besides, the class of the very rich is not of recent date. It has traditions and perspectives and it takes a calm view of things. The middle class is only 100 years old, a new arrival, which is very jealous of its possessions, and it is easily frightened by rebellion. From its point of view communism is coequal with compulsory proletarization. The fear of communism on the part of the middle classes is the source of strength of all Fascist movements. It is more anti-Communist; it is more terrorized by communism than the upper classes. Switzerland and Yugoslavia, the two European middle-class nations, have not recognized Russia yet, and Holland, the middle-class nation, is more frightened by communism than rich England and France.

To fight it successfully and to form an iron wall against any further expansion of communism, fascism has adopted all the methods of the Inquisition—concentration camps, dictatorships, torture chambers, spying systems, and the deification of the State. Since communism has created for the workers a devil in the form of capitalists, the Fascists have created for their own adherents an imaginary bogey in the form of communism. Both know that their followers have to have a great object of hate and both give them that object. Both dictatorships need these bogeys to maintain themselves in power.

The division of western humanity into Communist and Fascist places the liberals in a tragic position. The liberals, too, belong to the middle classes. They represent the older and more rooted element of the middle classes—people who are not easily frightened and who take a calmer view of things. These liberals understand the limitations and the shortcomings of communism. They understand that it is a one-sided proposition and that it will never become a tenet of all humanity. They wait for the day when communism in Russia will undergo liberal changes and will adjust itself more to western conditions. These liberals are anti-Communist, but they are also anti-Fascist. They believe in democracy and reject fascism and communism as incompatible with true liberalism. They see in both fascism and communism medieval forms of economics and politics. In the Middle Ages life was regulated by authoritarian and totalitarian powers. The individual was deprived of all freedom. In the Fascist and Communist states human life is mechanized and human beings reduced to the position of machines, without freedom to think or to speak their own mind. Just as democracy rejects both fascism and communism, so both reject democracy as incompatible with their own doctrines. However, their fight with both sinister forces is just a sideshow. The main show is a life and death struggle between fascism and communism, and the success and failure of fascism depends upon the success and failure of communism.

Fascism is a reaction to communism, and the historical experience of the last 20 years bears out this thesis. Mussolini was the answer

to Lenin and Hitler the response to Stalin. Marxism in its present form is an intellectual proposition. To the present day the representatives of communism claim that they represent the scientific point of view and that their economic doctrines are based on science only, while the economic doctrines of their Fascist antagonists are based on superstition, traditionalism, mysticism, or ignorance. As a matter of fact, Engels, the collaborator of Karl Marx, claims that Marx was the first scientific economist of modern times. Whether we think that Marx's claims to science have a basis in reality or not, the fact that they are being made proves that Marxism is consciously, at least, a rationalist phenomenon. The Fascists, however, admit that they are opposed to rationalism, to intellectualism, and to pure science, and are guided by emotions. It is possible to argue with reason, even if it be beclouded, as is the case with every dogmatic. The place to argue this proposition is not the schoolroom, but the legislative hall, where laws are enacted for the nation and where every legislator seeks a wider orientation and real intellectual enlightenment on the laws for which he will be called upon to vote.

Mr. Speaker, let me therefore briefly recapitulate some of the fundamental concepts in the trends of contemporary history that I have thus far stated in my address.

The attempt to liberate man economically following upon the attempt to emancipate man religiously by the Reformation and politically by the French Revolution has culminated in a struggle whose outcome may spell the end of western civilization unless liberal America, headed by President Roosevelt, succeeds in preserving for man the great spiritual heritage of the Reformation and the Renaissance. The present struggle is economic in character and is fought today by two contending groups, the Communists and the Fascists. The one group, swearing by Karl Marx, is materialistic and tries to reduce the entire cultural process to an economic process. Karl Marx has invented a man, the homo economicus, the hungry man, who as an isolated type is a pure myth, for this homo economicus does not exist in reality. Man is not only a hungry man but is also a thinking man, a feeling man, a playing man, an ambitious man, a spiritual man. The color white is composed of its spectroscopic colors—violet, blue, green, indigo, yellow, orange, and red. So, likewise, man consists of all his attributes and not of one of them. Just as communism has created a myth, the hungry man, to establish its rule, so has fascism created another myth, the instinctive man, who is thirsty for power to establish his domination. The instinctive man of the Fascist is no more a reality than is the economic man of the Marxists, for man is not only hungry for power but also for beauty and truth. The fight between the Communists and the Fascists is really a fight about the one or the other attribute of man and not about man in general. In the course of this struggle man is being disfigured, for he is being turned into a beast, either a devouring or a domineering beast. It took humanity thousands of years to establish the truth of the spiritual personality of man and of man's totality of personality. The prophets of Israel, Socrates, Plato, Jesus, the Reformation, the Renaissance, Kant, have all taught one great truth, the spiritual personality and spiritual character of man. They all established the truth that man is a citizen of two worlds, the sensuous and supersensuous, and that man has therefore double functions to perform and double duties to fulfill, morally and spiritually. But in the fight of the Communists and the Fascists for the domination of man the latter is reduced to a caricature of real humanity, he is deprived of his spiritual personality, and is presented either as a machine, as is the case with Marxian philosophy, which drew its inspiration from French materialism of the eighteenth century, or as a beast, as is the case with Nazis. The great teacher of nazism, Spengler, says: "Man is a beast, and the beast must be curbed, and only the totalitarian state can curb him." The materialistic economists say that man is a machine and has to be driven like a machine, and only the dictatorial state can drive him.

The New Deal, on the other hand, as formulated by President Roosevelt, clings tenaciously to the eternal truth that man is a spiritual being and that he is a being of many attributes and, like the color white, cannot be divided into component parts without destroying him. The real philosophy of the New Deal is an effort to preserve the totality of man's personality in the midst of so many attempts to destroy it. The New Deal is a Biblical proposition and President Roosevelt is a Biblical character, because both insist upon the spiritual character of man, who must never be a means to an end but always an end in himself. Consequently, he must never be exploited, oppressed, or humiliated. He can never be either a machine or a beast of burden, but must always be treated like a human being, with respect and dignity. The legislation of the New Deal has this object in view: To preserve the dignity of man, so that he be in a position to give the best that is in him to his fellow man. [Applause.] This necessitates the curbing of rugged individualism, which has degenerated into ragged individualism, and bringing about a just distribution of wealth without however destroying the basis of our civilization. The totality of human personality, which is the combination of all of man's urges and instincts, stands for evolution and not for revolution, but whoever identifies man with any one of his instincts, such as hunger, sex, holiness, personality, or the will to power, which is a disintegrated part of the totality of human personality, must stand for revolution, for bloodshed, and for cruelty, and must destroy the image of God in man. The struggle, therefore, between these three contending forces—communism, fascism, and the New Deal—simmers down to a struggle for either the totality or the partiality of the human personality. Either man is identical with all of his attributes or he is identical with any of his many attributes; in short, he is either man or beast. On the basis of the totality of man's personality, humanity has established a culture and a civilization. To preserve it and to guard it is the primary motive and ultimate task of the New Deal. To destroy that culture and civilization and to introduce instead regulated jungle, either in the form of fascism or communism, is the primary motive and ultimate task of either communism or fascism.

To us who believe in the ultimate victory of man's highest ideals there can be no doubt that President Roosevelt will emerge victor from this world historic struggle. [Applause.]

Mr. Speaker, let me therefore attempt to dissect the five fundamental principles underlying Marxian socialism, as conceived by Karl Marx in his tremendous work Das Kapital and his Communist Manifesto, which have been translated into every civilized language of the world, and which are the foundation upon which the superstructure of communism and socialism have been evolved. The first, the Economic Interpretation of History:

"In every historic epoch," reads the preface to the Communist Manifesto, "the prevailing mode of economic production and exchange, and the social organization necessarily following from it, is the basis upon which is built up, and from which alone can be explained, the political and intellectual history of that epoch."

What is my answer to Karl Marx's economic interpretation of history? Mr. Speaker, whoever is familiar with the Marxist theory will admit that it stands and falls with his economic and materialistic conception of history. Karl Marx contends that the all-driving power in history is economics, the hungry man, or the "homo economicus."

We admit that man is hungry, but we know that he is thirsty, too, thirsty not only for water but for knowledge, for beauty, for inspiration, and that he is ever ready to sacrifice himself for quenching of this thirst, as he is ready to do all kinds of things to satisfy his hunger.

The difference between us and Karl Marx is that we are not denying that man is hungry, but we challenge the assertion that he is driven by hunger only. The hungry man of Karl Marx is a myth. He has never existed and never will exist. Since Marx insists that man's reality is hunger only, it goes without saying that the history of the world should be a history of economic struggles only.

Neither Marx himself nor any of his followers have ever even attempted to explain the first 300 years of Christian history in terms of Marxist history. When tens of thousands of pious men and women adopted Christianity, in spite of the dangers and perils to which they would be subjected, did they do it for economic reasons? Or is it not true that adopting Christianity meant sacrificing everything, not only their properties but also their liberties and their very lives? Of course, you all know the history of early Christianity, with its martyrdom and tragedies. You all know the history of revolutions and the tragic fate of revolutionary leaders. Did the thousands and tens of thousands of Russian revolutionists who in adopting the cause of revolution sacrifice their stations in life, their liberties, their privileges, do it only to gain material wealth? Again I say no. Is not the heroism and self-sacrificing idealism of the Russian revolutionary leaders, and even of the masses of the Russian revolution, a living denial of the Marxist interpretation of history? Who can explain the Huguenot movement in Marxist terms? Who can explain the history of the victims of the Spanish Inquisition in Marxist terms? Here was a group of well-to-do people, deeply rooted in the soil, with the tradition of thousands of years, that preferred exile and torture of body and mind to peace of mind and material happiness only because it would not yield to the purely abstract principle of religious conversion. This history of all nonconformist movements in the world is the very contradiction of the Marxist interpretation of history. Today, 140 years after the French Revolution, we know from its greatest historians, Lavisse, Hanataux, and Jaures, that, while famine was one of the incentives of the revolution, it was not its main motive power. Its main motive was the will to power of a rising middle class and the attempt to take away the power from the other classes. Nobody denies that economics was one of the motives of the French Revolution, but no historian today admits that it was the prime and only motive. To Karl Marx, however, it was the only motive.

The greatest and most convincing proof against Marxism is Marx himself. Marxism was not created by the hungry masses about which he speaks, but by a powerful, bitter, and rebellious personality called Karl Marx, who was not a workingman himself, but the son of a middle-class lawyer. There were many shades of socialism before Marx, but Marxism was produced by a personality called Karl Marx, and this personality produced a doctrine pronouncing the death sentence against all personality. Marxism, if honestly applied, spells the death of all personality. When you say absolute economic equality you deny personality. You cannot have both personality and equality. Of all the philosophies of history created during the nineteenth century, Marxism alone has survived, because it is first a tenet of great personality; second, because it has a great deal of truth in it; third, because it has a greater appeal to the masses of the people than any other conception of history, for it appeals to the belly and not to the mind; and fourth, because of its one-sidedness, giving it the character of religion. If Karl Marx had come along with the proposition that economics is one of the most important factors of history, everyone would have applauded him, and he would be only one of the many philosophers of history. But, since he said economics is the only factor in history, the hungry part of humanity applauded him and the satisfied part of humanity cursed him. Marx knew perfectly well that the masses are only guided by slogans and not by subtle intellectual analysis and considerations.

He knew that only one idea powerfully expressed would hit and impress the masses, and he proved to be right. By assuming that the materialistic conception of history was his innermost conviction of the way the historical process moves he visualized not only a tensionless state and society which is a sort of a sociological nirvana, but he dug the deepest grave for the personality, which is the only source of all creativeness. The creative mind deals with formulas, terms, notions, and ideas, which are manifestations of the intellectual analytical mind. Therefore, in the realm of the mind, you cannot have intellectual equality. Since the creative mind develops wealth, you cannot have economic equality. Equality is not to be found in nature at all. It must be superimposed by force upon man.

Karl Marx's conception of economic equality cannot be translated into a reality without dictatorship, concentration camps, civil war, and the abolition of the rights of man. If religious equality, as Torquemada understood it, was not possible without an inquisition, economic equality, as Karl Marx proposed it as the consequence of his conception of historic materialism, is not possible even with five inquisitions. Economic equality presumes not only economic straitjacketing of the individual but also intellectual imprisonment.

Mr. Speaker, such are the consequences of the materialistic conception of history. It is unrealistic and false in its presumptions and it is tragic in its consequences. Marx's dictum that not the mind makes man's life but that economic conditions make man's mind, is the greatest violation of the truth ever committed by man, for the fact is, that all economic progress and also social and political progress, are the products of man's creative mind. Up to the machine age humanity was divided into two classes—the feudal and the peasant class—with the masses of the people being very poor. The middle class was created by the machine civilization. The life of the modern workingman is surely not the life of a pauper. This economic improvement all along the line is due to the machine, and the machine was created by man's mind. It presumes mathematics and physics, mechanics and chemistry. A new engineering principle leading to the creation of the automobile industry, a principle born in man's creative mind, has proved to be a source of wealth and employment to millions of people. The discovery of the Hertzian waves by the late Professor Hertz, a Jewish physicist in Germany, led to the establishment of the radio industry, giving employment to hundreds of thousands of people and a source of wealth to those who know best how to handle it. The same holds good of many other purely abstract principles invented by man's creative mind, whose translation into reality revolutionized our entire economic life. Thus it is not economic life that shapes man's consciousness, but it is man's consciousness that shapes man's life even economically.

Mr. Speaker, "homo sapiens" means thinking man, living man, enterprising man, playful man, searching man, and consequently human history cannot be only economic history, determined by materialistic factors alone. Man is the only animal who is never satisfied; he never has enough. Man's rise to power was brought about by his will to more; and while this will to more, if given full sway, must lead to jungle rule, it cannot be entirely curbed, even economically. This psychological law governing man—the variety of man's desires and aspirations and the inability to satisfy any of his desires completely—reduces Marx's interpretation of history to a dogma, to an article of creed or belief. Belief and creed are not philosophy. Marx's conception of history, therefore, is dogmatic or theological, but not philosophical.

It has been established again and again that Marx was, in his general philosophical views, a follower of eighteenth century materialism, and that his so-called materialistic philosophy of history, far from being a byproduct or a development of the philosophy of Hegel, which was purely logical, is only a continuation of his general materialistic philosophy. Since no materialistic philosopher has ever demonstrated how dead matter can transform itself into a mind or consciousness, materialism as a philosophy is considered today a mere superstition. It is the most unsatisfactory of all answers to the puzzles of life. While no materialistic philosopher has ever demonstrated the possibility of deducing mind from matter, all great philosophers have demonstrated that all human reality is the product of the human mind. Man alone is the tool-making creature, because he has a mind to create tools with. This tool-making ability created for him his economic problems. Only man has economic problems—animals have no economic problems, because they have no creative consciousness.

All material human reality as well as all spiritual human reality is born of the mind and not of dead matter. With the help of the principles of mathematics, which are born in our mind, and with the help of the principles of theoretical physics, which are born in our mind, we create means of transportation, machines, and, in short, our civilization. A new principle of mathematics or engineering which is born in man's mind may revolutionize the entire economic fabric. If human economics is a continuation of the human mind, the mind comes first and matter or material comes second. The materialistic conception of history is, therefore, subjectively and objectively false; it is plain superstition and a gross form of mysticism.

The second basic contention of Karl Marx is his philosophy of "the class struggle":

"The history of all hitherto existing society," begins the Manifesto, "is the history of class struggles. Freeman and slave, patrician and plebeian, lord and serf, guildmaster and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted fight, now hidden, now open, a fight that each time ended either in a revolutionary reconstitution of society at large or in the common ruin of the contesting classes."

What is my reply to this principle of the "class struggle"? To Karl Marx the content of the world historic process is a struggle between economic classes, between the master and the slave in ancient times, between the feudal lord and the serf or retainer in the Middle Ages, and between the capitalists and workingmen of modern times. Class to him means primarily an economic class.

There is a twofold objection to this theory: First, the content of history is not always an economic class struggle; and, second, the classes are not always economic classes. As a matter of fact, the class is not a historical category but a psychological category, developed not only by historical forces from without but by psychological forces from within, and that the struggle of the classes is not always determined by economic factors. There is, first, the struggle of the sexes; second, the struggle of ideas; third, the struggle of religion; and fourth, the struggle for political power motivated by the will to rule or by the will to get more. There is a class of lettered and a class of illiterate people; the one hates the other. There is a class of gifted and a class of nongifted people; the one hates the other. There is a class of ambitious and a class of sullen people; the one hates the other—and the greatest struggles of history were not only fought out by economic groups, the poor against the rich, but by different religions. The Crusades were religious wars. The Thirty Years War was a religious war. The Seven Years War was a war of Protestant Prussia against Catholic Austria. Most civil wars originate in difference in ideals as well as difference of interests. Even the civil war in Spain is as much a war of ideas as a war of interests.

Since the class is at least as much a psychological as an economic category, and as a psychological category will always be in existence, the proposal of a classless society is bereft of all realism. In Communist Russia today there are as many classes as in any other capitalist country. The official who gets a salary of 3,000 rubles a month has no more in common with the laborer, who draws only a salary of 200 rubles a month, than has the capitalist in the capitalist country in common with the laborer whom he employs.

The third basic contention of Karl Marx is his principle of surplus value. The fundamental doctrine of Marx's economic system and the central theme of Das Kapital is known as the theory of surplus value.

According to Marx, the exchange or market value of a commodity depends upon the amount and degree of labor necessary to produce it. He defines a commodity as a "mass of congealed labor-time." Labor is therefore the source of all value. It is likewise the measure of value, as "commodities in which quantities of labor are embodied or which can be produced in the same time have the same value."

What is the philosophy underlying surplus value? According to Marx, the exchange or market value of a commodity depends upon the amount or degree of labor necessary to produce that article or commodity. By labor Marx means, not that of an individual, but socially necessary labor time that is required to produce a commodity under formal conditions. It includes the labor of highly paid managers as well as that of poorly paid operators.

But the laborer does not receive the full product of his toil, only barely enough to maintain himself and continue to produce. Of course, this theory of surplus value is not Marx's creation. He accepted the theory of wages formulated by the classical economists of modern times. According to this theory, the laborer can get only the mere sustenance under the existing conditions. A contemporary of Karl Marx, Ferdinan La Salle, called this wage theory "the iron wage law." The fact cannot be denied that under the old deal labor was shamefully exploited. In the western democratic countries, however, the worker has not only political but also personal freedom, which is denied to him, however, in dictatorial lands. There not only strikes are forbidden but no worker may leave his job or his abode without the consent of the government. In all Fascist countries the worker is practically a state slave, compelled to take the wage given him by the state and forbidden to express dissatisfaction with his lot. No privilege of which he is the recipient, such as unemployment insurance, socialized medicine, recreation and vacation privileges, can compensate him for his loss of freedom.

In any free democracy it is obviously wrong and unjust that a small group of men organized in a corporation, whose destinies they control, should take all the surplus values created by labor, and be permitted to accumulate infinite wealth, which it later uses or misuses to strengthen its own position economically, politically, and socially. The solution to the problem of surplus value is not the Utopia of absolute economic equality as visualized by Karl Marx, because such equality cannot be brought about without inquisitions, torture chambers, and dictatorships. Our old economic conceptions that labor is entitled to wages only are remnants of a feudalistic age. To solve the problems of surplus value, labor should be entitled, not only to decent wages but also to a fair share of the profits.

The surplus-value theory of Karl Marx to the effect that all wealth has its source in labor is only partly true, for wealth has also its source in human inventiveness, in the human creative genius whose economic value cannot be fixed at all—in human skill

and demands for goods, which are often developed by purely spiritual factors. It is not true that the market value of a commodity always depends upon the amount and degree of labor necessary to produce it. It also depends upon other factors, such as demand for that commodity, the risk connected with producing it, the inventiveness and skill necessary to create it—in short, it depends upon a number of external and internal conditions over which labor has no control at all and whose value cannot be fixed.

Labor is one of the principal sources of value, but not the only source. It is true that the workingman constructs the machine, but who is going to evaluate the work of the inventive engineer who invented the machine, and who can evaluate the mathematical and physical principles upon which the machine is built? To say that labor is the only source of wealth is to place a negative economic evaluation upon man's creative genius. It is true, however, that labor to a great extent is the source of modern wealth. But the answer to the problem arising from this phenomenon is not old Marxism but the New Deal, which subjects accumulated wealth to a process of attrition and aspires to the establishment of an economic balance, giving the poor more and the rich less. It seems to me that there is more realism and more objective truth in the New Deal than in Karl Marx and all his interpreters combined. The law of surplus value, therefore, is as little valid as the theory of the class struggle or the economic process of history. The class struggle today throughout the world is the conflict between capitalism and communism. Classical capitalism is the exploitation of labor by capital. Classical communism is the exploitation of capital by labor. The New Deal democracy synthesizes these two opposing forces, by regulating capital and cooperating with labor, to bring the greatest good to the greatest number, so that labor may receive a fairer share of the distribution of the wealth that it creates without crippling or destroying invested capital. [Applause.]

The fourth important concept of Karl Marx is his tremendous argument pleading for the "inevitability of socialism." What does Karl Marx say about this subject? He says:

"Capitalism produces, above all, its own gravediggers. Centralization of industry and of labor is, according to Marx, the inevitable tendency of the modern system of production; more and more will the capitalists combine and wealth will be consequently in fewer and fewer hands. As with capital, so with labor. The factory tends to centralize many laborers of different trades and localities and to reduce them to a common wage level. Their lot will steadily grow worse, till finally they are reduced to a state of semipauperism."

The theory of increasing misery advanced by Marx is based upon his belief that the workingmen, because of their low wages, have no purchasing or consuming power and are unable to buy the enormous quantities of goods produced by machinery.

What is my answer to this economic contention of Karl Marx? According to Karl Marx, the Socialist state or the classless state is predetermined by the entire economic process and its arrival is inevitable. This inevitability of socialism Marx deduces from the increasing misery of the masses. According to his calculations, the capitalistic order of things, leading to monopolies and trusts, will destroy the middle classes and in the end there will be only two classes—the workingmen, who form the majority, and a small capitalist class. The majority will seize power, overcome the capitalist class, and introduce a Socialist order. But the economic development of the last 75 years shows that the middle class, far from decreasing in numbers, is constantly increasing in numbers and is constantly gathering strength. Today it is so powerful that in many countries it is the ruling class. It can be the ruling class in every country if it chooses to cooperate either with the workingmen or with the capitalists.

Modern legislation in every civilized state tends to limit the power of accumulated capital and to strengthen the middle class. The middle classes are by inclination both anti-Fascist and anti-Communist. They are democratically inclined. The inevitability of socialism is a false prophecy based on entirely false calculations. The very fact that communism faces everywhere capitalistic fascism as its enemy, and that both forms of dictatorship are being fought by the democratic middle classes everywhere, demonstrates clearly the falsity of Karl Marx's theory of the destruction of the middle classes and the inevitability of socialism.

Finally we come to the fifth contention of Karl Marx, which is the principle of "internationalism." Karl Marx states: "The proletarians have nothing to lose but their chains; they have a whole world to win." "Workingmen of all countries, unite!"

My answer to the subject of "internationalism" is:

For the last 500 years western history was a history of nations and nationalism. The highest development of western nationalism coincides with the development of our industrial civilization and with the spiritual deepening of the cultures of the major nations. "Nationalism," in the best meaning of the term, is as much a part of white man's reality as is religion, art, literature, and science. The cosmopolitan idea of the French Revolution was nationalistic in its motive. For the French cosmopolites said to the non-French people, "You adopt spiritual France as your fatherland and you will be saved." Today, when Hitler, Mussolini, and Stalin shape the destinies of 275,000,000 people in the west and Gandhi and Nehru do the same in the east, nationalism is a greater reality than it was 120 years ago. Hitler and Mussolini, the aggressors, and Gandhi and Nehru, the resisters, are equally nationalistic-minded. They are primarily interested in the welfare of their own people, to which there cannot possibly be any objection. What one must object to is the methods they use, and not to the nationalistic principle they represent.

If it is true that the principle of nationalism and the nationalistic consciousness of people are part of man's psychological reality, then Karl Marx's internationalism, culminating in the idea that the proletarians have no country, but an accidental birthplace, is a perversion of western man's reality. While it may be conceded that some unscrupulous people use patriotism as a refuge and hide-out for their corrupt activities, to most people the love for the native country is as genuine as their love for their family. It makes no difference whether the bearer of this love is a workingman, a businessman, or a manufacturer, an artist, or a scientist. To workingmen their native place is as much their country, the land of their ancestors, the land they love, as to any other stratum of society. The internationalism of Karl Marx is nothing but the revival of a medieval idea of the church. The internationalistic representatives of the medieval church thundered against the love of the native soil in the same way as have Karl Marx and his followers for the last 75 years. The medieval church fought with the same energy, determination, and violence against the rising nationalism and for internationalism. Even long after the victory of modern nationalism was achieved through the Reformation and the Renaissance, the representatives of the medieval church continued their fight against nationalism. The activity of the Jesuit order for the first 200 years of its existence was primarily directed against nationalism. The political ideal of the medieval church state was the one and indivisible world state, headed by the Pontiff. The political ideal of Marxism is the one indivisible economic state. Both state ideals are universalistic; that is to say, they do not permit any borderlines and any limitations lest the personality arise. Goethe, the biographer of St. Ignatius Loyola, says that it was the ideal of the founder of the order to denationalize all nations. The medieval church was as much opposed to individualistic nationalism as Marxian communism is opposed to nationalism as far as theory is concerned. In reality, however, the Catholics are as patriotically inclined as all other groups of the population. The main struggle of Stalin in Russia today is the battle for Russian nationalism as against the internationalism of spitfire Trotzky, who is pursuing his principle of permanent world revolution as advocated by Karl Marx.

The internationalism of Karl Marx is a violation of all human reality, because our love for our country is actually born with us and cannot be destroyed in normal people. Soon after the German declaration of war against France the first thing the German Social Democratic Party, a purely Marxian organization, did was to vote for the imperial war budget, and many German Social Democrats, to prove their superpatriotism, joined the army voluntarily and asked to be sent to the firing line.

The French, the English, the Italian, and Austrian Socialists did the same. This and similar historical experiences show that the workingman is as much concerned with the welfare of his nation in times of national crisis as are the other strata of the population, and that they do not place their class interest above their national interest. The contention of Karl Marx, that the workingmen had nothing to lose but their chains, is just a militant figure of speech. Would the American workingman permit the invasion of cheap labor? Does Communist Russia permit the invasion of Chinese coolies, who would compete with Russian labor? Would the German Republic permit Polish and Russian laborers to invade the country to compete with German labor? There are justified struggles going on within the ranks of labor itself. Skilled labor is in constant struggle against unskilled labor. Technically developed labor is in constant struggle against intruders who are not technologically trained and experienced. There is just as much an aristocracy of labor as there is an aristocracy within any stratum of the population.

Marx's slogan, "Workingmen of all countries, unite," is based on the stated assumption that the workingman of one country has more in common with the workingman of another country than he has with the different classes of his own country. The workingman is as much rooted in the life and traditions of his nation as is the member of any other class. The workingman is swayed by the same emotions as other people, is as much attached to his native soil as are other people and is carried away by the same patriotic feelings as the rest of the population. To say that the workingman of one nation has more in common with the workingman of another nation, implying that he places his economic interests above his other interests, spiritual, religious, patriotic, is libeling the workingman. As a matter of fact there is more community of interests between the mercantile class of different nations than there is between the laboring class of different nations. Business is business, and many a merchant during the war has been guilty of trading with the enemy. Today the French sell war material to the Germans, the English to the Italians, and vice versa, though knowing that this material will some day be used against them. It seems to me that the two most patriotic classes in the Nation are the farmers and the workingman. [Applause.]

It is thus evident that the principal philosophical and psychological theories of Marxism, the economic interpretation of history, the class struggle, the inevitability of socialism and internationalism, are from the point of view of reality, pure fiction. They are illusions of a fanatical mind, and they have no basis in reality.

Mr. Speaker, for almost an hour I have discussed the historical, social, political, economic, and philosophic conceptions of socialism, communism, and fascism. What is the antidote to these economic philosophies that have challenged the democracies the world over?

Mr. Speaker, after centuries of rich intellectual experience, ancient Greece, as represented by one of its great philosophers, Aristotle, came to the conclusion that in matters of the state the golden middle way is the only solution to all political woes and problems of man. As between the leftist tendencies, culminating in collectivism and resulting in the obliteration of personality and in the dictatorship of the proletariat, and the extreme rightist expressing themselves in rugged individualism and resulting in the economic and political exploitation and enslavement of labor, there is the golden middle way of the New Deal. The solution it offers to the economic, social, and political problems of men of our generation is a synthesis of the two driving forces; each of which is anxious to dominate man entirely—individualism and collectivism. The pendulum swings fast and furiously from one extreme to the other. To have discovered its rhythm somewhere in the middle of the way is the immortal deed of Franklin Delano Roosevelt. It is comparable to the triadic rhythm discovered by the great philosopher, Hegel.

The New Deal as an economic and social solution to our problems is not a purely abstract principle. Born out of dire experience, born of the necessities and problems of life, it is more applicable to life than all the theories of the millennium advanced by economists, sociologists, historians, statesmen, and philosophers. The New Deal is primarily concerned with regularizing and improving upon three spheres of man's life—the home, the factory, and man's relationship to Nature. Millions of American homes in the village are denied the facilities and the comforts of the home in the city.

The oil lamp is still the rule in the village home and cooking is a laborious process for the farmer's wife, because unlike the worker's wife in the city, who uses either gas or electricity in the kitchen, she has to rely on wood to prepare meals for the family. To furnish power to a farmer is to make his home life more tolerable and give the farmer's wife a minimum of comforts to which she, too, is entitled.

The improvement of the home of the worker in the city is also one of the main objectives of the New Deal. It proposes to lighten the burden of the two frail members of the home—the child and the aged. The New Deal is committed to the abolition of child labor, to give the young ones a chance to develop physically, morally, and intellectually. It is committed to old-age pensions, so that the old father and old mother need not be a burden to the children and suffer want in the last years of their life. It is my candid opinion that these measures, supplemented with unemployment insurance for the worker, security of protection for investments of our people, maternity legislation, child welfare, workingmen's compensation, care of youth through Civilian Conservation Corps, and the protection of the blind, crippled, and paralyzed, all, measures adopted by the New Deal, will greatly strengthen the American home and make it more than ever the very basis of our civilization. The inscription of "God bless our home" on the walls of the dwellings of our citizenry will be the epitaph to Franklin D. Roosevelt's struggle to maintain the home, with slums abolished throughout the United States. [Applause.]

Mr. Speaker, the New Deal is not only concerned with offering the members of the home a minimum of worry and a maximum of happiness, but it is also greatly interested in the well-being of the man in the factory, mine, or shop, and to that end, it proposes to enact laws guaranteeing the worker a minimum wage, that is to say, a saving wage, and maximum hours, as well as unemployment insurance. The New Deal contends that man must never be a means to an end, but must always be an end in himself. He must not be enslaved, oppressed, and exploited. If he has to sell his labor to his fellowmen, the least he can expect out of this sale is a sufficient income to give him economic security, to take care of his needs and to enable him to provide for those who are dependent on him—otherwise the labor that he sells is not human labor, but machine labor, or beast of burden labor. But man is not a machine nor a beast of burden, but a spiritual being, for he has responsibilities and problems which neither the machine nor the beast of burden has. All men have to work for a living, but no man should slave for a living, and the maximum-hour principle, stressed by the New Deal as one of the solutions to the problems of mechanized labor, will prevent the enslavement of man. Men will work a given number of hours in the mine, shop, or factory and the balance of his time he will use for his human needs—for the betterment of his domestic life—for the betterment of his social and intellectual life. The maximum-hour law will humanize labor by enabling the workingman to participate in all the joys and pleasures of life.

In the Communist state, labor has certain privileges, especially educational and recreational, but the obligation and duties of labor are so terrific that these privileges amount to very little. It is denied all freedom, the right to strike, the right to free movement, even the right to change jobs; in matters of pay it must take what is given to it. It is the aim of the Communist state to exploit labor as much as possible, and it does this very effectively by reducing the workingman to a working machine. In the Fascist states labor has all the obligations and duties of the Communist state, but none of its privileges. From the point of view of employer-employee relations, labor is absolutely enslaved in the Communist state as well as in the Fascist state.

The New Deal offers labor a new magna carta. By curbing rugged individualism through collective bargaining, and compelling it to do justice to labor, it transforms labor machines into free workingmen and thus raises the dignity of labor. Labor should not be autocratic and arbitrary in its demands. It should not endeavor to exploit and destroy honest capital. Only by meting out justice to labor and capital will the social unrest disappear and our present economic order be saved. That capital does not see it and does not express its gratitude to Franklin D. Roosevelt, the creator of the New Deal, is one of the greatest paradoxes of our time.

Mr. Speaker, the third link in the chain of the New Deal is man's relationship to nature. To the extent that nature is a source of joy to man, it has been so far, the property of the few, of the classes, and not of the many, of the masses. The classes can afford the luxury of travel, the luxury of everything the eyes take delight in, new scenery and new sights. Through a reorganized merchant marine and the use of the automobile the American workers will be enabled to travel during their vacation time, to enjoy fresh air, to see new scenes, and to enrich their life with new experiences. Summer camps for poor children to continue their education in the country is the next move in the onward march of developing the youth of our country, our future citizens.

Mr. Speaker, it is a great privilege, indeed, for me to address myself to you sitting in the middle of the House listening to my remarks. I can well remember many years ago when you asked me to speak for the Sheppard-Bankhead bill that would make it possible for the Government of the United States to appropriate money to take care of the maternal welfare of those of our mothers throughout the Nation who were dying with puerperal sepsis because they were confined by some unclean person working on the farm. No doctor, midwife, or nurse was there to take care of them and provide for their physical comfort. Hundreds of thousands of mothers of that type have died upon the altar of childbirth. It is such humane legislation as you have sponsored, as typified by the Sheppard-Bankhead bill, that is now incorporated in the social-security bill, that is taking care of thousands of innocent mothers by having trained doctors, midwives, and nurses look after them in their hour of anguish and labor pain they undergo in bringing a child into the world.

While speaking for the preservation of the home and bringing justice to the working people of our country, let us not forget the sacrifices that have been made by our colleagues on the floor of this House, who have died in the performance of their duties. They battled for the preservation of the home and for the day when labor can secure a better distribution of the wealth it creates. Let us not forget the tragic death of our beloved humanitarian colleague, who has made the eternal pilgrimage from whence no traveler ever returns, Bill Connery. He will live in the memory of those who love him as an exponent of everything that is sweet and beautiful in ennobling labor and giving of his today that the laboring man may have his tomorrow.

Thus while Marxism promises a dictatorship of the proletariat which in fact has proved to be a source of oppression and enslavement of labor and while fascism promises the disappearance of social unrest by equally enslaving labor, and while both at the same time destroy capitalism, the one totally and the other partially, the New Deal, taking the middle of the road, opens new vistas to labor, guaranteeing a secure and dignified existence, and at the same time leaving our present capitalistic order intact, thus avoiding revolution and bloodshed.

The Bible gave man the new deal for the first time in the world's history. Then the Reformation and the Renaissance gave man a new deal for the second time, because the postulates of the first new deal were forgotten. Now, man is receiving a new deal for the third time, because the postulates of the second new deal were forgotten. It is for that reason that the personality of Franklin Delano Roosevelt is only comparable to that of the great figures of the Bible or to the great figures of the Reformation and the Renaissance. May God bless our great President, Franklin D. Roosevelt, and give him strength and good health to realize all the ideals of the New Deal. May he put into realization the spiritual message of our forbears, when they gave us as our shibboleth and slogan the inspired words, "E pluribus unum." Out of many people let us have one united group of American citizens, all enjoying a totality of personality that will bring happinness into the hearts of our American people, and contentment in the home, hearth, and fireside of every American. [Applause.]

Mr. MCSWEENEY. Mr. Speaker, I ask unanimous consent to proceed for 1 minute to ask a question of the gentleman from New York [Mr. SIROVICH].

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. MCSWEENEY. Mr. Speaker, I believe that when the culture of a nation dies, the nation dies. I think it is well for us in this great legislative body, where we have material things before us continually, to be elevated and entranced, as I have been by this marvelous and brilliant speech of the gentleman from New York.

May I ask the gentleman his thought with regard to the freedom of the press in this country as compared with the treatment of the press in communistic and Fascist countries?

Mr. SIROVICH. In the Fascist countries of Europe there is no freedom of the press. There is no freedom for the press of foreign countries to pillory, to excoriate, to denounce, to tell falsehoods, or even to tell the truth about public officials. The editors would be sent to jail and concentration camps for casting aspersions upon rulers or dictators and their papers suppressed.

As an evidence of what our great institution of democracy is doing, behold our President, Franklin D. Roosevelt, when he goes to the Gridiron Club. Here in the presence of the most eminent and distinguished men who run the press of the Nation the President good naturedly sits mute while he allows in panorama to march across the proscenium of time all of his actions, his conduct, and his deeds. The newspapermen roast the President across the gridiron for 2 hours. They lampoon him, ridicule him, laugh at him, pillory him, and he even greatly enjoys these blessings. We Members of Congress are often deeply wounded by unfair criticism, unjust and uncalled-for aspersions, unwarranted and cruel deductions, but in spite of it all there is not a Member of Congress who would vote to destroy the freedom of our press. The freedom of newspapers, magazines, periodicals, and publications to publish news uncensored, unrestricted, and untrammeled must live on to guard and perpetuate our democratic republican institutions. [Applause.]

[Here the gavel fell.]

Mr. RANDOLPH. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. RANDOLPH. Mr. Speaker, I have listened with intense interest to the very able and instructive address of our distinguished colleague from New York. He has been endowed with splendid talents of retentive genius, historical knowledge, marvelous memory, and clarity of utterance, and he has brought them to us again today. I believe that the highest traditions of the House live again in the speech delivered this afternoon by our colleague. I compliment him with every sincerity of my heart. [Applause.]

Mr. MOSER of Pennsylvania. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. SIROVICH] may proceed for 2 additional minutes in order that I may ask him a question.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MOSER of Pennsylvania. Will the gentleman from New York tell us the difference between an organism and a mechanism?

Mr. SIROVICH. Mr. Speaker, when a child comes into the world, whether it be an embryo or a fetus, it comes in as an organism. It comes in intact; every part that Nature has given it is there. No part is added to it from the outside. Its motive power comes from within.

A machine or mechanism, on the other hand, must be made piecemeal, from part to part, and when the parts are all put together, its motive power or the force that motivates its movement must come from without.

Therefore, no human being should be made a slave or servant of a machine, but every human organism ought to be treated with dignity, with graciousness, with humanity. An organism is created by divine Spirit. A machine is only made by human hand. Man should therefore be master of the machine, and not its servant. [Applause.]

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, AT JACKSON DAY DINNER, SPRINGFIELD, MO., JANUARY 7, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an address delivered by the junior Senator from Florida [Mr. PEPPER] at Springfield, Mo., on January 7, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is fitting indeed that in this day when democracy is being challenged the world over, we should pay this tribute to the man who, more than anyone else, has made this the world's greatest democracy.

Andrew Jackson was as typical of America as were the giant mountains and the towering trees of the frontier to which he was born. He came from the heart of America, for he was of the people, and spoke for the people in a way as distinctive as was his own rare courage. The noble philosophy and the refined principles which Thomas Jefferson conceived and announced, Andrew Jackson wrote into the bone and sinew of the Nation. The aspirations which Jefferson declared, Jackson made real. The sentiments of liberty and brotherhood which Thomas Jefferson dreamed, Andrew Jackson lived and made others live under the scorpionlike lashes of his compelling power.

Truly did Andrew Jackson speak the people's language, breathe their hopes with the humblest of them, share their vicissitudes of orphanage and poverty, possess their virtues and vices, and in his tumultuous breast feel the surge of all the emotions of tenderness, anger, happiness, and love, which characterized their human hearts. The honest and sympathetic heart of Andrew Jackson rebelled against special privilege, against monopoly, against economic as well as political tyranny. He crushed the national bank because he felt it a sinister effort to subjugate the great masses of the American people to the interest of the financial class. He threatened war even, upon a State, because in this challenge to the integrity of the Union, he saw a danger to the peace, the welfare and the happiness of the great masses of our far-flung Nation.

Jackson was a Democrat by nature, because he believed in and appreciated the dignity of his fellow man. He left as a legacy to his name and nation, the Democratic Party, which ever since his day has been characteristically a militant party. The Democratic Party has always fought for something, for whatever it deemed to be for the best interest of the American people as a whole. It has always fought against the excessive accumulation of power in the hands of a few people. It has always fought against abuses of power, against special privilege, against dishonesty in Government, against the use of Government and its power to further the stand of a special group at the expense of the many. The events of the last 5 years have shown that the Democratic Party still is characteristic of Andrew Jackson. No period of our history shows more the living vitality of Jacksonian Democracy than does that period.

Conditions which are well known to every man, woman, and child had become unwholesome in America. A few people were a preferred class. The economic system was operated by and for the benefit of too small a number of people. The currency, the fiscal structure, the credit of the country were primarily employed to buttress their power, the few who knew how to gain access to such reservoirs, and denied to those who had little to commend them save the stern necessities of their need. Our whole national policy was based upon that sinister and selfish Hamiltonian philosophy that the best way to help the masses of the people was to help the few at the top. Neither the citizens at home, nor the neighbors here and abroad, felt that the heart that had beat in Washington, that conditions in the National Capital, reflected those ancient virtues and that noble and unselfish spirit which moved our ancestors to their struggles and their sacrifices. The element of moral fervor had disappeared from American political life. How changed was the whole picture by the resurgence of the Democratic Party.

In 1932 we see that party, in words which Jackson himself might have written, thundering against monopoly, against unfair trade practices which threatened the independence of labor, the small producer, and the distributor; against financial interests fleecing the American people of their savings, by the sale of securities issued both at home and abroad; against excessive charges by utility companies; against a vicious banking system, which violated the confidence and jeopardized the savings of the American public; against an iniquitous tariff law which gave undue and abused privilege to a class at the expense of the whole people. And equally clearly, candidly, and courageously did that platform covenant with the American people that it would use the power of the people's government to give a greater, actual, practical security to America's citizens; those citizens struggling with the superior forces throttling their agriculture; those citizens struggling with the dominating forces of economic maladjustment which had thrown them out of employment and closed to them avenues of economic opportunity; to those citizens who aspired to a greater liberty of leisure gained by the reduction of excessive hours of labor; the kind of security that could be provided to the individual citizen only by unemployment and old-age insurance.

After 4 years of administration of the people's government in times as trying as any in this country's whole history, the Democratic Party again in 1936 declared to the American people its fundamental faith and its conviction of the duties of this Government in these times. For in that platform, that party said:

"We hold this truth to be self-evident—that Government in a modern civilization has certain inescapable obligations to its citizens, among which are:

"1. Protection of the family and home.

"2. Establishment of a democracy of opportunity for all the people.

"3. Aid to those overtaken by disaster."

Here was clearly expressed a new declaration of independence—the faith of the people's party; that the people's government was concerned not merely with the technical, but with the larger liberty and the effective freedom of the American citizen. For, obviously, if the American family might enjoy its traditional freedom around the sacred hearthstone of the American home, it was not enough that the Government should not itself trespass upon that liberty; the Government must see to it that neither the kidnaper, the marauder, nor any man who would take away that liberty by any kind of injustice—physical, moral, or economic—shall be permitted so to do. What higher form of freedom; what better state of liberty could the citizen be afforded than that afforded under a true democracy of opportunity for all the people?

The creed of Andrew Jackson's party became an earnest effort so to conduct the government of this country that 130,000,000 people with a tradition of individualism might inhabit a contiguous land, rich and fertile of resource amid the complexities of modern civilization, so that all should have enough, none should have too much; all should have justice, none should have preference; each should be stimulated to do his best, none should be permitted to do his worst; conflicts should be reduced to a minimum; and the end of government should be the utilitarian philosophy of honestly trying to bring about the greatest good for the greatest number with unfairness toward none.

For 5 years now the Democratic party has striven to realize that aspiration with an earnestness not surpassed in the annals of history. We challenge any period of history to show such a profound influence upon the progress of a people as that administration has shown for the last 5 years. We see agriculture, for the first time, sharing with industry the Government's earnest efforts for aid; we see the purchasing power of the farmers raised by billions of dollars, and a great effort made to give the wage earner the country over not only the recognition of the Biblical principle "that the laborer is worthy of his hire" but the power to consume the products of the farm; we see Federal regulations of security issues and stock exchange for the protection of the investor and the honest trader; we see a purging of certain features of the Nation's public utilities—an agency that regulates the Nation's network of communications systems, and assures not only an orderly development and protection of these important agencies from the viewpoint of the investors but likewise gives an assurance that the marvels of the radio shall not be selfishly employed to undermine the morals of the American home; we see a rejuvenated Maritime Commission building a merchant marine to do honor to the American flag and to give greater security to the American people; we see an insistence upon the consciousness in the Federal courts that they, too, have a responsibility for a nation's progress, and in the Nation a determination that not even the judiciary is above a legitimate concern for the public welfare; we see prohibitions against price discrimination between buyers of commodities of like grade and quality so as to injure or destroy the weak competitor; we see further reforms in the banking structure added upon the noble base of banking reform laid by Woodrow Wilson and Carter Glass; we see something that had been considered as impractical as a child's dream becoming an actuality—insurance of small bank deposits so as to secure and to stimulate a nation's thrift; we see an enlargement of the Nation's enjoyment of mechanical and electrical devices—electric power going into the rural districts to entertain and to comfort the occupants of the lonely farm home; we see great power reservoirs harnessed and made subservient to a nation's needs; we see the deserts irrigated, floods brought into greater and greater control, the forests protected, and a nation's dwindling timber resources being restored; we see a wasting soil preserved against erosion, and hundreds of thousands of families living upon soil too poor to produce a livelihood removed to lands of more fertile character; we see a nation's credit protecting the American home against mortgage foreclosure; we see, for the first time, the strong hand of Federal power building homes, and at the same time sacred hearthstones for the comfort and the peace and the patriotism of American families; we see a program of social security by which the crippled child has its little limbs straightened, the blind is assured at least a pittance for comfort, the old man and the old woman heavy with the hard years of life saved from the poorhouse or an untimely grave; we see the employed man or woman, with the help of the Government, laying by in store a reserve for the day of unemployment, and an insurance policy for the time when the head of the household lies still in death; we see employment for the jobless; we see public works of a useful character from one end of the Nation to the other; we see literature, art, and music stimulated by an interested and appreciating Government; we see the heart of the Nation lifted; the dull countenance of a dejected people illuminated with hope; the weak eyes of the despairing revived with determination; the heart of a great nation beating confidently and patriotically in united resolve that we shall continue our march forward.

The President has said that this generation has a rendezvous with destiny. We know that probably the historic role of this democracy in the years yet ahead of us may be the brightest star in the firmament of this age, or it may be a burnt-out and dark mass whence once emanated brilliant light. Whether we like it or not, the world looks to us for an example. Demoralized, defeated, disillusioned people the world over look to us for hope. They look to us for courage to keep on fighting for those things that seem now forever beyond their grasp. We must keep alive freedom, liberty, the principles of brotherhood, but to do this we must find some answer to these sinister forces which are almost beyond the reach of even a nation's power, and threaten to rob men and women who are trying to carry on this fight for freedom—even of the means of a bare subsistence.

In an earlier day when chaos seemed to engulf the Old World, our forefathers with their intrepid will, set out to, and established, their civilization and their aspirations upon another. America again must lead the way to new worlds; to new worlds of thought, to new worlds of understanding, to new worlds of adjustment, to new worlds of harmony, to new worlds of unity. And when this generation, as I prophesy, shall have met its rendezvous with Death, they who have gone ahead of us who carried the torchlights of their difficult generations, will know that their fine blood has not lost its vitality, and that we are worthy of their tradition.

Jefferson Memorial

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

REMARKS OF THE PRESIDENT BROADCAST AT THE GROUND BREAKING FOR THE THOMAS JEFFERSON MEMORIAL IN WASHINGTON ON DECEMBER 15, 1938.

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the RECORD the remarks of the President on the occasion of the ground breaking for the Jefferson Memorial in Washington, December 15, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Nearly a hundred years ago the Congress of the United States, in response to a general public demand, undertook to provide a memorial in the National Capital to the first President of the United States, George Washington. There followed many years of controversy both as to the type of memorial and as to its location. The Washington Monument emerged as the result of congressional action.

Half a century ago, again in response to public demand, the Congress began the consideration of a monument to the memory of Abraham Lincoln, the preserver of the Union. Years went by and a distinguished committee, following the broad objectives of the original plan for the development of the National Capital, recommended the creation of two broad axes in the general form of a cross—one axis from the Capitol, through the Mall, past the Washington Monument, to the river bank; the other axis from the White House, past the Washington Monument Grounds, to another point near the river.

In line with this well-considered plan the Congress erected the Lincoln Memorial at the end of the longer axis, and it was then the clear intention both of the Congress and of the many planning committees and commissions who studied the subject to complete the other axis by the erection of a public monument at the fourth corner of the cross.

For far more than 50 years Thomas Jefferson, the third President of the United States, has been recognized by our citizens not only for the outstanding part which he took in the drafting of the Declaration of Independence itself, not only for his authorship of the Virginia statute for religious freedom, but also for the services he rendered in establishing the practical operation of the American Government as a democracy and not an autocracy.

For very many years it has seemed appropriate that, with Washington and Lincoln, his services should be held in memory by the erection of a monument of equal dignity. We are breaking ground today for such a memorial. The Congress of the United States, through a distinguished Commission, has, after long consideration, chosen this site and made the first appropriations for the erection of the Thomas Jefferson Memorial.

In the days to come the millions of American citizens who each year visit the National Capital will have a sense of gratitude that at last an adequate permanent national memorial to Thomas Jefferson has been placed at this beautiful spot because, as the joint resolution of the Congress says, "The American people feel a deep debt of gratitude to Thomas Jefferson" and "honor the services rendered by him."

Mobilization for Human Needs

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

ADDRESS OF THE PRESIDENT BROADCAST FROM THE WHITE HOUSE IN BEHALF OF THE 1938 MOBILIZATION FOR HUMAN NEEDS, OCTOBER 14, 1938

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address of the President,

broadcast from the White House on behalf of the 1938 mobilization for human needs, on October 14, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In troubled days when the nerves of men and women have been strained almost to the breaking point we have been in danger of losing sight of one very important fact—the all-pervading human kindness of men and women. This human kindness cannot be created artifically out of speeches and appeals—it is part of life itself.

In accordance with this thought, I am not this year making a speech or an appeal in behalf of the 1938 mobilization for human needs, but I am calling your attention to the past and present generosity of the people of America. That generosity never has failed and please God it never will fail. In full faith and confidence, therefore, I present to you the news that local community chest drives will shortly be undertaken in all parts of the country.

There are some persons who say that the need for voluntary private agencies has decreased. They say that the Government—Federal, State, and local—has moved in and taken over part of the jurisdiction of the private agencies. Such persons talk as if the scope of voluntary action and of mutual aid had been limited, or even eliminated.

Private community effort is not contradictory in principle of government effort, whether local, State, or National. All of these are needed to make up the partnership upon which our Nation is founded. The scope of voluntary action cannot be limited, because the very desire to help the less fortunate is a basic and spontaneous human urge that knows no boundary lines. It is an urge that advances civilization. I like to think it is a national characteristic.

Let me give you an example of successful working-together. One section of our country, New England, has recently been devastated by hurricane and tidal wave. Hundreds of lives were lost and millions of dollars worth of property were destroyed. This was indeed a tragedy. But there was one consolation in this New England tragedy. Hardly had the hurricane subsided when all the forces of Government, assisting and cooperating with private agencies, were rushed to the aid of the injured, the sick, and the homeless. How many lives were saved because of these efforts no one can say. The extent to which human suffering was alleviated is beyond all estimate. And we can say that no effort was spared to aid the victims of this disaster.

The rehabilitation work is still going on. The Red Cross, the W. P. A., the C. C. C., the N. Y. A., the Army engineers, and other Federal agencies are working with the local agencies, both private and public, to rehabilitate those stricken areas and to assist those who are in need. Certainly, there has been no conflict between Government and private agencies—there has been more than enough work for both. And there is more than enough work for both in our national effort to lift up the lower one-third of our Nation to a standard of living which will conform with decency and comfort and self-respect.

It is true that our Government has assumed increased responsibilities for social welfare. We are giving work to more than 3,000,000 men and women, unemployed through no fault of their own, on our W. P. A. program. Through our social-security program we are aiding the States in caring for the aged, for widows and children, and for the blind. We are providing new opportunities for more than a half million boys and girls through our C. C. C. and N. Y. A. programs; and in many other ways the Federal Government, in cooperation with the State and local governments, is aiding our underprivileged citizens.

But you may well ask if the need for community action is as great as before now that your Government has provided a national program of social security. I would answer that the need is just as great as before, because Government help was intended and is intended to improve the old conditions, and if local help and private help decrease today we will nullify the improvement and return to just where we were before. Very definitely we need the effort of the pioneer agencies, the local voluntary agencies, because it is expended on concrete problems which must be met if our whole program is to go forward with the coordination that is its basic aim.

Community leaders have met the challenge of changing conditions. They are not looking backward with resentment against the Government. They have welcomed the acts of their Government as a liberation of their efforts, as an opportunity to move forward on the front of social progress.

It is these men and women whom I salute. They are the shock troops of the social conscience. I call upon the American people to fall in behind such leadership and to widen the social horizon. I am thoroughly convinced that no matter how much the Government does the private agencies of America still have much to do before any of us can rest on our oars or on our laurels. I am thoroughly convinced that the American people want to participate on a voluntary and individual basis in the endeavor to make this country the best possible place in which to live. I feel confident that this year's community chest drive will be successful, as it has been successful in the past and as it will continue to be successful for long years to come.

American Legion National Convention

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, AT LOS ANGELES, CALIF., SEPTEMBER 19, 1938

Mr. CONNALLY. Mr. President, the senior Senator from Massachusetts [Mr. WALSH] addressed the national convention of the American Legion at Los Angeles, Calif., on September 19, 1938, on which occasion he delivered a very able and instructive address. I ask unanimous consent that it may be published in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a great privilege, and I am duly appreciative of the honor that you accord me, of addressing the members of the American Legion assembled in annual national convention.

I salute all assembled here—you who represent at this convention those millions of patriotic men and women who have witnessed and experienced the indescribable horrors of war in the defense of our country and democracy.

I salute your able, energetic, and popular national commander, Mr. Doherty, a respected and outstanding citizen of my own State of Massachusetts, and one whom I have long held in high esteem and with warm personal regard.

At the outset, I need hardly remind you of my deep interest in legislative matters affecting the veterans—an interest that has continued unabated since the commencement of my service in the Senate in 1919, when I inaugurated the investigation of deplorable conditions in veterans' hospitals, which culminated in the present excellent hospital facilities, and moved to enact the first of the presumptive clauses into veteran legislation.

I will continue, as in the past, to exhibit that concern for veterans and their dependents, disabled or otherwise, who may seek governmental assistance. Your members may be assured that the Congress will be appreciative always of receiving suggestions and recommendations from this organization for legislative action beneficial to your comrades.

You have come from all parts of our great Nation to transact the routine business of this historic organization, and what is more important to the welfare of our beloved country you have gathered here to renew and rekindle the blessed associations of your sacrifices in the greatest military adventure since the dawn of history.

You have come to pledge anew your fealty and devotion to the exalted cause of your country for which you offered on the altar of imperishable patriotism everything that humankind holds dear—your unremitting service, your youthful hopes and ambitions, your precious blood, and where necessary, your very lives.

No man in whose veins flows the warm love for our great and dear America could fail, in the presence of this great concourse of patriots and saviors, to feel a deep inspiration from the sacred memories this occasion evokes in our hearts—the stirring days of 1917 and 1918, the bugle call to arms, 10,000,000 willing men marching to martial strains, surging fearlessly to combat in a thousand fields and forests of France—struggle, sacrifice, slaughter, death, and, at last, victory.

What tragedy, yet what glory did those wartime scenes encompass. Through travail and death to victory. That is the unerasable record stamped upon the sands of time—to live forever as imperishable testimony of the glorious ideals of America, fought for and died for by you and your comrades. And for what? All for the salvation of our American institutions, the preservation of our self-government, and the maintenance of our best traditions. All these sacrifices meant so much to you who consecrated everything you had to your country's cause, in order that (as we were told at the time) "democracy here and throughout the world might live."

Those words, "that democracy might live," is almost an irony as we survey the world about us. Nearly 20 years have passed since that eventful Armistice Day in 1918, when the peoples of the allied nations riotously celebrated with unabated joy the end of the World War. Regardless of what officials may have thought on that day, there is no doubt that the people believed that they had fought and won a war to end all wars. What a disillusionment has followed. Who can assert today who were the victors or who were the victims of that war? We do know your sacrifices were nonproductive of peace or progress. We have not even the consolation of feeling that the dead who lie in unmarked graves, the millions maimed and slain, the blind and the halt commanded to a

life of suffering, was an actual contribution to the preservation of world peace or the protection of freedom for the human family. We only know the names of the victors and the vanquished. But who can proclaim any enduring truths and principles won for the welfare of humanity?

Today at home and abroad we behold the very negation of the ideals of democracy. In some of our former allied countries and their adversaries of 1917 democracy has been cast into scorn and contempt. Force and tyranny have replaced moral suasion and individual freedom as the most modern instruments of government. Coercive dictatorships, suppressing most of the principles we have cherished, in some cases contrived by tyrants more ruthless than Nero, more merciless than the primitive savage, are the order of today. In those beleaguered countries the rights of free men for which you fought and your comrades died to preserve have been shamelessly cast into the discard. The individual is effaced, his conscience and his soul stagnated, while the corporate state of the superman holds imperial sway by means of the mailed fist, carnage, and murder.

Insolent aggressors in control of millions of enslaved subjects, who recognize the law of neither God nor man, are planning and pursuing policies in complete disregard of the lessons of the World War. They have forced nations and people everywhere, crushed by staggering taxation, seeking and praying for peace, to maintain heavy armaments to build and maintain huge engines of war in self-defense. In the midst of a darkness and despair that hangs over the world, with human beings crying out everywhere for peace, I plead with this powerful and patriotic organization to accept the challenge to preserve peace and order here in our own America and to continue ceaseless devotion to the claims of justice.

On this memorable occasion, with fitting solicitude for you in a desire for brevity, I propose to discuss with you some of my views on three subjects of current and critical importance: Neutrality, national defense, and radicalism.

NEUTRALITY

We are told by some who profess altruistic theories of international cooperation that America cannot fail to avoid entanglement in the next war unless we join with other nations of the world in efforts to prevent it. Some of these sincere advocates to pacificism and internationalism are urging upon us, even now, a policy of intrusion in the muddled and menacing affairs of Europe and the Orient in order, as they assert, to preserve peace and promote justice. With these views I cannot agree. Instead, I urge a policy of unquestioned and affirmative neutrality.

We must strain every effort, employ every means of vigilance, exhaust every alternative short of mischievous meddling to prevent another world conflict. But, even more important, we must protect our country from becoming entangled in the mesh of international rivalry and conspiracy which inevitably leads to war.

Our primary duty in this regard is not to other nations who urge impressive claims on our friendship, not to the property holders who dominate our own great munition industries, not to our financial interests who may have foreign commitments, not to any of the groups of our Nation who have gainful economic enterprises abroad which they primarily seek to protect. Our first solemn duty is to the millions of young men, standing in the same position as you brave citizens stood in 1917, upon whom all the heavy burdens, the sacrifices of war would fall—to their mothers, their wives, their families, and to those dear to them. The problems of youth of America are complicated and serious enough as it is, problems growing out of our own economic troubles, without our Nation involving them in the frightful events of another organized international cataclysm.

There is no doubt in my mind—and I am sure all who are mindful of the World War will agree—that the American people will never tolerate an involvement in any war to settle European troubles, to salvage the foreign holdings of our own "follow-the-flag" dollar diplomats and capitalistic groups. "With malice toward no nation in the world but with charity and justice to all," we must courageously and tenaciously cling to the Washingtonian policy of minding our own business, tending to our own affairs, and letting all other nations do likewise.

As a nation, we have no preordained mandate to police the rest of the world. To meddle with the explosive rivalries of Europe—rivalries, jealousies, animosities, and enmities which antedate our own origin as a free independent government—is to invite disaster.

American neutrality must be real and genuine, fearlessly asserted, and meticulously enforced if we are to avoid international bad will and possible complications likely to lead to war. The policy, "Avoid entangling alliances," can be transgressed by indirection and implication as well as by express language.

Our own experience has proved how dangerous it is to carry on trade and commerce with belligerents in time of war. An offer to trade on equal terms with all the nations engaged in war is not equal treatment, in fact, inasmuch as circumstances will very likely permit one of the belligerents to obtain supplies from us while the other is cut off. We then become, perhaps unintentionally, the ally of one and invite the enmity of the other. This is precisely what happened after the outbreak of the World War in 1914 and prior to our entry into the war.

In my opinion, the only course that will actually assure our peace, if we are to remain truly neutral, in fact, is to suspend all trade and commerce with all the belligerents in time of war. Such a course may occasion some economic loss, but it will be unmistakable evidence of our neutrality.

The present Neutrality Act, in my judgment, requires substantial amendment if it is to serve its intended purpose. It is dangerous to leave the imposition of embargoes to the discretionary judgment of Government officials, however highly placed, however great our confidence in their judgment, however good their intentions. This policy permits, in a sense, a variable and changing attitude by our Government instead of a positive, inflexible, fixed position requiring complete detachment.

NATIONAL DEFENSE

The realities of today in the world at large admit of only one construction, namely, that strong and adequate national defense, coupled with absolute neutrality, is the best and perhaps the only assurance of peace. The war to end all wars has been followed by every nation outdoing every known effort to prepare for war on land and sea and in the air.

The most striking lesson of the present war spirit in the world is that weakness encourages aggression. We must proceed upon the belief, amply supported by the record of history, that a nation is seldom attacked if its weapons of defense are so strong that attack is foredoomed to fail.

We are committed to a policy—and we must militantly defend it—of strong national defense. The naval-expansion bill which was enacted with overwhelming approval at the last session of Congress must provide not merely a "blueprint navy." But the policy enunciated by the Congress must be translated into the actual building up of the naval strength declared therein to be our needs.

We must not be content until we have an American Navy of such size that it may single-handed be a match at sea against any foreign power or combination of powers, a navy of such sufficient size and mobility as to afford adequate protection to both the Atlantic and Pacific seaboard under any conceivable set of circumstances. This means a large navy in every category—fighting ships, auxiliaries, aircraft, naval bases, and all else. It entails large expenditures of money. But under the conditions prevailing in the world today it is the only safe course open to us.

It cannot be emphasized too often that we are not proposing to enter into a competitive armament race with the other naval powers. The size and character and extent of our naval strength should be determined solely by what we conceive to be our own needs for our own national defense in the light of all the circumstances. One of the circumstances, of course, is the size and character of the naval armament built and maintained by other countries.

We cannot emphasize too often that we are wholeheartedly in favor of disarmament as an avenue of peace, provided the disarmament is mutual and universal. Personally, I have supported every disarmament conference and every effort to secure disarmament treaties. The American people know that every war veteran can be counted on to support every move looking to the avoidance of another war for the United States unless we be attacked; and to support every move calculated to the preservation of peace. This is not only the course of true patriotism but one of the imperishable purposes that has penetrated, never to be eradicated, the very souls of you veterans who have experienced the social, political, and economic evils of war.

Such a policy does not mean we are too proud to fight. Though shunning war as we would a poisonous reptile, we must be prepared to defend and protect our shores, our people, our property, and our homes against invasion or foreign aggression. We must let the other nations of the world know with positiveness and finality that although we love and cherish peace, and will strive mightily to achieve it, yet we are ready at all times to ward off and destroy any enemy who attempts to wage war against us.

COMMUNISM

War from without is not the only danger that America is facing today. We have enemies within our gates, enemies that are challenging our basic ideals secretly and stealthily, striving in devious ways to undermine them, and whose ultimate aim is to overthrow our system of organized economic and social activity. The democratic constitutional government that has flourished here for more than 150 years they would replace with a proletarian dictatorship.

Some may deride those who recognize this danger to American institutions as unduly disturbed by sporadic outbursts of radical agitators. But discerning American patriots can no longer afford to ignore the widespread campaign of radical ideas in our country today. No strata of our social and economic structure is free from the encroachment of extremely radical thought and action which have as their major objectives a new political and economic system in America.

The American Legion, whose members have never failed to be interested in the public affairs of the Nation, received a shocking illustration of the activities of these radicals at a national convention of educators recently held in the city of New York. At this meeting of educators and teachers gathered from the entire country, a paper was presented which cast aspersions (not, I am sure, with the approval of all the members) upon your organization. In substance, you were branded as Fascists and reactionaries, your leadership as unattuned to modern social needs, your membership as moribund and unenlightened—all this because you have opposed dangerous radicalism.

That you will continue to oppose subversive doctrines with all the zeal, with all the force, with all the great influence at your command the American people may be assured. Your service, your sacrifice for our Nation in time of war are contributions that the American people can never forget, and you are not going to fail them now by battling less bravely than in 1917 to preserve their freedom—civil, religious, and political.

Veterans, the record of your service is immortal, ineffaceable. It will live gloriously forever. But your service in peace is not yet finished. You must gird yourselves now against the subtle enemies within our gates. We seek not to suppress the right of any man or woman to think and speak freely. That is their God-given right as American citizens. But we must exert our utmost influence in thought, speech, and action against the apostles of foreign philosophies, alien to American ideals, who would, if they had their way, topple our most precious institutions about us and erect on the ruins the superstructure of destructive authoritarian government.

Guarding the destinies of America against the perils that threaten to entangle it from abroad and the sinister enemies that would undermine it at home is more than ever a cause to which you may well dedicate yourselves. As was once said of the great first President of the United States, let it with deserving reality be said of you, the American Legion, by the grateful appreciative citizens of America:

"First in war, first in peace, and first in the hearts of his countrymen."

Veterans, as in 1917, the command is "Forward"—forward, not for world democracy but for peace and democracy at home here in America.

Institute of Public Affairs

EXTENSION OF REMARKS

OF

HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, AT THE INSTITUTE OF PUBLIC AFFAIRS, CHARLOTTESVILLE, VA., JULY 4, 1938

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the distinguished Senator from Florida [Mr. PEPPER] at the Institute of Public Affairs, Charlottesville, Va., on July 4, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Emerson has said that an institution is but the lengthened shadow of one man. How appropriate is that declaration to the scene here today, when we realize that this teaching and learning institution providing this forum for the exchange of ideas in the best tradition of intellectual freedom is but the lengthened shadow of the spirit and the hand of Thomas Jefferson. It is fitting, indeed, that this university, which for more than a century has taught men and women how to live better, how to develop their talents, to elevate their standards of life, to improve their quality of being, should still be concerned about how other men and women may live yet better than we, and how we, even, may with the advantage of man's increasing knowledge and experience and God's ever-enduring bounty, live still better tomorrow than we live today. This many-sided, almost universal, genius—Thomas Jefferson—may be said to have had one passion in his life—a passion for liberty. And liberty to Jefferson meant freedom, freedom from the restraints which are neither natural to the state of man, nor just.

The Virginia statute of religious liberty bears testimony to the fervor with which he fought against the shackles of the conscience imposed by intolerance, bigotry, or unrighteous authority. This flower of both an old and a new civilization here in this hallowed soil, amidst these age-old spreading trees, and among these touchingly mellow traditions, is immortal evidence of his will to destroy the bonds of the mind and to dispel the dark shadows of lack of understanding. His fingers wrote with burning words his passion against those political restraints which narrowed the horizons of life, liberty, and the pursuit of happiness. He laid his eloquent curse upon any form of government which should become destructive of those high ends. Indeed, he imposed upon a free people the solemn duty to alter or abolish a form of government destructive of those aspirations, and to lay their government on such principles and organize its powers in such form "as to them should seem most likely to exact their safety and happiness."

He was not appeased when a nation had achieved its liberty. His spirit wrought itself into an assured liberty for the citizen against the tyranny even of his own Government, his own brethren, so that into the Bill of Rights were impressed in indelible permanence those liberties and that freedom which were deemed to be inalienable to the American people.

No man in our history has so broadened the horizon of conscience, of the mind, and of the person's liberty as has Thomas Jefferson. Upon these concepts, and to perpetuate them, he built a national consciousness of their necessity and fathered a national determination for their survival.

The Democratic Party, thus conceived, is the offspring of these Jeffersonian concepts of liberty and freedom. Throughout all its long history, its varied and changing career, has that party held steadfast to these sentiments of its origin. Its voice has not always been strong enough to arrest the Nation's attention, its purposes and its methods have not always been unconfused, its faith has not always had the same fervor, but at no time have not both its voice and its hand been of the same person. It has not recanted, ever.

Jefferson knew tyranny at first hand. He knew the tendency to oppression not only in foreign governments but in local governments, in majorities even at home; and he knew that nothing save rigid impenetrable immunity could cloak the individual against the contraction of the individual's political freedom. He knew that men are ambitious and governments which men dominate take their ambitious passions from those who give the empty form vigorous reality of substance. He knew that moral restraint was not enough to safeguard those who loved liberty against overreaching governmental power. And so he was known to be jealous of every narrowing of individual freedom by additional government authority.

It might even be said that he knew that government was not an unmixed blessing. In its very nature and of its very necessity it exacted at best a great deal of one's cherished freedom, and the strength of every tendency, well he knew, was more and more to collapse the corridors of freedom in which men lived. And so, in giving expression to the much used and wrongly termed phrase "that government is best which governs least," he deplored the necessity for every additional contraction of the boundaries of personal liberty.

It is interesting, however, to observe the misunderstanding of these principles which is current in some modern political speech. For many who are the disciples of a system which has conceived and would perpetuate upon the American people a slavery far more real than the tyranny of George III, call upon this same Jefferson as their prophet, and their authority to continue their dominion. This Jeffersonian philosophy of liberty and freedom they would reduce to a box with one side; and to hear them speak one would think that Jefferson neither appreciated nor opposed any oppression save that from England or from the Government of the United States; that his whole life's struggle was one of total unconcern for the fate of men, women, and children from economic forces more exacting in their tyranny than were ever the wildest ravings or the most oppressive decrees of a mad George.

To appreciate the emphasis in Jefferson's attitude one must recall the economic and social order of which Thomas Jefferson was a part. It is not easy for us, citizens of an empire with more than 130,000,000 people inhabiting so large a share of a continent, besides islands beyond the seas, to appreciate that in 1776 Jefferson wrote a Declaration of Independence for a population of about 3,000,000, scattered over a territory 1,500 miles in length, narrower than 500 miles in width. Fish in plentitude filled the streams and the seas, while game enlivened the primeval forests.

The fallow ground invited man's effort for his food and produce of his heart's desire. Illimitable acres stretched before his eye. In his inaugural address Jefferson spoke of our country as having "room enough for our descendants to the thousandths and thousandths generation." Man's home beckoned from the virgin woods. A commercial system was still but the means of a society's service and, while it invited the enterprise of those who understood its signs, did not dominate a people's life or circumscribe their destiny.

There was plenty of work for all. The relations between employer and employee were still intimate. The factory system had not come to chain men to their machines and condemn families to shabby cells in darkened areas of a free country. There was no great industrial prince who held the power of food, clothes, shelter, education, health, and happiness of a million fellow human beings. Monopolies had not devoured a nation's forces of production and related the price of a country's essentials not to cost, but to what producers could exact. There were no masters of the elements of exchange, who possessed a despot's power to guide the ebb and flow of a nation's fortune.

The essentials of life, at least, were available to every man and woman by the exercise of reasonable enterprise and reasonable effort. And in that civilization, and in that social order, so long as nature did not withdraw its bounty, there was no serious threat to the liberty of living, save from those artificial restraints which might be imposed either by or in the name of authority.

The reason, therefore, that Thomas Jefferson so unrelentingly set his force against those artificial curbs upon natural liberty, which he and his fellow citizens enjoyed, was because he loved that natural kind of freedom, and he wanted it ever to be the habit and the inheritance of man to be free in that grand way that nature, here, upon this bountiful continent, made him free under a free and democratic government.

Jefferson's administration, therefore, concerned itself with what were essentially political problems, including international complications. In fact, upon his retirement the Assembly of Virginia passed a vote of thanks to Jefferson for the services he had rendered the country, naming among them the decline in the number of public officials, the reduction of the national debt, the peaceful acquisition from the Indians of 100,000,000 acres of land for settlement, and doubling of the size of the national domain by the purchase of Louisiana, the lesson taught the Barbary pirates, and the inviolate preservation of freedom of speech and of the press.

It will be noted, however, that there were two economic aspects of Jefferson's acquiring new land. The first was to open up new

areas to acquisition and development for those who, for one reason or another, were forever marching toward the frontier; and the second was to provide unobstructed navigation of the Nation's greatest stream and forever to secure to his countrymen freedom of access to this great commerce-bearing waterway.

It will not be overlooked, either, that Jefferson took this decisive step for his country's peace and his country's prosperity in the face of the gravest doubt as to his constitutional authority so to do; if in fact he were not actually convinced that in making the acquisition, he exceeded his authority. Jefferson, therefore, is certainly no authority for the view that the Nation's Government may not, when faced with a great national emergency involving the safety and the well-being of its people, resort even to the very verge of its constitutional power.

In his first message to the Congress Jefferson also made it clear that he was not averse even to direct governmental aid to business, if in the public interest and under the circumstances in the opinion of the Congress such aid should be required. For while he stated his belief that "agriculture, manufacture, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise," yet he added, "Protection from casual embarrassment, however, may sometimes be seasonably interposed." "If in the course of your observation or inquiry they should appear to need any aid within the limits of our constitutional powers, your sense of their importance is a sufficient assurance they will occupy your attention. We cannot, indeed, but all feel an anxious felicitude for the difficulties under which our carrying trade will soon be placed. How far it can be relieved, otherwise than by time, is a subject of important consideration."

Certainly Jefferson was not beyond using administratively the Federal financial power to weaken the force of the Federalist money interests by building up counteracting Republican financial agencies in what he regarded as the public interest. For Beard tells us that "knowing full well how deeply dyed with federalism the United States Bank and its branches were, Jefferson and his advisers deliberately adopted a policy of manipulating the Government funds in such way as to build up local Republican money machines in order to resist the force of the Federalists interest and provide competitors that would give the Republicans the power in the economic world, which they so earnestly desired." And, continued Beard, "That this was a conscious policy of Jefferson's administration, there can be no doubt." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, p. 446.)

To make the matter beyond doubt, in reply to a communication concerning the bank at Providence, R. I., which was a notorious Federalist stronghold, Jefferson said: "As to the patronage of the Republic Bank at Providence, I am decidedly in favor of making all the banks Republican, by sharing the deposits among them in proportion to the dispositions they show; if the law now forbids it, we should not permit another session of Congress to pass without amending it. It is material to the safety of republicanism to detach the mercantile interest from its enemies and incorporate them into the body of its friends." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, pp. 447, 448.)

Moreover, Jefferson clearly foresaw the day when the employment saturation point should be reached even in agriculture and there should arise the necessity of the Government's guiding the surplus of labor, that is to say, the unemployed, into some useful and profitable employment.

When, in the summer of 1785, John Jay wrote him asking whether it would be useful to us to carry on all our own production, or none, he replied: "Were we perfectly free to decide this question, I should reason as follows: We have now lands enough to employ an infinite number of people in their cultivation. Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, they are tied to their country, and wedded to its liberty and interests, by the most lasting bonds. As long, therefore, as they can find employment in this line I would not convert them into mariners, artisans, or anything else. But our citizens will find employment in this line until their numbers, and of course their production, become too great for the demand, both internal and foreign. This is not the case as yet, and probably will not be for a considerable time. As soon as it is the surplus of hands must be turned to something else." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, pp. 425, 426.)

Everyone knows, of course, that Jefferson's passion for liberty would no more compromise with economic despotism than with political despotism. Writing to an Italian friend in 1796 in passionate remonstrance against an economic tyranny fast engulfing the cherished independence of his fellow citizens, he said: "In short, we are likely to preserve the liberty we have obtained only by unremitting labors and perils. But we shall preserve it; and our mass of weight and wealth on the good side is so great as to leave no danger that force will ever be attempted against us. We have only to awake and snap the Lilliputian cords with which they have been entangling us during the first sleep which succeeded our labors." (Economic Origins of Jeffersonian Democracy, by Beard, 1927, p. 431.)

It must be satisfying to the spirit of Jefferson to catch his own passionate note of remonstrance against conditions similar to those which he protested against in these words of the Democratic platform of 1932: "The only hope for improving present conditions, restoring employment, affording permanent relief to the people, and bringing the Nation back to the sound position of domestic happiness, and of financial, industrial, agricultural, and commercial leadership in the world, lies in a drastic change in economic governmental policy."

In the same spirit of Jefferson, Jefferson's party then set forth to the American people a platform which for clarity, candor, and courage is without a parallel in American history. In unequivocal words this virile party of Jefferson's expressed its determination and its covenant to restore to the American citizen as fully and completely as modern conditions would permit the kind of liberty and freedom which Jefferson gave him in his day.

In words which Jefferson himself might have written, that platform thundered against monopoly, an unfair-trade practice which threatened the independence of labor, the small producer, and the distributor; against financial interests fleecing the American people of their savings by the sale of securities issued both at home and abroad; against excessive charges by utility companies; against a vicious banking system, which violated the confidence and jeopardized the savings of the American public; against an iniquitous tariff law, which gave undue and abused privilege to a class at the expense of the whole people. And equally clearly, candidly, and courageously did that platform covenant with the American people that it would use the power of the people's Government to give a greater, actual, practical security to America's citizens—those citizens struggling with the superior forces throttling their agriculture; those citizens struggling with the dominating forces of economic maladjustment which had thrown them out of employment and closed to them an avenue of economic opportunity; to those citizens who aspired to a greater liberty of leisure gained by the reduction of excessive hours of labor; the kind of security that could be provided to the individual citizen only by unemployment and old-age insurance. Likewise in the same spirit did that platform pledge the Democratic Party to the restoration of the citizen's private liberty, curtailed by the eighteenth amendment, and reiterate again democracy's fundamental doctrine of liberty—"equal rights to all; special privileges to none."

After 4 years of administration of the people's Government in times as trying as any in this country's whole history, the Democratic Party again in 1936 declared to the American people its fundamental faith and its conviction of the duties of this Government in these times. For in that platform that party said:

"We hold this truth to be self-evident—that Government in a modern civilization has certain inescapable obligations to its citizens, among which are:

"(1) Protection of the family and the home.

"(2) Establishment of a democracy of opportunity for all the people.

"(3) Aid to those overtaken by disaster."

Here was clearly expressed a new Declaration of Independence—the faith of the people's party, that the people's Government was concerned not merely with the technical, but with the larger liberty and the effective freedom of the American citizen. For obviously, if the American family might enjoy its traditional freedom around the sacred hearthstone of the American home, it was not enough that the Government should not itself trespass upon that liberty; the Government must see to it that neither the kidnaper, the marauder, nor any man who would take away that liberty by any kind of injustice, physical, moral, or economic, shall be permitted so to do. What higher form of freedom, what better state of liberty could the citizen be afforded than that afforded under a true democracy of opportunity for all the people! Who more than Thomas Jefferson would have appreciated such a declaration of policy, and such a covenant of faith!

Surely there is nothing inconsistent with the noblest conception of liberty for a party to assume an obligation to aid those overtaken by disaster. You may be sure that the American people are not easily fooled. Well do they know what liberty is their inheritance, what freedom they have the right to enjoy. So when the American people have given to these declarations of party objectives approval never paralleled in American history, you may also be sure that these concepts of individual liberty are in high accord with those which are deeply imbedded in American hearts.

The cyclonic forces which threatened to engulf the American people and the American social and economic order in March 1933 began to form when Alexander Hamilton and his associates wrote their political concept into the fabric of American political life. The economic despotism which some private enterprise wielded, the financial tyranny which the masters of the Nation's finance exercised at the end of 1932, the shameless abdication by the American Government of its duty to prevent these aggressions and to preserve the traditional liberties of the individual American citizen prior to 1933, all had their origin in the views of the Hamiltonians that the form of this Government should be a kind of fascism—ruled by the industrial and financial interests—and that the Government, when it did not especially contribute to and enhance the power of these ruling State corporations, should at least assure them the protection of the rule of the jungle, that "He may take who has the power, and he may keep who can."

Against a state of affairs provoked by these conditions and accentuated by the closing of the American frontier more than one-third of a century before, a state of affairs which for the first time drove the dark shadows of threatened revolution across the folds of the American flag, an otherwise peaceful nation in 1932 rose in righteous wrath.

It demanded that the money changers be driven out of the temples of finance, that business abuses be stopped, and at least a semblance of the moral law be applied to what ambitious and powerful men could do under the guise of business. It demanded that democracy reassert itself and the people regain some control,

at least, over their economic and political destinies. It demanded that the economic structure of the United States be built from the bottom up, and not from the top down. It demanded that the currency of this Nation be put to its legitimate purpose of serving the business needs of an industrious people.

It demanded that the rewards of business enterprise be fairly distributed and that the burden of toil be lightened upon the back of labor. It demanded that the true principles of democracy be applied to the industrial order as well as to the political order. It demanded that our untold resources be applied to the alleviation of human suffering, to better homes, better food, better clothes, and better recreation for all the American people, and not just a few. It demanded the preservation for the American citizen of the greatest of American liberties—the right to work and the privilege of being succored in old age, at least to a peaceful death.

It demanded that the marvels of modern science, the genius of current invention and discovery, be made the workhorse for a more abundant life for all the men, women, and children of America. It demanded that the door of economic opportunity, which had been jammed shut for decades by an avaricious monopoly, be opened again. It demanded that the Government of the United States be moved from Wall Street to Washington, where the peoples' Constitution put it. It demanded a revival of true American earnestness and zeal, the resurrection of age-old American ideals and dreams, when the United States was conspicuous for its spiritual wars. It demanded an America that had the spirit of the forefathers in its own crusading breast.

No government can honorably abdicate the duty to govern. To a degree never before known to our history the American Government is now the willing and intelligent servant of the American people. That Government knows that so great is the inequality in the distribution of its Nation's wealth that 200 of our greatest corporations in 1932 owned nearly one-fourth of the whole wealth and about one-half of the nonbanking corporate wealth of the country; that one-tenth of 1 percent of all the reporting corporations in the Nation in 1935 earned 50 percent of the net income earned in that year by all the reporting corporations; that in 1935–36 some 47 percent of the American families and individuals living alone earned less than $1,000 a year; and that 33 percent of the property passed by inheritance according to the returns of 1937 was found in only 4 percent of all the reporting estates; that nearly one-third of the American farmers make annually less than $500 each, and nearly two-thirds of America's farmers make annually less than $1,000 each; that 42 percent of the total farm population of the United States is tenantry, and the number of tenants between 1930 and 1935 increased almost one-quarter of a million; that we have so squandered our soil resources that already 50,000,000 acres of our lands are eroded into uselessness; that one-third of the Nation is ill fed, ill clothed, ill housed; that the Nation has more illiterates by a million than college graduates; that one-quarter of a million citizens are lost to the country every year by preventable disease, although the annual crime bill for the country is estimated at $15,000,000,000, one murder is still committed every 40 minutes.

That Government, just as Jefferson knew when faced with the national emergency of the Spanish closing the mouth of the Mississippi River, knows that it is confronted with a possible breaking up of the American social and economic order; it knows that it is faced with the herculean task of promoting the general welfare and at the same time preserving the individual right of the American citizen to life, liberty, and the pursuit of happiness, each in his own way, as much as may possibly be. That Government knows that in the new catalog of crime there is antisocial homicide, when manipulation of economic forces starves a child.

That Government appreciates that there can be such an offense as larceny of a nation's resources, and embezzlement by a class of a nation's inheritance. That Government is well aware of both the danger and the difficulty of ordering a nation's agriculture so that the farmer may make for himself and his family a decent livelihood and preserve an indispensable independence.

Well does that Government know the Scylla of cutthroat competition and the Charybdis of destructive monopoly. You may be sure that that Government struggles every day with the problem—with finding an honest answer to the challenging query—of how 130,000,000 of people may peacefully and contiguously occupy so great and rich a land so that all shall have enough, none shall have too much; each shall be stimulated to do his best; none shall be permitted to do his worst; legitimate enterprise shall be stimulated; abuses contrary to the public interest curbed; learning and the arts advanced; misery and suffering eliminated as lies within the power of science; the broad horizon of the Nation further extended, and every resource of the Government employed to preserve not only the safety but the dignity of a child.

They who dare to take the lever of responsible authority in times so demanding will need, if they are to win and keep a nation's liberty, the great qualities of courage above all and, as well, the power to endure with resignation the bitterness of temporary defeat. As Laski tells us: "They will require the self-control that gives rein to the heart only as it is guided by the mind. They will need philosophy as well as faith, daring not less than patience. It is the glory of freedom that it brings these qualities to those who serve it with fidelity. Before now, it has transformed a prison into an altar. Before now it has brought the light of unconquerable hope into places that seemed utterly dark. We who fight the battle of freedom can maintain at least one certainty. We know that alone among the ends men seek it has the genius, where the need of its service is imperative, to give the quality of heroes to the common men who answer its call."

Cottonseed Producers of Alabama

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1939

Mr. HOBBS. Mr. Speaker, day before yesterday, I brought to the attention of the House, the plight of the cottonseed producers of Alabama who have been compelled to sell their 1938 crop at prices which represent a $7,000,000 loss. In all the cotton States the loss is upwards of $75,000,000. A little later, I propose to discuss how the same condition which caused this loss has affected the producers of all other kinds of fats and of oils and oil bearing materials in all parts of the United States.

This is a situation that must not be permitted to continue, not even for another year. The greatest farm problem is marketing. The greatest problem of farm security—the security for the largest group of people in any single industry in the United States—is increased farm income, fair prices, parity, first call on their home markets.

Foreign fats and oils, at prices fairly indicated by the today's quotation of Sumatra palm oil at 2.9 cents a pound, and Philippine coconut oil, almost as cheap, and imported in 1938 to the enormous quantity of 600,000,000 pounds, are the reason for this condition of loss in this great sector of our agriculture.

The prices of these products and of the oils and fats which they produce are very much below what they should be. Farmers producing competitive products are in distress.

From the major premise I now proceed to answer some of the questions which have arisen.

First. Are these fats and oils products really of great importance?

Answer. Yes. Taken all together they constitute one of the largest items of farm wealth. In this list is the following array of production:

	Pounds
Butter, largest average annual crop	2,200,000,000
Lard (inspected plants)	1,250,000,000
Lard (farm production estimated)	250,000,000
Cottonseed oil	1,500,000,000
Peanut oil	75,000,000
Tallow and grease	800,000,000
Soybean oil	225,000,000
Linseed oil (from domestic production)	27,750,000

To this enormous total should be added as a domestic resource, though not agricultural, fish and marine-animal oil to the average of about 300,000,000 pounds a year, or a total of 6,630,750,000 pounds.

The farm value is very hard to estimate. The value of the crude oils and fats range from 3 cents a pound for certain fish oils up to 25 to 30 cents a pound for the fat in butter. Eliminating the value of butter entirely—which amounts to an average of $550,000,000 a year—a fair guess at the other items will give a total of over $300,000,000 a year.

The present low prices will reduce this figure by at least 30 percent. At 1926 prices the value would have been above $400,000,000; at the 1935 prices nearly the same figure.

I am talking about what the farmers should be receiving. The claim that these products are mere byproducts does not affect the fact that they are part of the crops the farmers sell.

One other question is frequently asked; it is this:

Second. Since we do not import very much lard, butter, or cottonseed oil, why is it claimed that these products are injured by what is called large foreign imports?

As to cottonseed oil, the imports have been large during the last 2 years, and may increase. However, the answer, in general, is based on both practical business facts and technical investigation.

The oils that are imported—most of them are just as competitive as imports of lard, butter, or cottonseed oil would

be, for they are interchangeable. The United States Tariff Commission has reported after a long investigation, and its reports and other authoritative statements show how nearly complete is this interchangeability.

The commercial facts are of record in the annual reports of the Census Bureau on "factory consumption of oils and fats."

For example, let us quote briefly from the census figures as to the oils used in the manufacture of shortening, and in the manufacture of soap. These are the largest items in domestic consumption.

In shortening, until recently made very largely of cottonseed oil, in 1937 there was substituted for cottonseed oil twelve and one-half million pounds of coconut oil, all imported; 91,000,000 pounds of soybean oil, more than half of which was imported; 5,000,000 pounds of rapeseed oil—thirty and one-half million pounds in 1936—one hundred and twenty-three and one-half million pounds of palm oil, all imported; 29,000,000 pounds of sesame oil, all imported; and, in 1936, 11,000,000 pounds of Russian sunflower seed oil. The action of Congress in 1936 in placing taxes on rapeseed oil and sunflower oil has ended that competition.

The use of foreign oil in soap is far more amazing. Until we took over the Philippines, soap in the United States was made chiefly of tallow, and the lower grades of other domestic fats, including the lower grades of cottonseed oil and cottonseed foots. Today imported fats have monopolized this market.

Here are a few figures. In 1937 the soap industry used in place of domestic fats, 252,000,000 pounds of coconut oil, 111,500,000 pounds of palm kernel oil, 141,000,000 pounds of palm oil, and 190,000,000 pounds of fish and marine-animal oils. At least one-half of the fish and marine-animal oils was imported. Only inedible tallow of our domestic fats retains a place in the soap industry.

The chemists have evolved the cheapest formulas which will do the job for their respective employers. These cheap foreign products are used to form the cheapest possible combinations of raw materials and the products of American farmers are forced down to a competitive price or else are not purchased at all.

A spokesman for these American farmers who produce these fats and oils says that they are "the forgotten items of American political and business economics."

As pointed out already, the loss this season of over $75,000,000 sustained by the producers of cottonseed, is but one aspect of the national picture presented by the low prices prevailing in the fats and oils industries. The whole picture is fearful. The tragic total of our national loss is a cruel burden, a part of which is borne by every producer in this whole country.

By giving proper attention to this pressing problem and applying the needed remedies, we can surely increase substantially farm income and buying power.

This Business of Government Today

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, AT WASHINGTON, D. C., JANUARY 19, 1939

Mr. SMATHERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] before the Council of State Governments, at the Mayflower Hotel in Washington, D. C., on January 19, 1939, in responding to the general subject of discussion, This Business of Government Today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The American contribution to political theory is our Federal system. Making that theory work is America's contribution to the art of government. The objective of all American government, both State and National, is to promote the individual liberty. Either in political theory or in the art of government there is no definition for liberty. In a sense, though, it is all in the field of human endeavor which the individual possesses unmolested in his activities, in his thought, in his prayers, and in his speech, not proscribed by the basic law of the States or the Union.

The founding fathers thought they saw in government what an ancient Greek thought he observed in the functioning of the Roman Government and what a French writer in the eighteenth century thought he saw in the functioning of the British Government and what Blackstone thought he saw as he lectured on his own government and the law that made it secure. The founding fathers, the ancient Greek, Polibius, Montesquieu, and Blackstone were all poor observers. Not one of them was scientific in his observations, and therefore the deductions drawn became premises which writers and thinkers accepted. The founding fathers, accepting in the fullest the theory that liberty might be secured and maintained by a division of powers under a system of checks, produced a governmental system which revels in the idea of conflict. The outstanding characteristic is that it is constantly against itself. Thus, we assume that the individual's liberty is preserved, his property rights secured, by a government which can constantly be checked on the theory that it is one of law and not of men.

Actually, when we make progress, when we make more secure liberty, when we do our best in a governmental way, it is not while we are in conflict, but it is as it has always been when we are in cooperation and seek by mutual aid to advance.

How, then, is our liberty preserved to us? Of course, when an individual has a right taken away from him by his government and that right is restored as a result of litigation, we have liberty maintained as a result of conflict. But the real reason the American citizen enjoys liberty is because he has many loyalties instead of one and those loyalties respected by all actually are not in conflict but contribute cooperatively toward the development of liberty for all. The Bill of Rights itself is merely a guaranty to the individual of a complex life. Since the adoption of the fourteenth amendment we have had a dual citizenship. Since the adoption of the first amendment man has been guaranteed complexity in thought, in worship, in the written word, and in speech. Wherein the Constitution guarantees him the right to free assembly and free association, it merely multiplies his complex activities.

The genius, then, of American government today is a recognition by all that it is perfectly possible to have many loyalties and those loyalties themselves to be never in conflict with the general objectives of the state or its governments. This probably is such a commonplace deduction that it is hard to understand. Think of your friends. You no longer are suspicious of them because they have different occupations than yours, because they belong to a different political party, because they are affiliated with a different church, because they enjoy activities in a different lodge, because they have a different type of credit at the banks. All of these aspects of our life are reflections of the American fundamental objective of liberty to the individual. Contrast this, if you will, with the aim of the single-willed states to bring about simplicity in the citizen and a single loyalty.

Now, in the relations between the States and the Nation, it is this complexity that I would stress, complexity in cooperation, mutual aid, good neighborliness. Utah's ability to work out its problem with the Nation depends more upon a spirit of complete understanding of objectives than upon some basic law either in the Constitution or asserted to be law by the judges in deciding a contest between New York, say, and the Nation. States' rights versus centralized control is not a static principle; it itself is a principle which must be modified by time, place, and circumstance. It is when we lose sight of government as a growing, living entity and bind our actions and our thoughts by some absolute in law that we mar rather than insure the attainment of liberty.

The theory of our governmental processes is ideal. We have a Federal fundamental law which can be changed only by action of the people's representatives in the separate States and in order that that law may not by interpretation become an expression of yesterday or the will of the dead we have a Supreme Court to expound that law and keep it up to date. Your rights, the Federal Government's rights, the States' rights are all protected by this review of the courts. If, though, a court in passing judgment or in making an explanation of that judgment pronounces an explanation which becomes a rule of law not based upon fact or truth, then the people's objectives are definitely put in jeopardy. This has happened once or twice in our history. Sometimes it has taken the loss of many lives to overcome a false rule. Sometimes it has taken a loss of many rights to correct a false rule.

I do not say this in criticism of the healthful process of judicial review. It is not the Court's fault; it is not the judges' fault; it is the fault of a system which must of necessity put the last word somewhere. When the last word errs, the whole structure is affected.

In the evolution of our Federal system, both in theory and in practice, we definitely are developing toward the place wherein, in spite of the fact that more people are living in more compact places, liberty to the individual is on the upgrade, rather than in process of restraint. This holds actually; it definitely holds philosophically. And if liberty is being attained by more persons all the time, it is primarily so because we have learned to recognize complexity and have called it good. We have learned how to cooperate rather than to fight.

The American Federal system, so simple in its analysis that we can say it rests upon the simple principle that those things which are of purely local concern shall be administered locally and those which are of national concern shall be administered nationally, has in it an element possible of expansion even greater than its remarkable growth of the last 160 years. In fact, this system gives us a way not only to greater American growth but also to cooperation among the world's nations and peoples. Thus this American contribution to the science of politics and the art of government may become the key to the fulfillment of that long-sought desire of nations for the better world.

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. AUGUSTUS LONERGAN, FORMER SENATOR FROM CONNECTICUT, AT NEW HAVEN, CONN., JANUARY 7, 1939

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by former Senator Lonergan, of Connecticut, at the Jackson Day dinner held at New Haven, Conn., on January 7, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, today is the day set aside for observance of the one hundred and twenty-fourth anniversary of the victory of Andrew Jackson and his fighting frontiersmen over the redcoats at New Orleans.

Although it is the general impression throughout the land that our Jackson Day dinners are primarily to celebrate that victory, and although some people are mistaken in their belief that it is a celebration in observance of the birthday of Jackson, it is more correct to say that it is a day when we renew our enthusiasm and support for the principles for which Andrew Jackson fought.

During the past 100 years Jackson Day has stood not for a great military victory but for the forces of embattled Democracy. Democrats get together on Jackson Day in a joyous battling spirit. I am glad to be here tonight, as I was last year, to speak to my own people of Connecticut at this banquet and to a larger invisible radio audience over the State.

Although we have gained inspiration and determination at each of our Jackson Day dinners, particularly during the past few years, I think that the dinner this year is of utmost importance to all Democrats, and to the Nation.

Last year, and the year before, when we met on this anniversary, we were in the midst of a great crusade to eliminate injustice in this country and establish a greater measure of economic and social benefits for the average man. This crusade was in full swing, led by a President who has demonstrated that same courage and determination for reform that Jackson did in his day. Our dinners during those years served but to add enthusiasm and to give impetus to our work in pushing that crusade forward.

Andrew Jackson was a fighter. As an Army officer he learned to fight and to command fighters. There is a story of the time when he led his army for days without sufficient rations to feed them. Becoming weak and weary, some of his men threatened to turn back. With almost all of his men too hungry to resist the temptation to leave and go back, but knowing that his victory was almost in sight, Jackson calmly walked to the rear of his lines to the only road that led back from the wilderness where they were. There he took a stick and drew a line across the road. He looked at his men and said: "The first three men to turn back and cross that line will be shot dead." Not a man moved, and so great was their respect and admiration for this demonstration of leadership and courage they went ahead without hesitation.

I hope that our Jackson Day dinners tonight throughout the land will mark the time after which there will be no retreat from the fight of the Democratic Party to lift to a new level the economic and social welfare of all the people of this great Nation.

Our determined leader, President Roosevelt, has time and again called us to the fight and kept us there. In a great many respects his career has resembled that of Jackson, even to the point of political strategy in remaining silent for long periods of controversy over national issues—and then speaking out firmly. He has often been criticized for not announcing at the outset his views on various subjects of vital importance to the Nation. But in those cases he has preferred to wait until the public had formed a guiding opinion, which served to give more publicity to the problem by keeping the newspapers guessing, and to awaken widespread public interest. This was not at all unlike Jackson during the great nullification fight, when both sides sought to learn his attitude. He remained silent for a long time, and then on the occasion of a banquet, when called upon to give a toast in the presence of various factions, he arose and firmly proposed a toast to "Our Federal Union, it must be preserved." Dramatically he had declared his position at a time when it was most effective in holding the Nation together.

And I feel that the spirit of Andrew Jackson is at this banquet tonight proposing to us a toast: Our crusade for economic and social progress, it must go on.

Those who heard President Roosevelt's address at the opening of Congress were impressed by his definite statement and restatement of objectives, and by his determined pronouncement on our national-defense policy. To my mind it was one of the best speeches he has ever made. It was more important than usual, because it related not alone to our problems at home, with which we have been dealing primarily these past few years, but also to our position in the international sphere as a democracy. For in these days of world-wide depressions, wars, and disturbance of all kinds, if we are to preserve our democratic principles at home we must protect ourselves from un-American influences arising beyond our own borders as well as from within. In this respect, our crusades of today face more obstacles and complex situations than in Jackson's time. But fortunately, at least, we do not need Jackson's military ability and prowess in these days to press back our frontiers by armies and physical strength. These frontiers are now established, and our battle lines are laid in economic and political warfare which, we can thank God, has enabled us to accomplish reforms without the bloodshed of war.

In the days of Thomas Jefferson, or Andrew Jackson, or Woodrow Wilson, who were our three truly great Democratic crusaders before President Roosevelt, they faced definite and difficult problems, but they did not confront the rapid changes in these problems that we do today. Scientific progress has brought to us things like the submarine, the airplane, the radio, and so many other instruments of progress or destruction that we no sooner set our course for a certain objective than we are forced to change it slightly. This has made it necessary to establish ideals as our goals, and then try to approach these ideals as nearly as possible through pursuit of objectives that are stabilized as nearly as it is possible to do so under modern conditions.

Those who may have doubted the course of the Democratic Party during the past few years should understand by now that, like one who operates a sailboat, it has been necessary for the leader of our party to do some "tacking" back and forth to keep in favorable winds. But he has never lost sight of our ideals and neither has he lost the determination to come as close to them as possible during his term of office.

Then, like Andrew Jackson, he will turn over the crusade to his successor. He and the Democratic Party cannot expect to accomplish all that we have set out to do within our span of life. Great economic and social reforms will go on forever, and our hope rests in maintaining a party that will courageously pursue them, and in finding young men and women who will take up the fight and carry it forward with the same ability as Jefferson, Jackson, Wilson, and President Roosevelt.

In the hope of inspiring the young people of our Nation to join and continue enthusiastically in this social and economic war long after the present major battles have been won, let us look just a little more fully into Andrew Jackson's life and character.

Andrew Jackson fought the Indians and pressed back the frontier of Tennessee and Kentucky, but this was not his greatest distinction. He won an outstanding victory over the British at New Orleans, but this was not his greatest distinction. He served as a judge of the supreme court of his State, but this was not his greatest distinction. As a major general of the United States Army he served as a military governor of Florida, but this was not his greatest distinction. He was a Member of the House of Representatives and twice a United States Senator from his own State of Tennessee, but neither of these was his greatest distinction. He was one of the main forces that led to the annexation of Texas, but this was not his greatest distinction. He was a forthright citizen of his time, a delegate to the constitutional convention of Tennessee, on all occasions a leader of men, a fighter of duels, an aggressive—some thought even a turbulent—frontiersman, in days when men were outstanding in proportion to their adventuresome spirit and reckless courage, yet none of these was his greatest distinction.

He became President of the United States, serving in that office for 8 critical years, but that was not his greatest distinction.

The most distinguished deed of his career was his mortal engagement with the concentrated wealth of the America of his day, which resulted in his triumphant victory over the Bank of the United States.

The fight with the bank in his day was not unlike the fight of today against special privilege and monopoly and greed. It was an economic fight, which, after all, is at the basis of all political

warfare. Many of us have acquired the habit of thinking that the real struggle of man has been along political lines, but a little reflection will bring the conviction that political instrumentalities have been but a means to an end. There can be no political freedom where economic freedom is lacking.

The right to vote is a precious right, indeed; it is worth all that it cost our forefathers, and it must be defended against those who would invade it; but, after all, the mere right to vote is of little substance to a man who is jobless and cold and hungry.

Jackson knew all this. He knew also that to the degree that the wealth and economic powers of the country became concentrated in fewer hands, with the many having less of the necessities and opportunities of life, the more important the ballot box became in the national economy. The great mass of the people who had the vote did not know how to use it effectively for their own economic welfare. They needed leadership, and Jackson furnished leadership.

When Jackson became President of the United States, the Bank of the United States had come to be the symbol of concentrated wealth. Actually it was more than a symbol. The bank was economic America—kind and beneficent to its friends, condescendingly generous to its servitors, but harsh, cruel, and exacting to those with whom it did not have to curry favor.

The Bank of the United States had come to occupy the same position between the people and the final sovereign power that the feudal system had occupied during the Middle Ages. Our ancestors in England and on the continent of Europe had toppled that feudal system into its own moats when its oppressions could no longer be endured; but here in free America, so gradually as to be almost imperceptible, a more stifling and more sinister system had grown up, which, unless it were checked, would more inevitably oppress and exploit the underprivileged than the feudal barons of old had oppressed and exploited the serfs as they sweated their way into the earth to produce wealth and power and glory for their masters.

There may have been other men of his generation who saw this issue as Jackson perceived it, who discerned that the substance of the liberties for which Washington had fought, and of which Jefferson was the architect, were gradually being lost to us, even though their shadows remained.

But no one except Jackson had either the courage to join the issue with the concentrated wealth, as represented by the Bank of the United States, or that quality of leadership which might encourage the hope that victory would rest upon his banner.

No one but a Jackson, who had towered above other men in those turbulent, soul-testing days on the Tennessee frontier, and who had thrown back the British at New Orleans, would have dared to do what he so confidently undertook to do as President of the United States and as the accredited leader of the people of the United States.

The fight finally came to a head when the Bank of the United States asked to be rechartered, with the economic royalists on one side and the people on the other. The struggle was long and furious, and nothing was left undone to destroy Jackson and his followers. The foundations of the Nation were actually tottering, and there was a declaration that Jackson was destroying America. Many of Jackson's friends deserted until there was great uncertainty what would happen when the issue finally came to a vote in Congress.

Ill in bed as a result of this fight, his body too frail for his great heart, Jackson said one day to the Vice President of the United States who had called to see him, "The bank, Mr. Van Buren, is trying to kill me, but I will kill it."

And kill it he did.

He killed it with his grim determination, with the sword of his unconquerable spirit. And, in killing it, he put at least a temporary stop to the forward march of the concentrated wealth of America to greater riches, to greater aggrandizement, to greater monopolistic power.

He had won a great battle; but the war goes on, and the same economic forces are here to make battle. The Democratic Party is the army of America's common people who are fighting for the general welfare, and President Roosevelt is our leader.

Jackson was not only a hard and uncompromising fighter, but also a patriotic, warm-hearted humanitarian. In his farewell address as President he said: "I thank God that my life has been spent in a land of liberty, and that He has given me a heart to love my country with the affection of a son."

It is said that on one of his journeys an admirer unrolled a length of red carpet so that Jackson might walk like royalty from his coach to the inn. He did as was expected of him, but showed his dislike by saying with quiet emphasis, "The soil of the United States is good enough for me."

Jackson's most absorbing love was love of country.

Next to that was his love of his wife; and then his love for youth, whether in the helplessness of infancy, or the strength that makes young soldiers, or the bloom and sudden beauty of mating time.

He was President of the country when the Nation was young, and, leading young America, he remained to the last breath the friend of youth. And he had confidence that the youth of America will carry on in the great fight which he undertook.

Youth will take up the fight, but they should be aware of certain dangers lest they be misled. America is the hope of the world. We must carry on under the Constitution and our economic system. This is necessarily a government of and by political parties. The Declaration of Independence is the cornerstone on which the Democratic Party was founded. We must never, for the sake of victory, form an alliance with any group seeking to change the order of things in America. Patriotic citizens should oppose such attempts by any political party. There is no room in this country for the reactionary or the radical. We must carry on along lines that are constructive and progressive.

In conclusion I want to thank you and the Democratic Party for your loyalty and friendship throughout the years. My interest in public affairs will continue.

Senator Byrd's Letter to Mr. Eccles

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

LETTER FROM ROBERT L. OWEN

Mr. LOGAN. Mr. President, a few days ago there was placed in the RECORD a letter written by the Senator from Virginia [Mr. BYRD] to Mr. Eccles, Chairman of the Federal Reserve Board. I have a letter relating to that letter from former Senator Robert L. Owen, of Oklahoma, and I ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROBERT L. OWEN, COUNSELOR AT LAW,
2400 SIXTEENTH STREET,
Washington, D. C., January 18, 1939.

Re: Senator BYRD's letter to Mr. Eccles.

Hon. M. M. LOGAN,
United States Senate, Washington, D. C.

MY DEAR SENATOR LOGAN: I was impressed with the very able letter of Senator BYRD in his reply to the public criticism of BYRD's Boston speech by Chairman Eccles. Senator BYRD, with justice, vigorously protests against the systematic prolongation of emergency appropriation and spending as a means of restoring our national income through national production and employment. It seems apparent that Senator BYRD relies upon private business restoring employment and national production and income by restoration of business confidence.

The attempt to restore public confidence by the processes employed since 1929 has failed.

Why it has failed I fully explained in my testimony before the Banking and Currency Committee on H. R. 7230 last March (p. 65).

Until you correctly diagnose the cause of depression you have no adequate basis for discovering the remedy.

The cause of the depression of 1929–32 was a contraction of $21,000,000,000 in loans to business people by the banks and a corresponding decrease in 1932 of the volume of money in the form of potential and actual demand bank deposits of $21,000,000,000. In 1929 the demand bank deposits were $24,000,000,000 actual and a potential of $10,000,000,000 in the form of time deposits convertible into demand bank deposits—and they were converted into demand deposits. At the bottom of this depression not only had the money supply in the form of demand deposits, actual and potential, been reduced $20,000,000,000, but of the $14,000,000,000 of demand deposits remaining, $5,000,000,000 were hoarded and taken out of actual circulation leaving $9,000,000,000 with a normal function of 50 times per annum and creating a volume of check money equal to $450,000,000,000 for the year 1932 and only $430,000,000,000 for the year 1933. This contraction of our money supply in the form of demand deposits through contraction of the volume and the hoarding of what remained prevented a restoration of employment, production, and national income. This was the case in 1936 even after the Government had increased the volume of demand bank deposits through Government borrowing. The Government's borrowing from the banks created additional demand deposits but they were absorbed through corporate and individual profits and interest collected on bonds and debts. These values were concentrated in our great financial centers where our great corporations had their central offices. The money was extracted from the consumer class through profits and interest and concentrated in the financial centers.

In 1934 the Federal Deposit Insurance Corporation found $6,000,000,000 of hoarded demand deposits.

In 1938 the total of the checks debited was $530,000,000,000, which represents less than $11,000,000,000 at a turn-over of 50 times per annum, the normal predepression velocity of money actually employed in business.

In 1938 the total of demand deposits, excluding Government deposits, interbank deposits, was thus demonstrated to have been hoarded to the extent of over 50 percent. The statisticians who smear together demand deposits having zero velocity with demand

deposits having 50 times per annum velocity confuse correct diagnosis in that manner. It is not $22,000,000,000 having a velocity of 25 times per annum; it is less than $11,000,000,000 having a normal velocity of 50 times per annum and approximately $11,000,000,000 plus having zero velocity, the money having been cornered through fear or through hope of finding a better opportunity of investment through a further collapse in property prices.

The remedy proposed by Marriner Eccles is obviously unsound and justifies Senator BYRD's attack.

The remedy apparently contemplated by Senator BYRD of businessmen working themselves out of depression has been very disappointing.

But your remedy, Senator, would give confidence to business and restore to activity the hoarded money—the $11,000,000,000 of frozen, congealed, inactive, demand deposits.

Your remedy, instead of expanding the public debt, would contract it by the purchase through the Federal Reserve banks of Government bonds, State, city, or county bonds, or other sound bankable assets. This would stop the interest on the volume bought, conveying the interest to the Federal Reserve banks for Government use. It would stop the amortization costs of such bonds, and it would at the same time expand the demand bank deposits automatically under control to the extent necessary to restore business confidence, thus restoring to circulation the hoarded demand deposits. In this manner the evil which caused the depression would be removed, to wit, the contraction of the money supply necessary to exchange maximum products and services of the people.

It would thus not only restore our national production to $80,000,000,000 but could easily, with the manpower and available machinery in the country, expand our national production to $130,000,000,000, as found by Loeb's "chart of plenty." With the income of the Government, corporations, and individuals thus increased; with the Government debt absorbed in the process; with a billion dollars cut off of the Government's annual cost of interest; with the cutting down of expenditures for public relief the Budget could be balanced, business confidence restored, and taxes could be cut half in two. These figures are not exaggerated.

The President has been misled by the advice he has received from Mr. Eccles. It is not necessary to impugn Mr. Eccles' integrity of mind. His subconscious thoughts as a banker control his conclusions because his premises are false. He thinks that the bankers should create the money of the country by loans and contract it by contracting loans. But this system has been demonstrated to have been the cause of our booms and depressions. The bankers expand too much when full of hope and contract too much when full of fear. It needs the power of the Government to prevent undue expansion, which means inflation, and to prevent indefensible contraction based on fear or on the hopes of profit through bear raiding and other processes known to financial art.

In Senator BYRD's letter to Marriner Eccles he gives a most powerful support to your views as to the remedy, and incidentally he fully justifies the argument which I submitted to the Committee on Banking and Currency of the House of last March, above referred to.

Yours respectfully,

ROBERT L. OWEN.

Appropriations for W. P. A.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, January 20 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM ATLANTIC CITY DAILY PRESS-UNION

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Atlantic City Daily Press-Union, an independent Republican newspaper in my home town of Atlantic City, under the caption "Don't Slug W. P. A."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Atlantic City Daily Press-Union, January 19, 1939]

DON'T SLUG W. P. A.

For years nearly everybody agreed when some wiseacre remarked what a Heaven-sent thing it would be if the United States Army could manage W. P. A. That would take politics out of it all right. Well, today we have a West Pointer at the head of it, Col. F. C. Harrington, and he's said to be one of the Army's most experienced and efficient men. He tells Congress he must have the eight hundred and seventy-five millions that the President urged them to appropriate, not the seven hundred and twenty-five millions that they are about to grudgingly provide. He is reported to have warned Congress against restricting the political activities of W. P. A. workers, since this might be interpreted as a violation of civil rights.

This kind of advice will not set well with reactionaries who have swelled with pride since the last election and are all for showing the country how they will charge the windmills with lances of bombast and emasculate the spending program in the interests of dear old economy. But to the rest of the Nation it is apt to have the familiar ring of a trained Army officer's unemotional and unprejudiced advice. Throwing from 600,000 to a million men out of work will not be the wise thing to do, even in the supposed interest of party advantage or personal pride of opinion. And legislating that a recipient of relief shall take no part in politics—in other words, shall not exercise personal freedom—can also have dangerous reactions.

Religious Intolerance Through the Ages

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MAY 10, 1937

Mr. SIROVICH. Mr. Speaker, because of countless requests which I have received asking for copies of the speech I delivered on the floor of the House of Representatives on May 10, 1937, on Religious Intolerance Through the Ages, the House has granted me unanimous consent to reprint that speech in the RECORD:

The SPEAKER. Under special order the gentleman from New York [Mr. SIROVICH] is recognized for 1 hour.

Mr. SIROVICH. Mr. Speaker, ladies and gentlemen of the House, man's mind is influenced and shaped by two potent forces: Heredity, which depicts the influence of the seed and blood, and environment, which typifies the contribution of the soil and Nature. Heredity represents the transmission of the physical and psychical characteristics of parents to their offspring. The influences of environment are both physical and spiritual in Nature. The mountaineer is known for his rugged individualism, his stubbornness, his abruptness of style and language, his epigrammatic sentences, his stiffneckedness, his subjective attitude in seeing only his own side, and the quick, jerky rhythmic sway of his shoulders in dance movement. The man of the plain is identified by his tendencies toward uniformity, talkativeness, repetitiousness, equality, the sententiousness of his phrases and writings—Lenin wrote 41 volumes—the love of the smooth rhythmic sway of the dream waltz, and the tendency for collectivism. The island nation, as exemplified by England and Japan, is powerful and ambitious and strives toward empire. The forest man, as typified by the Germans, inclines toward the lyrical and musical but the influence of the forest jungle is shown in his severity and political brutality. Man who lives on the peninsula shores of great bodies of water, always gazing at the sea, has a wide vision, and is also more creative than the man of the inland province. As a matter of fact, all great civilizations were established along the shores of great bodies of water, and we accordingly speak of a Mediterranean civilization, an Atlantic civilization, and now the coming Pacific civilization. We know that the man of the desert has a different mentality from the jungle man. The difference of mentality expresses itself in their different types of religion. We know that the two principal redemptive religions that grew out of the Hindu jungle, Brahmanism and Buddhism, with their doctrine of pessimism, resignation, and the identity of life and sin, are but the intellectualized agonies of the devitalized and suffering human being, baked by the scorching sun. These victims of a cruel nature cannot see in life anything else but suffering, agony, and pain. Out of this vision of suffering grew their religious feelings, and accordingly their relationship to the forces of eternity was shaped by these very factors—suffering and pain. To them life appeared as a valley of tears, as one long uninterrupted agony, from which man can free himself only by death. But we also know that all those religions whose attitude to life is affirmative have grown out of a more favorable natural condition, a temperate climate, fertile soil, blue skies, and a beautiful panorama.

The desert mentality is totally different from that of the jungle, and its effect upon man's mind is one of the most potent forces in history. If redemptive religiosity, calling upon man to turn away from life, to diminish his desires, and thus be redeemed from sin through salvation, has grown out of the jungle, legalistic religiosity attempting to regulate man's life by the medium of the law has grown out of the desert. The Ten Commandments are a

prototype of all legalistic religiosity and are a typical product of desert mentality. The desert has developed not one but three types of mind, and this variety of mentality has impressed itself powerfully upon western man and has been instrumental in definitely shaping his spiritual destinies.

Three men grew out of the desert—the Babylonian, the Arab, and the Jew—and all three have developed a different mentality as a result of their diversified attitude to the vast sand expanses of western Asia. Out of these three different attitudes to the desert there developed three dissimilar world concepts and three divergent messages to man. The ancient Babylonians, a poetically gifted people, loving the azure blue of the skies, would lie at night in the desert and watch the skies. They looked heavenward and beheld the stars in their motion. In doing so they created an astronomy and an astrology. They developed a cosmic outlook on and a fatalistic attitude to life. They recognized in the motion of the heavenly bodies not only eternal, unchangeable, and immutable laws of nature, which must be valid for every sphere in nature, including the life of man, but through astrology they also came to believe that man is dependent upon the stars; that he is a helpless creature and must submit to fate. The Babylonians, who were wide awake intellectually and capable of cultural creativeness, were at the same time cruel and bloodthirsty. The words "pity" and "compassion" were not to be found in their dictionary. If man is governed not only by immutable and eternal laws but is also in addition dependent on the stars, then he is just a slave of nature, and human life is meaningless. The life of the individual man is only an erratic mood of destiny. What is man when compared with heavenly bodies, and what does his life signify, if he is totally dependent upon the stars for his happiness and welfare? Men who think in cosmic terms do not think in human terms; it is either one or the other. From the point of view of the cosmos, man is just an atom, and his position in nature amounts to no more than to a particle of erring matter. Whether man fares well or not, whether he is happy or unhappy, makes but little difference. It is for these reasons that all cosmocentricism is the grave of ethics, because it denies man by belittling his importance. Hence the ancient Babylonian, though intellectually advanced, remained a bloodthirsty person, because only the cosmos nature was his guide.

The Arab walked through the desert and looked neither heavenward nor earthward but straight in the air. Time stood still in Arabia for thousands of years. The Arab Bedouin lives today exactly as he lived 5,000 years ago. He is still a son of the desert. He is still admired for his erect, majestic walk, moving along in measured gaze. The Arab Bedouin had to maintain a bodily balance not to lose the basket of provisions on his head. The Arab Bedouin, therefore, always had to look straight ahead and saw neither the stars above nor the sand below, but the coming and going of the eternal cycle; sunrise and sunset, day and night, light and darkness, and occasional sandstorms, turning the bluish desert air yellow. Beholding only the eternal cycle, he developed a cyclical attitude to the desert and, almost like the Babylonian, decided to submit to the forces of fate and nature. He became cosmocentric and submissive and evolved the Islam or Mohammedan faith, whose meaning is submission or resignation.

What is the cosmocentric theory of life? This philosophic doctrine worships Nature first; man comes afterward, because man is only an insignificant part of Nature, just like any other animal. The right of Nature precedes the right of man, property being dead, and Nature its symbol. Therefore Nature or property rights precede human rights.

Nature can be divided into four component parts. First, inanimate Nature, or our Mother Earth, which is usually called dead nature. In the bowels of Mother Earth are found gold, silver, copper, platinum, iron, coal, oil, and the countless materials that constitute the mineral and natural resources which represent the wealth of the material world, or property rights. The second part of Nature represents the flower, plant, and vegetation life. It is often referred to as poetic nature. The third part of Nature is typified by the birds of multicolored and variegated plumage that fly through the air and space singing their melodies and harmonies. This third part of Nature has been heralded far and wide in song, prose, and poetry as lyric and idyllic nature. The fourth part of Nature is referred to as animal, or jungle, nature. Here the strong and powerful animals eat and destroy the weak. In this realm of Nature might and instinctive brute force rule. Here authority is represented by the claw, fang, and tooth. Let the weak beware. The strong are the self-anointed, self-appointed rulers and dictators of jungle nature. Laissez faire is the order of the day. Nature's law never changes, never yields, never compromises. In Nature there is no pity, no sympathy, no compassion. Its laws are fixed, eternal, and immutable. Such is the doctrine and philosophy of cosmocentricism.

If you project the law and order of jungle nature upon the earth, and surround this state with artificial boundaries, you create the modern Fascist state, either to the right or to the left. Here, too, might makes right. Force rules. Authority supersedes and takes the place of the majority. Deified Nature becomes the deified dictator. The dictator takes all the freedom and liberty unto himself and gives a small modicum of these rights to his subjects. So we behold the law and order of the jungle transferred to the modern state in which the dictator, like the powerful animal of the jungle, reigns supreme.

When the Jew walked through the desert he looked neither heavenward like the Babylonian, nor straight ahead like the Arab, but downward, earthward, because he was always sad, or sunk in thought. The sad, or the thinking, person always looks downward. In the Old Testament the Jew is often called upon to lift his eyes, to look heavenward, because he was always used to looking earthward. Thus, looking downward, he discovered neither the laws governing the stars in their motions, like the Babylonian, nor the eternal cycle, in the fabric of nature like the Arab—but observed himself. He discovered man. Seeing nothing in the desert except the infinite sand expanses, he could discover nothing to lean upon, either plant or animal, and fell back on his own resources. It dawned upon him that man, and man alone, is the center of all things, that man is the source of all wisdom, knowledge, culture, and civilization, and not nature; that man is the goal of everything in life and must not be exploited or oppressed; that human rights precede nature or property rights, and that man is equal before God, the state, and the law. Then and there was proclaimed the doctrine of religious, political, and juridic democracy.

Out of these considerations, the anthropocentric world picture of the ancient Jew was born. In the desert, the Jew could only hear the wailing noise that accompanied the sandstorm. Seeing nothing he could only hear. The Jewish religion is therefore an ear religion. The Bible expresses it clearly in the eternal cry of the Jews, "Hear, O Israel, the Lord thy God. The Lord is One."

Biblical religiosity, in contradistinction to Buddhistic, Brahmanic, or Islamic religiosity, distinguishes itself primarily by its anthropocentric world picture; that is to say, by the all-important position man and not nature occupies in the scheme of things and the care and attention one loving God gives man. It is for this reason that Biblical religiosity has captivated the imagination of the white man, the most creative and the most able of all men.

It is generally assumed that the contribution of the Bible to religion is the doctrine of one God; in short, monotheism. That is not the case. The idea of one God was formulated in ancient China, Egypt, and Greece independently of the Bible, but only the God of the Bible has an intimate relation to man and is the God of man. The one-god conception of ancient China, Egypt, and Greece was purely cosmological. Their god was only the engineer or architect of nature without any attitude to man, because their idea of one god was the result of certain cosmological speculations. Aristotle, too, has clearly formulated the idea of one god. But the god of Aristotle is only the god of nature and not the god of man. The Aristotelic god represents the peak of Greek nature speculation. This becomes evident when one considers the religious philosophical development in Greece from Thales to Aristotle. Thales, the father of Greek philosophy, started out with the principle of water as the origin and nature of the world. Then came Anaximenes, and stated that everything is derived from air. Pythagoras established fire as a principle of the world. Then came Democritos with the idea of the atom, and so all along the line up to Aristotle, who explained the origin of the world as a creation of God. But his god was the architect of nature, who retired from his creation and no longer participates in the affairs of the world. He is the prime mover who has taken a long vacation. Similar cosmological ideas sprang up in many other cultural centers of oriental antiquity, Egypt, China, and India. However, what good does this cosmological principle do man, and what significance has it for his destinies, since God is indifferent to man? The God of the Bible, on the other hand, who is also the Creator of the world, is primarily the God of man. He has created nature as well as man, but is disinterested in nature and is keenly interested in man. The first chapters of the Bible are devoted to a story of creation; with the exception of water, God created everything—in evolutionary stages—in six periods. These basic cosmological principles—that water is a source of all life, and that the world was created in evolutionary stages, happens to be not only the first word of the Bible but also the last word of science. But soon after everything was created, minerals, plants, beasts, and man, God abandons dumb nature and dedicates Himself exclusively to the care and service of man. Therein consists the originality of Biblical monotheism. Here is a god, who is not only the architect of nature but is also the father, judge, guide, and teacher of man. This type of monotheism makes man the very center of the world and the focal point in the scheme of things. Christianity has often been described as a daughter religion of Judaism. It is so, because in Christianity the anthropocentric world picture is still more outspoken and sharper formulated than in Judaism. The Old Testament opens with a story of creation, with a story of nature, but the New Testament opens with the story and destiny of one man, who begins as the Son of Man and ends as the Son of God. In the final analysis the Old and the New Testament share the same principle, and they are animated with the same ideal—the ideal of the dignity and holiness of man, who by virtue of his spirituality, is capable of attaining the most dazzling spiritual heights.

Not only have Judaism and Christianity been hewn from the same rock but they have also shared similar destinies. It is not quite a blind chance that when Christianity wound its way westward Judaism followed it. Ever since Christianity has the west as its center, Judaism, too, has the Occident as its center of gravity. In the last 1,800 years Christianity as well as Judaism are western phenomena, although they both spring from the east. Just as oriental Christianity has always been a negligible quantity, so has oriental Judaism been a negligible factor, for both are deeply anchored in the west and identical with the Occident. That, too, is not an accident. The west is distinguished from the east by its individualism in contradistinction to oriental universalism.

Both Biblical religions have experienced the same difficulties, encountered the same enemies, met with the same obstacles, and were threatened by the same hostile forces—paganism, dualism, naturalism, and materialism—because both represent the one and the same basic idea, the anthropocentric world picture, a type of religiosity in which God is devoted to man, and man stands in the center of things and demands respect for his personality and a right to freedom in return for his willingness to be righteous and do good.

As against this anthropocentric world picture of Judaism and Christianity there stands out in bold relief the cosmocentric world picture of Brahmanism and Buddhism, and the purely theocentric world view of the Islam. In these religions man appears as an insignificant creature—a marionette on the chessboard of life. He is not the crown of creation, and is but an insignificant part of nature, subject to its laws exclusively, and unable to account for the position he occupies in nature. Man as a part of nature only is just an animal like all other great animals and aspires to an order of life whose arch type is the jungle and the tyranny, the despotic rule, the satrapy in which the masses of the people have no rights at all. All political, social, and economic despotism has its origin in a purely naturalistic world view, and this world view is the counterpart to the world picture of Biblical religiosity with its doctrine of the freedom, dignity, and spirituality of men.

From time immemorial these two world concepts—the anthropocentric, representing human rights, has battled against cosmocentric, or property rights views. These two opposing groups have engaged in a life-and-death struggle for supremacy. The ancient Hebraic anthropocentric and one God world picture was so forceful and so unique that none of the spiritual powers that be could ignore it or leave it in peace. The doctrine of one God was a menace to polytheism. The doctrine of the free man as the crown of creation was a menace to the entire political, economic, and social fabric of the time, and particularly to the institution of slavery. The ethical doctrines of the prophets were a challenge and a menace to every type of political despotism and tyranny. To all of the contemporary powers the Hebraic world picture must have appeared a provocation pure and simple, and each and every one of them was determined to make an end to it and destroy ancient Judea. Assur made the first attempt; then came the Babylonians and Alexander the Great. They actually destroyed the land of the Jewish people. When it was rebuilt with the help of Cyrus the Great and slowly but surely regained its strength until it stood out as a respect-commanding commonwealth, not only the local enemies also but the great powers of the time, each in succession, attacked it with the object of destroying it.

From Alexander the Great to Antiochus Epiphanes to Titus and Vespasian ancient Judea witnessed conqueror after conqueror, until it was finally subjugated by Caesaric Hadrian after long and bloody struggles. When news reached the Eternal City of the complete destruction of ancient Judea the Roman rabble was overjoyed, and gathering in the streets of Rome it shouted itself hoarse crying, "Jerusalem is lost." The temple was destroyed. Every home in Jerusalem was burned. A quarter of a million Jews were taken as prisoners to Rome and marched under the Triumphal Arch. The Israelites were scattered to all parts of the world. From that time on the Israelite has been known as the "Wandering Jew." When Caesaric Rome annihilated ancient Judea it was sure that it had accomplished two things: That it had killed Judaism as a spiritual force and that it had also destroyed the Jewish people representing that force. But this calculation was wrong. Only the political sovereignty of the Jewish people was destroyed. Spiritual Judea continued to remain a force in world's history. The Jewish people as a people, and not as individuals, survived, too. When ancient Rome was fighting ferociously to subjugate Judea and destroy it there appeared the figure called Jesus, whose teachings and doctrines, principles and ideas, growing out of the Jewish conception of a spirituality of man, his holiness and his dignity, contributed in the end to the destruction of Caesarism. Not only maddened Caesaric Rome but also all other forces of obscurantism realized, at an early period, that these new spiritual energies emanating from the Son of Galilee were as threatening and dangerous to their very existence as was Judaism. Just as Jesus attracted the lonely and the meek, the peaceful and the just, and the pious to follow Him, so His doctrines invited the enmities of the mighty and the wicked. Caesaric Rome fought against rising Christianity with the same ferocity as it did against its historical background, Judaism. There was Roman logic to this anti-Christian madness. If the spirit of Judaism with its doctrine of the dignity and holiness of man challenged Caesaric Rome, the doctrine of Jesus did it more so. In crucifying Jesus the Roman authorities of the day thought they killed His teachings, just as they thought they destroyed Judea by destroying the temple. In both cases they erred. Just as Jesus survived His crucifixion, so did Judaism survive the destruction of Judea. No despot has ever discovered an instrument by which to kill ideas. To destroy principles, ideals, and justice, all mankind must be annihilated. [Applause.]

Like all great world historic events, the blossoming out of the anthropocentric world picture, on the soil of small people, surrounded by peoples dedicated to the cosmocentric world view, called forth hostility and anger. If the ancient Hebrew was right, that man is more than a part of nature, that he is a spiritual being and must be treated as such, then the social and political systems of that time, based on the idea that man is only a part of Nature like any animal, must have considered the Jew as a rebel and revolutionary, as one who disturbs the calm and tranquillity of traffic and may become a menace to the neighbors. If we were able to retrace the historical process in Palestine from 1000 B. C. to 40 B. C. as simply as we do dissolve the historical process of the last 500 years into its component parts, it could easily be established that the constant onslaughts against ancient Judea by the great powers of that time were not only due to strategic, political, and economic reasons but also to cultural motives. The Assyrian, Babylonian, Persian, Greek, and Roman considered ancient Judea a hotbed of revolutionary ideas and decided to subjugate and destroy it. The struggle against ancient Judea was as much a war against Judaism as a war against the Jews. Every invader and every conqueror of Judea was out to destroy not only the body but also the spirit of that people. They all desecrated the temple and finally destroyed it, for they looked upon the temple as the center of Hebraic spirituality. If the ancient Hebrew had been a conquering race, or, at least, a missionarising people, they would have gone out and preached their gospel to other peoples. However, they have never been a conquering race, but a pastoral people, dedicated to peace, and an idyllic state of peace, among men. This captivating peace vision is also a direct consequence of the anthropocentric world picture, culminating in the doctrine of one God. It requires two to make war, but God is only one, and therefore always peace unto Himself. But man is admonished to make the attributes of God his guide in life. If God is the very embodiment of peace, man should be peaceful, too. The pacifist inclinations of the ancient Jews had also a historical background. The ancient Hebrews were a fusion of two nations—the Amorites and Hittites. The Amorites were a pastoral people and the Hittites a hunting, conquering race. They were the Romans of the east of their time. But Destiny willed it that the Jew become heir to the Amorite and not to the Hittite. When he grew to full nationhood he displayed all the qualities of the Amorites—pastoral peacefulness, a love for the idyllic, and lyrical softness instead of epic vigor. It never dawned upon him to propagandize his truth or to impose it upon others. The God of the Old Testament wishes to be recognized by man's reason and appeals to man's reason and not to man's emotions. The greatest religious vision of Isaiah is that the land will be full of knowledge of God, but not of belief or faith in God. Ancient Hebraic monotheism rests entirely upon intellectualist ground, and for this reason alone it could not be propagandized. Only emotional tendencies spread like wildfire. Abstract ideas make headway, but very slowly. For these two reasons—the pastoral character of the ancient Hebrews, plus the intellectualistic nature of ancient Hebraic monotheism—the world picture of the ancient Jew was confined to his Creator, while the two antithetic tendencies in the east and in the west, universalism and individualism, grew rapidly outside the land of their origin. At no time has any representative of Judaism ever made an attempt to convert strangers to his belief and to his ideas. Of all the great historic religions in the world, Judaism alone is lacking in imperialistic impetus and missionarising was always strange to its mind. It has never been endowed with the will to move, and this absence of ambition spelled destiny to Judaism. Instead of growing horizontally like all other great historic religions, it grew vertically, in depth. It has never been diluted as a result of expansion. By virtue of its inner concentration it has always appeared mysterious to the outsider and invited attacks. Because Judaism is not a missionarising religion, the Jew remained a minority, and he is still here to write the minority report.

Between the years 500 and 40 B. C. the two outstanding cultural forces in the east and in the west have undergone great changes and have grown to full maturity. In the east, Buddhism emerged from its Brahmanic background to become very rapidly a great imperialistic force in the realm of the spirit. In the west, ancient Greece shone in all its glory, wresting from its genius immortal works of art, with man as its center; unforgettable philosophical ideas and great works of literature, also with man as their theme. While ancient Greece developed into an inexhaustible source of cultural inspiration, Rome grew from a small commonwealth to an empire, with world domination as its goal. In the course of but a few hundred years, western individualism, both in its political and its spiritual aspects, became the all-dominating force in the life of occidental man. Bursting with energy and expansive power, it reached out on other continents with the clear objective of subjugating them. Palestine being the gateway to three continents, all three forces—Buddhism, Hellenism, and Caesarism—tried to establish themselves first in that little country which, in spite of its small size, is in fact a shrunken continent. It has all the attributes of a continent—mountains and vales, Dead Sea, desert, and seashores, and a variety of climates, as can only be found in the continent. In the third century, Buddhistic missionaries from the east reached Palestine. A little later emissaries of Hellenic culture reached the Holy Land, only to be followed still later by the representatives of Caesar. In the century preceding the appearance of Jesus, Palestine was the greatest cultural melting pot of antiquity. Every great cultural power in the east or west was trying to make converts from Palestine and to make the country a base of further operations in the east. While eastern universalism in its Buddhistic manifestations strikes westward, western individualism in the shape of Hellenism and Caesarism strives eastward. Both attempt to extend their rules as far east as Persia and India. To be successful, they must control Palestine. To attain this goal they must first subjugate the Jew both culturally and politically. But in spite of their relentless efforts, they made very little headway. Judaism had become a concentrated force, tree plantlike, rooted in the soil of Palestine, and could not be destroyed. It could not even be diluted. The Buddhist missionaries succeeded in influencing a few thousand people, and so did the emissaries or representatives of Rome and Greece. Around 50 B. C.

one could hear in the streets of Jerusalem some Jews speaking Greek and some Latin, but the masses of the people spoke Hebrew. The descent of Buddhism upon Palestine resulted in the formation of the sect of the Essenes, who, in their negative attitude to life, in their rejection of all earthly forces, in their resignation, and in their pessimism, represented the Buddhistic mood. The representatives of Rabbinic Judaism were engaged in warding off attacks from the Hellenistic or Greek element, and the entire commonwealth was engaged in a fight with Rome. This terrible tension, brought about by the meeting of Buddhism, Hellenism, and Romanism, made a spiritual explosion an absolute necessity. This explosion came with the appearance of Jesus and the rise of Christianity, which is the synthesis of four distinct forces—ancient Hebraic anthropocentricism, with its discovery of man; eastern universalism, with its emphasis upon the whole; Greek intellectual mysticism, with its vision upon the logos or reason; and Roman imperialism, which found its expression in the fast-conquering church.

This synthesis, giving birth to Christianity, is the greatest single event in all of man's history. Christianity is the greatest peacemaking force, for in its bosom dwell harmoniously the four contradictory and antagonistic elements, eastern universalism, western individualism in its two forms—Romanism and Hellenism—and ancient Hebraic ethical idealism, flowing from the anthropocentric world concept of the ancient Jews. Its all-cementing force, however, is a typical Palestinian and typical Hebraic element—the doctrine of the spirituality, dignity, freedom, and holiness of man. Christianity is the only religion in which a man becomes the central figure of all piety and of all saintliness, who, because of these qualities, can suspend the laws of nature and perform miracles. Representing the totality of the great cultural motives of its time, including that of ancient Rome, with its will to expand, Christianity not only captivated man's mind and heart to the extent that it made him capable of martyrdom but it also gained such force and momentum as to seriously threaten Caesaric Rome, which it conquered in the end. The amazing victories of the Islam were victories of the sword, but the conquests of Christianity were the conquests of Christian saints and martyrs, and the victories of Christian spirituality over paganic barbarism. The success of Christianity was also due to the fact that it was not totalitarian, or authoritarian like the Islam, having exhorted man to give to Caesar what is to Caesar and to God what is to God—that is to say, not to permit the state to interfere with the spiritual and intellectual interests of man or to impose itself upon man, as does the modern totalitarian and authoritarian state. Christianity gave man both peace and freedom and held out the promise of true salvation for him. But upon its amazing march of victory it encountered two hostile forces. What were they?

First, the cruel and antagonistic forces who lived in Persia and were the great sun worshipers of their day. They believed in the duality of nature—light and darkness—as the twin forces that ruled the destinies of nature. Their great prophet was Zoroaster, who was the Moses of his time. Long after his death the most distinguished disciple of his was the very militant leader Mani, and his followers were called Manichaeians.

Manichaeism is a cosmocentric world picture explaining the world as a constant struggle between light and darkness. Ahura Mazda is the symbol of the sun and Ahriman is the figure of Satan and darkness. Mani lived from 215 to 275 A. D. Mani also came under the influence of Brahminism, Buddhism, and Gnosticism. Mani's three principal theories are, first, cosmic dualism—light and darkness; second, the identity of physics and ethics—meaning that everything is physics or nature and that ethics, which is man's relation to his fellow man, is governed by physical nature only; that is, that might is right; and third, the doctrine that man, far from being the crown of God's creation, is actually the creation of the prince of darkness, Satan. This theory of man leads to social pessimism. The threefold doctrine of Mani, brought him into conflict with Christianity and Judaism alike, and his disciples declared war against both. Manichaeism as a religious movement made rapid strides in the fourth and fifth centuries and conquered for itself such a powerful position in the city of Rome and in the Provinces of the Roman Empire, especially in northern Africa, that the political and spiritual powers in Rome decided to curb it. In the end it was outlawed in Rome, having been declared a capital offense, punishable by death, to practice Manichaeism. In the course of the anti-Manichaean orientation St. Augustine himself, who had been a Manichaean leader, deserted Manichaeism and adopted Christianity. In doing so he saved the day for the church and the synagogue, for he soon became the most effective and influential leader in the anti-Manichean movement. In Rome the Manichaeans submerged and discontinued their fight against the church and the synagogue, but they soon reappeared in eastern Rome, in Byzantium, which is today modern Turkey, and developed there great strength until suppressed by victorious Christianity. Around the tenth century they appeared on the Balkan Peninsula, first in Bulgaria and then in Servia under the name of Bogomiles, fighting the church and the synagogue.

From there they migrated westward and reached Italy, France, and Germany, disguised under different names, but always fighting Christianity and Judaism. Since the Catholic Church watched them closely, they concentrated their war against Judaism only and continued to attack the Old Testament, hoping that by destroying the influence of the Old Testament they would also undermine the position of the New Testament. This explains why Jew hatred in Europe was unknown during the first thousand years after Christ. Only with the penetration of the Manichaean, anti-Christian sects in Europe, does Jew hatred manifest itself in the wake of these sinister influences. Not a Christian but an anti-Christian force, like the Neo-Manichaean sects, has planted Jew hatred in the Old World. Those who are familiar with European sect history know that in two countries, Germany and old Russia, have the various Manchaean sects established themselves firmly, and it is no sheer coincidence that just in Germany within the last 5 years has Jew hatred become supreme. In Soviet Russia it is now being destroyed by the might of the state, but in Germany, where Manichaeism in different forms is again flourishing, Jew hatred, Bible hatred, and Protestant and Catholic Church hatred are the very basis of governmental policy. Throughout all Germany today there is turmoil in all the churches as trials of Catholic priests for "treason" continue, as the anti-Jewish campaign goes on without end, and as the Protestant Church elections are postponed because once harmonious congregations are hopelessly split by the drive for pagan "unification." The pagan idolatrous sects in Nazi Germany today, all anti-Christian, antisemetic and cosmocentric, are direct or indirect continuations of Manichaean forces which had penetrated into German life in the course of centuries and which were never subjugated. In the course of its struggle with both, Manichaeism in the East, Caesarism in the West, Christianity itself became permeated with a spirit foreign to its very essence.

In the long struggle between Christianity and Manichaeism the latter was defeated but not entirely destroyed. For many centuries Manichaeism in many forms continued the fight against victorious Christianity. Neo-Manichaeism sects in all parts of the West have continued a guerilla warfare against the teachings of Christ, the Bogomiles, the Neo-Bogomiles, the Catharists, the Albaganses, and numerous other sects have constantly sabotaged the Catholic and Protestant Church and have also waged war against the synagogue. During the Middle Ages Jew hatred came from those quarters and not from the church. The Popes have always defended and protected the Jew, but the Manichaean sects within the Christian world have always attacked them. To the extent that Christianity has retained its purity and its true piety, it has never had any difficulties in its relation with the mother religion. But when Rome was destroyed, and Caesar was dead, and the church remained the only authority of western humanity, struggling for consolidation and organization, the church assumed the functions of the state and held both temporal and political power. Out of this double power grew the medieval totalitarian state in which there was no longer any room for any religious minority. The medieval church became not only the source of all power but also of all wisdom and imposed itself upon man's mind in the same way as does the modern Fascist state.

Man's creative intelligence was delimited by the church, and the latter decreed what is scientifically true or untrue. Holding steadfastly to the cosmology of the Old Testament, the medieval church fought Copernicus, punished Gallileo, and burned Bruno at the stake. In the medieval church the Roman element with its Caesaristic tendencies prevail, but Christianity, after destroying Caesarism, was not going to be overwhelmed by it again, and after many centuries of struggle it found its way back to its source—the Bible. If the Reformation means anything at all, it means the rediscovery of Christianity and the overthrowal of the medieval fascism. Martin Luther laid down the principle that the civil government has nothing to do with faith and conscience:

"Heresy is a spiritual thing," he said, "which cannot hew with any iron, burn with any fire, drown with any water; the word of God alone is there to do it."

The consequence of that principle spelled the doom of medieval fascism. Individual man was spiritually emancipated, and with this spiritual emancipation, which is a postulate of Bibical anthropocentricism, the foundation was laid for the emancipation of all religious minorities, including the Jewish minority. It is surely no blind coincidence that the rediscovery of man and Christianty corresponds with the discovery of the New World, in which man was destined to establish the greatest and most powerful democracy on God's earth. Nor is it mere chance that while medieval despotic and inquisitorial Spain expelled the Jew in 1492 the New World established by the forces of biblicism accepted him and enabled him to participate in the development of a new civilization and to reestablish his own life on the basis of his own religious traditions. Not only in America, but anywhere where the forces of biblicism arise, the synagogue is permitted to breathe freely and to consolidate its energies. It was the Biblicist, Cromwell, who opened the gates of England to the Jews. The same holds true of Biblical-minded Holland. Inquisitorial, despotic, and anti-Biblical Spain expelled them, but Biblical Holland received them with open arms. Jewry's gift to Holland was Spinoza, one of the great philosophers of all times, whom Holland claims as its greatest son, and who, together with the Biblical-minded Rembrandt, has made little Holland a major cultural power in Europe.

Wherever the influence of the Bible becomes a potent force in life, as in the Anglo-Saxon countries, man's rise to dignity, freedom, and spirituality is rapid. This rise to power on the part of the individual is attended by the rise of power of the nation. It is no blind coincidence that the English Empire began to rise in the heyday of Biblical influence. The freeing of man from the shackles of medievalism has loosened the imprisoned intellectual, political, and economic energies to which there is scarcely any analogy in occidental history. Medieval man was sterile culturally and economically, because he was enslaved physically and spiritually. But when the anthropocentric forces stormed in upon him and freed him from

his shackles, three events took place: The liberation of the individual, the rapid development of the nation in every field of human endeavor, and a fertilization of man's mind, leaping to the great discoveries in science and to the great creations in art, philosophy, and literature.

It is fascinating to observe how these spiritual forces slowly but surely demolish the medieval ghetto and finally free the Jew entirely and enable him to participate on the basis of equality in the great works of civilization and culture. The small Jewish groups in all these countries, guided by the spirit of true Bibical religiosity, have not remained ungrateful for justice meted out to them. In his young days, Benjamin Disraeli, an English Jew, dreamed of India as the jewel in the crown of the British Empire, and in his older days Disraeli actually made India a part of the British Empire. Disraeli, or Lord Beaconsfield, is Anglo-Jewry's answer to Cromwell, who admitted the Jews to England. For the little freedom Imperial Germany had granted the Jew in the fatherland the latter gave it an Einstein, who, because of his Biblical religiosity, refused to sign the manifesto of Germany's scholars in 1914, in which they justified Germany's war against Europe. For the justice meted out by America to the Jew, he has given America a Brandeis and a Cardozo, the very embodiment of the ideal of justice. The fructification of the genius of the Bible everywhere has proved to be the source of cultural creativeness to gentile and Jew alike. In the Slavic countries where the Bible was not permitted to become a source of spiritual influence neither the Slavic gentile nor the Jew have accomplished much in the field of civilization and culture. The non-Bibical Slavic countries have not produced one great philosopher, not one great plastic artist, and only a few great scientists. For all the science and all the arts emanate from but two sources, from the Renaissance and the Reformation. The Slavic peoples had neither a share in the Reformation nor in the Renaissance.

For hundreds of years men in Anglo-Saxon countries, guided by the creative genius of the Bible, have been engaged in establishing a civilization and a culture on the basis of freedom for and justice to all. With thorough Anglo-Saxon common sense, they concluded that if God is the Creator of all men, all men must be equal before God, and if they are equal before God they must also be equal before the law and must have an equal share in the political order.

It is my contention that Anglo-Saxon democracy is the work of that type of man in history known as the Christian gentleman, that this democracy which is not limited to any economic, religious, or racial group, is not the revived memory of ancient Greek democracy, but is the consequence of Biblical religiosity, whose genius alone made Anglo-Saxondom the most important power in the world economically, politically, and culturally. Since the King James version of the Bible appeared the Anglo-Saxon peoples went from strength to strength. If the Protestants in Germany still continue to cling to the faith of their fathers, in the face of bitter Nazi persecution, it is also because they know that the influence of the Bible is equally a source of strength to the fatherland, not only spiritually but also politically. For was it not Martin Luther's German version of the Bible that was instrumental in creating a united German language and thus a united German peoples? The German Protestants know very well that the greatest literary work of Germany, Goethe's Faust, would not have been possible without the influence of the Bible. Do they not know that just as Milton in England has poetized in Biblical terms so has Klopstock in Germany? Do they not see what has happened to Germany the moment the anti-Biblical Nazi force arose and declared war on the Bible. Do not they see that 4 years of warfare against the Bible in Germany has spelled more havoc to the fatherland culturally, politically, and economically than the 4 years of World War?

Today we hear the voices of the ancient Manichaeans when we listen to General Ludendorff, the former field lord of the German Army and Hitler's most intimate collaborator, commenting on Christianity:

"Christianity," the Teutonic general exclaimed, "must be destroyed in Germany because it is a foreign religion, which falsifies our inheritance, slays our racial qualities, steals the unity from our people, and renders them defenseless."

That is exactly what the adherents of Mani, the third-century anti-Christian lawgiver, said about Christianity, and undertook to destroy it. Exactly like the Manichaeans of old, who concentrated their wrath against the Catholic Church and the synagogue, Ludendorff declares war against them:

"I ask myself," he said recently, "how it is possible for the Jewish people and the Roman Catholic Church to shatter the unity of the German people in the struggle which the latter waged for its existence during the World War?"

It is worth while to point out that Ludendorff, like the Manichaeans of old, is an outspoken naturalist and materialist, taking nature as his guide and vehemently denying the prevalence of spiritual forces in life. The Manichaeans of old represented an uncompromising naturalism. In their system there is no difference between physics and ethics, and the result is—might is right. Ludendorff and his neopagan friends keep on repeating—physics and ethics are identical. There is only nature, and in nature, where jungle rule prevails, the will of the powerful reigns supreme. Might makes right. But since the Bible exhorts man to reject the theory of might is right and teaches him to consider right as might, the Bible and its influence upon German life must be destroyed.

In one more respect does Ludendorff repeat an adage of the Manichaeans. They taught that man is not the crown of creation but the product of the prince of darkness, Satan. Hence their social pessimism. Ludendorff, too, rejects the doctrine that man is the crown of creation. Man, he says, is only a part of nature and no more. If nature is bad, man is bad, too, and he has to be treated like a part of nature only. In nature a state of perpetual war exists, the strong animal destroys the weak, and hence all pacifism must be considered a degeneration. War is the only permanent thing in life.

It is a blind coincidence that after Martin Luther the German universities began to flourish and became the greatest centers of learning in the world, and that after Hitler came to power the same German universities became Nazi propaganda schools and ceased to be centers of learning and scholarship. The World War has not ruined the German universities, but Hitler's war against the Bible, culminating in the persecution of Jews, Protestants, and Catholics, and in expelling the great scientists, teachers, and scholars from the universities and burning great works of distinguished scholars has destroyed ancient seats of German learning. As long as the Bible was a force in German life, there was even in Prussia a minimum of freedom, but now that the Bible has been eliminated from German life there is a maximum of industrial slavery, not only in Prussia but in all the other German States. But why do the Nazis wage such a cruel war against both Biblical religions—Christianity and Judaism? Because the Bible tells man to consider himself free and equal, to consider himself a spiritual being, to consider himself an end in himself, and not a means to an end, that he should not be exploited, and to accept spirituality as his guidance in life. But nazi-ism, with its doctrine of soil and blood, with its doctrine of naturalism and cosmocentricism, denies man his freedom and his dignity; and, therefore, the Bible is a menace to the Nazi regime.

Few of us realize that the forces of cosmocentricism, now in control of Germany, and which are now storming in on the western world are in many respects a resurrection of Manichaeism of old. Just as Manichaeism in the fourth and fifth centuries was the greatest threat to the church and the synagogue, so is nazi-ism today. Just as Manichaeism has displayed the utmost cruelty to Jew and Christian alike, so does modern nazi-ism. Just as Manichaeism represented naturalism and cosmocentricism, so is nazi-ism cosmocentric and naturalistic. Just as Manichaeism believed in the duality of Nature, light and darkness, as the twin forces that ruled the destinies of Nature, so modern nazi-ism preaches the duality of races, the Aryan race representative of light and the non-Aryan, as the figure of Satan, the devil, and darkness. The Nazis were born of brutality and conceived in cruelty. They have resolved to destroy all the forces of the spirit, and are imitating Manichaeism of old. The Nazis have resolved to carry their sinister gospel to all parts of the world and to impose themselves upon every nation, including our own. In the seventeenth century Italy produced a great painter, Giovanni Biscaino, who was born in 1632 and died 25 years later from the plague. He portrayed in a most masterly and brilliant picture, The March of the Terrorists, as they destroyed the temple, burning, pillaging, and murdering human beings, young and old, without mercy, pity, or compassion. The chief bloodthirsty assassin in that extraordinary costly Italian painting of 300 years ago looks exactly like Nazi Hitler. Every Nazi in this country, as well as abroad, is just as much a sworn enemy of Christianity, as he is a sworn enemy of Judaism, because both are hewn from the same rock, and both strive to attain the same end—the spirituality, dignity, freedom, and honor of man, as against the despotism and cruelty of an omnipotent and omniscient state which, being an extension of the jungle, is cruel and bloodthirsty, and is neither a respecter of man nor of God. The two Biblical religions—Christianity and Judaism—after a long, checkered, and glorious history face again the old enemy—the Manichaean, disguised as the modern Nazi of today.

If St. Augustine, who saved Christianity and Judaism from Manichaeism, will again present himself, this St. Augustine will be the Anglo-Saxon peoples and other races that think in such terms. Only they can make the world safe for Christianity as they can make it safe for democracy.

The entire western world, and a good part of the east, is now overwhelmed with that sinister and destructive force known as fascism, which is only an emanation and manifestation of the cosmocentric world picture. It has entrenched itself in many countries, and is now fighting for its existence in Spain. Should it succeed in forcing itself upon humanity, the future of man can only be described as a second dark Middle Ages. A dark age in which the sun of reason sets and gives way to the forces of darkness, ignorance, emotionalism, jungle rule, and the doctrine of might as right. When you observe closely the picture of the present world historic process, you behold a number of fierce looking, sinister figures, goose stepping, with extended hands and clenched fists, and determined to run over and destroy everything in their path. These figures are the dictators of present-day Europe. Hitler today typifies a sadistic, fanatical paranoiac; bloodthirsty, cruel, avaricious, filling concentration camps and torture chambers with hundreds of thousands of men and women fighting for liberty, for racial tolerance, for freedom of the mind and press, for the emancipation of the soul to worship God in conformity with their inherited traditions, and beheading men and women for demanding social justice for oppressed labor. Hitler is the modern Torquemada using cruel scientific instruments of torture to crush the body and soul of the liberty-loving Germans, crying aloud to the world to save them from their Nero.

It is noteworthy that Hitler's fraternity brother in fascism, Benito Mussolini, has not seen fit as yet to perpetrate all the

excesses of power which have been so ruthlessly practiced by his brown-shirted colleague. To the present time, at least, Mussolini has not sought openly to replace Christianity. In point of fact, he is the first politician of modern Italy who has made peace with the church. In addition, it should be carried in mind that Mussolini is only a Prime Minister, though an absolute one, while Hitler is an unqualified combination of Kaiser and King, Prime Minister and Pope, who demands of his unhappy subjects their last full measure of loyalty, temporal, secular, intellectual, political, and ecclesiastical.

But high and above both these personalities stands the lofty, smiling, dignified figure of Franklin Delano Roosevelt, who, like the prophets of old, calls upon man to be good, just, and merciful. He calls upon man to have regard for his fellow man and not to exploit him, not to oppress him, and to consider him an end in himself, and not a means to an end. To many the outcome of this gigantic struggle between the forces of neo-Manichaeism and Anglo-Saxon idealism, and Biblicism, still seems to be in doubt. But to us who believe in the high destiny of man and in the final victory of the forces of the spirit over the forces of brutality the outcome cannot be in doubt. If humanity is to survive this crisis—and it will survive it—this will be a Roosevelt and not a Hitler world, a Biblical and not a materialistic, naturalistic world, an anthropocentric and not a cosmocentric world. For it is impossible to assume that man, who has bled for freedom, for dignity, and for creativeness all these centuries and accomplished so much during these centuries, should suddenly revert to barbarism and destroy his own creations which he wrested from his genius. Neo-Manichaeism in its Fascist-Nazi disguise is only an ugly mood of history, and it will vanish as fast as it came. Nazi Manichaeism will disappear, provided the Anglo-Saxon peoples and those who are with them in this struggle gird their loins and are prepared for this fateful struggle with the forces of malice and infamy.

The twentieth century has witnessed the reincarnation and resurrection of the spirit of Mani and his ancient Manichaeans in the person of the modern, autocratic, pagan Fuehrer, Adolf Hitler, and his Nazi disciples. Throughout Germany today the sadistic Adolf Hitler is a new Messiah of neopaganism. In the Nazi aims, objects, and world outlook "Heil Hitler" is only the latest edition of Mani and his ancient Manichaeans.

Hitler, like ancient Mani, shares one outstanding aspiration—to reduce man from his status as the center of culture and the crown of creation to an insignificant atom, whose right to existence depends entirely upon his value to the ruling dictator crowned with autocratic power.

To Hitler, like Mani of old, the cry of suffering humanity means nothing. Mankind has no inherent rights, nor stands for personal dignity, or should be respected as a human being. With Hitler's cosmocentric outlook upon life it is perfectly logical that modern Nazi-ism, the resurrected and reincarnated mummy of ancient Manichaeism, should wage a relentless war upon Christianity and Biblicism, because these groups proudly proclaim anthropocentricism or love of man as their ideal and are prepared to battle for the principle that man is a spiritual being whose welfare, salvation, and dignity are the primary purposes of life.

But just as Mani's war upon Christianity finally ended in complete disaster to himself, he being drawn and quartered and his followers scattered to the winds, so must Hitler's attack upon Christianity and the Bible bring down upon himself and his neopagan Nazi followers the universal condemnation of an outraged public opinion throughout the civilized world. Christianity must crush the Nazi paganism of Hitler, just as it destroyed the ancient paganism of Mani. America especially is spiritually prepared for this encounter. We are a people grounded in the Bible. In its spirit the most noble document of modern humanity, our Declaration of Independence, was written, and its symbols are to be found not only on the seal of the United States Government but also on the seals of the great American universities. To preserve this spirit that made America great and that conquered for all the Anglo-Saxon peoples their position in history seems to me to be the foremost task of Anglo-Saxondom today. Because we swear by the Bible we are uncompromising antagonists of all those forces whose object is to destroy the spirit of the Bible, so that beastliness instead of godliness may rule the world.

Because we swear by the Bible we are determined to continue the bitter struggle against religious bigotry, racial hatreds, oppression of minorities, and the exploitation of man to the very end. Only by continuing the struggle for religious freedom, justice, and liberty will we make the predictions of our own American prophets—Washington, Franklin, Jefferson, Lincoln, Wilson, and Roosevelt—come true. [Applause.]

Anthropocentricism and cosmocentricism are therefore the two great vantage points from which human life can be viewed and whose struggle for supremacy constitutes the spiritual drama of man. These two forces may be compared to two railroad tracks running in parallel lines. The one track, cosmocentricism, with its catastrophic implications for man that might is right, the perpetuation of the jungle conflict, fatalism, pessimism, the impossibility of creating true human values to give man's life meaning and significance, all leads in the end to perdition. This is best demonstrated by the fate of all the civilizations and empires based upon cosmocentricism.

The other track, anthropocentricism, leading to true spirituality, to idealistic ethics, to a high conception of man, to optimism, and to spiritual creativeness, leads to a state of blessedness, happiness, and paradise, for it is concerned with man, his liberties, his dignity, and keeps man in a high state spiritually. Anthropocentricism as a world historic force and as the most potent agency in the spiritual life of man is almost 3,000 years old. It is indestructible and imperishable because it represents man's true reality and must last throughout the ages.

Throughout the years that have rolled by, Biblicism and Christianity have been the gulf stream in the ocean of spirit, spreading liberty and freedom and carrying spiritual warmth and divine blessing to those desirous of being baptized in its spirit and being responsible for the discovery and ennobling of mankind through the emancipation of man and nations. Let us, in the name of God, continue this spiritual struggle until all the world will be made safe for Christianity, Biblicism, and democracy. [Applause.]

Mr. BEAM. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. Yes; I yield to my friend from Illinois.

Mr. BEAM. I have listened with a great deal of interest to the scholarly remarks of the learned and distinguished gentleman from New York. Can the gentleman give the House any information as to the date of the inception of culture in Germany, when it started, when it began?

Mr. SIROVICH. Mr. Speaker, German culture began within a generation after Martin Luther had translated the Holy Bible into the German language in September 1522. Prior to the Reformation, Germany, which was a part of the Holy Roman Empire, had about 30 groups of people in various parts of Germany who spoke different dialects and could not understand each other. Voltaire in referring to the Holy Roman Empire contended that it was neither holy, nor Roman, nor an empire. Prior to the Protestant Reformation, which began in Germany in the sixteenth century, all intellectual theses and books were written in Latin. The agricultural element, the humble worker, and toiler in Germany was unacquainted with the classical languages of antiquity, in which cultural works were expressed and therefore was illiterate so far as art, science, culture, and civilization are concerned. It was in the eighteenth century that Gottlieb Friedrich Klopstock (1724–1803), the gifted, brilliant, poetic genius wrote his great lyrical poetry entitled "Der Messias," which was founded upon the Biblical concept of a physical Messiah, who brings peace, happiness, concord, and tranquillity to the people of the world. The poetic genius of Klopstock in Germany is comparable to the superb and magnificent contributions of John Milton who wrote his Paradise Lost and Paradise Regained, which are also grounded in Biblicism. After the death of Klopstock, Germany gave to the world one of the greatest exponents of cultural nationalism. His name was Herder. He was the first pioneer and crusader for German nationalism. He was opposed to imperialism. He believed that Germany should not be exploited by any other foreign nation, but should have the privilege of developing its liberty and freedom amongst its own nationals, which could only be accomplished through developing a culture that was German in spirit. Contemporary with Herder's battle for cultural nationalism in Germany was Lord Bolingbroke, who fought for aristocratic nationalism in England, while Rousseau in his "social contract" fought courageously and heroically for democratic nationalism in France, contending that all governments derive their just consent from the governed and denouncing the divine right of kings to rule over a sovereign people.

The sublime and outstanding intellectual genius of German culture was Johann Wolfgang von Goethe. He symbolizes to my mind the most gigantic brain of eighteenth century German learning. His great work Faust, which will live throughout the ages, is founded upon the Biblical character Job. He shows the trials, tribulations, and sufferings to which Job was heir. The Bible was, therefore, the source of Goethe's inspiration.

Contemporaneous with Goethe was the profound, learned scholar Schiller. So barren and sterile was Germany in material which could inspire an author to write, that Schiller had to find his inspiration in characters that lived outside Germany. We, therefore, behold Schiller writing about Don Carlos in Spain, William Tell in Switzerland, Joan of Arc in France, and Mary, Queen of Scots, in England.

The polished and distinguished German novelist Lessing, a product of eighteenth century Germany, had to go to the Holy Land, Jerusalem, to find inspiration for his great character Nathan the Wise, whose idealism and character are an expression of the life of the great Jew, Moses Mendelsohn, the dear and devoted friend of Lessing.

Emanuel Kant symbolizes to me the most oceanic mind of German philosophy, but Kant's father and grandfather were born in Scotland. The great German writers vilified and abused Kant's outstanding contribution to the knowledge of the world, the Critic of Pure Reason. Kant is considered an alien in Germany. Strange as it might seem, Goethe, Schiller, Lessing, Hegel, Schopenhauer, Nietzsche, and Karl Marx have worshipped the philosophical writings of the little Jew from Amsterdam, Benedictus Spinoza.

When Martin Luther first translated the Holy Bible in 1522 into the German language and helped to make Germany conscious of its nationalism, he helped to perfect the development of the great German universities. Throughout the world men and women flocked to German universities like Heidelberg and Bonn in order to develop themselves intellectually. German universities in the seventeenth, eighteenth, and nineteenth centuries were the great outstanding cultural centers of the world. There intellectual freedom prevailed. Science, art, culture, civilization responded to the freedom that came from enlightened minds trying to subjugate the forces of Nature and serve the will of man. [Applause.] Within the last 4 years a fanatical demagogue has taken possession of that great nation, Germany. He has destroyed intellectual freedom

and liberty of the mind. As a paranoiac, with fixed, firm delusions of grandeur and exaltation, he has enslaved a liberty-loving German people through brutality and force. Through him and his disciples he has pillaged and plundered the libraries of Germany and burned the great works of scholars, scientists, and professors of learning and culture in order that his paganistic cult of nature worship may prevail.

Throughout the world German savants, scholars, and men of learning are seeking opportunities for appointment to teach in foreign universities. What happened to Spain during and after the period of the Spanish Inquisition will happen in Germany. Where intellectuality is enslaved and might, force, and jungle rule prevail, that nation must succumb intellectually and culturally. To develop, a nation must battle for intellectual freedom. That is the foundation upon which the superstructure of civilization must evolve. [Applause.]

Mr. DUNN. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Pennsylvania.

Mr. DUNN. The gentleman spoke about Christianity and cited as an example Mussolini preserving Christianity. That depends upon the interpretation the gentleman puts on Christianity. What is his interpretation of Christianity?

Mr. SIROVICH. As I explained to my colleagues, Christianity first and foremost stands for human rights; for the love of man for his fellow man, which is ethics; for the respect of the human mind for a supersensuous living God who is interested in man and man alone and not in Nature, which is religion; for morality; to love thy neighbor as thyself. To my mind, Christianity should represent the greatest peacemaking force in the world and preach the gospel of the doctrine of spirituality, dignity, freedom, and happiness of man. Christianity never stood for totalitarian governments that exploit human beings and consider them insignificant parts of nature. Christianity has given to mankind, wherever it has been permitted to develop, peace and freedom and has always held out to suffering man the promise of their redemption and salvation. That is my conception of Christianity. [Applause.]

Mr. DUNN. Will the gentleman yield further?

Mr. SIROVICH. I yield to the gentleman.

Mr. DUNN. This is quite a long discussion. The gentleman's definition of Christianity is a fine definition. Does the gentleman think that Christ thought it right for a powerful man to prey upon his brother who might be weaker? Is it not a fact that today practically every Christian nation in the world is doing that very thing? Of course, they call themselves Christians.

Mr. SIROVICH. In response to the question of my distinguished friend from Pennsylvania, may I call to his attention that when Jesus stood before the Pharisees in the temple and was being interrogated as to his views upon life, that moment, in my humble opinion, was one of the most dramatic moments in the world's history. Literally speaking, Jesus was " put on the spot" regarding the paying of tribute to Caesar. Without a moment's hesitation the Saviour replied, "Render unto Caesar the things which are Caesar's and unto God the things that are God's." In that extraordinary answer Christ once and for all declared that no ruler, king, potentate, or dictator should ever have the right to enslave the mind, the soul, or the spirit which belong to God, and to God alone, but so far as the political powers of the ruler is concerned man should have the right to obey the laws of a nation until they are changed by the sovereign right of the people. That statement of the Saviour typifies to my mind the attitude of the church and Christ to rulers throughout the world. [Applause.]

Mr. LUCKEY of Nebraska. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. LUCKEY of Nebraska. I have listened with great interest to the scholarly dissertation of the gentleman from New York and would like to ask this question: Would Hitlerism have been possible in Germany if it had not been for the injustice of the Treaty of Versailles?

Mr. SIROVICH. The Treaty of Versailles, in my humble opinion, was an infamous treaty imposed upon the defeated German race. It did not correspond with the philosophic dictates and expositions of the greatest philosophical President this country has ever had, Woodrow Wilson. To bring the frightful World War, with all of its horrors and tragedies to an end, Woodrow Wilson proposed and enunciated 14 points on the basis of which he hoped the German people would submit to end the war and stop the awful carnage, the pillaging, plundering, and destruction known as modern war. President Wilson, in his most gracious and affable manner, told the German nation that he was not at war with the German people but that our country, with all of its resources and manpower, had determined to check the autocratic despotism of kaiserism. As an evidence of the sincerity of the German people to the President's declaration, the German people laid down their arms, Armistice Day was celebrated throughout the world, symbolizing the cessation of hostilities.

A short time thereafter the most cruel, vicious, and unjust Treaty of Versailles was signed. It enslaved countless millions of innocent Germans and unborn Germans as industrial and economic slaves who would be compelled for generations to work in the quarries of industry and commerce to pay off the colossal and stupendous reparations and indemnities which victorious nations of the World War had imposed upon them.

When the German people could no longer carry this load and pleaded with the victorious nations of the World War to lighten their burden, our so-called statesmen of the world lost their greatest opportunity. Then and there the fanatical demagogue Hitler and Hitlerism came to the fore. Like Moses of old he promised to take the German people from the land of depression and helplessness and lead them to the promised land of social, political, and economical success. He has destroyed the freedom of the press, freedom of speech, freedom of assembly, and freedom of worship to millions of Germans and other citizens of that great nation. He has built concentration camps and torture chambers and has utilized every agency and instrumentality to break the will and spirit of millions of German citizens, all tragic victims of the accident of religious births. Throughout Germany the armament factories are working day and night preparing arms, and ammunition of war, that foreshadow the most dreadful carnage yet known to human history. Mr. Speaker, the time has come, the hour has now arrived, when this great Republic, liberty-loving as it is, in conjunction with the great constitutional parliamentary democracies as England and France, must call a halt to this modern tyrant. Mr. Speaker, I appeal to the great liberty-loving German nationals and representatives of German culture and civilization to rise in their might and break the shackles that have enslaved them during the last 4 years and destroy Hitler and Hitlerism the same as St. Augustine destroyed their ancient prototype, Mani and his Manichaeians, and thus liberate themselves from the Nero and Torquemada that has submerged their culture and civilization to the level of the dark Middle Ages of a thousand years ago. [Applause.]

Mr. Speaker, may I take this opportunity to thank the Members of the House for their patience in listening to my address for over an hour. [Applause.]

Gen. Robert E. Lee

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1939

ADDRESS BY HON. LUTHER PATRICK, OF ALABAMA

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks I include the following address delivered by my colleague, LUTHER PATRICK, of Alabama, on yesterday as the principal speaker at the exercises held before Robert E. Lee's statue in Statuary Hall under the auspices of the United Daughters of the Confederacy for the District of Columbia:

Of course, it is no particular effort for any southerner to make a speech on the name of Lee. My grandparents—father's side, mother's side—fought for the Confederacy; even a great-grandfather was wounded fighting under the great leadership of Robert E. Lee. Mothers still love to name newly born sons Lee, often still adding the Robert. And yet I shall not lend my part of this lovely hour to reciting The Sword of Lee or The Conquered Banner, beautiful thoughts and grand niches that they occupy in literature.

When I was a little chap in school it was often my privilege, and ever a great delight, to arise and extol the valor and virtues of our great southern general and hero. How mother kissed and pressed me to her side and how the pupils joined in the theme shall always remain a memory to be cherished and enjoyed. I know now that I never gave anything new before my mother and schoolmates. There is no doubt that my every word and thought had been the speech of many before my day, but a child who cannot give a pretty fair account of who Robert E. Lee was and what he did in this life would have a poor chance of getting out of any present grade in his southern school work.

General Lee does stand out nobly in America's galaxy of generals. Many a general is at his greatest on the battlefield and in the officer's tent, but his personal life is not so great. Lee was and is recognized by historians all over this earth as one of the all-time great military men of genius.

English, French, and Italian historians place him in the immediate company of Alexander, Hannibal, Napoleon, Caesar, in his world rank as a military genius; and this takes no thought of his general character, noble purposes, and gracious contributions to civil life and educational development of his day. His shadow grows longer and his form finer with the passing of years and as the sunlight of more fully seen historical facts are given to develop them. We know at this date that we may exclude every hour and every achievement of his outstanding military history and still safely nominate him as one of America's all-time great.

But may we develop safely and without being thought any less "southern" another theme today? We shall only touch upon it briefly. We know the conquered banner was bathed in heroes' blood, that of valorous and valiant men fighting for what they felt was right, fighting with all their hearts. We know the sword of Lee flashed naught but glory and honor, and our hearts shall forever swell with pride as we review the records they show as the moving finger writes and has written; but withal the banner is a conquered

one and Lee's glorious sword did come to its sad moment of surrender. Of course, we shall always tread lightly about the graves of those dead, shall cherish the fearless charge that followed the rebel yell into the very cannon's mouth, shall bring richest oils, aloes, and myrrh to the shrine of Lee's last resting place, shall sing songs and write poems to the sword of Lee and to the conquered banner, shall encase their smallest momento in embroidery and sweetened with perfumes, but also shall let it rest there. There they belong. Their own glory is enough, rich in an abundance of kisses and tears.

A conquered banner, it matters not how pure and unsullied, is not a challenge of the highest inspiration to the achievement of the awakening dream of youth. It does not lend life to early castles in the air. No sword ever flashed more brightly than the clear steel blade of Gen. Robert E. Lee, but our hopeful and cherished youth know of a World War that has passed in historic review between them and the War between the States, a war in which their fathers fought by the side of the grandsons of those who died under the leadership of Meade and Grant and Hooker, and it does not light the bright fires of their hopes to forever refer them to the sword that was forced to surrender.

This exquisite statue of our great and beloved general is not merely a monument upon which to lay a wreath and to drop a tear but is a stone, one of the mighty stones, upon which we are building our Nation. Thus while we pay the highest tribute to the sterling and peerless leader, Lee, and point with swelling pride to his achievements, to his character, and to his devotion to his cause, still we do this while remembering to point the onmarching youth of our beloved Southland to the greatest gift this earth has to offer to the children of men—citizenship in the United States of America—a flag that has never been conquered, Old Glory, the banner Betsy made, our flag—and to a swift and shining sword that has not and must never know surrender—the sword of freedom!

I thank you.

Reciprocal-Trade Agreement With Cuba

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1939

REMARKS OF CERTAIN MEMBERS OF THE GOVERNMENT OF PUERTO RICO

Mr. IGLESIAS. Mr. Speaker, on January 13 the representatives of the government of Puerto Rico and I appeared before the Committee for Reciprocity Information on trade agreement with Cuba to defend the interests of Puerto Rico, and on leave of the House I am inserting here my own remarks and those of other representatives of the island:

STATEMENT OF HON. SANTIAGO IGLESIAS, RESIDENT COMMISSIONER OF PUERTO RICO

Commissioner IGLESIAS. Mr. Chairman and members of the Committee, I have no statement in writing. I am just going to explain my point of view directly to you. The Governor of Puerto Rico has expressed a sincere and accurate statement regarding the conditions and situation of the island. What he said is true. Puerto Rico has a great density of population, over 1,800,000 people in 3,400 square miles. That is to say 500 people per square mile. The area of Puerto Rico is made to sustain such a crowd of people there.

Sugar production in the principal industry of the island. Two-thirds of the people of Puerto Rico are engaged in agriculture. Thousands of workers are unemployed at this time. Unemployment is very serious and it is the greatest problem that we have to confront in the island.

This proposal of reducing the tariff with Cuba is certainly a threat; it causes a terrible apprehension that another economic catastrophe may obtain in the future. The workers on the island depend more than anything for their employment, and the business in general, on what sugar can give to them.

It is very extraordinary, very exceptional, that with the island of Puerto Rico being one of the most important markets of the United States, buying $65,470,000 worth against $49,615,000 of Cuba, that we are going to protect Cuba against the interests of Puerto Rico.

The reason seems to be that by giving that concession to Cuba we will increase the benefit of the importations that Cuba can have from the United States.

In the reduction of the tariff from Cuba they have received already in the past years the sum of almost $180,000,000 in benefits, while Puerto Rico could not receive such benefits, and it is affirmed that they are going to receive $2,000,000 more each year if that reduction will be granted.

For each dollar of sales of Puerto Rico to the United States the island has purchased 83 cents worth of American products, as compared with 52 cents worth of purchases made by Cuba directly. So Puerto Rico, as an American country, has contributed to the market of the United States more than Cuba has done, regardless of that fact that there have been benefits constantly given to that ccuntry.

At this moment I have no desire to attack Cuba, which is only natural. We are practically the same kind of people in general, but I want to affirm this: That all those millions of dollars that are given to the treasury of Cuba, or the producers in Cuba, do not go directly to the masses of the workers of Cuba. They have not received any benefits, but in Puerto Rico anything that is being given directly to better conditions over there, the workingmen receive a part of that benefit.

The decree of the President of Cuba some months ago has put the wages of the workers of Cuba engaged in agricultural pursuits, especially in sugar, on a basis of 80 cents a day and up. There is no control over the hours of labor there in the sugarcane fields. There is no organization—there cannot be an organization for the workers over there for years and years. They get from Haiti and other West Indian countries of English extraction cheap labor—cheaper than they have over there. So the benefits are accrued by those who make the business, but not by the workers themselves.

When we talk about Puerto Rico we are talking about the greatest majority of the workers over there; we are talking about the benefit to them, to protect them; and I come here just to express to you, in my poor English expression, that anything that is being done to give preference to the foreign countries is against the interest of Puerto Rico, and, as Senator PEPPER has established here, to the States of the Union and Hawaii, too. All the materials for that industry are being bought over here, not in a foreign country. We are not going to Europe; we are not going to any country but the United States; and when you study this question seriously and profoundly you will see what is going to be the tremendous handicap that Puerto Rico is going to have in view of these concessions to other countries.

I am not going to enter into a discussion of the facts concerning the sugar industry per acre, because there are people here that understand the situation much better, who know what is going to be the crisis that may come in view of the proposal that is before your committee.

The same thing occurs with the tobacco industry of Puerto Rico. They cannot compete with the tobacco of Cuba, and anything that is being given to Cuba is against the interests of the tobacco producers in Puerto Rico.

The same thing may be said in regard to pineapples. Any concession given in regard to pineapples in Cuba would be against the interests of Puerto Rican producers, as well as the Hawaiian producers and other State producers.

The same thing has happened with coconuts. In giving to England the benefit of reducing their tariff on coconut importations to the United States it has made the producers of coconuts in Puerto Rico suffer.

It is indeed a very complicated situation, this matter of the so-called reciprocity and change of tariffs. The interest of the United States should lie in protecting their property, that is Puerto Rico, Hawaii, and the other islands. The other countries can produce tremendously cheaper. The workers in many of those countries cannot organize themselves to defend their economic conditions and to improve their situations. The United States has given them the right to organize, and has guaranteed them the right to protect themselves. Puerto Rico has had that privilege, especially since Governor Winship has been there.

So, Mr. Chairman and members of the Committee, I think that I will conclude by saying that I will endorse very sincerely not only what the Governor has said but what the other members of the government of Puerto Rico and the private businesses have to say, and I know that they will do it much better than I can. The people of Puerto Rico have been very generously treated, of course. Since the occupation by America over there we have made wonderful progress. We believe that we are a part of the United States, and anything that may be done over here to protect the people of the United States would be protecting the people of Puerto Rico. I thank you.

Chairman GRADY. Thank you, sir.

STATEMENT OF HON. F. A. LOPEZ DOMINGUEZ, COMMISSIONER OF AGRICULTURE AND COMMERCE OF PUERTO RICO

Commissioner DOMINGUEZ. Mr. Chairman and gentlemen, I appear here in behalf of the government of Puerto Rico. That means in behalf of the whole island of Puerto Rico and of all the interests concerned, without expressing any special interest in any manner or any special commercial activities of the island, but only to present the question from the point of view of the welfare of the people of Puerto Rico as a whole.

The Department of Agriculture of Puerto Rico is charged with the responsibility of looking after the welfare and the development of agriculture and the commerce of the island of Puerto Rico. Anything that affects those things is, of course, of vital concern to the Commissioner of Agriculture of Puerto Rico.

In this specific instance the issues that are going to be presented here are not only of vital importance, they are a matter of life and death for the people of Puerto Rico. I am going to try to show this very briefly, and I will just get over the direct, concise statements in a few chosen fields, because I know you do not want any long discussion of any sort or any unnecessary detailed information.

Puerto Rico is an agricultural country and must depend for its income chiefly on the exportation of agricultural products. The chief lines of export have been sugar, molasses, products of the needlework industry, tobacco, fruits, fresh and prepared or preserved, coffee, and, for the last 3 years, rum.

Due to restrictions in production, in accordance with congressional legislation and administrative measures, and to concessions made to foreign countries introducing into the American market the same products as Puerto Rico sells here, the total value of these exports has declined during the fiscal year ending in June 1938, in accordance with the table herewith attached. It may be seen from this table that the total value of exports has dropped down to $82,077,000, as compared to the total value of $114,954,000 for the year immediately preceding. This is lower than our total exports for the depression years, except 1932 when the great storm swept the island and destroyed property of approximately a total value of $80,000,000. This means that the balance of trade for the year 1937–38 has been against Puerto Rico by a total sum of $11,237,605. It may be seen from this table also that the sugar and molasses exports have been reduced from $72,601,000 to $51,361,000; that the needlework industry dropped in value from $20,811,000 to $11,612,000. This industry is now at a standstill, it is on the verge of disappearance on account of the wages and hours law. The tobacco exports have diminished from $10,115,000 to $8,484,000. The tobacco industry is also menaced now by the Wages and Hours Act. Coffee, which at one time within the last 20 years produced as much as $7,000,000, and which last year netted an income of $1,170,000, has dropped down during this year to $111,000.

Rum is a new industry that is just beginning to develop and the estimates are that during this calendar year it declined 20 percent in volume. Also, the needlework industry is at present at a complete standstill and the tobacco industry is menaced with disappearance on account of the application of the Wages and Hours Act. It may be seen that the fruit industry is declining, as will be shown later, having dropped from a total of $2,451,000 last year to $1,760,000 for this year. This was an industry that produced in the past about $8,000,000. It is down now to $1,000,000 and will be less.

The estimates for the calendar year of 1938 show that there will be a drop of $12,500,000 in purchases and of about $21,000,000 in sales, so that the value of our total exports for the ensuing year 1938–39 are bound to be lower than for this year. Now, this is a tremendous situation. This means that all our lines of exports, for one reason or another, which I do not want to tire you now with explanations of, but chiefly on account of restrictions through legislation and through administrative determinations, but in a great measure on account of concessions to foreign countries that produce the same thing that we produce at cheaper rates, all our lines of export have been practically annihilated up to this moment. Now we are facing the situation where, after tremendous effort to put over a more sound economic basis by diversifying this production, we are pushed back again because of Cuba, and we are facing 1939 where we will have to feed the people of Puerto Rico and we will have to supply them the necessary services in health, school, and other things, and we are facing the job of keeping up the standards of our industry, and an industry which has been reduced down to $51,000,000 from $70,000,000.

Chairman GRADY. Commissioner, I think you ought to show wherein these proposed concessions will harm Puerto Rico and not address yourself to the general problem of Puerto Rico, which is not what we have before us here today.

Commissioner DOMINGUEZ. I understand, Mr. Chairman, but I have made this expression as a background to show the tremendous importance that it will have in affecting the life of the people of Puerto Rico. I wanted to show that we are going to be dependent entirely on sugar, and anything that menaces the income from sugar would menace the life of the people of Puerto Rico.

I wanted to say that anything that reduces our income is going to be vital for us, because we are buying here about $100,000,000 worth, which represents the extreme limit of our needs, and if that is reduced to about half, then it means that our standards of living will have to go all the way down. I am going to leave that without saying a few things I have here, Mr. Chairman, to comply with your instructions.

Commissioner DOMINGUEZ. Yes, sir. The fact that Puerto Rico has imported in the past over $100,000,000 worth of goods, that only last year our purchases amounted to $98,859,969, shows that, in order to keep our present standards of living we ought to be able to buy goods and commodities amounting in value to not less than $100,000,000. The fact is that, in order to maintain a proper standard of living in Puerto Rico, much more than this amount should be expended for imported goods. Reducing the income of the island to slightly over one-half of the requirements of the population not only means a great lowering in the standards of living but is bound to create a very difficult social problem, mainly by an extensive increase in unemployment.

As regards point one, the theory of the trade agreements is that they create a greater purchasing power in foreign countries that will result in increased exports from the United States to them. The cigar manufacturers have been and are promoting this reduction because, in accordance with their views, they need to obtain Cuban tobacco at lower prices so that they may continue to use it in class A cigars. This means, then, that the manufacturers are planning on taking advantage of this reduction in tariff to obtain their product at lower prices. If this is so, then the concession is not going to favor the Cuban farmer. The only purpose it will accomplish then would be to deprive the United States Treasury of income to be given to the cigar manufacturers. The only way in which this measure would favor the Cuban farmer, then, would be by creating a greater demand for Cuban tobacco in this country. This means displacement of Pennsylvania and Puerto Rican cigar filler tobacco in the American market.

As regards point 2, the Cuban farmer is receiving now a price of from 55 cents to $1, and an average of 70 cents per pound for tobacco, which is raised at much lower costs than in Pennsylvania and Puerto Rico. Pennsylvania and Puerto Rico tobacco command a price of 42 to 45 cents per pound of stripping tobacco, which in Puerto Rico means a price of about 12 to 16 cents to the farmer. This hardly covers his total cost of production. The reduction in the tariff that has been requested would, then, give an added advantage to a foreign product which is selling in our own market at twice the price of our own product and putting our farmers at a further disadvantage in any efforts that they might make in the future to secure a more reasonable price than they are now getting for their tobacco.

Puerto Rico has been making efforts to improve the price on her tobacco by asking spontaneously for restrictions in production. Only this year, the allotment made to Puerto Rico under the Agricultural Adjustment Act was for 42,000 acres. The Puerto Rican farmers requested that this allotment be lowered to 30,000 acres in the hope of getting better prices. The value of the tobacco crops of Puerto Rico has diminished from $10,115,000 last year to $8,484,000 this year, and the discouragement among tobacco growers has been so great, on account of so many obstacles and restrictions and unfair prices, that I do not think there will be even 20,000 acres planted for the coming year. So one other line of export is gradually and surely going out of existence.

Pineapples: The pineapple trade agreement with Cuba has been only a source of disappointment and heavy losses to the Puerto Rican fruit growers. In the year 1935, 1 year after the trade agreement with Cuba on pineapples was signed, the shipments of fresh pineapples from Cuba to the United States were 52.7 percent of the total, and the shipments of Puerto Rico, 38.2 percent of the total. In 1936 the proportionate amount of Cuban pineapples increased to 55.4 percent and in 1937 to 64.6 percent, with corresponding decreases in the proportionate amount of fresh pineapples from Puerto Rico to 34.2 percent in 1936 and 28.3 percent in 1937. Not only has the proportionate amount of Puerto Rican fresh pineapples sold in continental United States been diminishing as a result of this agreement, but also the prices have been going down. In 1935 the price per crate for Puerto Rican fresh pineapples in the New York market was $2,66; in 1936, $2.47; and in 1937, $2.24. The agreement has wrought, then, a great injury to the pineapple industry of Puerto Rico. Not only this, but the only part of the agreement that would make some compensation to the Puerto Rican farmers has been utterly disregarded by the Cuban interests. I refer to the part of the agreement which required the Cuban Government to enable American growers to obtain pineapple slips in Cuba. The two attempts made by Puerto Rico pineapple growers to obtain slips in Cuba in 1936 and in 1938 met with such obstacles and opposition, encouraged by officials of the Cuban Government, that it was impossible to secure them. A report of the representatives of the Puerto Rican pineapple growers, who went to Cuba to purchase this material, is appended for detailed information. In our estimation, this has been a breach of contract which justifies an annulment of the agreement.

TESTIMONY OF WILLIAM CATTRON RIGBY, WASHINGTON, D. C.

Mr. RIGBY. I am legal counsel for the government of Puerto Rico. I have but a few words to say. The Governor has covered the things generally, and the witnesses for the different interests will be here.

Puerto Rico is somewhat in the same situation, in a way, that Mr. Brewster said Maine is. Puerto Rico is in the same situation as to the tropical products as Maine is to the products of Canada. It is a relatively small part of the United States, but its products are almost entirely similar to those of Cuba and the other countries, and apparently there is, because of that situation, a very natural tendency to use those products as those of a comparatively small part of the country in trading purposes, and that might be justified from the standpoint of the commerce of the whole country if it were not for the fact that Puerto Rico is in itself such an excellent market for the mainland, and particularly for its food products and its textiles, and giving up the things that support Puerto Rico and that support Puerto Rican industry is necessarily cutting right directly into the mainland's market.

Now, it is little hard to understand, perhaps, why it is that the Island of Puerto Rico, with only a million and a half of cultivable acres, farming land, can buy $90,000,000 worth of the mainland's products from the United States, which makes actually more than $60 an acre for every cultivable acre of Puerto Rico that they buy here, but the reason is explained in the situation there. You have that very dense population. You could not feed that population on simply the ordinary foodstuffs that they could raise there, with 1,800,000 people on 1,500,000 acres of land. What they have to do is to raise things of high per-acre value and trade them off for the foodstuffs. For example, they can raise on an acre of land devoted to sugar enough sugar to buy 10 or 11 acres worth, or the produce of 10 or 11 acres of rice in Louisiana, and so they buy about half of all the rice that goes out from the mainland. So with corn and the other things, and that is why Puerto Rico, with that relatively small acreage, is such a tremendously heavy purchaser of mainland goods, and is valuable for that purpose.

Now, I just want to add another word, if I may. The last paragraph of this press release that was sent out states, "Due consideration will, however, be given to all representations which may be made to the Committee for Reciprocity Information regarding any provisions of the agreement with respect to which the interested persons may feel that adjustments are necessary." That applies directly to the point of the welfare of the pineapple and the vegetable industries of Puerto Rico. We do want to ask that in any bargaining with Cuba there be taken into consideration and requested from Cuba, or insisted upon, a change in those things in the Cuban trade agreement that so directly hurts the interests of Puerto Rico. The agreement of 1934 cuts in half the tariff on the pineapples and has well nigh destroyed the pineapple industry of Puerto Rico, which is an industry that does not compete with the mainland at all, and particularly because they have failed to carry out the agreement to allow the purchase freely of slips so you could "smoke" the pineapples in Puerto Rico, to force their early ripening for marketing, because without the early marketing they cannot compete with the reduced tariffs, and yet they have not been able to get the pineapple slips for renewed propagation, because obstructions have been put in their way, and without the opportunity to purchase these slips, they cannot "smoke" their pineapples, because the smoking largely destroys the tender slips and thus prevents new propagation.

In the same way the reductions of the tariffs on vegetables have seriously hampered and injured the Puerto Rican vegetable industry.

Investigation of W. P. A. Activities

EXTENSION OF REMARKS
OF
HON. EDWIN M. SCHAEFER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1939

EDITORIAL FROM BELLEVILLE (ILL.) NEWS-DEMOCRAT OF DECEMBER 29, 1938

Mr. SCHAEFER of Illinois. Mr. Speaker, authorized to do so by the unanimous consent of the membership of the House, I am privileged to hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD the text of a most interesting and thought-provoking editorial written by the Honorable Robert L. Kern, publisher of the Belleville (Ill.) News-Democrat, and which appeared in that publication on December 29, 1938.

Mr. Kern, a son of the late Honorable Fred J. Kern, of Belleville, who served in this House with distinction many years ago, is an editor of great influence in Illinois and with a wide knowledge of political affairs. The News-Democrat, likewise, is a journal of high influence and one which may rightfully be classified among the leading liberal daily newspapers, not only in the Midwest, but in the entire Nation.

This editorial from the experienced pen of Mr. Kern is timely indeed, in view of the constant demands on the part of some for investigation of the Works Progress Administration.

PUBLICIZE GOOD POINTS

Through this distinguished editor from my home city let me offer this food for thought and let me urge those who call upon Congress to authorize this investigation to include in whatever resolution they may present a suggestion, yea, a compulsory provision, that the good points of the W. P. A. be given just as much publicity as I am certain will be given to the bad points.

If we search for the truth, let us have all of it. Even though those who seek an investigation of W. P. A. and P. W. A. activities, may not like it, let them have the good, which they ignore, with the bad, which they seek.

I am starting my fourth term in this House. Never before have I taxed the budget of the Public Printer by offering anything for publication in the CONGRESSIONAL RECORD. But the thought developed by Mr. Kern is so logical and so pertinent to matters now before Congress that I feel I am justified to diverge from my usual course to place herein what I consider to be a very important message to the House membership.

Mr. Kern's splendid editorial follows in full:

[From Belleville (Ill.) News-Democrat of December 29, 1938]

INVESTIGATING THE W. P. A. AND P. W. A. ACTIVITIES—FAIR-MINDED AND IMPARTIAL INQUIRY THAT ENTERS INTO ALL PHASES, GOOD AS WELL AS BAD, WILL HAVE ACCLAIM OF ALL HONEST AND PATRIOTIC AMERICAN CITIZENS

That a resolution will be introduced early in the next Congress to investigate W. P. A. activities over the past 5 years is a foregone conclusion.

That Congress will authorize and appropriate for such an investigation is highly probable.

That the investigators will discover considerable in peculations and petty graft is inevitable.

The great diversity in the make-up of human nature being as it is, it is inconceivable that such vast sums of money could have been handled and distributed by so many different people without a degree of scandal and corruption entering the picture.

PROGRAM A PARTY RESPONSIBILITY

The W. P. A. is a Democratic administration issue, so the party must necessarily shoulder the blame for every evil that it has fostered.

But the Democratic administration is also entitled to all of the credit for the good that has been accomplished by the W. P. A.

By all means let us have a congressional investigation of the W. P. A., but let it be a fair and unbiased one.

For every case of petty graft exposed let there be cited in a parallel column the honest disbursements.

For every instance of coercive voting uncovered, let there be listed the names of those who voted the Democratic ticket in gratitude for the food and shelter that only the W. P. A. afforded.

For every dollar found to have been diverted into private pockets illegally let them put down the thousand dollars distributed fairly.

And for every W. P. A. official found guilty of wrongdoing let them laud the other 999 who performed their allotted tasks thoroughly, conscientiously, and honorably.

INDUSTRY FAILED WORKERS

Let the investigation show that the P. W. A. and W. P. A. of this Democratic administration has provided subsistence and shelter for millions of American men and women which private industry could not or would not give.

And against the total of several billions of dollars of Federal expenditures through these two branches of government, let them also list the astonishing totals reached by the end of 1937 of 11,106 new public buildings, repairs, and additions to 31,173 others, 43,870 miles of new roads, 146,901 miles of old roads improved, 19,272 new bridges and 13,166 old bridges made safe for traffic.

And the total will also include 3,300 water-storage dams and 15,855 other dams for the prevention of soil erosion.

Include also the large total of new city streets and sidewalks, parks and recreation grounds prepared for public enjoyment, and countless other items of civic improvement far too numerous to mention.

BILLIONS INVESTED IN HUMANITY

The permanency of millions of these W. P. A. and P. W. A. dollars are visible to the eye.

What is not so easily discerned are the billions that have been invested in humanity.

A fair-minded, impartial fact-finding investigation of the Works Progress Administration will be acclaimed by all honest and patriotic Americans of every political faith.

But one of those long-nosed, snooping, evil-hunting committees, interested only in scandal mongering, will earn nothing but the disgust it will deserve.

The Wage and Hour Law

EXTENSION OF REMARKS
OF
HON. SAM HOBBS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1939

Mr. HOBBS. Mr. Speaker, our beloved Uncle Sam, who has of late years become known as Santa Claus, used a new sleigh last month to deliver large presents of grief to some of his 130,000,000 children in the United States. This new sleigh was the wage and hour bill.

Under its malevolent functioning this is what happened to a business in Alabama which for years before this new sleigh was put into operation functioned with perfect satisfaction to its employees and with profit to the owners:

In December 1937—before the wage-hour offensive—the average wage for the month was $53.19. In December 1938,

it was $51.65. Production decreased 27.4 percent, costs increased 46.67 percent. Average sales price increased 7 percent. The December profit of $3,000 plus of 1937 had been transmuted into a $4,000 loss for the same month of 1938.

This is a true story which could be multiplied many times. It is one of Uncle Sam's Christmas presents to some of the finest men under the Flag, who happen to own this business. Insolvency instead of solvency, loss instead of profit, both to the employees and the employers.

This story is of a firm which has complied with the law both in letter and in spirit. It hoped against hope that it could survive under the wage-hour law. It is not the story of the hundreds of businesses which did not have enough capital to enable them to experiment—they are closed.

This simple statement of facts will bring joy to those who designed this piece of legislation, for this is evidence that it is having the desired result—to kill industry in the South.

Both employer and employee will suffer in the South. Few, if any, employees will be benefited in the other regions of our Nation. But the industrial "big shots" of those other regions will profit, so "On with the dance, let joy be unconfined!"

W. P. A. Appropriation

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1939

Mr. SHANLEY. Mr. Speaker, in all my experience I have never received telegrams from so many disinterested organizations who are anxious to obtain real and adequate relief. Every one of these organizations is absolutely for the President's proposal and so am I. I have read every page of the 221 of the hearings. I have read the report. I have studied the bill. I have listened to the debate in the committee and if I needed anything else to convince me of the urgency and of the real substantial need of the President's proposal I would go to page 50 of the hearings where Colonel Harrington, whose ability and whose sincerity has never been questioned, pointed out that even today there are 750,000 certified eligible relief applicants who have not and cannot be placed.

Let us assume, for example, that a real purge, as Republicans and some of our Democratic friends maintain, of the relief rolls will dismiss 500,000. Let us maintain that this is true and 1 out of every 6 of the eligibles is really ineligible. Even with that ratio there would still be just as many and more eligibles for relief as is warranted by the President's proposal. You and I know that the charge that there are over 500,000 ineligibles who could be purged is fantastic, ducks the issue, and seeks to draw up a smoke screen. It is my humble opinion, from study and analysis and personal investigation, that no such numbers are illegally entitled to relief.

Mr. Speaker, under unanimous consent, I am using my privilege to insert three typical important telegrams which have been sent to me.

From New Haven:

Please vote against reduction of W. P. A. appropriation.
NEW HAVEN FEDERATION OF MUSICIANS,
ARTHUR J. EHEHALT, *Secretary.*

Earnestly urge you support President's proposal of eight hundred and seventy-five million for W. P. A. New Haven has no money on hand or in 1939 budget to meet increased relief costs that committee proposal of seven hundred and twenty-five millions will compel if adopted.

JOHN W. MURPHY,
Mayor of New Haven.

I have added also a copy of the resolution of the State Senate of Connecticut. It is interesting to know that the liberal vote in the State senate was for the President's proposal while the Republican-controlled lower house voted tooth and nail in opposing the resolution.

Resolved by the Senate of the State of Connecticut, That President Roosevelt's proposal to the United States Congress, recommending a W. P. A. deficiency appropriation in the amount of $875,000,000 be, and the same is hereby, wholeheartedly endorsed by the Senate of the General Assembly of Connecticut, and that the clerk of the senate be instructed to inform the Connecticut delegation to Congress of such action and urge them to vote for said appropriation.

The Responsibility of Congress

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 20, 1939

Mr. THORKELSON. Mr. Speaker, I have received many resolutions asking for personal and public aid from the Federal Government. Several of them are practically ultimatums for $1,000,000,000 or more for relief. Many of such resolutions concern requests for work, regulation of hours, length of working time, and compensation. A few of them ask to have some employees fired and others appointed in their places. There are resolutions for W. P. A. employees to be tried by tribunals in their own organization; to introduce and support legislation to regulate and limit working time and other related conditions for employees in public industries; resolutions to propose and favor constant spending of money for the promotion of Utopian living conditions; resolutions to appose retroactive taxation, and against amendments to the N. L. R. Act; resolutions to recognize and make relief organizations permanent under civil-service status.

I have resolutions to stop war, to police the world, to help warring nations, and to employ and support religious groups. I have also resolutions which protest farm regulation and planning by the Government. As a matter of fact, I have received hundreds of resolutions, and would like to mention every one of them, but there are simply too many.

I do not look upon such public interest and reaction lightly, for there are definite causes for such mass protests. It is said where there is smoke there is fire, and I believe it is well for Congress to remember that our Nation is smouldering. Some day it may break into a destructive fire of public upheaval.

Someone is responsible, and it is not the people. It is not industry, commerce, business, labor, agriculture, professional, or any other earning group. It is not President Roosevelt, ex-President Hoover, or any other President, for no legislative power is delegated to the Chief Executive. Responsibility cannot be placed on Departments, or upon subdivisions thereof, and it cannot be blamed on a particular administration.

The blame for all must be placed on the majority in Congress which has supported unconstitutional legislation; upon those who have denied and disparaged the rights retained by the people; upon those who have treated lightly their oath of obligation to preserve, to protect, and defend the Constitution of the United States. The people themselves are also to blame for not having elected to office men who embrace the Constitution as the greatest instrument ever drafted for the protection of the people.

I am not interested in the enactment of laws. We have too many. I am, however, interested in the people who have labored and helped to create and build the wonderful structure we live in. For 2 years I shall use every effort to warn the people to protect themselves and their rights by sending men to Congress who will adhere to and support the Constitution instead of destroying it by enactment of unsound and unconstitutional laws.

We, the Members of Congress, should bear in mind that Congress represents all the people in all the States—that

when laws are enacted to help one group, they hurt another. If laws are enacted to punish one group of the people, it is a pain in the neck to all the people. We must stand together or hang singly. When the people's rights are restricted or removed by laws, one by one, when the last is removed, Congress has, by such legislation and confiscation of rights, transformed our Government into a legal despotism. I want every man, woman, and child to understand this, and never forget it.

It is now in order for someone to introduce a resolution that Congress resume its rightful position to the people, as provided for in the Constitution. That would be the manly and the proper thing to do, instead of passing the buck and blaming someone else for our own mistakes.

Congress cannot evade responsibility by general accusations because the people are too intelligent, and they are doing their own thinking. If I am right, and I believe I am, let us begin now to get business going in a businesslike manner so that our idle people may be gainfully employed. We cannot increase consuming power by Federal spendings. It just does not work—never has and never will. All business must either be run by the people or by the Government. There is no middle road. To expect business to operate and to furnish money to the Government so it in return may use such money to foster or enter into competition with its own benefactor—business—can only end in idleness, poverty, suffering, and revolution. Yes; revolution against professors, dreamers, crystal gazers, and horoscope entrepreneurs. The people are ill from technicalitis, graphitis, and statisticitis. The people are sick of laws, restrictions, and regulations, and, Mr. Speaker, I am in accord and in sympathy with them.

The people should now take the law into their own hands by insisting that all departments in the Federal Government adhere to the Constitution; that all laws enacted in conflict with the Constitution be repealed, one by one, so that the people's rights may be restored. That will start the wheels of industry going, furnish employment, increase consumption, build property, and return the American smile to our people.

War Hysteria and National Defense

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1939

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, JANUARY 19, 1939

Mr. KNUTSON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio address of Hon. HAMILTON FISH, of New York, delivered over the Mutual Broadcasting System, Thursday, January 19, 1939:

What I intend to say this evening may not be approved or appreciated by New Deal war mongers, hysterical internationalists, war profiteers, superpatriots, and Communists, who are all hell-bent on arming the United States to the teeth for the purpose of acting as a policeman for the entire world.

The contention that this country of ours is in danger of foreign attack is sheer political bunk. It aims to deceive the people into supporting a huge armament program in the guise of national defense, which in reality is nothing but a smoke screen to obscure the depression and economic failures of the New Deal.

President Roosevelt rants against foreign dictatorships and nations where there is no freedom of speech, religion, or business, but never mentions Soviet Russia, the founder and creator of this autocratic and ruthless type of government.

I submit that we should devote our energies to solving our own problems and to making America a better and more prosperous country to live in, instead of worrying about the forms of government in Russia, Germany, Italy, and Japan.

I am willing to vote for every dollar that is necessary for adequate national defense, but not one dollar for aggression or for political purposes or pump priming.

I feel strongly that in the midst of a depression, with 12,000,000 unemployed, it is not sound policy or logical to cut down relief for our destitute on the one hand and spend billions for superarmaments and destructive purposes on the other. If we have billions to spend it should be spent for the benefit and welfare of our own people in promoting their health and well-being, and to help the one-third of our population who, according to President Roosevelt, are ill-housed, ill-clothed, and ill-fed.

Billions are needed for a proper and adequate low-cost housing program and to do away with slums. More billions are needed for parks, playgrounds, and hospitals. Large sums are urgently needed to help eradicate such maladies as cancer, tuberculosis, and contagious diseases that are ravaging our people.

The American people cannot have their cake and eat it too. We cannot spend billions on destructive purposes and have billions to spend for constructive and useful purposes. The people must decide whether they want to follow the sound advice of Thomas Jefferson or the pump-priming schemes of President Roosevelt, all tied up in a red, white, and blue ribbon. Let a Republican quote the sound advice of Thomas Jefferson, one of the keenest minds to ever occupy the White House, and what he said applies precisely to the present world situation:

"I have ever deemed it fundamental for the United States never to take an active part in the quarrels of Europe. Their political interests are entirely distinct from ours. Their mutual jealousies, their balance of power, their complicated alliances, their forms and principles of government, are all foreign to us. They are nations of eternal war. All their energies are expended in the destruction of labor, property, and lives of their people. On our part, never had a people so favorable a chance of trying the opposite system, of peace and fraternity with mankind, and the direction of all our means and faculties to the purposes of improvement instead of destruction."

I particularly desire to emphasize Jefferson's wisdom in advising our people to spend their energy and money for the purposes of improvement instead of destruction and for peace and fraternity with mankind.

Although I happen to be the ranking Republican member of the Committee on Foreign Affairs and a veteran of the World War, I speak tonight in neither capacity, but as an American citizen who is sincerely alarmed at the extent of the war propaganda and hysteria being spread throughout our country by the administration.

The American people are actually being led to believe that they are in danger of attack by foreign nations.

They are being led to believe that foreign nations plan to invade South America.

They are being led to believe that we are as defenseless as Ethiopia and China, and about to be invaded.

They are being led to believe that in spite of annual expenditures of a billion dollars for national defense our Navy is powerless to defend our shores.

They are being led to believe that the defense of our democracy requires our participation in collective security, economic sanctions, military alliances, and war commitments.

They are being led to believe that we must again make the world safe for democracy with American blood and treasure.

They are being led to believe that we must aline ourselves in a united front with the Communists against Japan, Germany, and Italy.

They are being led to believe that armament spending offers a way out of the New Deal depression; and, finally, they are being coaxed into believing that the President should have a blank check to determine the aggressor nation and take over the war-making powers of the Congress.

This would mean fighting dictatorships throughout the world by creating a one man supergovernment and making the President the most powerful dictator of them all. I believe that the Congress should take back some of the emergency powers granted to the President and restore representative government in foreign affairs as well as in internal affairs.

Who is the leader in laying down this barrage of war propaganda and hysteria in America? Why is it being spread broadcast among peace-loving American people? What is its purpose and main objectives?

The American people have a right to know who is beating the war drums and arousing their passions, hatreds, and fears. President Roosevelt more than a year ago, at Chicago, delivered a provocative and inflammatory speech designed to alarm our citizens. The Chicago speech inferred that we were on the verge of war and called for American intervention in the quarrels and eternal wars of Europe and Asia. This speech was the opening gun in the administration's propaganda barrage to destroy our traditional American policy of neutrality, nonintervention, and peace for one of collective security, sanctions, and war.

Since that time scarcely a week has passed but what some Cabinet official or administration spokesman has filled the air with swashbuckling speeches, denouncing foreign nations and inciting our own people to hatred and talk and thoughts of war.

The lead given by the President and high New Deal officials has been quickly followed by the hysterical internationalists, Communists, and war profiteers. This constant war propaganda, like the dripping of water on a stone, has worn thin the will of the American people to keep out of foreign conflicts. I confess, deeply as I regret it, that war hysteria pervades the land, as shown by the actual belief of many people in New Jersey that it was being invaded by warriors from Mars. This is the direct result of the propaganda let loose by the war mongers of the New Deal.

I challenge President Roosevelt to tell the American people what nation, or nations, has the faintest idea or capacity to attack or invade the United States. President Roosevelt knows very well that no nation dreams of committing economic, financial, military, or naval suicide by attacking us. All of the dictatorial nations are heavily engaged in their own back yards, and will have all they can do to work out their own salvation at home. Why, then, this dangerous and un-American attempt to involve us in foreign disputes and other people's wars?

The truth is that President Roosevelt is at heart the greatest internationalist and interventionist that ever occupied the White House. He has consistently opposed the enactment of any neutraltiy legislation by the Congress, and has, with equal consistency, demanded that Congress turn over to him the war power of selecting the aggressor nation. If this demand had been granted I believe we would have been involved in a war by now. If the Congress accedes to the same demand, reiterated in the President's annual message, to determine the aggressor nation, we will inevitably be at war by 1940.

History is filled with instances of autocrats and dictators forcing their governments and people into war to cover up discontent and economic failures at home. It is to be fervently hoped that history will not be allowed by our people to repeat itself in America. The only real check is the sound common sense of the American people and their determination not to become involved in the war plagues of other continents.

I am unable to understand the motives of those Americans who insist that we meddle in foreign quarrels and become entangled in European or Asiatic wars. The hysteria has reached such a tempo of fury in the United States that Congress may be asked to provide submarines for western dust bowls, battleships for the Great Lakes, howitzers to protect every mile of the Mexican border, and antiaircraft guns to defend the Mississippi River. The people have the jitters, and instead of allaying the fear of war it is encouraged and fuel added to the fire by high officials of the Government.

The President asks for 8,500 airplanes. Against whom are they to be used? What nation can attack us from the air? No airplane has been invented that can fly from Germany, Italy, or Japan to bomb American cities and get back to their base.

I challenge President Roosevelt to tell the American people if he has any secret information about the possibility of foreign airplanes being able to bomb American cities.

It is the duty of the President to put an end to such hysterical propaganda instead of encouraging it by requesting Congress for over a quarter of a billion dollars to build a total of 6,000 airplanes for the Army alone.

I favor our having a sufficient quantity of the fastest, strongest, and best airplanes, and an efficient research bureau to keep up with the most modern inventions and improvements. However, I see no reason for providing for any additional planes. The 5,300 already authorized for the Army and Navy are more than enough to defend our shores and cities. My voice may be only a voice crying in the wilderness against the greatest propaganda machine ever known in America. It may be and probably is unpopular, in the midst of the wave of hysteria that has swept the country, to plead only for adequate national defense and against a super Navy, a naval base at Guam, and a super air force that can only be used for aggression and war instead of defense and peace.

It may be that Germany has 10,000 planes, but she is surrounded by enemy countries, not an hour's flight from Berlin. Ours, thank God, is a peculiar situation, guarded by extensive oceans that have not yet been conquered by airplane developments. A modern pursuit plane lasts only 5 years, and a bomber for from 6 to 7 years. I urge the building of the newest types of military and naval planes, but I am unable to see the need for additional planes beyond those already authorized. Against whom are they to be used? I do not know, unless perhaps it be the recently invigorated Republican Party.

That part of the President's program for research, industrial preparedness, and for mobile antiaircraft guns, artillery, and fast tanks should be supported by all loyal American citizens, regardless of party affiliations. That part of the program that deals with huge naval increases and doubling the air force must be squeezed through a public wringer to get at the motives and facts.

As Al Smith says, let's look at the record. I submit that we have the most powerful Navy we ever had—three times as large as Germany's, twice as large as Italy's, and 50 percent larger than Japan's. Even if we sunk our Navy, these totalitarian states have not sufficient airplane carriers to bring over more than 400 planes altogether, against the 5,300 we have already authorized. Italy has no airplane carriers, Germany has two, and Japan six. Each carrier can only transport between 40 and 50 planes. Still the American people have been made jittery by inspired propaganda that we are in danger from European and Asiatic air attacks. What fools we mortals be!

The President knows that no enemy bombers can fly 6,000 miles to bomb New York City and return. It is the duty of the President to stop this kind of humbug on our people, instead of beating the war drums.

It is this type of New Deal brainstorm propaganda that creates fear in the hearts of the American people and makes them feel that foreign airplanes might wipe us out overnight. Its only purpose is to develop a state of public alarm under cover of which Congress will grant huge sums to provide for 8,500 airplanes and still greater sums for other destructive purposes.

I have definitely made up my mind that I will not vote to declare war unless we are attacked or the American Continent is invaded. I shall vote every dollar needed to defend our own territory and to maintain the Monroe Doctrine.

Now is the time to reaffirm our faith in our traditional policy of neutrality, nonintervention, and peace.

In conclusion, I urge the radio audience to insist, in view of the proposed huge armament program for destruction and intervention, to write to their Representatives in Congress to support the proposed constitutional amendment, House Joint Resolution 94, I have introduced, giving the American people the sole power by a national referendum to determine whether their sons shall be conscripted to serve in our armed forces outside of the Western Hemisphere. This in no way interferes with our program for national defense.

I do, however, believe that the men and women of America who are opposed to sending their sons to die on foreign battlefields should have the right and power to voice their views in a national referendum.

I am convinced that this is a proper issue to submit to the people in a free country through a free ballot, and that it would tend to preserve and promote peace and keep us out of foreign wars.

Nonpartisan Cost-of-Production Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1939

Mr. LEMKE. Mr. Speaker, I am talking to you today not only in the interest of the farmer and the laborer but in the interest of the professional and business man as well, I am not talking to you as a Republican or as a Democrat but rather as a citizen of the United States—a Member of Congress who is more interested in the success and welfare of 130,000,000 men, women, and children, in all the people of this Nation, than in a few bureaucrats in the Department of Agriculture or in any other department here in Washington.

I am sure that in the minds of a majority of the Members of Congress, regardless of political affiliation, the welfare of this Nation comes first. This is more clearly demonstrated when we realize that a nonpolitical revolt has taken place in Congress against the further deception and betrayal of agriculture. Eighteen Members of the Senate and eight of the House, realizing that the Secretary of Agriculture's farm program has been a "flop," introduced a nonpartisan cost-of-production farm bill.

These Members know that during the last 6 years of farm regimentation—of the insane policy of destruction and curtailment of agricultural wealth—about one farmer out of every five lost his farm by mortgage foreclosure, tax, or judgment sale. The price of that erroneous policy comes too high. You cannot become an $80,000,000,000 nation by curtailing and destroying the agricultural wealth of a $60,000,000,000 nation. We cannot attain the "abundant life" through the erroneous philosophy of scarcity. No nation has ever become great by destroying its wealth. Our Nation became great because it increased its wealth, because it produced an abundance for all.

Congress knows that when the Department of Agriculture and the Farm Credit Administration tell you that the farm indebtedness has been decreased by over $2,000,000,000 that that is only half the truth. This decrease in farm indebtedness has been brought about—largely—by mortgage foreclosure, tax and judgment sales. It has been brought about by evicting innocent men, women, and children from their homes and crowding them into the already overcrowded towns and cities to swell the ranks of the unemployed. We know that in these foreclosure proceedings the Federal land banks have been and are some of the worst offenders. We feel that this destruction of American farm homes must cease.

These Members of Congress know that the farmer who still owns his farm is deeper in debt than he was in 1932. They know that the prices for farm commodities last fall were as low as they were in 1932, considering the difference in the

purchasing power of the farmers' dollar. They know that millions are still idle, still hungry, and in want in the midst of plenty because they have no buying power.

They know and you know that the farmer can no more continue in business and sell his commodities for less than it costs him to produce them, than you, as a merchant, can stay in business and sell for less than you buy. Everybody seems to know that except the Department of Agriculture. If we want the farmer to continue to feed the Nation we must have the decency to pay him cost of production. No honest man or woman expects to eat, drink, or wear that which the farmer produces for less than cost of production.

This new nonpartisan cost of production farm bill defines agricultural products as "poultry, livestock, and any farm product of the soil, and any product or byproduct thereof, in an unmanufactured state," which entered interstate or foreign commerce in quantities having a value in excess of $10,000,000 during the preceding marketing year.

It provides that:

The Secretary of Agriculture shall ascertain and determine for each year the average cost of production to the farmers of each such agricultural product. Such average cost of production shall be determined after public hearings, participated in by the representatives of farmers' organizations, and all items of cost, including all taxes and other overhead charges, shall be estimated and included in accordance with the formula and method commonly used in the manufacturing industry.

The Secretary of Agriculture shall consider the average individual farm as a business unit, and shall, among other things, include compensation to farm operators for management and for labor for themselves and their families and hired help, equal to the compensation paid for like time and services in industry, together with adequate allowances for maintenance and depreciation of soil, improvements, buildings, farm machinery, implements, tools and equipment, stock-breeding and work animals.

He shall also determine the fair and reasonable property investment value, not necessarily the market value, devoted to the production of such agricultural products, using the official census data so far as possible, and calculate a capital return, equal to the average interest rate on farm indebtedness, upon the investment value thus determined. The Secretary shall determine prior to the beginning of each marketing year for each agricultural product an average-cost-of-production price which shall be equal to the average cost of production of such product as determined under this section.

Under the provisions of this bill the dealers in interstate commerce are licensed by the Secretary of Agriculture. They are required to pay to the producers the average cost of production price for that part of such products consumed within the United States. The Secretary of Agriculture is required to dispose of the surplus at the world price or he may keep it as warehouse reserves. For the surplus, the farmer will receive the world price, less cost of marketing and administration. For the warehouse reserves he will receive the cost of production price.

In order to protect domestic labor and industry, the bill provides further:

The Secretary may sell at or above the world price warehouse reserves and export quantities and percentage of any agricultural product to any processor or manufacturer for processing or manufacturing into finished or semifinished and manufactured or semimanufactured product, but he shall first require a sufficient bond from such processors or manufacturers to the effect that such finished or semifinished or manufactured or semimanufactured product or any byproduct thereof will not be sold or disposed of directly or indirectly for domestic consumption. Such finished or semifinished or manufactured or semimanufactured product, together with any byproduct, shall be exported to foreign markets unless the Secretary upon investigation finds that there no longer is an exportable surplus and that some or all of such products or byproducts are needed for domestic consumption.

It also provides further:

If the quantity and percentage estimated for domestic consumption should be insufficient by reason of flood, drought, pestilence, or other calamity, or for any other reason, to supply the demand for domestic consumption, the Secretary of Agriculture is authorized to supply such shortage out of the warehouse reserve or export quantities and percentages, at the cost-of-production price, plus storage and expenses.

It provides:

Any agricultural product, now owned or hereafter coming into the possession of the Government of the United States, or any department or agency thereof, shall be conclusively deemed to be warehouse reserves or exportable surpluses, and shall be disposed of only in accordance with the provisions of this act providing for the disposal of warehouse reserves and export quantities and percentages.

The bill protects the home market by prohibiting the importation of competing farm products at a price less than our domestic price level. The farmer will be given the American market:

In order to carry out the purposes of this act, the Secretary of Agriculture is hereby directed that whenever he finds, upon investigation, that the world price, computed in United States currency, of any foreign agricultural product or substitute, in its manufactured or unmanufactured state, is below the cost of production price of any competing domestic agricultural product, in its manufactured or unmanufactured state, to notify the Secretary of the Treasury thereof. It shall thereupon become the duty of the Secretary of the Treasury to levy and collect upon such foreign competing agricultural product or substitute on its manufactured or unmanufactured state, when imported from any foreign country into the United States or any of its possessions, a duty equal to the difference between the world price and the cost-of-production price of such product, plus 10 percent of such cost-of-production price.

This bill does not repeal or affect the soil conservation, the adjustment of freight rates, the new use and markets for farm commodities, the Surplus Commodity Corporation, loans on agricultural commodities, the retention of 30 percent of tariff revenues, or crop-insurance provisions of the 1938 Farm Act.

There is nothing new in this bill. It makes use of the same Federal power to help agriculture that has been used to help industry. The Interstate Commerce Act fixes the rates for the transportation of commodities in interstate and foreign commerce. The Packers and Stockyards Act regulates commission and yardage charges and fixes the price per bushel or ton on corn and hay charged farmers for feed for their stock while awaiting sale. The Commodity and Exchange Act regulates interstate and foreign commerce in the commodity markets of the Nation. It regulates the amount of commissions charged for the sale of grain. The Supreme Court has held all these acts constitutional.

This bill will not cost the Federal Government one penny. When it becomes a law there will be no further need for subsidies to the farmer. There will be no further need of the 27 varieties of Federal agencies now riding on the farmers' back. There will be no further need for an army of Federal employees to regulate the daily lives of the farmers. It will take at least 3,000,000 off the W. P. A. pay rolls because they will find useful employment. Prosperity and security for agriculture means prosperity for labor and business as well. When this bill becomes a law the Government will no longer have to bail out the farmer—the farmer will bail out the Government.

This bill will not materially increase the cost of living. The Department of Agriculture has shown that the farmer receives only 20 percent of the dollar that the consumer pays. The leech and the parasite, who still think that the farmer can or will feed him below the cost of production, will now be smoked out. He will have to come out in the open and be counted. This bill, together with the Frazier-Lemke refinance bill, is a complete solution of the agricultural problem and, also, largely, of the unemployment problem.

We imported from foreign nations $8,373,652,981 of agricultural products, substitutes, and manufactured products thereof in the last 6 years. That is the foreign valuation. The domestic valuation would be over $16,750,000,000. That is what the consumers paid. That is what our own people should have received instead of foreigners.

This would have been sufficient to have handed to every head of our 6,000,000 farm families a check for $2,790. That money would have done billions of dollars' worth of business in our own country. It would have kept the idle employed. It would have given buying power to the Nation—that is what the cost-of-production bill will do.

It is now up to the farmers and business and professional men throughout the Nation to get busy and let Congress know they, too, welcome this kind of intelligent legislation. It is up to the farmers to see that their farm leaders back

this legislation. The intelligent people must get together and solve the agricultural and unemployment problems or this Nation will collapse. It cannot continue to permit the destruction of homes—to hand out sandwiches because it is already $40,000,000,000 in the red.

Cooperation Between the State Commissions and the Federal Communications Commission

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. PAUL A. WALKER AT NEW ORLEANS, LA., NOVEMBER 16, 1938

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Paul A. Walker, Federal Communications Commissioner, delivered at the Fiftieth Annual Convention of the National Association of Railroad and Utilities Commissioners, New Orleans, La., on November 16, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Cooperation, though one of the first subjects considered by this association, is still, in my opinion, the most vital of all. The Federal Government came into being through cooperation among the Thirteen Colonies, when they constituted themselves the Union of the Thirteen Original States, or the United States of America.

The National Association of Railroad and Utilities Commissioners had its inception in an effort at cooperation. Early in the year 1889, almost 50 years ago, Judge Thomas M. Cooley, then Chairman of the Interstate Commerce Commission, called together the railroad commissioners of the several States, with the idea of getting them to work together with the Interstate Commerce Commission for the better regulation of the railroads. Thirty States then had railroad commissioners or commissions. Twenty-one States and the Territory of New Mexico responded to the call. This association was organized at that conference, and has been a vital and necessary factor in all progress toward railroad or utility regulation from that day to this.

Then, regulation was largely a new and untried experiment. Today, it is an accepted part of our governmental administration. The most important question now is how best to achieve regulation which can be really effective and which can bring to the public the greatest measure of benefit, while at the same time doing justice to the utilities regulated. When we start, then, with the premise that regulation is now an accepted tenet of our system of government, and that the best, the wisest, and the most effective system of regulation is desired by all, the conclusion logically follows that a harmonious and effective working together of all agencies of government concerned in this regulation is a necessary factor of success.

Our Constitution provided for a Federal Government and defined its powers. It is a central agency with such powers as were delegated to it by that instrument. There were reserved to the States all powers which were not expressly delegated to the Federal Government and which do not arise by necessary implication to enable it to exercise fully those powers expressly delegated. In the Constitutional Convention there was great contrariety of opinion as to where the line should be drawn between State rights and Federal sovereignty. This issue nearly wrecked the convention. The conflict has continued through the intervening years as the courts have been called upon to reveal the Constitution by judicial interpretation. In the regulation of the utilities engaged in both intrastate and interstate commerce this long conflict can be terminated by cooperation between the Federal and State regulatory commissions. This was practically demonstrated through the case of Houston & Texas Railway against United States (*Houston, East & West Texas Railway Co.* v. *United States*, 234 U. S. 342), wherein the Supreme Court of the United States sustained the right of the Interstate Commerce Commission to remove discrimination on the part of the State of Texas against commerce from Louisiana, and by the whole line of similar and related decisions commonly known as the Shreveport cases.

Following these decisions, the Interstate Commerce Commissioners were not slow in beginning negotiations with the State commissions looking to cooperative handling of cases involving mutual jurisdictions of Federal and State Governments. Actual recognition of this situation by Federal statute did not occur, however, until the Transportation Act of 1920, amending the Interstate Commerce Act, provided that the Interstate Commerce Commission should be empowered to utilize facilities and agencies of the State commissions in determining interstate issues.

Congress having thus once recognized, by statutory enactment, the necessity for Federal and State cooperation, it was only natural and logical that in the creation of other commissions empowered to regulate interstate affairs the cooperative principle should be made applicable by legal enactment. In amending the Federal Power Commission Act and broadening its jurisdiction, statutory provision was made for cooperation between that Commission and the various State commissions. (Act of August 26, 1935, ch. 687, 49 Stat. 847.)

In 1934, when Congress created a new commission to regulate communications and transferred to it the duties theretofore exercised in connection therewith by the Federal Radio Commission, the Interstate Commerce Commission, the Department of Commerce, and the Post Office Department, it was only logical that there should be embodied in the Communications Act specific and definite provisions for cooperation between the new Federal Commission and the several State commissions. Sections 410 (a) and (b) of the Communications Act of 1934 (June 19, 1934, ch. 652, sec. 609, 48 Stat. 1105) give the broadest authorization for cooperation between Federal and State commissions found in any regulatory act of Congress to that date, concluding with this proviso: "The Commission is authorized in the administration of this act to avail itself of such cooperation, services, records, and facilities as may be afforded by any State commission."

This is as it should be. Just as commerce is not all interstate, so communication is not all between persons of different States. But the interrelationship between State and interstate communications is so vital that complete regulation cannot be had by either the State commissions or the Federal Commission acting independently each of the other. Together, there exists complete jurisdiction over regulation of communications. The act itself recognizes that no system of interstate regulation can cover the whole field, and that certain vital matters of regulation necessarily are left under the control of the States. The act likewise recognizes that no State, or even group of States working together, can regulate successfully all matters incident to complete control of wire communications of telephone and telegraph companies.

New conditions present new issues and responsibilities. When the Transportation Act of 1920 came into being, our national existence was dependent largely upon the railroads. Transportation still is a vital factor in our national welfare and security, and cooperation between State and Nation in regulation thereof is of major importance, but other agencies of human welfare now have crowded themselves into the problem as matters of primary consequence. Recent days have brought before us with a force most startling the possible truth that communication now is a greater and more potent factor than transportation in both national and international affairs.

The incidents leading up to the signing of the four-power agreement of Munich on September 30, 1938, and other recent events, have demonstrated the extreme importance of communications, not only in national but also in world affairs, involving, as they may, the life or death of nations, of governmental systems, and even of our modern civilization.

A world war is averted, and the world knows instantly when, and where, and how. A hurricane whips the New England coast, and while the storm is at its height material and financial relief gets under way.

So realistic are the word pictures flashed across the country by our modern communications that individuals and whole communities are thrown into consternation and panic by a war that never happened, and never could happen—the child of a clever imagination put in words by a clever dramatist, as occurred a few days ago. Most of us would have said prior to this unbelievable incident that it could not happen. (The War of the Worlds, dramatized by Orson Welles, October 30, 1938.)

In 1930, at a convention in San Francisco, messages were sent from the convention hall to most of the continents, and replies received within 30 minutes, and by prearranged traffic set-up a message was flashed around the world within 6 minutes. This was then a stupendous achievement in communications. But 3 weeks ago, ushering in the Nation's observance of Navy Day, an American admiral in New York was in constant two-way communication for 30 minutes with commanders of different rank on American ships on the seven seas, including Asiatic waters; on a naval air dreadnaught 10,000 feet above San Diego, Calif.; and in a submarine (and outside the submarine in an escapement demonstration) 100 feet below the surface of the sea at New London, Conn.; and any citizen who cared to tune in heard it all at his own fireside.

These incidents serve to indicate the crucial factor communication has become in our national existence.

It is this development, miraculous to the technically uninformed, that your Federal Communications Commission is charged with the responsibility of regulating for the purpose of the national defense and safety of life and property, and in the public interest.

The close relationship of wire communication to broadcasting, through the transmission of broadcast programs from one end of the country to the other, the possible transmission of television programs from city to city through the development of the coaxial cable, and the other interrelated services of wire and radio communications, bring definitely to the fore the keen interest of

all regulatory authorities in all communications. The tremendous development and improvement in wire communications further indicate the necessity of active interest of State and Federal authorities in a cooperative handling of the regulatory problems arising therewith.

At the 1934 convention the Chairman of the Federal Power Commission, now the Chairman of the Federal Communications Commission (Hon. Frank R. McNinch), expressed the present spirit of cooperation in these words:

"* * * The magnitude and complexity of the task that lies immediately before your commissions and the Federal Commission is so great and challenging that there is real need for close cooperation for the most complete and perfect unity and harmony that is possible, if together we are to meet and fully discharge the obligation we owe to the public and measure up to its expectations and demands, namely, that through the joint efforts of the State organizations and Federal organization the public utilities may be thoroughly regulated and the public interest completely protected."

I am most happy to give definite assurance that the Communications Commission is today adhering to the principles of cooperation so well enunciated by earlier leaders of the cooperative movement.

From the date of its organization, the Federal Communications Commission has attempted to cooperate with the State commissions on all matters of communications regulation where mutual interest and issues were involved. You will recall that, as a representative from the State Corporation Commission of Oklahoma, I was honored with the chairmanship of the first regularly designated "cooperative committee" of this association and was privileged to serve in that position until I became a member of the Federal Communications Commission. At the very beginning of its administration, the Federal Commission was confronted with problems demanding and necessitating the most hearty and thorough cooperation with the State commissions, and constantly since then we have been in touch with the State commissions' representatives on matters demanding mutual action by the respective Federal and State jurisdictions.

I shall attempt to point out, as briefly as practicable, some of the more important specific instances of cooperation between the Federal Communications Commission and the State commissions. Subsequent to the defeat of the Couzens bill of the Seventy-first Congress, attempting more adequate regulation of interstate wire communications, the State commissions came to the realization that interstate regulation was imperative, for the reason that so many vital factors could be reached only through a Federal agency. Hence, the States, both individually and through this association, gave active assistance during the Seventy-third Congress to the bills which formed the basis of the Communications Act of 1934. Various sections of the act, particularly its provisions looking to cooperation between State and Federal authorities, and its reservations to the States, reflect specifically the work of representatives of this association.

The most important practical instance of cooperation between State and Federal authorities came very soon after the organization of the Federal Communications Commission on July 11, 1934. Within a few weeks subsequent thereto, the Telephone Division of the Communications Commission extended an invitation to all the State commissions, and particularly through this association, to cooperate with it in the promulgation of telephone accounting rules and regulations. This invitation was promptly accepted, and a committee therefor (the State commissioners who sat through these proceedings included the Honorable Milo R. Maltbie, chairman, Public Service Commission of New York, and the Honorable Andrew McDonald, chairman, Public Service Commission of Wisconsin, and president of the National Association of Railroad and Utilities Commissioners. Other State commissioners were consulted from time to time. Most helpful cooperation was secured through a group of State commissions' accounting experts, including the association's committee on statistics and accounts), composed of several State commission representatives appearing for the association, and representatives of the State of New York, began active cooperation with representatives of the Federal Communications Commission. Commissioners of these various States sat in conferences day after day with the members of the Telephone Division of the Communications Commission, and thereafter also in conferences when the telephone companies expressed their views on the proposed accounting rules and regulations. The National Association went on record at Nashville, in 1935, in favor of adoption of these rules and regulations by the several State commissions. Thus, the accounting rules so promulgated represented unanimity of opinion and action.

This made what we regarded as a distinct advancement in regulation, calling for the furnishing of original cost data by telephone companies, a requirement vigorously resisted by the Bell System companies and others, and by certain telephone trade organizations. This opposition was carried beyond the Commission hearings and into the courts, where determined effort was made to enjoin the enactment of original cost accounting on the ground that it was both arbitrary and oppressive and not within the jurisdiction of the Federal Commission.

When the application of the telephone companies to restrain the Federal Commission from enforcing its accounting order (Order No. 7–C, issued June 19, 1935, to become effective January 1, 1936) was filed in the statutory Federal court for the southern district of New York, the legal representatives of the States and the Nation joined in defending the order. The general solicitor and the assistant general solicitor of this association and the legal representatives of the Public Service Commission of New York appeared with the representatives of the Attorney General's Department and of the Communications Commission. The Federal court, in a unanimous opinion by Judge Manton (*American Telephone & Telegraph Co. et al.* v. *United States et al.*, 14 F. Supp. 121), sustained in all important particulars the accounting order of the Federal Communications Commission.

The same spirit of active cooperation prevailed throughout the appeal taken to the Supreme Court of the United States by the telephone companies, where the general solicitor and the assistant general solicitor for this association joined with the representatives of the Attorney General's Department and of the Federal Communications Commission in briefs and argument in support of the Commission's rules and regulations. Again, that Court, through an opinion delivered by Mr. Justice Cardozo (Id., 299 U. S. 232), unanimously sustained, in all important particulars, the rules and regulations of the Federal Communications Commission.

In the decision of the lower court appears this important observation, indicative of the power and spirit of cooperation and the effect of unity of actions: "47 State public-utility bodies acquiesce in the proposed requirements." Thus, through unanimously cooperative efforts of every State having a regulatory commission and the Federal Communications Commission, unity in accounting rules and requirements was effected and the basis laid for an actual, rather than a fictitious, valuation of telephone properties for ratemaking and taxation purposes. The principles concerned were far more important than any mere accounting rules. They involved the rights of the several commissions to require data from the utilities fundamental and vital to regulation. This decision of the Supreme Court of the United States, sustaining the Federal Communications Commission in its accounting rules and regulations, provided a precedent for other commissions, State and Federal, to prescribe similar regulations for other utilities, including transportation, power, and natural gas. This victory was so vital to the cause of regulation that we can all take pride in crediting cooperation with one of the great accomplishments in its history.

The second major case before the Federal Communications Commission wherein active cooperation was practiced was the application of the carriers to increase telegraph rates. Following the practice of the carriers before the Interstate Commerce Commission, the telegraph companies, in December 1937, filed a petition with the Federal Communications Commission for a general percentage advance in interstate domestic rates and charges for telegraph messages. These applications involved, indirectly, of course, intrastate charges, because it was obvious that any change in the level of interstate rates must be met by corresponding change of intrastate rates, to prevent unjust discrimination.

Soon after the filing of these applications with the Federal Communications Commission, inquiry was made on behalf of the States, through this association, as to a cooperative handling of the proceedings. Our Commission promptly invited the cooperation of the State commissions, and they appointed a committee of five commissioners (the committee of five commissioners was composed of the Honorable John S. Boyer, of the Public Service Commission of Missouri, chairman; the Honorable Dennis J. Driscoll, chairman of the Public Utility Commission of Pennsylvania; the Honorable Leo H. Leary, of the Department of Public Utilities of Massachusetts; the Honorable Paul H. Todd, of the Public Utilities Commission of Michigan; and the Honorable Harry Holden, president of the Public Utilities Commission of Idaho), who sat with us at the hearings, during oral argument, and in conferences. The general solicitor of this association participated at these hearings, assisting in developing the facts, and by oral argument and brief. The Communications Commission availed itself of the advice and suggestions of these State commissioners in the proper disposition of the proceedings, and they concurred in the views expressed by the Commission in its decision wherein the advances requested by the telegraph companies were denied. (See Petitions of Domestic Telegraph Carriers for Authority to Increase Rates and Charges, Docket No. 4995, decided April 26, 1938.)

Thus, in the two proceedings before the Federal Communications Commission involving mutual problems of regulation, the State and the Federal Commissions have worked together in complete harmony, and the effect of this cooperation has been unanimity in decision and in final results of litigation.

Another field of cooperation has been in the telephone investigation. The new Federal Communications Commission received from Congress, the duty, among others, of regulating rates and practices of telephone companies, and direction to make certain investigations. The 1934 convention of this association went on record as pledging cooperative aid in all practicable ways in making the investigation of the telephone companies. (See Forty-sixth Annual Convention Report, p. 386.) The Seventy-fourth Congress thereafter increased the investigatory powers and duties of the Federal Communications Commission in authorizing and directing an investigation of the American Telephone & Telegraph Co. and its subsidiaries and all other telephone companies (Public Res. 8, 74th Cong. (49 Stat. 43), effective March 15, 1935).

The Federal Communications Commission immediately called upon the several State commissions for assistance in the selection of personnel to make the investigation. Where practicable, State commissions made available personnel from their staffs or from those subject to call. Thus, we drew heavily upon the State commissions for the accounting, engineering, and legal staffs of our

investigation. Many of the States were not in a position to release personnel because of shortage of help in their own organizations, but there was manifest among all the States the spirit of cooperation and the desire to assist in pointing out competent and available personnel for employment by our Commission. It was a matter of regret that, because of the long and continued work on the telephone investigation, it was impracticable to have State commissioners sit in the hearings and conferences on matters under investigation. I am sure the results would have justified the formation of a committee of State commissioners to work with the Federal Commission on the investigation and sit constantly at the hearings, but time and financial limitations made this infeasible. The cooperation given by the State commissions was deeply appreciated by our Commission.

The Federal Commission, on its part, attempted to carry through this spirit and purpose of cooperation by regularly making available to each commission copies of reports compiled and introduced from time to time in the investigation for the use of the State authorities. During the last year of the investigation reports particularly pertinent to State commission activities were furnished the State commissions through the rate and research group (headed by Carl I. Wheat, rate counsel) of the telephone investigation. That the information gathered and furnished to the States by the Federal Commission was put to practical use is illustrated by actions taken by the several State commissions. The aggravating hand-set charge, now, fortunately, on its way into oblivion, is a concrete example. I could recite other instances brought to me by State commission representatives in various investigations and rate cases.

In addition to these concrete examples of cooperative aid to the State commissions through the furnishing of information, I could cite instances of personnel borrowed from the Federal Commission's investigational staff and of advice given to State commission staffs through exchange of personal visits.

I can only hope that the plan of joint conferences between the Federal and the State commissions may be further followed and that through such conferences practicable solutions of current regulatory problems may be effected without the necessity of costly and long-drawn-out litigation. Cooperation during the telephone investigation was most helpful. Greater and more thorough cooperation, had this been practicable, would have been most advantageous to everyone concerned.

I call your attention now to matters of continuing cooperation aside from those heretofore recited. To be effective and worth while, accounting rules and regulations require constant supervision and examination on the part of the regulatory authorities, to see that they are being complied with. To do this requires a larger personnel than has heretofore been available either to the Federal or to the State commissions. Concrete results in effecting the regulatory benefits to the public will assure better financial support to bring about the needed personnel. I cannot hope here to point out the many instances before our accounting department where cooperation with the State commissions is imperative. Various classes of accounts and of accounting practice, not yet made effective, but requiring uniformity of action and of procedure thereafter, on the part of both Federal and State commission authorities, are, as you know, now under consideration. Nor shall I attempt to detail negotiations and cooperative efforts under way dealing with uniform interpretations of accounting rules and uniform periodic reportings for telephone and other companies or with the pension system accounting. I call your particular attention to the imperative necessity of some immediate consistent action in connection with the problem of depreciation as practiced in the telephone industry and especially as affecting the depreciation reserves carried by the Bell System companies.

There are two other important and vital matters necessitating cooperation. One is the question of what constitutes exchange rates, that is, whether, for example, a telephone company, by the mere publishing of so-called exchange area rates, may thereby evade both State and interstate jurisdiction. The other problem is designated as one of separation, that is, the determination of where the division between State and interstate jurisdiction on toll calls begins. Such a separation is essential before any final solution of exchange and toll rates can be brought about.

Vitalizing a provision in the Communications Act for liberal State cooperation, the association now has before it for consideration at this meeting a suggested plan, approved both by the executive committee of this association and by the Federal Communications Commission. Plans in themselves are important only as indicating the machinery available. As I have so often quoted from a former member of the Interstate Commerce Commission, Hon. E. I. Lewis, "Cooperation is of the spirit and not of the letter." I believe that both the State commissions and the Federal Communications Commission are sufficiently imbued with the spirit of cooperation to make it a successfully working factor in bringing about effective regulation on communications matters within the jurisdiction of the respective commissions. Speaking further of the machinery of cooperation, I trust that the day is not far distant when sufficient funds can be available to carry on cooperation as intended by Congress and as hoped for by the commissions concerned.

The problem of continuing cooperation sometimes presents serious phases. It involves oftentimes an exchange of personnel and the releasing of persons sorely needed in present assignments. Yet we have tried to accommodate ourselves to what appeared the greater need of all. Only recently we released one of our engineers to complete a 3-month task for one of the State commissions. From time to time engineers and accountants from our staff have assisted State commissions in important matters. Numerous requests we have been unable to comply with because of lack of personnel and funds. The Commission now has before it the troublesome problem of pensions, already mentioned, which is being handled in a cooperative way.

At the outset of the telephone investigation (see proposed report on the telephone investigation (pursuant to Public Res. No. 8, 74th Cong.), pp. 418–419, 709. United States Government Printing Office, 1938) the problem of the use of telephone wires and facilities in so-called sporting news dissemination, particularly in race-track gambling at points distant from the track, was before the Commission. The problem is a serious one, and its solution involves much more than the mere promotion of law observance. A short time ago the Federal Commission was called upon by the State of Pennsylvania for active cooperation in an acute situation involving this problem. To determine whether communications facilities shall be denied to an applicant to all appearances in regular course of business; and if so, under what conditions, may involve basic principles of government and of individual rights; yet the problem must be faced and a solution found. The Pennsylvania commission, following its recent race-track gambling investigation, issued orders directed to three telephone companies (*Penna. P. U. C. v. Bell Telephone Co. of Penna.; Same v. Keystone Telephone Co.; Same v. Penna. Telephone Corp.;* issued October 26, 1938), in one of which the commission said:

"It is apparent that Federal action will be necessary if the real purpose of this order is to be effectuated. The longer and stronger arm of the Federal Government is therefore summoned by us to the aid of Pennsylvania in this effort for proper regulation of the facilities of interstate communications in the interest of the public. * * *"

The Pennsylvania commission is undoubtedly right in calling upon all the appropriate Federal agencies for cooperation and assistance. It may develop that the matter is not one which can be adequately dealt with under present laws. If so, Congress and the States must provide the necessary authority by appropriate legislation.

We could continue to recount past accomplishments and to detail current problems, but it is to the future that our cooperative efforts should be directed and with reference to which my appeal lies. I think that each of us, regardless of his particular relation to regulation, may now feel that the season for reaping something of the harvest sown through past years is here. Through legal enactments now in effect, Federal and State, the authority necessary to substantial success in utility regulation exists. However, effective administration as well as authority must be had if desired results are to be secured.

Of this, however, I am confident, that if this meeting of commissioners, of whatever jurisdiction, shall witness a rededication of talent and effort for regulation effective in all fields and fair to all interests involved, we shall from now on achieve a new and definitely greater measure of success.

To be worth while, cooperation must reflect itself in something tangible. The spirit must be translated into deeds. A mere willingness to cooperate or work together, though a necessary predicate to cooperation, is not enough. The situation which called the Federal Communications Commission into being was realization by the States that they could not, either singly or jointly, effectively regulate the communications utilities. The demonstrated futility of attempts at such regulation, due to interstate operations, brought congressional support from State commissions for interstate regulation. It is my hope that our Federal Commission shall be able to function in the practical manner intended; not that we should take over functions of the State authorities, but rather that we should, by our assistance, make the State commissions able to function as it was intended that they should, as completely effective regulatory agencies. This must necessarily imply a mutual concept of the theory of regulation. If we are agreed that the primary function of a utility or public-service commission is the protection of the public, that is, to see that every right of utility patrons is fully sought out and protected, as to both services and charges, while at the same time doing justice to the utilities themselves, then we have a basis which both justifies regulation by commissions and guarantees the success of cooperation.

I shall not dwell further upon the duties of the States. Speaking for worth-while cooperation by the Federal Communications Commission, I vision the day when our Commission will be sufficiently manned and financed that we can make available at your request both information and personnel assistance. Today the great central organization of the Bell Telephone System, for example, has experts available on call for any one of its subsidiaries, the result being that the remotest Bell Co. has the resources of this powerful group subject to its call; whereas the local authority, or State commission, being left to itself, is without resources or facilities adequate either to effect regulation or to protect the public. In the proposed report (Proposed Report on the Telephone Investigation, pp. 697, 713, 755, 757, 771) on the telephone investigation I have indicated an effective Federal working organization wherein are coordinated all classes of able personnel needed, functioning effectively to accomplish adequate public regulation. Such an organization, properly supported,

as it would be if it had the enthusiastic and active backing of the several State commissions, would be an effective agency of real cooperation and would make possible Nation-wide effective regulation by State and Federal authorities of all the utilities under our mutual jurisdiction.

Agriculture in the South

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19 (legislative day of Tuesday, January 17), 1939

ADDRESS BY DONALD COMER, OF BIRMINGHAM, ALA.

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an address by Mr. Donald Comer, president of the Avondale Mills, Birmingham, Ala., before the annual meeting of the American Farm Bureau Federation on December 12, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I was honored when your president, Mr. Edward A. O'Neal, invited me to be on this program. Mr. O'Neal is an Alabamian and is a personal friend of long standing. Also, Mr. Howard Gray, the head of your association in Alabama, is a personal friend. My only hope, naturally, is that I can add something really worth while to this meeting and so not disappoint either you or these two good friends of mine.

I am going to list my speech into three parts. The first part will deal with the things that we can do in the South to help ourselves. In this category I was asked by your president to particularly mention the need for continuing improvement in our cottonseed.

One of the great men of the South has just died—I refer to Mr. David R. Coker, of Hartsville, S. C. He has devoted a large part of his life to the breeding of many kinds of seed, but he has specialized on cottonseed. The good results of this effort will be found all over the South, but in his own native State the continuing crops there of better staple cotton is outstanding, and is evidence of work done along this line and largely because of the continued emphasis of the need for this by Mr. Coker. I am very happy for this opportunity to make this public recognition of the life work of my friend Mr. Coker.

I have studied the records of the cotton crops of the last decade, both as to its grade and staple, and I am quite sure that everyone here will agree with me that it is well within the realm of possibility for us to increase the average length of our cotton crop one-eighth inch in staple and to increase its quality at least one grade. These two improvements could easily give an added value to the crop of $5 a bale.

The Bureau of Agricultural Economics, in their August 31 release, said: Of the 18,237,100 bales of the 1937 cotton crop, 44.3 percent was white Middling and better and 33.6 percent was inch or longer. So 55.7 percent was under Middling and 66.4 percent was under inch. The same authority quotes the penalty for the next grade down 49 points, or $2.45 per bale, and for the next staple down 62 points or $3.10 per bale. Penalties of $5.55 per bale for over 60 percent of the crop, even if it were only one grade and one staple down. Of course, it averaged much lower.

I realize that already tremendous progress has been made along this line and that there is continuing progress being made. The urge for this is coming from many sources, our agricultural colleges, of course, taking the lead. As processors of cotton, cotton spinners are having a part. Mr. Coker has given credit to prizes offered by South Carolina cotton manufacturers for the best 5 acres of cotton. In Alabama, cotton spinners, in cooperation with Auburn, have inaugurated such a program, offering rewards, through 4–H clubs for the best acre of inch-staple cotton. It is interesting to know that in one of our counties a young 14-year-old girl, Gladys Woodruff, won first prize.

Increased and new uses for cotton is a very lively question before all of us today. A group meeting in Memphis November 21, and headed by Mr. Oscar Johnston, calling cotton the Nation's foremost economic problem, has launched a South-wide campaign to this end. They propose to raise a generous fund based on an assessment of 2 cents per bale for carrying on this campaign. The Cotton Textile Institute now for a good many years have been devoting many thousands of dollars annually for the promotion of new and increased uses of cotton. This has been financed partially by the mills contributing 1 cent per bale for each bale that they spin, and the fund has amounted to as much as $100,000 a year.

The need for increased work along this general line was recognized in the last Congress and we are soon to have a research laboratory located in the Cotton Belt and financed with a million dollars a year by the Federal Government. I naturally hope that this laboratory will be located at Auburn, but wherever it is located it holds out a very distinct promise for the cotton industry. It would be wonderful if at the very beginning of this search we could all agree on two programs, namely, that we could cover our cotton in cotton bagging and that we would ask the Post Office Department to tie up our mail with cotton string instead of with jute. Jute as a raw product comes into our country without tariff and continually displaces cotton as covering, as container, and as string, and just for one reason—it is grown in India where farm people work for 8 and 12 cents per day. I will speak about this more generally later.

I realize the difficulty of a common program sufficiently broad for everyone to get behind it. I believe that the most fundamental difficulty down here at the moment is the lack of a fair amount of industry. If our farmer friends can have a proper appreciation of what this means, I am quite sure we can have cooperative effort toward its accomplishment.

I lived in Birmingham during the 10 years that Dr. George R. Stuart was pastor of the First Methodist Church. He told us that in his experience with people he had never been able to get everybody to do the same thing excepting in two instances; he could get everybody to stand up, and he could get everybody to sit down. He also told us that a certain member of his church complained to him that the people were not friendly, that no one spoke to him. His answer was, "When you go to church next Sunday, I suggest if you shake hands with the person next to you, he will shake hands with you." I think that behind this philosophy there is an answer to many of our problems today, but I am not here to try to claim any final answers.

To all those studying the subject I feel sure that you can learn much from the annual international edition of your local paper here, the Cotton Trade Journal. President Roosevelt on election eve night at Hyde Park said: "The modern interdependent industrial and agricultural society is like a large factory. Each member of the organization has his own job to perform on the assembly line, but if the conveyor belt breaks or gets tangled up, no one in the factory, no matter how hard he tries, can do his own particular job. Each of us—farmer, businessman, or worker—suffers when anything goes wrong with the conveyor belt. If our democracy is to survive it must give the average man reasonable assurance that the belts will be kept moving."

What our problems are has been repeated over and over again by many people. I am going to quote from some of these later on. Right here, though, I should like to claim for our section tremendous progress since the Civil War, regardless of our handicaps and regardless of obstacles and obstructions. I am not going to try to outline or detail this evidence of progress. You cannot look anywhere without seeing it. The South is going to continue to make progress in spite of obstacles. This is not going to stop us, however, from calling attention to unfair treatment and injustices and to suggest their elimination.

The Department of Agriculture in Washington, together with the help of our Congressmen, have worked out a farm program. We have recently voted to continue this program and as a farmer in south Alabama I voted with the majority. Some of my reasons for this position might be different from the reasons of someone else.

At Enterprise, Ala., there is a monument erected by citizens of that town in the main city square to the boll weevil. The boll weevil destroyed so much of their cotton (for which he did not pay them) that they, through desperation, had to look for other crops and they began to plant peanuts and raise hogs and the results were so satisfactory that they expressed their appreciation with a monument to the boll weevil for having come.

Now comes the Federal Government and asks us to curtail our cotton and pays us for it and thereby gives us the opportunity to find other crops and I am sure we will discover that they will be just as helpful to us as the Enterprise farmers found peanuts and hogs were helpful to them. My only suggestion to our cotton farmers in the Southeast is that they take advantage as fast as they can of this legislation, helping to improve its administration wherever possible. Surely the loan policy should give way to a free market supported by benefits.

In the North and West I recently read accounts of prizes that had been won by farm boys and girls. One girl won a prize for having put up in the course of a certain length of time 4,000 cans and jars of vegetables, fruits, and meats, and another 14-year-old girl of Aledo, Ill., Irene Brown, had raised the prize steer and was paid $3,785 for him, and as a matter of interest, it was bought by an industrial company—the Firestone Tire & Rubber Co., of Akron, Ohio.

In the South where just a few years ago prizes were being offered for the purpose of stimulating the best result in cotton, today we find prizes also for the best corn, the best pig, and for the best steer.

The dairy countries of Europe, because they were dairy countries, now have their farm lands richer today than they were a thousand years ago when they first put them under fence. For a hundred years the South has been pursuing a farm policy that has left our land and our people the poorest in our country. Everywhere we see tendencies away from this. Legume and cover crops for both winter and summer, the growing of cattle and hogs and dairy products is increasing. These programs are having the support of our farm leaders all over the South. As we change more and more of our land from cotton to pastures, food and

dairy products, we are still going to find that we have not solved the problem until we have nearby customers.

A recent study in Georgia showed that from 1920 to 1930 between three and four hundred thousand young people left Georgia and went to other States. Georgia estimated that for the education and care of this many young people to maturity had cost the State a billion dollars, and, yet, just as they reached the point where they could turn their talent to production and benefit for Georgia, they found that broader and better opportunities seemed to lie in the North. This has all got to be changed. It is changing.

Dr. H. A. Morgan, of T. V. A., several years ago made a wonderful speech on the subject of Decentralization of Industry. He compared two counties in Tennessee—Lowden and Hancock; Hancock purely agricultural, Lowden with agriculture and industry fairly well balanced. He showed that in Lowden the assessed valuation per child of school age was nearly double that of Hancock. He showed that the amount spent per child of school age was three times as much in Lowden, that the schools were opened 50 percent more days, that the teachers' salaries were nearly double that of Hancock, and that the tax rate per $100 was less in Lowden than in Hancock. Dr. Morgan compared Mississippi and Ohio. Mississippi, with no industry, with farming practically the only occupation, producing agricultural products to the value of a billion dollars, whereas Ohio, the smaller State, with 63 percent of its population in incorporated towns and cities, had a farm income of over $3,000,000,000. Mississippi was raising cotton for export and Ohio was raising diversified food products for her industrial population. Dr. Morgan asks, "Do you see what industry does for agriculture?"

In the South we are not asking industry to pick up lock, stock, and barrel and move down here, but we are suggesting that, where the advantages justify it, that industry be encouraged to come, and we are suggesting that all national manufacturers whose plants are in the North consider the establishment in the South of branch plants at least to take care of some of the needs of their southern customers.

We have two and one-half million farmers in the South. Wouldn't they and the whole country be better off if they could buy their trace chains from some southern plant, a branch plant if you please, of the Pittsburgh plant?

There has been some criticism of the fact that localities in the South have offered some inducement for such moves—have offered tax exemptions. I don't care to argue the point to a conclusion, but all of the industry in the East and North was established behind a tariff wall, which means that all of our people were taxed with a tariff tax in order that they might become established.

It seems to me in comparison with this a very small thing in some instances for the local communities down here to say that we altogether, and only we are willing to burden ourselves by carrying your tax while you come and get established with us. I have said always that in the South we want no industry that comes here for the purpose of exploiting any situation. As much as we desire to have a mixture of industry and agriculture, we would prefer to fight our battle along agricultural lines and take our industrial development more slowly.

In our home market, cotton has a hard fight with domestic competing fibers. We all recognize this and all we ask is that there be no favorites. In 1911 the United States produced 500,000 pounds of rayon, with a world total of 18,500,000. In 1937 the United States produced 342,000,000, with a world total of 1,800,000,000, with Japan well in the lead and making it so cheaply that they require local spinners to use 25-percent rayon with cotton for all fabric for home use.

In 1916 kraft paper was produced in this country to the equivalent of 684,000 B/C. In 1936 this had increased to 3,904,000,000 pounds, or the equivalent of 7,800,000 B/C.

Paper and rayon are fair and natural substitutes for cotton in many places, but certainly we must be alert and active in the interest of cotton.

How will nearby industry help the southern situation? The Bureau of Agricultural Economics of the United States Department of Agriculture on April 15, 1938, listed the farm wage rates of the several States as of April 1. The lowest rates were in the following order:

South Carolina	$0.80
Georgia	.85
Alabama	.90
Mississippi	.95
Louisiana	1.00

This for one day's work without board. Twenty cents per day was deducted if board was supplied. These wages reflect the old system. Since it was this farm wage at home or an industrial wage away from home, it is only natural that our farm boys and girls continue to go North. I think all industry is just as bad as all agriculture. I think that in the South farm boys and girls should have a chance for an industrial job without having to leave home. I think that as these 90-cent-per-day workers are given a chance for jobs in industry for $2.50 and up, that this will be that many more dollars in their hands to spend first for truck from the nearby farmer, and then for the finer things that come from the North.

The minimum in the South today for the textile worker is 30 cents per hour for 8 hours, with an average of nearer 40 cents. Multiply this by 300,000 southern textile workers and you can easily see how much increased purchasing power has resulted in this one industry.

You have only to look around in your home or on your person, or on the shelves of any store, to realize that the stuff we spend our money for in the South largely comes from without the South. If the North loses an industrial worker to the South, it results in the changing of a southern farmer to a textile worker and out of this move the North as a whole profits more than does the South. Yet we find an active opposition from the populous industrial North to every effort we are making to develop industry in this predominantly agricultural section.

Secretary Hull is constantly reminding us that trade is not a one-way traffic. Since the war between the States, the South has been buying things from the North with dollars that came from our exported cotton. The North has all the manufacturing industry in this country, the South can't become industrialized without some of this industry moving from the North to the South. The North became industrialized behind a tariff wall against the older European industrial countries. The South can't erect any such barriers against the industrial North, they don't want to, but they do say that since the North expect to continue to sell us automobiles, electric refrigerators, radios, watches and clocks, cutlery, luxury and semiluxury articles, they must take pay for these things in a large way in things that we can make in the South. The same argument that Secretary Hull uses of swapping things in a trade between nations holds just as true in a trade between the States. We like to grow cotton in the South, we want to keep on growing it, we want to keep growing some for the export markets, but the North must look less and less for cotton dollars in payment for the things that they sell us and they must realize that they must more and more take their pay in things from the South. As I said before, all sections of this country will be better off because of this.

President Roosevelt on July 4 last year, addressing the descendants of old Hudson Valley families, reminded them that a hundred years before Governor Clinton was asking for public money with which to build the Erie Canal in order to float the farm produce of the West more cheaply to New York. President Roosevelt said that his forbears, together with the other valley farmers, opposed the program, feeling that they would lose their markets to the down-river urban dwellers to the cheaper farm produce of the West. But he said that over the opposition of our forebears, the canal was dug and that as a result the descendants of the Hudson Valley farmers are still there and prospering and the West has developed and, our urban neighbors had the benefit of the cheaper western products.

The South doesn't want a Government canal dug to the urban centers of the North; but they do want barriers in the way of discriminatory freight rates removed, and, as that does us good, it will be just that many more dollars in our pockets to buy more of the high-priced luxury and semiluxuary goods from the North and to help us to assume our full responsibility, social and economic, in this Nation of sister States. For a hundred years the South has had to pay for the things it bought from the North with dollars—dollars which came to us from our exported raw products. This has worked a hardship on our land and our people. That procedure will not continue.

It is stopping right now. Fair trade must be by barter; if we are to continue to buy things from the North, they must in a large measure take their pay with things from the South. We won't have international trade on any other basis, and certainly the trade between the States must be on that basis, too.

The two great stumbling blocks today to expansion of industrial growth in the South are, first, the distance from the more populous markets of the North and, second, the South has to pay higher rates per mile for moving its stuff than the North has to pay per mile for moving their stuff. I prefer not to let this fact rest on my statement alone, and so I am quoting you what some other people have recently said.

First, though, let me say that the textile interests of the South filed their protest in this matter of discriminatory freight rates before the Interstate Commerce Commission and the northern railroads, in opposing our efforts, filed the following statement: "In many instances such commodities, sought to be marketed within official territory, come into direct competition with the commodities produced in that territory. Official lines, therefore, are in duty bound to protect the geographical or other natural advantages possessed by shippers or producers on their lines, and as a matter of justice and equity they may not be required to join in such low bases of interterritorial rates as to nullify or neutralize those natural advantages."

The Interstate Commerce Commission decided against us, but a minority report was filed by three of their members in which they said, "We repeat, therefore, that if rate equality on cotton piece goods is not justified on this record, it is not likely that sufficient evidence can be adduced to move the Commission to prescribe rate equality for any other commodity."

Since the southern Governors have taken up this whole question before the Interstate Commerce Commission and hearings in that case have just been completed at Buffalo, N. Y. The opposition was led by northern Governors, with Governor Lehman of New York at the head. I hope the philosophy of Governor Clinton will prevail.

Governor-elect Frank Dixon, of Alabama, was recently in Washington in conference with the President and he said, "The President is convinced that the present discrimination in fixing freight rates must be and will be corrected."

The National Emergency Council in their recent report on the South said, "The South has been forced for generations to sell its agricultural products in an unprotected world market, and to buy its manufactured goods at prices supported by high tariffs. The

South, in fact, has been caught in a vise that has kept it from moving along with the main stream of American economic life. On the one hand, the freight rates have hampered its industry; on the other hand, our high tariff has subsidized industry in other sections of the country at the expense of the South. Penalized for being rural, and handicapped in its efforts to industrialize, the economic life of the South has been squeezed to a point where the purchasing power of the southern people does not provide an adequate market for its own industries nor an attractive market for those of the rest of the country.

"Moreover, by curtailing imports, the tariff has reduced the ability of foreign countries to buy American cotton and other agricultural exports. America's trade restrictions, without sufficient expansion of our domestic markets for southern products, have hurt the South more than any other region."

The Honorable Harry Hopkins, W. P. A. Director, several weeks ago in a Memphis national broadcast hook-up said, "Crushed by the Civil War and the incredibly vicious period of reconstruction, what you have done and are doing in the face of economic and political handicaps which have prevailed since the War between the States constitutes a saga of human accomplishment of which you can forever be proud. * * * Later the freight rate structure was planned to clinch the industrial supremacy of the North and the East. It still stands and today's rate differentials penalize both southern railroads and southern shippers. Northern manufacturers have a rate advantage of about 30 percent over southern manufacturers who want to ship the same products into the rich and populous North and East. The tariff puts a double handicap on the South. It makes it difficult for foreign shippers to send goods here in exchange for our export crops of cotton and tobacco. At the same time, it increases the prices of manufactured products which the South must buy."

The Honorable Alf Landon, head of the Republican Party, has recently in Little Rock, Ark., said: "It is evident that the Republican Party after fighting a war to keep the South in the Union, unhappily for the Nation, has ever since pursued a tragic policy, the effect of which has been to keep the South out of the Union." Ex-Governor Theodore Christianson, of Minnesota, recently in Alabama, is quoted as saying: "The South has been discriminated against in that matter and suffered freight rate injustice. Freight rates should not be geographical, but should be based solely on the cost of rendering the service performed."

The Honorable David Lilienthal, T. V. A. director, in an address at the University of Alabama, was quoted as saying that money that had come into the South from its exported cotton and which was spent for things made in the North had been the basis of the tremendous industrial and transportation wealth of that section. He also said that the prices obtained for the South's exported cotton had been so low that it had left an impoverished people and an impoverished land. Colliers on April 30 said: "The Constitution says they can't do it, but the States are erecting trade barriers against each other."

If the South is an economic problem and if there is to be a discussion of conditions in the South, it seems that we should deal in causes as well as results. If the South has been the Cinderella of the Nation since the War between the States, is there any wonder that today we find in the South the lowest expenditure per school pupil, the lowest paid school teachers, the greatest percentage of illiteracy, is it any wonder that we find the lowest farm income, the lowest textile money income, the lowest percentage of income taxpayers, the lowest per capita wealth, obtainable anywhere.

We sometime overlook in thinking about our problems down here the tremendous value of our cottonseed oil. I have before me a chart which shows that in 1937 we produced 4,000,000 barrels of 400 pounds each of cottonseed oil and that we imported 517,000 barrels. This same chart indicates that we imported about 3,000,000 barrels of other oils, including coconut, palm kernel, peanut, olive, sesame, obassu, tea seed, rape seed, and sunflower. We produced domestically 126,000 barrels of peanut oil and 285,000 barrels of soybean oil.

I have before me a list of 1937 imports gotten out by the Bureau of Foreign and Domestic Commerce. It lists the imports of cottonseed oil as 194,000,000 pounds and of soybean oil as 109,000,000 pounds. I will not attempt to list the others. These imported oils are directly competitive with our own cottonseed, peanut, and soybean oils.

A few years ago in the interest of our domestic oils Congress put duties on imported oils including whale oil. These imported oils come through our ports, of course, and go largely to the Middle West for processing into salad dressings, cooking fats, and soaps.

Cincinnati is a very large processing center and I wish to discuss freight rates on these imported oils from the ports to Cincinnati in comparison with freight rates on our domestic oils to Cincinnati. There is a case now pending before the I. C. C. filed by southern cottonseed crushers against railroads serving this industry. The complaint is that from New Orleans, La., to Cincinnati, 828 miles, the rate on imported oil is 28 cents per hundredweight, whereas the domestic oil takes a rate of 56 cents—just double. In other words, imported cottonseed oils from Brazil and the Orient moving through New Orleans, passing over exactly the same railroad, between exactly the same points, New Orleans and Cincinnati, enjoy a rate of 28 cents, whereas the same kind of oil produced in this country, going over the same railroad, between the same points, New Orleans and Cincinnati, pays 56 cents.

From Houston, Tex., to Cincinnati, 1,054 miles, the rate on imported oil is 31 cents; on domestic oil, 65 cents. The southern railroads claim they had to put these rates on imported oils in order to compete with rates put on by northern railroads from the Atlantic ports to Cincinnati. The rate from Baltimore to Cincinnati, 572 miles, on imported oils is 31 cents. The rate from New York and Boston to Cincinnati, 741 miles and 892 miles, respectively, is 34 cents. The rate on whale oil from Boston to Cincinnati is 33 cents. From Montgomery, Ala., to Cincinnati, Ohio, 578 miles, the rate on domestic oils is 46 cents.

This case was heard before Examiner John McChord and in this record the following statement was made: "In 1934 foreign vegetable oils came to United States—741,000,000 pounds. In 1936 this had grown to 1,279,000,000 pounds and with further increases in 1937."

The low prices prevailing for our cottonseed and cottonseed oil indicate that the present duties are not fairly protective, and further than that it indicates that railroad rates in favor of imported stuff and against the domestic product has to an appreciable extent nullified the protective tariff.

The examiner himself in this case says: "It is believed from the evidence in the case that the maintenance of the low import rates on vegetable oils described in the complaint and the product out of which it is made is a distinct economic menace to complainants, as well as the farmers of America who are engaged in cultivating and producing cottonseed, cottonseed oil, and other vegetable oils from the product of the farm."

To the credit of the southern railroads, an official of the L. & N. Railroad, testifying in behalf of all southern carriers, expressed themselves as finding no objection to the proposition to establish the imported and domestic oil rates on a parity and to the credit of Examiner McChord he has found that the procedures complained of are unduly prejudicial to and unjustly discriminatory against complainants and all other producers of domestic cottonseed and other oil-bearing products and the oil manufactured therefrom, and he has recommended parity rates.

This report has been on file with I. C. C. now for some months. The abuse has been in effect for a long time and continues.

Just as the textile industry, processors of cotton undertook the fight against a discrimination against a southern farm product, here we also find the processors of cottonseed leading the fight against unfair freight rates imposed upon another southern farm product. I could go further and mention discriminatory freight rates on stoves, on the stone we dig out of the ground in Alabama and Georgia, shoes we are trying to manufacture in Tennessee and Georgia, and all the rest, but the case quoted serves the purpose.

I want to talk about injustices to this cottonseed product in another way. Oleomargarine is a healthful product. It would naturally substitute for butter, but it also has a field of its own. Wisconsin put a prohibitive tax on oleomargarine and because of the insistence of the dairy interests of the North, today every manufacturer, wholesaler, and retailer has to pay a special license tax of $400, $200, and $6, respectively, in order to handle oleomargarine. Troublesome reports of sales have to be made out. You would almost think it was a narcotic, and if the manufacturer puts yellow coloring in it he has to pay an extra 10 cents per pound tax, and so the distributor gives a little package of coloring with each package of oleomargarine so that the customers who cannot afford to buy butter can do their own coloring. There is no similar tax on white butter containing the same coloring materials. This license tax is outrageous and should come off.

With an internal tax against our oleomargarine, with a high tariff tax against imports of foreign butter and cheese, with India jute on the free list, Congressman Boileau, of Wisconsin, tried to inject into the present farm bill a prohibition against the use of our land which is taken out of cotton for the raising of eggs, chickens, milk, butter, or cheese, beef or pork for sale, even within our own section.

Louisiana is one Southern State that has consistently believed in tariff protection. They have asked and secured tariff protection on their sugar so it is not out of place for me here to discuss the tariff question.

Cotton that grows from Texas to Virginia is the only important farm product that has no protection. Senator BANKHEAD recently said: "I am not in favor of forcing southerners to compete with the starvation income of peons and coolies of other countries." I am quoting below some statements and facts in support of a fair protection for our home market for cotton as against its worst competitor—jute.

The Commissioners of Agriculture for Southern States are on record and have passed resolutions favoring urging an adequate tariff on jute and jute products. I will refer you to the procedure they took when they were asking for a fair tariff in protection for their butterfats and other edible fats. They did not ask for protection for their cotton oils and fats only, they asked for a tariff on whale oil, sunflower, rapeseed, perilla, sesame, palm and coconut oils, and "an import tax on all oils and fats directly or indirectly competitive with all oils and fats grown or produced on American farms—such tax to be at a level which will permit domestic producers to market their complete output in the domestic market at prices which will cover fair domestic cost of production."

The American Farm Bureau Federation at your eighteenth convention in Pasadena, Calif., last December passed the following resolution: "During such periods of time as curtailed market outlets force American farmers to restrict the production of farm products more than is necessary to be consistent with good farm practices, including the maintenance of a high degree of soil fertility, we

urge that Federal laws and regulations restrict the importation from foreign countries of farm products to such points as is necessary to maintain the widest possible market for domestic farm products at fair price levels."

Since 1933 our cotton crops have been curtailed and our Government has had continually to protect the price by loans and other methods, and during this time Senator RUSSELL, of Georgia, says that imports of jute increased from 517,000,000 pounds in 1933 to 716,000,000 pounds in 1935. He showed that as cotton goes up in this country, importation of this low-wage product also increases. The New York Journal of Commerce on March 24, 1937, in speaking of the jute industry in India quoted from their own statement: "The position now is that all units of the industry will continue to expand and increase their output so as to take advantage of the demand which is still on the upgrade."

The Atlantic Constitution on June 1, 1936, said: "Substitution of cotton for jute in the manufacture of many products would be 'new use' * * * cotton could displace jute completely from every use in this country with a resulting better manufactured product that would be more satisfactory to the public."

The Alabama Journal of August 27 said: "Jute offers perhaps the most conspicuous example of tariff favoritism with which the South has to contend. Jute is a good place for the South's Representatives in Congress to begin to make their fight in order to get a square deal for a million and a half bales of cotton per year."

Mr. Louis J. Taber, master of National Grange, said: "On such matters as the tariff and kindred problems, the farmer has not received justice. Agriculture is entitled to the American market for all farm commodities that can be efficiently produced in this country. We have too large a free list. We must not only have additional tariff protection but we must prevent unfair treatment of the farmer in reciprocity treaties and international trade."

And in May of last year Mr. Lynn R. Edminster, Chief Economic Analyst with the Department of State, was in Birmingham, addressing the chamber of commerce, and he said: "The unvarnished truth concerning this whole agricultural import matter is that the bulk of agricultural products which can be produced in this country at less than a prohibitive cost have long since been barred out of our markets by high tariffs." And again, "No one, so far as I know, seriously proposed that it should be otherwise."

And I will quote Senator BORAH again, who said on August 29, 1936:

"The farmers' prosperity depends upon the maintenance of his exclusive right to the American market. Put the tariff up, even if it amounts to an embargo, in order to give the American farmer, up to the limit of his production, our home market; then the farmer will be prosperous, and not until then."

Congressman FULMER, of South Carolina, in his net-weight bill, gave the following figures dealing with our importation of jute and jute products: 1892, 260,000,000 pounds, 1900, 400,000,000 pounds; 1910, 600,000,000 pounds; and now over a billion pounds.

In recent figures compiled by Stein Hall & Co., September 20, 1937, they made the following comparison regarding production of India jute and shipment of burlap to the United States: 1935–36—acres, 2,181,000; crops in bales, 8,150,000; 1936–37—acres, 2,822,000; crops in bales, 10,725,000. Shipments of burlap alone to United States of America, 1935–36, 906,000,000; 1936–37, 1,150,000,000.

The cotton that grows from Virginia to Texas is the only major farm crop in this country that is not protected by tariff. Senator RUSSELL, of Georgia, last year made an attempt to correct this situation; he was opposed by a Senator from New York because his dairy farmers sacked their feed in burlap bags. Burlap bags are cheaper than cotton bags, because it is made out of India jute grown by people paid 8, 10, and 12 cents a day. The New York dairy farms have a tariff of 7 cents a pound on their cheese and 14 cents a pound on their butter.

A Senator from Idaho objected to Senator RUSSELL's jute tariff bill because his farmers sacked their potatoes in burlap bags, and yet there is a tariff on potatoes and there is a tariff of 1 cent a pound on sugar to protect the wages and profits of sugar-beet growers of Idaho, and southern cotton farmers pay 1 cent a pound more for their sugar, and yet Idaho doesn't want to use cotton bags because they can get burlap bags cheaper, only for one reason—because they come from India, where people work for 8, 10, and 12 cents a day.

A Senator from Washington objected to this tariff bill because he has never seen his grain in cotton bags. If cotton was fairly protected from India jute so that Washington farmers could get a cotton bag as cheaply as a burlap bag, Washington farmers would use cotton bags.

They have a tariff on the Pacific coast, there is a tariff protecting their salmon, their lumber, their apples, their wheat, their wines and their citrus fruits and the southern cotton farmers are customers for all of this stuff.

Southern farmers like to grow cotton, he has been growing it for generations, he is willing to even grow cotton and buy some of his foods, but if he is to keep his farm lands in cotton, then the food farmers of the North most certainly sack their food and feed in cotton.

The Post Office Department every year buys several hundred thousand pounds of string for tying up United States mail. They ask for bids for both cotton and jute, and they buy the jute for just one reason; it is cheaper.

In the Democratic platform adopted at Philadelphia there is this plank, "We shall continue, as in the past, to give adequate protection to our farmers and manufacturers against unfair competition and the dumping on our shores of commodities and goods produced by cheap labor and subsidized by foreign governments."

In the Georgia-Alabama edition of the Progressive Farmer Ruralist, June 15–30, 1932, under the heading Jute—an Enemy of Cotton, Mr. C. A. Cobb, recently director of the southern division of A. A. A. said: "All fibers are competitive."

When the farmers of California, Arizona, and New Mexico decided to begin growing long staple cotton a few years ago the first thing they did was to go to Congress and ask and get a 7-cents-a-pound tariff against Egyptian cotton. The equivalent of 2,000,000 bales of our cotton is coming to this country every year in jute and jute products. We are not asking, as Senator BORAH suggested, an embargo against this, but we believe a fair tariff would stop well over half of it and this would open up an American market for over 1,000,000 bales of American cotton and bring into our Treasury a tariff revenue from whatever jute that continued to come in.

There is a tariff on wheat, on corn, oats, cattle; a tariff on butter, cheese, potatoes, and a tariff on every farm product except the cotton that grows from Texas to Virginia.

Our Government is spending millions of dollars in an effort to establish parity income for our cotton farmers and yet every effort to increase the price of cotton opens our doors that much wider for increased quantities of this jute. Like an umbrella, the higher the prices for our cotton the higher the umbrella over this farm-grown pauper-labor product.

Southern farm interests appreciate every helpful effort from our National Government, but we feel the need of coordinated effort. We have the greatest respect for the reciprocal trade treaty program sponsored by Secretary Hull; and we've said before if the time ever comes or if it's here now when a southern man can hope to be President of the United States, Mr. Hull is our 1940 candidate. In the January 15th Saturday Evening Post, in an article about Mr. Hull, Marquis James says that the Secretary's method is to say to a country, "We will lower our duty on such and such items which you have and we need if you will lower them on such and such items which we have and you need." We are for this 100 percent. We even recognize the necessity of some departures. Our textile mission to Japan last year in friendly cooperation established an arrangement for quota imports of cotton goods from that country, although we have idle spindles and unemployed textile workers and we don't need a yard or a pound of their cotton goods. We think that Senator CAPPER overstated the case when he said that "the American farmers are being sold down the river." Mr. James says that these treaties have greatly increased our export trade in manufactured articles, such as automobiles, farm machinery, oil, refrigerators, sewing machines, etc., and that specific injuries to agricultural producers are more than recompensed by the general gains—the "greatest good to the greatest number" theory. This is what the tariff-protected industries have been telling our exporting farmers for 100 years. They buy our machines, tend them with their cheaper labor, and then want to sell us the product. They have adopted our machine and methods but not our standards.

Secretary Wallace continues to tell us that we lost our exports for cotton since 1933 because of lack of dollar exchange in the hands of foreigners. Secretary Hull tells us that foreign customers found dollar exchange to buy increasing quantities of the manufactured articles listed above.

Secretary Hull negotiated a trade treaty with the British Empire. We had hoped that he would put a quota on jute products not over 65 percent of the average imports for the years 1931 to 1935, inclusive. We need their rubber and their tin and they need our cotton. Let's remove every trade barrier for their free interchange.

In a recent hearing in Washington for the purpose of establishing a quota limit on jute three governmental departments appeared in opposition, the State, Agricultural, and Labor Departments, from whom cotton farmers and textile workers have every right to expect all possible help—from the Labor Department protection for textile workers' jobs; from the Department of Agriculture protection for cotton's home market; and from the Department of State true reciprocity—swapping only what each nation has in overabundance that the other needs. Cotton fighting for its life against paper and rayon—home products——and then in addition this unfair fight against jute.

In a senatorial debate in Congress on April 15, Senator BANKHEAD, of Alabama, made the following statement. This statement of the Senator came during the debate on an appropriation for the Veterans' Administration of $547,917,500. The appropriation carried the provision that no part of this appropriation should be expended for the purchase of oleomargarine or butter substitute for food. Senator GEORGE, of Georgia, suggested an amendment that no part be used for the purchase of oleomargarine unless at the request of the veteran or on the prescription of a doctor, but even this proposal was defeated.

Senator BANKHEAD said: "A few days ago there was proposed a tariff on jute, a commodity raised in India, the pauper labor there displacing over 2,000,000 bales of cotton in the American market. Where did the Senator and the other Senators from the dairy States stand when the question of a cent or two upon a bag here and there for potatoes or something else was before us? * * * The Senator asks about a tariff on cottonseed oil. Unhappily the southern cotton farmers have not received protection against the importation of cottonseed oil similar to the protection the wheat growers, the barley growers, and the oat growers in the West have

received. They have not received protection on raw cotton; they have not received protection on manufactured cotton. Our country has been flooded with importations of cheap Japanese cotton goods during the past few years. Southern cotton producers have had no sort of protection, while the agricultural interests and the producers in every other part of the United States have demanded the American market for the American farmers * * *. Since I have been in the Senate I have seen the western farmers and the southern farmers marching together in a common interest, standing by each other, helping each other so far as they were asking for the right thing. But, Mr. President, unhappily I do not see any opening in the clouds that have been hanging over us since the days of the Civil War, so long as any sort of sacrifice is involved. It is very fine if we can all sit back in peace and complacency and say, 'Yes; we are standing together. It will not cost us anything. We have what we need. Now we will go along with you fellows unless it costs us something. Then we will separate.' * * * I have no purpose to injure the dairymen; there are too many good ones all over America; but, Mr. President, we do not have to injure any group of people in order to make possible the use of food such as this, which can be used healthfully by millions of American people who can get none or not enough of high-priced butter."

I should like to refer again to the three points I wanted to bring to your attention in this paper.

First. The things which we can do for ourselves—better cottonseed, more intelligent use of our land, and the encouragement toward and support of local industry.

Second. The necessity for the removal of freight-rate barriers and injustices.

Third. The removal of the internal tariff against cottonseed oil, and equal tariff protection for this product. Cotton fiber and cotton goods need the help of all who are interested in helping the South, and in helping the South helping the Nation.

Municipally Owned Power System in Tacoma, Wash.

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

ARTICLE FROM TACOMA SUNDAY LEDGER OF JANUARY 1, 1939

Mr. BONE. Mr. President, I think it may be of more than passing interest to the people of the country to know something of the progress being made by my own city of Tacoma, Wash., in the field of public ownership of power. Tacoma is a city which for years has enjoyed the cheapest electric light and power rates in the country. Therefore I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an article on the Tacoma municipally owned power system which appeared in the issue of the Tacoma Sunday Ledger of January 1, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Tacoma Sunday Ledger of January 1, 1939]

TURN ON YOUR LIGHTS! CHEAPEST IN U. S. A. HERE—NEW LOWER RATES OF TACOMA MUNICIPAL LIGHT DEPARTMENT IN EFFECT TODAY—STATISTICIAN TELLS HOW INEXPENSIVE POWER IS

Tacoma's light and power rate for domestic consumption, already lowest in the world, becomes still lower, effective today.

Under the new rate Tacoma users will pay per month 4½ cents for the first 20 kilowatt-hours, 1 cent per kilowatt-hour for the next 400, and one-half cent for all additional. The reduction will represent a saving of about 11 percent in average monthly bills, according to Commissioner Ira S. Davisson, who announced the new rate schedule recently. He also has expressed the belief that a further reduction will be possible in 1940. The reduced rates have been made possible by the favorable financial condition of the city light department and the fact that the department's bond redemption schedule has been eased considerably in recent months.

To bring home to Tacomans the lowness of their light and power rates, the News Tribune asked Vivan Jones, rate engineer and statistician for the city light department, to reduce some typical light and power uses in the average Tacoma home to an actual cost basis.

EASTERN PAPERS PLEASE COPY

For instance, consider that basement light which is so apt to be left burning. Discovered after an hour's unnecessary illumination, what has it cost? Approximately one-seventeenth of 1 cent, according to Mr. Jones. That is, assuming it is the usual 60-watt globe and figuring the rate at 1 cent per kilowatt-hour which will apply (beginning January 1) after the first 20 hours of consumption. In other words, a 60-watt light, whether it be in the basement or on the back porch, can be burned nearly 17 hours for 1 cent. You can leave the porch light on all night and every night for a month at a total cost of about 18 cents.

An electric clock will consume 1½ kilowatt-hours of current in a month, at a cost of 1½ cents. Likewise, an electric fan can be operated 20 hours for 1 cent. Invasions from Mars via radio come a little higher, Mr. Jones figuring the average set consumes about 8 kilowatt-hours of current a month, or 8 cents worth.

Electric irons are estimated to consume 4 cents worth of current per month in the average home. And turning from heat to cold, to emphasize electricity's range of uses, the average refrigerator uses from 20 to 40 hours of current a month at a cost of that many cents.

ELECTRIC RANGE $1.30 A MONTH

The kitchen range begins to run into real money, the cost of preparing some 90 meals being figured at $1.25 to $1.30. Mr. Jones fails to state whether this includes any baked beans. Sewing-machine operation is practically a gift from the light department for the estimate of an average month's operating power is a lone kilowatt-hour, or 1 cent.

Two relatively expensive items of home electricity cost are water heaters and oil furnaces, the former estimated at $1.88 to $2.63 a month and the latter at 25 to 62½ cents a month. But, on the other hand, if you have hesitated to install an electric dishwasher for fear it will require too much current, hesitate no longer. Mr. Jones assures us that such a machine will wash the dishes three times a day for a month and add less than 3 cents to the month's bill.

The next time you are in doubt whether to leave the porch light burning you might as well leave it on. The neighbors will appreciate the added illumination and the only ones who will object will be the young lady of the house and her escort when they finally get back from the dance.

Foreign Relations

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. ALFRED M. LANDON AT TOPEKA, KANS., JANUARY 21, 1939

Mr. CAPPER. Mr. President, I desire to call the attention of the Senate to a speech by Hon. Alf M. Landon, of Kansas, on the subject of foreign relations, delivered Saturday night, January 21, before the Kansas Press Association at Topeka, Kans.

Governor Landon was a member of the United States delegation to the Eighth Conference of American States at Lima, Peru. In this connection I wish to express my appreciation of the excellent work accompliished at Lima by Secretary of State Cordell Hull and his associates; also my pride as a Kansan in the share that Governor Landon took in the proceedings.

I believe that the views expressed by Governor Landon in his Topeka speech are worthy of the careful attention of the Senate.

I ask unanimous consent to have Governor Landon's address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We Americans are citizens first and Republicans or Democrats afterward. That is our view to a reasonable degree on questions of internal importance. Fortunately, it is true to an even greater degree when the country is confronted by difficult foreign problems. I take such a view in discussing very dangerous international questions confronting us.

Troublous world conditions 2 years ago convinced me that a solid American front was vitally important then—that it would become even more important in the future. As a nation our position is so much stronger if we all stand together, regardless of politics, when outside pressure or outside interference threatens. So I pledged our President my support in the delicate and difficult foreign problems that would confront his administration.

At the time of the *Panay* incident a year ago I renewed that pledge. That was again my view when I accepted service as a member of the United States delegation to the Eighth Conference of American States at Lima. It is more evident every day that we are dealing on this hemisphere with the equivalent of what has occurred in Europe.

Democracy suffered a serious blow at Munich. Representative government sustained a loss of prestige. The result of the Lima conference was the statement in broad principles of the unity essential among the American governments in order to rebuild that prestige. But the ultimate success of what was accomplished at Lima rests upon the specific application of these principles.

Most of the members of the Lima conference delegation were interested in learning first-hand to what extent Nazi, Communist, or Fascist nations had actually penetrated the economic and political life of our neighbors of Central and South America.

It didn't take long to find out that totalitarian propoganda had had its effect. Rumors and reports about the extent and vigor of those efforts have not been overemphasized. A fascinating and dangerous maze of propaganda and intrigue has been directed against us and against our democratic ideals in those republics.

For example, American news agencies are now putting up a hard fight for existence. German and Italian news services are offered to the newspapers of South America at practically no cost to the users. The major costs are defrayed by the Nazi and Fascist Governments of Europe. These services are almost as good as the American from a news standpoint. And they afford the sponsors an excellent opportunity to put over their propaganda. Radio facilities are being employed in the same way, and for the same purposes.

But even despite such effective and dangerous means, the success of totalitarian propaganda is being exaggerated by many writers. Despite the inroads of this propaganda the general run of feeling in the nations to the south of us is friendly to the United States. In all frankness, however, there is a disposition there to blame us for what does or doesn't happen. And today the foreign dictators are doing their utmost to stimulate this feeling. On the other hand, our lack of effort to understand the country from the Rio Grande to the Strait of Magellan is amazing and tragic. Our schools should be placing more emphasis on our relations with the people to the south of us.

I am afraid that in the past much of the effort toward such an understanding has been made by our sister American republics rather than by us. There are instances of serious indiscretions on the part of our people. Some were prompted by good motives, some were not. We have meddled in matters that primarily were not our business and have steered clear of other matters which vitally concerned us.

Our conception of South and Central American dictators is one source of misunderstanding. To most of us a dictator is a dictator. Some of our sister American republics, it is true, do not enjoy our ideas of representative governments. But neither do they have the kind of dictatorship that prevails in the totalitarian countries. Not a single one of those American nations has made state slaves out of its citizens in the same sense as has Russia, Germany, or Italy.

The conference at Lima was a splendid example of how democracy works. It laid the basis for a better understanding among the 21 American nations which took part. This closer relationship is vitally important to the security of the republican form of government on this hemisphere.

And it did not consist merely in the formal signing of the declaration of Lima. Equally important were the personal contacts from which developed a fuller and more sympathetic appreciation of each others' problems.

A group in America is most vocal in the praise of communistic experiments and in condemnation of the Nazi and Fascist forms. We hear much from them about the dictatorial forms of governments to the south of us. We've heard relatively little about the Communist Government of Mexico.

When the large haciendas were first broken up in Mexico, most Americans felt it was a just and wise policy. An enduring civilization can only be built on the ownership of the land by the man who works it. But that was not the ultimate result. The land was not returned to the individual. It was made communal. The peonage was simply transferred from the haciendas to the government. And a worthwhile social project has been sidetracked.

The result has been most unsatisfactory—unsatisfactory both from the standpoint of production on the land and from the standpoint of remuneration to the men and women who work it. The proof of that statement lies in this astonishing fact: Mexico is on an import basis for basic agricultural products.

The most important results of the Lima conference were to strengthen the United States in its international relationships; to cement stronger ties among the nations in the two Americas; to strengthen representative governments in the struggle with the totalitarian powers.

There is an intense struggle—almost one of death grips—between all democracy and the totalitarian countries. This clash may never come to open military violence, but it is just as bitter and just as real, nonetheless. It is an economic war, based on new methods of economic penetration. These new methods are just as dangerous to representative government as new war machines. Jobs and opportunity for millions of free men are at stake. And, in this struggle it is important that we face reality.

The totalitarian powers of which I speak are making some temporary inroads. In the first place, these powers are absolutely unscrupulous. Humanity means nothing to them.

It boils down to this: We in the democracies are competing as an aggregation of free individuals; the totalitarian countries are competing as an aggregation of state slaves. We are working less and playing more—they are working more and playing less. To us liberty is all important and world competition is incidental; to them liberty means nothing and their success in world trade is a matter of life or death. So long as this goes on we are confronted with a new kind of competition that we cannot safely ignore.

Hence, until the totalitarian powers crack up under the economic strain there is no hiding the fact that the democratic powers are receiving no quarter in this conflict being thrust upon them.

But in facing our realities we cannot count on such a crack-up in a few months or even a few years. Some of our best economists predicted 7 years ago that Japan could not stand her financial strain for 2 years. They said 20 years ago that Russia couldn't last. They predicted that Italy couldn't hold out. They said, too, that Germany couldn't last. But to all outward appearances they're still going strong.

In taking stock of realities, I want to make it plain that I am not a believer in the ultimate triumph of the brutality of communism and nazi-ism. But, in considering this great struggle between these theories of government, we must take into account the cold-blooded brutality by which these two "isms" operate. In business and in politics it is always a serious mistake to underestimate the other fellow. In dealings between governments such a mistake has been fatal to a nation. That is particularly true when two theories of government are involved. Therefore, I feel it is essential to national preservation that we do not underestimate the totalitarian powers.

The greatest threat to us today is from within. It comes at a time when the republican form of government is being attacked all over the world from without.

Upon this internal discord the Nazis, Fascists, and Communists are basing their hopes and forming their plans. And these bloody "isms" see alike in their fight upon representative government. They aim to take advantage of every mistake we make. Mortal enemies though they are, they have one thing in common: They despise and hate all democracy. Their leaders believe that, after all, there are just two theories of government, and these two cannot exist indefinitely alongside of one another. On the one hand is representative government. It stands for freedom of the people. On the other hand are the totalitarian forms. All stand for a complete enslaving of their populations. So democracy is the common enemy.

Totalitarian powers do not want democracy to work—they cannot afford to have it work. Therefore, the technique of thousands of agitators the world over, and especially in America, is to not give it a chance to work. No opportunity is overlooked for proving that democracy is decadent, therefore will not and cannot function.

The Communists, for instance, do not want labor disputes peaceably settled. They do not want to see the democratic countries enjoying prosperity. Lenin has said the greatest enemy of communism is contentment.

Fortunately for communism, there is a school of thought in America that calls everyone who fights against the evils of our economic and political life a Communist. At the other extreme there is another school that calls everyone failing to line up with its particular methods of change and reform a reactionary.

The air is filled with the shrill cries of both. Both play the game as all the totalitarian powers would wish them to play it. Those tactics tend to inflame one group or class against another. The real Communists do everything they can to fan this flame into disunity. All the while they predict the fall of capitalism and democracy.

The President has urged solidarity. He has pointed out the importance of a solid front in all our foreign relations. In that I heartily agree with him. I think I have proven that I intend to go along with the President as far as I can whenever my doing so will help make unity possible. Everyone recognizes that no reasonable man would support any Chief Executive blindly in either foreign or domestic policies.

However, his plea for solidarity must not only be made to the American people at large. It must be made in particular to members of his own administration. The use of class hatred as a political weapon must stop. At least class hatred cannot be used if we are to pull together in meeting either difficult foreign situations or domestic problems.

The President is preparing to meet military aggression. He pleads for unity in meeting it. Every true American is with him 100 percent in any program of adequate preparedness. I believe,

however, there is a legitimate question about what constitutes reasonable preparedness. And the country is entitled to know more about it, especially in view of the now all to apparent administration's trial balloons on national defense which preceded the President's message. Trial balloons have their place in our domestic political life. They have no place in dealing with such highly inflammable subjects as foreign affairs and national defense. If the Chief Executive had made his advance publicity on national defense consistent with the program he actually proposed to Congress, he would have avoided an unfortunate situation both at home and abroad.

If there is another world war it is going to be waged by totalitarian nationals against nations believing primarily as we do. Our ideas and views stand in the way of totalitarian ambitions. If we are to protect ourselves against the ravages of such a war, whether we are directly involved in the line of fire or not, we must make our democracy impregnable.

Obviously we must strengthen our armed forces to whatever level may be necessary for defense. I am sure we are willing to spend millions in carrying out an orderly and intelligent plan of military defense. But I am equally sure we are not willing to spend millions on a helter-skelter program, whipped up to satisfy the hysteria of the moment. Above all, we are not willing to spend one cent for a defense that is merely another name for Government pump priming.

Right now we are confronted by another fight—a fight that is real, involving all representative forms of government throughout the world. It is the economic war which is now being waged against all democracy by the totalitarian powers. That means we must be prepared to defend ourselves in that war. However, the same basic preparation against economic warfare will be equally important against any military threat.

A sound fiscal policy is prerequisite to preparation for military or naval defense. It is prerequisite, as well, to preparation for economic conflict. In any war, modern or ancient, the country with the soundest finances and the greatest natural resources possessed an undeniable advantage.

In today's modern warfare financial reserves are just as important as military reserves. It is just as important to national defense to be on a sound financial basis as it is to be on a sound military and naval basis. Our Government cannot continue, hoping for the future breaks financially, any more than it dares to gamble on the lack of necessity for military defense. Any government, head over heels in debt, is in a bad position to defend itself.

We have had an unbalanced Budget for so long the people are being lulled into a false sense of security. They are becoming so accustomed to the present policies of deferred payment spending, some even think these policies of placing a debt on every piece of property and every man's wages can be continued year after year without endangering our economic structure. The deficit spending by the national administration if continued will be the means of destroying all the good and all the progress that has been accomplished in generations. It is a temptation to the totalitarian powers to mistake our sleazy government housekeeping for real weakness. We must start now, cutting down wasteful expenditures, and, if necessary, raise new taxes to bring expenses and income closer together. This is the biggest and most important reality for the American people to face.

In previous messages the President has always expressed the hope that the Budget would be balanced the following year. In his last Budget message he even abandons that hope. If this continues, I want to venture one prediction: No matter how badly off you may feel you are today, there is not a man, woman, or child in the United States who won't be worse off if immediate efforts are not made to bring that Budget into balance.

It is just as vital to national safety to strengthen a nation's economic and financial system as it is to strengthen its military system. To do one without the other is to neglect the fundamentals of national defense. Our President sees the necessity for adequate naval and military defense. But even after 6 years of failure to restore employment and prosperity he has failed to see the vital need for sound Government finances. This is tragic indeed for our country.

Our greatest immediate danger is not from military attack. Our greatest immediate dangers are from the economic invasion of the world by the totalitarian powers, from class hatred and name calling growing into disunity at home, and from reckless spending to ruin, leading to mounting debts and deficits. The present state of world affairs, instead of being a justification for continued deficits, is a mandate for a balanced Budget.

If we are to meet these dangers, we must present a solid front, not only abroad but at home. We must work together in overcoming our own great domestic difficulties. Unemployment, ruinous farm prices, demoralized business, continue to be our first questions to be answered. Most certainly these questions must not be sidetracked for the new program of national defense. We must bring about a balance between government income and expenditures. These things we must do if we are to hold the bulwark for democracy.

If democracy meets with defeat, it will not be because of its inherent defects. It will be because the democratic nations have not been vigorous and fearless in their leadership. It will be because America has refused to face reality.

Gold—A Business Restorative

EXTENSION OF REMARKS

OF

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM BALTIMORE SUN OF JANUARY 18, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Baltimore Sun of January 18, 1939, entitled "Gold—A Business Restorative."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of January 18, 1939]

GOLD—A BUSINESS RESTORATIVE

President Roosevelt rode into office in 1933 on a wave of fear set in motion by 3 years of severe business depression. That fear reached its climax shortly after the inauguration, when all banks were closed, markets were paralyzed, and business, except public utilities and the trades serving immediate consumption, was virtually at a standstill. The first two steps of the Roosevelt administration were taken promptly and with assurance: The banks were reopened and the gold standard for the currency was abandoned.

Reopening the banks did much to soothe nerves, to restore confidence, and to make possible the resumption of business. The wisdom of going off gold at that time is more debatable so far as the immediate effects were concerned. Certainly, the sequence of repudiation and the abrogation of contracts to pay in gold or the equivalent amount of currency, as upheld by the Supreme Court, was a blow to confidence.

Another and far more severe blow was administered in January 1934, when the Thomas amendment to the 1933 Farm Relief Act invested the President with authority to reduce at will the gold content of the dollar by as much as 50 percent of the old standard of $20.67 an ounce. The act was passed in the hope that it would prove more effective as a means of inflating commodity prices than had been the experiments of the preceding few months in purchase by the Government of gold at an arbitrary price in dollars, fixed daily.

Acting under authority given to him under the Gold Reserve Act of 1934 President Roosevelt cut the gold value of the dollar by approximately 40 percent, raising the price of gold to $35 an ounce. The act also gave to the President authority which he has not exercised, to issue up to $3,000,000,000 in greenbacks. Both currency devaluation and the greenback issue were authorized as the principal means needed to restore the commodity price level to that prevailing in 1926. Cutting the dollar's value was of a nature entirely different from the early banking and currency measures, which were taken with the idea of quieting fears of a complete monetary and business collapse.

It was hoped by the administration that devaluation of the dollar would increase our foreign trade, encourage a revival of business enterprise, restore real-estate values by relieving debtors of a portion of their obligations, stimulate a broad rise in prices, and so quicken the business pace. As a price restorative, tinkering with the dollar has failed. The Bureau of Labor Statistics index of wholesale commodity prices, on a paper-dollar basis, stands at 77 percent of the 1926 average against about 60 percent at the bottom of the 1932 depression. That is a rebound of even smaller extent than might have been expected from natural recuperative forces.

As a business stimulus the floating dollar and the constant menace of a further cut in its gold value clearly have done more harm than good. The undervalued dollar was principally responsible for the shipment to this country, with a terrifically deflationary effect upon world commodity prices and upon world trade, of approximately $10,000,000,000 in gold.

The Federal deficits each year, involving "pump priming" outlays and covered by the creation of bank credit, have combined with the increased supply of monetary gold to build up an enormous pile of potential inflationary material. It has not been used. It has made no appeal to speculative imagination or business enterprise; it has only diminished confidence, which is the substance of prosperity. Business could improve rapidly at the present price levels and resolve the problems of unemployment and Government Budget deficits if fear of the future could be downed.

That fear centers upon the floating dollar. The way to stop it is to restore the mooring lines to gold. Restoration of the old price of $20.67 an ounce would be too deflationary to be politically practicable, but there is no reason why legal stabilization of the dollar at the present price of $35 an ounce, repeal of authority in

the President to cut the gold content (which expires on June 30) and of the greenback issue clause could not be accomplished to the great good of all concerned.

The Treasury owns almost fifteen billions in gold, and the currency circulation is less than seven billions. With a restatement of currency and credit policy along sound lines, there would be no incentive to hoard gold; but on the contrary, the President and the Congress would have to work within the limits of protection of the gold dollar. Balancing the Budget, economy in government, would then become matter-of-fact necessity and not matters of political expediency.

National Representation for the District

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS, DELIVERED AT NATIONAL MEETING OF GENERAL FEDERATION OF WOMEN'S CLUBS, WASHINGTON, D. C., JANUARY 19, 1939

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "A Plea for National Representation for the District of Columbia," delivered by the senior Senator from Kansas [Mr. CAPPER] before a recent meeting of the General Federation of Women's Clubs at Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is both an honor and a privilege to appear today before this board of directors of the General Federation of Women's Clubs of the United States and discuss briefly pending legislation for the righting of a great wrong affecting a community of over a half-million of our fellow Americans. As you maintain your national headquarters in this great National Capital, I am sure that your contacts with the people of Washington must have convinced you, as I am convinced, that no finer or more intelligent Americans are to be found anywhere. Your own fine District of Columbia Federation of Women's Clubs is a good sample of the type of American citizens one finds here.

Here at the very heart of our Nation are more than a half-million as good Americans as are to be found any place under the Stars and Stripes. They are intelligent, public spirited, loyal, and patriotic and are always to be found meeting all of the obligations of American citizens, both in war and in peace. In measuring up to these obligations of citizenship they are excelled by no other American citizen, but when it comes to their possession and exercise of vital and fundamental political rights, they are rated in the same class as the criminal and the lunatic.

These people, being subject to all laws enacted by Congress, are as vitally affected by, and interested in, all national legislation as are the citizens of the States, yet they are deprived of the right to participate through duly elected representatives in the enactment of those laws. They are required to pay heavily in taxes for the support of the Nation, yet are denied representation in the Legislature which determines the kind and the amount of these taxes, and how the resulting revenues shall be spent. They are required in time of war to bear arms in the service of their country, to fight and possibly to die, yet they have no voice whatever in determining whether there shall be war, or at the conclusion of the war, as to the terms of peace. They are ruled over locally by administrative and judicial officers appointed by the President of the United States, but are denied participation in the selection of that President. They are also required to pay in taxes for the support of the National Capital whatever the Congress, in which they are not represented, requires of them, and have no voice whatever in deciding for what this money shall be spent.

Were these people of the District of Columbia satisfied to rest content in this deprivation of their natural-born rights, they would be unworthy of the name "American." They realize fully that they suffer a great injustice through inaction of their fellow Americans in the States. They know that in fact and in truth they are really the subjects rather than the equals of the other citizens of their country. They know that the only possible relief from their anomalous situation is to be found through an amendment to the Constitution of the United States, which will give Congress the power to correct this defect in our fundamental laws.

The framers of the Constitution unintentionally, I am convinced, omitted to fix the political status of the future residents of the 10 miles square, constituting the seat of government, and unintentionally failed to give Congress the power, analogous to that which it possesses in relation to the admission of territories to statehood, of granting representation in Congress and the electoral college to the people of the District. Under existing conditions, the Congress is a National, State, and local legislature of the District of Columbia, but there are no representatives in the legislature from these people who are thus governed without their consent, and in consequence can exercise only that right of doubtful value guaranteed by the Constitution "peaceably to assemble, and to petition the Government for a redress of grievances." Right here let me say as a matter of practical politics, however, voteless petitioners carry little, if any, weight. You women who worked for woman suffrage need not be reminded of that.

Throughout my 20 years' service in the United States Senate I have been a member of the Committee on the District of Columbia and have become well acquainted with many of the residents and familiar with their governmental problems. They have always had my sympathy in their humiliating deprivation of these vital and fundamental rights, rights that every American citizen is entitled to.

I have tried, and am continuing to try, to do more than just sympathize with them, and for a number of years have introduced in the Senate a joint resolution proposing an amendment to the Constitution of the United States, which will remove the obstacles which now prevent these good fellow Americans from participating in the government of their country. This amendment, supported by the Citizens' Joint Committee on National Representation, which is a truly representative body of the organized citizenry of the District, has just been introduced again in the Senate by me, and also in the House of Representatives, and has been referred to the Committee on the Judiciary of the two Houses.

The amendment will empower Congress, by appropriate legislation, to grant to the residents of the District the right of voting representation in the Senate and House of Representatives and among the electors for President and Vice President. It would also give the District residents the right to sue and be sued in the courts of the United States on an equal footing with the citizens of the States. This right, now denied to District citizens, is open even to aliens in the States.

The proposed amendment would not make a State of the District of Columbia and would not deprive Congress of an atom of its constitutional legislative control of the National Capital. It does not detract from the power of Congress but clothes it with a new power, to be exercised whenever the Congress, in its wisdom, shall decide that these voteless and unrepresented Washingtonians are fit to enjoy and exercise these rights and powers which are now denied them.

Several hearings have been held before the Senate Committee on the District of Columbia on this proposal, and in 1922 the committee made a favorable report to the Senate. This report was reaffirmed without further hearing in a later Congress. Since that time the joint resolution proposing the amendment has been, in each Congress, referred to the Committee on the Judiciary for consideration. So far this committee has never held a hearing on the resolution, but I am hopeful the committee will grant a hearing during this session of Congress.

The summary contained in the favorable report of the Senate committee in 1922, which I have just mentioned, gives such a clear statement of the case that I want to read it to you that you may get that committee's conception of the purpose, the scope, and the advantages which will accrue from this proposed addition to our Constitution:

"Summarizing, we find and report:

"The proposed constitutional amendment does not reduce the power of Congress in respect to the Capital, but adds a new power; it does not propose the admission of the District into the Union as a sovereign State; it does not propose the destruction of the '10 miles square' provision of the Constitution; it does not lessen in the smallest degree the control by the Nation through Congress of what remains of the '10 miles square'; it does not disturb in any way the financial relation of Nation and Capital; it is not based upon either the abolition or retention of the half-and-half law; it does not propose or involve changes in the municipal government of the District.

"It plans to bestow upon the 437,000 (now about 627,000) Americans of the District a distinctive, basic right of the American citizen—in a government of the people, by the people, for the people—in a government which roots its justice in consent of the governed—in a representative government which inseparably couples taxation and arms bearing as a soldier with representation.

"This distinctive American privilege decorates the American with a badge of honor and arms him with power. Its lack slurs the Washingtonian as unfit and defective and slurs the Nation as in this respect un-American and impotent.

"What the amendment proposes is equitable in itself and compulsory in accordance with American principles and traditions.

"It gives to residents of the District rights and privileges which, under our scheme of government, belong to all who pay national taxes and fight as national soldiers.

"It gives to residents of the District a self-protecting power in the national councils which is denied to the resident of no other community in all of the mainland and contiguous United States from Maine to Texas and from New York to California.

"In the matter of access to the Federal courts it raises District residents from a lower plane than that of aliens to the status of citizens of a State.

"National representation of the District will remove from the Nation the shame of impotency.

"It will proclaim to the world that the great Republic is as devoted to the principles of representative government and as capable of enforcing them as other republics with capitals in nation-controlled districts, like Mexico, Brazil, and Argentina. These nations have not found themselves impotent to give full national representation to the people of their capitals.

"It will proclaim to the world that the people of Washington are as fit to participate in national representative government as the people of Rio de Janeiro, Buenos Aires, and Mexico City. Washington will cease to be the only capital in all the world whose people, slurred as tainted or defective, are unworthy to enjoy the same national representation as that enjoyed by all other cities of the Nation.

"Washington will cease to be the only American community—numerous, intelligent, prosperous, public-spirited, and patriotic—in all the expanse of continental and contiguous United States whose fitness to exercise national privileges as well as to bear national burdens is denied.

"National representation will clothe the Washingtonian with a vital American privilege to which he is undeniably in equity entitled, will cleanse him of the stigma and stain of un-Americanism, and curing his political impotency will arm him with a certain power.

"It will relieve the Nation of the shame of un-Americanism at its heart and of impotency to cure this evil.

"It will inflict no injury or hardship upon either Nation or Capital to counteract these benefits."

The thought may occur to some that the small area of the District of Columbia would not entitle it to participate through its duly elected representatives in the councils of the Nation. But really it is the people and not the extent of territory which are capable and deserving of participation. According to the last Census Bureau estimate, the population of the District of Columbia as of July 1, 1937, is given as 627,000, and it is estimated that of this number over 400,000 are of voting age. The population of the District, according to the last official census (1930), was 486,869, which outnumbered the Americans residing in each of eight of the States—New Hampshire, Idaho, Arizona, New Mexico, Vermont, Delaware, Wyoming, and Nevada. At that time the population of Montana and of Utah exceeded very slightly the population of the District.

The population of voting age of the District in 1930 was 341,465, and exceeded that of each of 10 of the States. Some people throughout the country labor under the impression that most of the people residing in the District of Columbia vote back in the States, but this is by no means true, for a careful calculation of the number who possess and exercise the voting right in the States indicates that after all of these and unnaturalized foreigners are deducted, the resulting District of Columbia potential voters who can vote nowhere else would approximate that of New Hampshire and Utah and would exceed that of Arizona, Idaho, New Mexico, Vermont, Delaware, Wyoming, and Nevada.

On numerous occasions when I have been discussing in my own State and in other States the proposal to give the District national representation, I have been asked the question, "Why were these rights ever taken away from the people of the District?" The fact of the matter is, District residents never did enjoy the right to vote for Representatives in Congress or for President. It was something never taken away from them, because they never had it. They did, for more than 70 years, possess the right to vote for municipal officers in the several municipalities which simultaneously existed within the District. You must remember that when the seat of government was established here in 1800 there existed two incorporated towns, the city of Alexandria on the Virginia side of the Potomac, chartered by the Virginia Legislature; and the city of Georgetown, incorporated by the Legislature of Maryland.

In 1802 Congress incorporated the city of Washington and in addition set up a county government for the outlying area beyond the corporate limits of Alexandria, called Alexandria County; and another county government which included all of the territory beyond the corporate limits of Washington and Georgetown, called Washington County. These five local governmental units, in which the citizens had voting participation, continued until 1846, when the city of Alexandria and Alexandria County were ceded back to the State of Virginia. The three remaining self-governing units continued their separate existence until they were in 1871 consolidated into the so-called territorial government which covered the entire District as it exists today. This was the first time that a single local government covered the entire District of Columbia.

The plan of the Territorial government contracted, rather than expanded, the voting participation of the citizens. Under it the people were permitted to vote only for the 22 members of the lower branch of the legislature and for a voteless Delegate in the House of Representatives. The Governor, the council of 11 members which was the higher branch of the legislature, the Board of Public Works, and the Board of Health were all appointed by the President and confirmed by the Senate. This Territorial government was abolished in 1874, being succeeded by a temporary commission form, which was continued until 1878, when, with certain modifications, it was made permanent and is substantially the same as it is today. Three Commissioners appointed by the President are in charge of the affairs of the city.

From this brief sketch of the history of the government of the District of Columbia you can readily see that the District residents never possessed what is proposed to give them under the pending proposed amendment; that is, recognition as natural Americans, entitled to voting representation in the Congress and in the Electoral College. The chief difficulty with the present local government and with its predecessors, clear back to the time when the seat of the government was established here, in a large measure, has been due to the lack of the American plan of responsible representation of the people governed in the body which possessed the real power over them. I am inclined to the opinion that no worth-while and satisfying improvement in the local government of the District of Columbia is attainable until the District residents are accorded their natural right of representative participation in the Congress, which possesses and will continue to exercise over them the power of exclusive legislation in all cases whatsoever.

The prevalence of these political disabilities in the District of Columbia are not generally understood throughout the Nation. The impression just mentioned, that most residents of the District have a vote in the States, is only one of a number of prevailing erroneous ideas. Another is that the National Capital is a sort of tax-free paradise, supported entirely on the bounty of the Federal Government without obligation on the part of the local residents. This is entirely erroneous, for the fact of the matter is that the District pays annually in national taxes (internal revenue) an amount greater than that paid by each of more than one-half of the States.

Its annual payment in national taxes for national purposes is greater than the amount collected from nine States combined. In addition to the payment of national taxes just mentioned, District residents pay in local taxation for the support and upbuilding of the National Capital nearly 90 percent, while the Federal Government, which is the largest local industry, and the owner of extensive tax-free real estate, pays only a little over 10 percent.

I am glad to say that the people of the District of Columbia support this proposed amendment overwhelmingly. They have continued to knock at the doors of Congress annually for many years. Last spring they held an unofficial referendum in which there were cast over 95,000 ballots and of these 87,092 favored national representation, and only 6,832 voted against the proposal. To me this is convincing evidence that the people here, organized and unorganized, desire this legislation.

In conclusion, I wish to compliment the General Federation of Women's Clubs on having submitted this question to your constituent clubs for study. This, I understand, you did at the instance of your voteless and unrepresented sisters of the District of Columbia Federation. You are to be commended for laying the foundation for later intelligent, affirmative action. I believe that the General Federation of Women's Clubs and its affiliates throughout the country would do well to take an active interest in and support this proposed amendment with the weight of your organized and individual influence.

In the long fight for woman suffrage the women of the District of Columbia were always in the forefront of the battle. All the while they knew that when victory should crown their efforts they alone of all the women of the country would still be without a vote, unless, and until, another amendment was added to the Constitution, which would enfranchise them and the men also. The women did a good job in putting over the nineteenth amendment, but I feel that their work remains incomplete, and will so continue until the residents of the District, of both sexes, are given the franchise and voting representation in their government.

You know from your experience in working for legislation that the most potent force for obtaining action by the Congress is through the interest manifested in a proposal by the folks back home. Members of the Senate and of the House of Representatives always show a particular interest in the views of the folks whose votes sent them to Washington. There is no secret about this, for it is something well known to all of us and it is right that it should be so, for these men and women in Congress are only the representatives of the people who elected them.

I am impressed that this proposed amendment is far more important to the entire Nation than would appear upon a superficial examination of the subject. Here and now, at a time when orderly representative government is being challenged in many parts of the world, it is a dangerous, deadly, bad example to maintain at the heart of this great democratic Republic a complete despotism. What right have we to hurl denunciations and epithets at dictatorships and totalitarian states in other parts of the world when an almost perfect example of such irresponsible form of government is maintained by our National Government in our own National Capital? To my mind the time is long overdue for correcting so un-American a condition of government as exists here in the District of Columbia. If democracy is right and proper for the government of our States and of our Nation, it is right and proper that the same system be established and maintained in the Capital, and there should be no delay in removing this dangerous political cancer from the heart of the body politic.

Armament Program and Foreign Relations

EXTENSION OF REMARKS
OF
HON. H. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, JANUARY 22, 1939

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the RECORD an address delivered over the radio last evening by the very able junior Senator from Ohio [Mr. TAFT], on the American Forum of the Air, on the subject of our armament program and foreign relations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On January 4 the President of the United States devoted his annual message to Congress to an appeal for increased armament. He pictured a world about to be enveloped in the flames of war, and he pictured the United States as surrounded by deadly armaments and threats of new aggression. He appealed for increased appropriations for adequate defense. His message was followed several days later by a program calling for approximately $525,000,000, of which only $200,000,000 is to be spent in the fiscal year which ends July 1, 1940.

There can be no difference of opinion among Americans on the principle of providing for this country a completely adequate defense against attack by foreign nations. The amount proposed for expenditure over the next 2 years does not seem to be excessive, although there may be differences of opinion on the exact number of military airplanes which it is necessary or desirable to construct at one time. It should be remembered, however, that the appropriation for Army and Navy has increased from $520,000,000 in 1934 to $1,100,000,000 in the regular Budget for 1940, even before we add the additional $200,000,000 requested for 1940. The committees of Congress will examine carefully the details of the national-defense program and will provide sufficient funds to give us the most modern and adequate defense; and there will be no partisanship involved in that examination.

But the message of the President suggests that he favors a foreign policy very different from mere defense of the United States, and one which in the end would require much greater armament. A year ago in Chicago he declared his belief that we should "quarantine the aggressor nations." Now he says, "The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one, we must now make up our minds to save all." It is somewhat difficult to see how we can save democracy and good faith among nations by any policy of mere defense of the United States. The President says that we cannot safely be indifferent to international lawlessness anywhere in the world, and cannot let pass, without effective protest, acts of aggression against sister nations. It is true that he admits that the American people are not yet willing to go to war in other parts of the world, but he says, "There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people." He declares against neutrality legislation and implies that he favors the repeal of the neutrality law. All this cannot mean anything except that the President wishes power granted to him by Congress to favor one nation or another in any dispute that arises and to employ economic sanctions or embargoes against a nation that he does not like, at the same time that he assists those that he does like.

The President's views are apparently reflected by the Senator from Nevada who has preceded me this evening, and who is chairman of the Foreign Relations Committee of the Senate. On December 22, 1938, after declaring that the people of the United States do not like the Government of Japan, and do not like the Government of Germany, but saying nothing about their feelings toward the Government of Russia, Senator PITTMAN said, "The people of the United States have the right and power to enforce morality and justice in accordance with the peace treaties with us, and they will. Our Government does not have to use military force, and will not unless necessary." The necessary implication is that he would employ not only economic sanctions, but military force if necessary, to enforce morality and justice throughout the world. On January 10 Senator PITTMAN advocated an embargo on all war materials to Japan, while permitting such materials to go to China.

In my opinion, such a policy leads inevitably to foreign war. It is contrary to the traditional policy of the United States from the days of George Washington. The position of this country has always been that it would remain neutral in any foreign war, no matter how much its sympathies might be on one side, as long as its own rights or those of its citizens were not infringed upon. This is a policy which was emphatically reaffirmed by the American people in 1920, when it was proposed that we join the League of Nations.

There is much to be said in theory in favor of a general agreement for collective security, by which a number of nations, sufficiently strong to dominate the world, undertake to prevent aggression, even though their collective action leads to war. There is a reasonable chance that such a policy might succeed. Our people, however, refused in 1920 to adopt it, and the efforts made under the League of Nations, without our cooperation, have now completely broken down. But the policy of the President and Senator PITTMAN under present conditions is not the policy of a League of Nations; it is completely original. No one has ever suggested before that a single nation should range over the world, like a knight errant, protecting democracy and ideals of good faith, and tilting, like Don Quixote, against the windmills of fascism. The unsoundness and danger of such a course was eloquently set forth by Senator BORAH over a national radio forum on March 28, 1938.

Of course, such a policy is not only vain, but almost inevitably leads to war. If we enforce an effective embargo against Japan, driving its people to starvation, as Senator PITTMAN suggests, it would be only natural for Japan to attack the Philippines, and our whole standing and prestige would become involved in an Asiatic war. If the Spanish embargo is lifted and an American ship carrying munitions is sunk by an Italian cruiser as it approaches Barcelona, it is hard to see how we could avoid a controversy with Italy, which might flame into a general war. We apparently are asked to line up with England and France, and probably Communist Russia, without even knowing what their policies may be, or whether they will back up the stand that we may take.

It is proposed that we repeal the embargo against Government Spain. But this embargo is not only an embargo against Government Spain but against both Government Spain and the Franco insurgents. There is no partiality in our position. It happens that Franco is supplied by Italy and Germany, and the only reason why Government Spain is hampered is that England and France are enforcing to some extent an embargo against Government Spain. Yet we are asked, in defense of democracy, to do the very thing the great democracies of Europe, on the very doorstep of Spain, and infinitely more concerned than we, are apparently unwilling to do themselves.

I have received this week over 25,000 letters and telegrams regarding the lifting of the Spanish embargo. It is physically impossible for me to reply to all of these communications. Several weeks ago I took a definite position against lifting the Spanish embargo, because I feel the policy declared 2 years ago is impartial and more likely to keep us out of war than any different policy which we might adopt at this time.

Congress was wise in passing the neutrality bill, which prohibits the shipment of arms, ammunition, and implements of war to belligerent states. I believe the President should long ago have found a state of war to exist between China and Japan, which he had full power to do, so that munitions might not be shipped either to Japan or China. The neutrality law intends that we shall not manufacture munitions for foreign wars. It provides, further, that in case of war, nations must come to this country and pay for all articles other than munitions to be shipped abroad before they are shipped. Its purpose is to reduce the chances of our becoming involved, and I believe it will assist greatly the accomplishment of that purpose. It is in accord in spirit with the whole policy of American neutrality for 150 years.

But now it is suggested that the whole world is different. It is said that distances are so short we cannot possibly avoid being involved in a general war. I don't believe it. I think if we are sufficiently determined not to become involved, we can stay out. We learned our lesson in 1917. We learned that modern war defeats its own purposes. A war to preserve democracy resulted in the destruction of more democracies than it preserved. We may go in on the side of France and England because they are democracies and find before we are through that they are Communist or Fascist.

Not only that, a war, whether to preserve democracy or otherwise, would almost certainly destroy democracy in the United States. We have moved far toward totalitarian government already. The additional powers sought by the President in case of war, the nationalization of all industry and all capital and all labor, already proposed in bills before Congress, would create a Socialist dictatorship which it would be impossible to dissolve when the war ended.

The United States is in a fortunate position, a selfishly fortunate position, if you please. In Europe races are so mingled that no one can draw boundaries without leaving minorities which are a perpetual source of friction. In the end a war seems unfortunately probable—a war likely to destroy in a few short years the civilization which Europe has taken centuries to build. In that war the United States need not and shall not be involved. We have an isolated location, and it is still isolated in spite of all the improvements in air transportation. The best military authorities say that we can defend ourselves, and the Caribbean Sea south of us, if we maintain an adequate navy and an attendant air force. During any war we can be self-sufficient. This very position makes it less likely that any nation would wish to attack us.

There is a general illusion that we see in Germany and Italy forces which threaten to overwhelm England and France, and

march on to attack the United States. But this is surely an imaginary fear at the present time. There is no reason to believe that Germany and Italy could defeat England and France in any protracted war. It is hard to see what they would gain even after a successful war by an attack on the United States. Certainly the physical strength of our position would make any nations hesitate, no matter how strong they might be. The picture presented this evening by Senator PITTMAN simply will not bear the analysis of calm examination.

It is natural that the sympathy of our people should be strongly aroused when they see what is going on under the totalitarian governments. Perhaps the President should tell them what we think of them, especially as the day seems to have passed when nations go to war because others call them unpleasant names. But the great majority of the people are determined that those sympathies do not lead us into overt acts of embargo, blockade, or economic sanctions.

Considering the attitude which the President has taken, it seems essential that Congress shall strengthen the neutrality bill rather than repeal it. It seems essential that the President shall not have discretion to take sides in foreign wars, or impose sanctions against those nations which he might find to be aggressor nations. It seems wise not to repeal the Johnson Act, as is now being suggested, and to maintain a policy of lending as little money as possible abroad, for foreign loans today are certainly made precarious by the possibility of war and likely to stimulate temporarily a production of exportable goods which cannot be sustained. Congress is the body upon which is conferred by the Constitution power to declare war. It should not permit the Executive to go so far toward war, without consulting Congress, that Congress and the people no longer have the power to prevent war.

I do not say that some special situation may not arise in the future under which it may seem desirable to go to war as the first step in an effective defense. But if such a situation ever arises it should be undertaken deliberately, after a thorough public discussion by the people and by Congress as the representatives chosen by the people.

Many justifiable criticisms can be made of the Neutrality Act, and of any special type of neutrality. But the horrors of modern war are so great, its futility is so evident, its effect on democracy itself so destructive, that almost any alternative is more to be desired. The people of the United States are overwhelmingly in favor of keeping out of other people's affairs, no matter what their individual sympathies may be for or against those people. They will not support armaments required to carry out any such policy as that suggested in the President's message and supported by Senator PITTMAN.

Scrap Iron

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM THE WASHINGTON SUNDAY STAR OF JANUARY 22, 1939

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in yesterday's Sunday Star of Washington, D. C., under the headline "Scrap Iron."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sunday Star, Washington, D. C., January 22, 1939]

SCRAP IRON

Exports of scrap iron from the United States increased from 227,500 long tons in 1932 to 4,095,000 in 1937. Japan alone increased her purchases here during that period from 164,500 to 1,091,000 tons. American "scrap" has been one of Japan's most important and indispensable raw materials for the production of munitions of war for use against China. Britain's vast rearmament program also led to a tremendous jump in her scrap-iron orders. They rose from less than 1,000 tons 7 years ago to 845,000 tons in 1937. Italy took 6,700 tons in 1932 and 381,400, 2 years ago. We used to sell Germany only 100 tons. The Nazis in 1937 bought 88,000.

So Uncle Sam is the world's great purveyor of one of the basic rawstuffs from which death-dealing implements of war are fabricated.

Senator SCHWELLENBACH, Democrat, of Washington, who is frequently an exponent of administration policy, proposes legislation to regulate exports of scrap metals in order to conserve national supplies vital to this country in wartime. His projected bill is not only sound doctrine from that standpoint but it seems inconsistent that we should be furnishing certain potential enemies of the United States with the basic material for weapons that may some day be turned against these shores and our own citizens.

Mr. Roosevelt observed in his recent message to Congress that there are available to this country "methods short of war" for commanding respect for our rights and for the ideals which we cherish. Chief among the economic weapons which the United States possesses is its matchless wealth in natural products and in their byproducts. Scrap iron, as the export figures prove, is not the least considerable of these weapons.

Preaching peace with one gesture and, with another, openhandedly selling scrap iron to nations feverishly arming for war savors of a moral paradox.

Secretary Hull last summer, by a mere request, persuaded the overwhelming majority of our aircraft industry to quit selling planes and bombs to countries that condone the bombing of civilian populations. Perhaps if the State Department were to make kindred representations to dealers in scrap iron, it might obviate the necessity of legislation such as Senator SCHWELLENBACH advocates. If it did not have that effect, there would be even a stronger case for an embargo law.

The Schwellenbach bill is in line with the efforts now being made by a highly representative committee of citizens, called the American Committee for Nonparticipation in Japanese Aggression, of which former Secretary of State Henry L. Stimson is honorary chairman. It was Mr. Stimson, who, early in the China war in a notable public statement, sought to arouse the American people to the inconsistency of sympathizing with China while continuing to supply Japan with the sinews of war. In the latest statement of the committee headed by Colonel Stimson it is asserted that "Japanese shrapnel hurtling through the air to kill or maim, is made from scrap iron gathered and shipped by American junk dealers."

Silver Purchases

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

EXCERPTS FROM ADDITIONAL LETTERS CONCERNING SENATE JOINT RESOLUTION 1, FOR SUSPENSION OF SILVER PURCHASES PENDING INQUIRY BY CONGRESS

Mr. TOWNSEND. Mr. President, on Thursday last, at my request, there were printed in the Appendix of the RECORD excerpts from letters received by me with reference to Senate Joint Resolution No. 1, providing for the appointment of a special joint committee to investigate the silver program, and for other purposes. I now present excerpts from additional letters concerning the same matter, and ask that they also be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

From the chairman of a Chicago firm of printers:

I am interested in the resolution which provides for a general committee of 10 members to investigate the silver program, and for other purposes. I am interested because I feel that the silver program is an absolute waste of the taxpayers' money and is an out-and-out subsidy to the silver miners.

In these days when taxes are mounting to astronomical figures, it seems to me an absolute crime that we should spend money to buy silver at all and especially to buy it at higher than the market. I would appreciate your help in having all silver legislation repealed.

From the president of an Omaha, Nebr., creamery company:

As I understand Senate Joint Resolution No. —, introduced by Senator JOHN G. TOWNSEND, JR., of Delaware, it calls for a joint committee to investigate the silver-purchase program.

The published records of the amount of silver purchased by the Government and the amount of which is of foreign origin, surely warrants such an investigation and remedial action.

I agree with a good many others with whom I have talked that it is time that this Government stopped purchasing, at fictitious prices, the silver, not only of the United States, but also a great deal of the rest of the world. We sincerely hope that this Congress will see that this practice is discontinued.

This Government has surely spent money enough for the benefit of the few individuals who produce silver.

From a Rockford, Ill., banker:

I am heartily in agreement with your proposed silver program. Surely this country has played the part of the good Samaritan long enough to other nations who have been selling us silver in large quantities, very much to the detriment of ourselves.

From a resident of Greensburg, Pa.:

I have recently seen a copy of Senate Joint Resolution No. 1, introduced by Senator TOWNSEND, of Delaware, providing for the investigation of the silver program.

It has seemed to me that the American purchases of silver in recent years have benefited principally the Mexican and Japanese Governments, and I therefore believe that a fair and complete investigation of the whole silver program is very desirable.

I therefore respectfully urge your support for that resolution.

From a Cleveland, Ohio, insurance executive:

I understand that Senate Joint Resolution No. 1, introduced by you, is right to the point, and along the lines which many of us have been hopefully awaiting for some time.

There is no question in my mind but that it would be wise to complete such investigation as proposed. I do hope that vigorous effort will be made to follow the nature and intent of this resolution providing for the suspension of all purchases of foreign silver until the recommendations made by the joint committee are available.

From a Dallas (Tex.) economist:

I have written letters to the Honorable ROBERT F. WAGNER and the Honorable CARTER GLASS, urging the early adoption of your resolution to investigate the silver policies of the United States Government. I am enclosing copies of these letters for your information.

I sincerely hope that your resolution will be adopted, for I see no reason to have our Government continue the payment of an outright bonus to the silver interests of the United States.

From a Passaic (N. J.) manufacturer:

I agree that it is wise to provide for an investigation such as you propose in Senate Joint Resolution No. 1.

From a Detroit (Mich.) businessman:

I am writing you in regard to Senate Joint Resolution No. 1, which you introduced, providing for a joint committee to investigate the silver program and other purposes.

It seems to me that it is highly important that such a joint committee be authorized for the purpose of developing:

(1) A sound currency system.
(2) Some method of compromising the war debts.
(3) A return to the gold standard.
(4) The reestablishment of world trade.

While this committee may not be able to handle all of these matters, there are many subjects which they will discuss and which would be tending toward the accomplishment of the above aims.

Your consideration of these points, as well as your continued and energetic support of this joint resolution, therefore is being urged.

From a Pittsburg, Pa., law firm:

I am writing you in support of Senate Joint Resolution No. 1, introduced by you, providing for a joint committee of 10 members to investigate the silver program and for other purposes. The resolution provides also for the suspension of all purchases of foreign silver pending the submission of recommendations by the joint committee. It is difficult to find a sound argument against a proposal that is intended to provide Congress with facts that should be in its possession if it is to give intelligent consideration to the questions of continuing, revising, or abandoning our present silver policy.

I believe that this action is most important for the safety of the financial structure of our country and the good of the overwhelming majority of its citizens and am looking forward to its adoption.

From a joint letter from seven Bostonians:

We are strongly in favor of the passage of Senate Joint Resolution No. 1, introduced by you, providing for the investigation of the silver program and for other purposes.

From a Newark, N. J., resident:

I wish to put myself on record as being heartily in favor of Senate Joint Resolution No. 1, which you have introduced, since I feel that it is very necessary to eliminate the purchase of silver. It has not accomplished its purpose, and has only resulted in greater difficulties in certain silver countries—such as China—and has certainly not been of any particular advantage to us in Mexico.

From a Boston, Mass., businessman:

I am heartily in favor of the Senate Joint Resolution No. 1, introduced by you, and hope it will be passed in order to do away with the vicious, unfair, and uneconomical silver purchase law now in operation.

Foreign Policy of United States

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM LIBERTY OF JANUARY 28, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a portion of the January 28, 1939, editorial in Liberty magazine.

It seems to me it is about time someone should speak up in the press and on the public platform against the foreign policy now being pursued by our State Department and many of our administration officials. We must solve our own problems, and if we bend our minds to that we shall have no time left for roving the world. One world-roving expedition ought to be enough. The terrible and awful results of that monumental folly now haunt every legislative chamber and every executive and judicial chamber throughout our land.

There being no objection, the portion of the editorial referred to was ordered to be printed in the RECORD, as follows:

[From Liberty of January 28, 1939]

SHALL WE BE FORCED INTO WAR BY RECKLESS OFFICIALS?

We will have to admit that we have harrowing problems of our own, and we should attend to our own business and leave the affairs of other nations strictly alone. But what can we do to stop the harebrained officials of this country from bull baiting other nations?

Some of our officials are not unlike Hitler in their colossal self-esteem. They doubtless have an idea that they could efficiently manage the entire world, notwithstanding convincing evidence that they have made a ghastly failure of managing this Government.

Now, we are far away from the war-making nations, and until the last few months we have studiously refrained from mixing in their mad preparations for war. And why should we try to compel any nation, through taunting criticism or through moral suasion—especially Germany—to adhere to our particular creed?

* * * * * * * *

* * * We have a perfect right to express our opinions as publicly as we may desire—as private citizens—but the officials of this country have no right to express sarcastic and offensive personal opinions of other nations. They are not speaking for themselves. Whatever they say is an official utterance. It becomes the voice of the people of this country, and it is accepted abroad as the attitude of our National Government. And even offensive remarks by the officials of other nations are no excuse for a similar offense by our officials.

We certainly want to keep out of war. We do not want to fight Germany or any other country because of its failure to follow our governmental ideals. We are facing grave governmental emergencies. God knows they are serious enough to take the entire time and attention of our officials—and then some.

We have no reason to be proud of our national status at this time. We have more people on relief than the combined total of all the European nations, and the dictators of the totalitarian nations only laugh at us when they make comparisons. And they have good reason.

However, the people of this country are determined to pull out of our trouble in spite of the powerful official handicap we are facing—and we hope it will be soon. We have had entirely too much encouragement of class hatred by the officials of the present administration. They seem to enjoy setting group against group, labor against capital.

And now we have the attack on the German nation by Secretary Ickes.

* * * * * * *

He has seriously offended every well-balanced American who wants to keep out of war.

We have many fine citizens of German origin in this country. * * * Our officials are certainly going outside of their domain when they represent this Government in provocative criticisms of Germany's national affairs.

We hear much about "face saving" in Washington. It has been rumored that the mountain of debt the present administration has incurred will certainly bring the wreckage that comes with national bankruptcy. But it has been maintained that a war will save the face of the present administration, and if our country is to be plunged into a bloody conflict for such a reason, our national affairs are in the hands of malicious, heartless politicians.

The calamity we may fear through bankruptcy is indeed a disastrous possibility. But to think that thousands, perhaps millions, of our young men may lose their lives to save the face of the New Deal represents what might fairly be termed a helluva situation.

BERNARR MACFADDEN.

Relief

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

ARTICLE BY DR. GEORGE GALLUP

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the RECORD an article by Dr. George Gallup entitled "Nation's Voters Back Drive to Take Politics Out of Relief," published in the Washington Post of yesterday.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION'S VOTERS BACK DRIVE TO TAKE POLITICS OUT OF RELIEF—BOTH PARTIES LAUD CONGRESS CAMPAIGN—MAJORITY FAVORS CIVIL SERVICE FOR ALL W. P. A. OFFICIALS—WOULD PROHIBIT ALL PERSONS ON RELIEF FROM CONTRIBUTING TO POLITICAL CAMPAIGN

(By Dr. George Gallup, director, American Institute of Public Opinion)

NEW YORK, January 22.—The determined drive in Congress to take politics out of relief—a drive which began the very first day of the session—is overwhelmingly approved by the Nation's voters, the majority of whom have never been wholly satisfied with the administration of relief under the New Deal.

Those facts are revealed in a series of more than 15 public opinion surveys on the relief question conducted in recent months by the American Institute of Public Opinion. The latest soundings, as well as earlier surveys, indicate a widespread desire for changes in the technique of relief administration, a belief in strong laws and policies to stamp politics out of relief, and a conviction that relief must be looked upon as a permanent Government problem. The campaign in Congress for reform of the relief administration finds the public in a most receptive mood.

The testimony of Harry Hopkins, the reports of the Sheppard and Byrnes committees on relief abuses, and the revival of the Hatch amendment have all focused attention on the relief issue in recent weeks. Actually, however, public dissatisfaction with relief methods dates back for many months. Almost a year ago an institute survey found that a large majority of voters—about 8 in every 10—had become convinced that politics colored the handling of relief in their communities. There was a virtually unanimous vote that such abuses should be eliminated.

In the course of testing opinion on the relief issue, the institute collected the public's views on many specific plans for eliminating politics from the W. P. A. Its latest study, just completed, measured sentiment on a number of the proposals made by the Sheppard committee which investigated abuses in the last election. Other surveys have covered the principles of the Hatch amendment reintroduced at this session, as well as other aspects of the problem.

SEVERAL PLANS FAVORED BY PUBLIC IN SURVEY

From all these studies a composite picture of public sentiment can be drawn about as follows:

1. A large majority of voters believe that all relief officials should be put under civil service as a means of eliminating politics and favoritism in appointments. This vote is a reflection of widespread public faith, often noted in institute surveys, in the civil-service system as opposed to the spoils system.

2. Nearly 9 in every 10 voters favor a drastic law against allowing anybody to influence the vote of persons on relief either through coercion or promise of reward. The Hatch amendment, which failed to pass in the last session, sought to accomplish this reform.

3. By a vote of more than 7 to 3, the public believes that neither persons on relief nor relief officials should be allowed to contribute money to a political campaign—two of the recommendations of the Sheppard committee. The voters also support, 6 to 4, the committee's proposal that all Federal employees be prohibited from contributing money to campaigns.

4. A large majority of voters (73 percent) feel that relief would be better administered by a bipartisan board than by a single administrator, as at present. This plan, sponsored by Senator BAILEY, of North Carolina, is favored by voters chiefly because they think that control by a bipartisan board will help to eliminate graft and political preference. Even Democratic voters approve the plan.

One fact emphasized by the survey results in that attitudes on the relief question cut across party lines. The pattern is not one where the rank and file of Democrats think one way and the Republicans another. Instead the surveys find that both camps are equally anxious to see politics and graft purged from relief.

For example, large majorities of both Democrats and Republicans think it should be considered a crime for a relief official to try to influence the vote of persons on relief. Bringing relief officials under civil service is favored by more than 70 percent of both Republicans and Democrats, who also agree that reliefers should not contribute money to political campaigns, and that relief funds should be administered by a bipartisan board.

Thus there is every indication that New Deal Senators and Congressmen who advocate reforms in relief are carrying out the wishes of their own party members in addition to forestalling criticism from their Republican foes.

RELIEF A PERMANENT GOVERNMENT RESPONSIBILITY, VOTERS SAY

In the early days of the New Deal there was much debate as to whether it was the Government's responsibility to take care of needy persons out of work. Recent Institute studies show that this principle is now a definite part of the social philosophy of our times. Approximately 70 percent of voters declare that the Government should take responsibility for the jobless. About the same number think that the relief problem is no temporary phenomenon, but that relief appropriations will have to continue permanently.

The majority also feel, however, that the Government is doing enough for the unemployed. When the Institute asked voters recently "Do you think that people on relief in your community are getting as much as they should?" a majority of 71 percent said "yes." And other surveys indicate that the dominant pull of public opinion at the moment is more in the direction of reducing relief appropriations than in the direction of raising them.

WHAT THE PUBLIC THINKS

Following is a summary of institute surveys touching various aspects of the politics-in-relief issue:

1. Would you favor a law prohibiting any person on relief from contributing money to a political campaign? Yes, 78 percent; no, 22 percent.

Would you favor a law prohibiting any relief official from contributing money to a political campaign? Yes, 70 percent; no, 30 percent.

2. Should employees of the Federal Government be prohibited from contributing money to political campaigns? Yes, 62 percent; no, 38 percent.

3. Would you favor a law making it a crime for a relief official to attempt to influence the vote of persons on relief? (Survey taken May 1938.) Yes, 86 percent; no, 14 percent.

4. Do you think officials in charge of relief should be under civil service? (Survey taken November 1938.) Yes, 75 percent; no, 25 percent.

5. How large a part does politics play in giving relief in your community—none, a little, or quite a bit? (Survey taken May 1938.) None, 16 percent; a little, 31 percent; quite a bit, 53 percent.

The Wright Airplane

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM THE MIAMI HERALD

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial from the Miami Herald of January 6, 1939, in regard to the first airplane to fly successfully in America, driven mechanically, carrying a weight more than that of a man, which occurred at Kitty Hawk, N. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Miami (Fla.) Herald of January 6, 1939]

BEHIND THE FRONT PAGE

(By Ellis Hollums)

The battle to "right the wrong" done Orville and Wilbur Wright by the Smithsonian Institution is still going on, and, in connection with the all-American air races in Miami this week, Mrs. Fred J. Bartlett, widow of North Carolina's governor of the National Aeronautic Association, reminds us that the first heavier-than-air machine to really fly still rests in a British museum at South Kensington, London.

The late Mr. Bartlett devoted many years of his life campaigning for the idea that the historic relic belongs in America. Orville Wright (Wilbur died many years ago) is steadfast in refusing to allow the Wright brothers' first plane to be brought back to this country until the Smithsonian Institution removes the Samuel Langley plane out of the museum. The institution has continued to give credit to Langley instead of the Wrights for having flown the first plane. Of course, the public generally concedes the credit to the Wrights, but Orville is unwilling to yield his contention until the Smithsonian also concedes.

The movement to have the recognition granted gained considerable headway in North Carolina under Mr. Bartlett's direction, and his widow is carrying on the fight, now that he is no longer here to maintain it. Senator ROBERT R. ("Our Bob") REYNOLDS, of North Carolina, has a bill pending in Congress to appropriate $50,000 to be used in bringing "the bird back to its nest" at Kitty Hawk, N. C.

The Wright plane was successfully flown over the sand dunes at Kitty Hawk in December 1903. The queer-looking contraption left the ground and made sustained flights varying from 12 to 59 seconds. They had established the principle, and out of their work grew the present-day airplane. When the Smithsonian gave credit to Dr. Langley of being first with the heavier-than-air ship the Wrights naturally were indignant. When the British museum invited them to send their ship over they did so, but made a proviso that they could repossess it at their pleasure. So it is not impossible to get it back, and the Carolinians want to set up a place for it at Kitty Hawk.

The Red River Dam

EXTENSION OF REMARKS
OF
HON. WILBURN CARTWRIGHT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1939

Mr. CARTWRIGHT. Mr. Speaker, Governor Phillips, of Oklahoma, has strongly condemned the action of Congress in authorizing construction of the $54,000,000 Red River Dam between Durant, Okla., and Denison, Tex., and had a personal representative in Washington last week to present his opposition. He makes it appear that I, as Representative of the Third District, and other Members of the Oklahoma delegation in Congress have been blind to the interests of Oklahoma and working for the benefit of Texas, Louisiana, and Arkansas.

I am very much interested in the construction of this dam for the benefit of my State and district and have worked on it for years, in cooperation with Congressman SAM RAYBURN, of Texas, and with the support of the Oklahoma delegation in Congress.

GOVERNOR NOT FULLY INFORMED

I have a great deal of respect for my old friend Governor Phillips, but I believe he has been misinformed on this, the greatest Federal project that has ever come to Oklahoma.

In his first message to the Oklahoma Legislature, among other things, he said the construction of the dam:

> Will completely inundate many miles of important State highways, railroads, etc. * * * It will take permanently from the tax rolls of the school districts, counties, and cities in southern and southeastern Oklahoma a large part of the most valuable agricultural land * * * It amounts to the proposed destruction of land, streams, and natural resources without our consent * * * It was designed for the almost exclusive benefit of the States of Texas, Louisiana, and Arkansas * * * Neither the views, concerns, objections, nor advice of the sovereign State of Oklahoma have ever been invited or heard by either branch of Congress or by any committee thereof * * * It constitutes the most shocking disregard of State rights that has yet occurred * * * It aims at the destruction of the Union.

He says the object is to divert the waters of Red River into Trinity River for the benefit of Texas, and that such a dam will not prevent but will cause floods. He advocates building 56 smaller dams with the same amount of money.

It is evident that the Governor has not been fully informed about the Red River project, or he would not have made such statements.

Of course, the United States will make adequate provision for relocation and rebuilding of highways and railroads, and construction of bridges and viaducts over lakeside necks.

WILL INCREASE LAND VALUES

Land which it is necessary to acquire will be purchased and the owners paid a fair price in cash. Much of it is heavily mortgaged. Many thousands of acres of first bottom land along the river where it has always been hazardous to attempt to grow crops on account of floods will be safe when no floods occur on Red River as a result of the dam, and the value of this land will be increased by millions of dollars.

Other land along the shore line of the great lake to be created will have a largely increased value for purposes of local taxation and otherwise.

Oklahoma's water rights are amply protected by an express provision written into the act authorizing the dam. No such provision was made applying to any other State.

GREAT RECREATION CENTER

While Texas, Arkansas, and Louisiana will share in the flood-control benefits, Oklahoma will get the advantages of a great recreational center and the benefits of the cheap electric power to be generated, making possible establishment of new industries to provide new tax values and employment for our people, as well as substantial savings on electric bills even with extended uses of electricity.

POWER OF CONDEMNATION

There is no question about the United States having the power to construct dams across navigable streams and their tributaries. The States have delegated such powers to the Congress. The consent of the State is not necessary. The question has been passed upon by the Supreme Court and decided in an opinion by Mr. Justice Brandeis.

STATE CONSENT NOT NECESSARY

If such a new doctrine of States' rights as Governor Phillips advocated were put into practice the Federal Government could not construct a post-office building in any State if someone in high official position in the State, such as the Governor, objected. If such a doctrine had been in effect it might have been impossible for the United States to have built the Veterans' Hospital at Muskogee, or the $1,000,000 Indian Hospital at Talihina. We could not do anything to control floods or harness water power in Oklahoma or any other State if some opposing influence could sway the Governor or one branch of the State legislature. If it had been necessary to have such a form of "unanimous consent" none of the Tennessee Valley dams could have been built.

STATE OFFICIALS HEARD

The statement that Oklahoma was not represented at the hearings last year is incorrect. Several outstanding citizens of Oklahoma, officially representing the State government, presented their views to the Flood Control Committee. Among them were Dr. Henry G. Bennett, president of the Oklahoma Planning and Resources Board; Walter Archibald, of Durant, a member of that board; and F. L. Vaughn, director of the Water Resources Board of Oklahoma. The record of the hearings show that they approved and recommended the Denison Dam project, with certain reservations, which were met by committee amendments. Members of Congress from Oklahoma all gave careful consideration to the project, and most of them appeared before the committee in support of it. Personally I feel that Oklahoma has been recognized and well represented.

The rumor that waters impounded by the Denison-Durant Dam might be diverted into the Trinity River is fantastic. I think the cities of Dallas and Fort Worth would be the first to oppose such a proposal.

OTHER PROJECTS ENDANGERED

As for causing floods, the reserve storage for floodwaters, above the permanent power pool, will be more than ample to take care of the largest flood on record. The double-purpose dam, providing for flood control and electric power, has proven to be the most economical and practical, and if Oklahoma objects to this type of dam and the biggest and most important project, it is most likely that our State will lose other all-Federal projects which have been authorized for Oklahoma, as the "tail would go with the hide." Other States are unanimous in their cry for this money to be spent with them.

DESTROYS OWN ARGUMENT

Governor Phillips opposes the Red River Dam because it will cover up good land. The 56 smaller dams he proposes would certainly cover up more land than the 1 big dam. He destroys his own argument. And the smaller dams would be too small for practical use in generating cheap electricity for the common people.

PROVIDES MUCH EMPLOYMENT

I consider the Red River dam a very constructive and progressive proposition. It should be remembered that there are no more frontiers to conquer; that we can no longer say, "Go West, young man, and grow up with the country"—settle on 160 acres of virgin land. We must let down our buckets where we are, develop the country we have, control and utilize our waters and protect and rebuild our soils in the public interest, at the same time providing work for our unemployed on beneficial investments. Unemployment is Oklahoma's greatest problem, and this project will provide much-needed jobs for three or four thousand workers for 4 or 5 years, all the cost to be paid by the Federal Government.

RURAL ELECTRIFICATION

I am particularly interested in opportunities for rural electrification which this project will make possible for many Oklahoma and Texas farm families. Last summer I was in Europe and found that almost all the rural communities in continental Europe are electrified. I want the people of Oklahoma to have the advantages of cheap electricity in their homes, and for industrial use.

ISSUE IN CAMPAIGN

This Red River Dam was an issue in my campaign last year, and my opponents tried to make capital of my support of it without declaring their own position. I said then, and I repeat now:

"I am not the kind of a candidate who is for the dam below the dam, against the dam above the dam, and who doesn't give a dam away from the dam. I am for the dam."

Increase in Our Agricultural Exports Due to Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 13, 1939

Mr. BUCK. Mr. Speaker, the Seventy-sixth Congress has now been in existence some 10 days. During the portion of that time that it has been in session we have already been forced to listen to the old war cries of political die-hards. One of their pet hates has been and still is the Reciprocal Trade Act of 1934 and the reciprocal-trade agreements made pursuant to the authority of that act. Since the last session of Congress two new outstanding agreements have been entered into, that with the United Kingdom and its colonies, and the revised agreement with Canada. General approval has been given both of these agreements by American editorial opinion. By the second week of December 1938, the agreements having been signed on November 17, a tabulation of this editorial opinion showed that out of 492 publications polled, 318 expressed favorable opinions, 80 unfavorable, and 94 neutral.

Despite this general approval, which is echoed by popular opinion itself, an attempt is being made deliberately to convince the farmers of the Nation that agricultural products have suffered materially at the hands of the United States negotiators. Not all of the political opponents of this administration are participating in this attempt to humbug the farmer. One who has seen the light clearly is the Republican nominee for Vice President in the last campaign, Hon. Frank Knox, of Chicago, who just the other day, addressing a gathering of his Republican colleagues in South Dakota, went even further than this administration has gone and stated unequivocally that his party should give up advocating the present system of tariffs. But the Republican leaders in the House sing another tune.

The fact is that the trade agreements have been drawn up so as to prevent imports of commodities competitive with domestic farm products from disturbing home markets. Quotas, in most cases, have been attached to the few concessions made. On the other hand, our agriculture has gained enormous benefits through concessions made us by the trade-agreement countries on imports of our farm products into their countries. For instance, farmers in my own State of California benefit by 221 reductions of duty on exportable farm products contained in these agreements, an average of over 12 reductions per country, in addition to binding of duties or free entry on many other agricultural products. In our case these reductions occur on such diverse exportable farm products as asparagus, apples, beans, barley, oranges, onions, sardines, and prepared milk. Farmers in other States benefit by other reductions.

At a later date I hope to be able to comment on the results of the new agreements with the United Kingdom and Canada, but they have not been in effect long enough as yet for anyone to speak intelligently of their ultimate effect. Today I desire to consider what has been the effect on our farm exports generally under the 16 other trade agreements which have been entered into since the passage of the Reciprocal Trade Agreements Act.

One must remember that trade data for the past 4 years has been distorted by fluctuations in industrial activity and by drought and other climatic factors in the agricultural sections. In spite of these, available data on our foreign trade in agricultural products indicate that the agreements have substantially benefited American farmers. The increase in American agricultural exports to those countries with which we had trade agreements in effect in 1937 has been much greater and speedier than that in similar exports to other countries. The table below, published in December 1938 by the Bureau of Agricultural Economics, United States Department of Agriculture, shows the course of our trade with trade-agreement countries, comparing it to that of our trade with other countries. This table covers agreements with the 16 countries which were in effect by August 1937. Most of these were also in effect during 1936. The four agreements concluded during 1938 are not considered in the table since none of them appreciably affected data for that period. However, these agreements, especially that with the United Kingdom, are expected to greatly increase the extent to which farmers will benefit from the trade-agreements program.

United States foreign trade with trade-agreement countries[1] and with other countries

	Year ended June 30—				
	1935–36	1936–37	1937–38[2]	Increase (+) or decrease (−) 1937–38 over 1935–36	
	Million dollars	*Million dollars*	*Million dollars*	*Million dollars*	*Percent*
United States (domestic) exports:					
Of all commodities:					
To the 16 countries	805	1,034	1,236	+431	+54
To all other countries	1,570	1,757	2,123	+553	+35
Of farm products:					
To the 16 countries	186	207	288	+102	+55
To all other countries	580	525	600	+20	+3
United States imports (for consumption):					
Of all commodities:					
From the 16 countries	934	1,194	970	+36	+4
From all other countries	1,274	1,698	1,361	+87	+7
Of agricultural commodities:					
From the 16 countries	468	600	454	−14	−3
From all other countries	674	937	701	+27	+4

[1] Belgium; Brazil; Canada; Colombia; Costa Rica; Cuba; El Salvador; Finland; France, including her colonies, dependencies, and protectorates other than Morocco; Guatemala; Honduras; Haiti, Kingdom of the Netherlands; Nicaragua; Sweden; and Switzerland.

[2] Preliminary.

Farm products exported from the United States to the 16 countries rose by $102,000,000, or 55 percent, from the fiscal year 1935–36, when only three of the agreements were in effect throughout the year, to the fiscal year 1937–38. Notice that farm exports to all other countries rose by only $20,000,000, or 3 percent, for the same period.

Our largest farm export is cotton, which has not suffered greatly from foreign trade barriers, and which, therefore, has not been directly benefited by trade agreements to any large amount. Since this is the case, however, figures for farm exports other than cotton are more than usually significant. These I present in the following table, also prepared by the Bureau of Agricultural Economics, United States Department of Agriculture:

United States domestic exports of farm products other than cotton and cotton linters to trade-agreement countries and other countries

	Year ended June 30—				
	1935–36	1936–37	1937–38[1]	Increase (+) or decrease (−) 1937–38 over 1935–36	
	Million dollars	*Million dollars*	*Million dollars*	*Million dollars*	*Percent*
To the 16 countries	98	110	204	+106	+108
To all other countries	269	239	372	+103	+38

[1] Preliminary.

The table indicates that the percentage of increase for exports to trade-agreement countries has been 108 percent, while that to all other countries amounts to 38 percent for the fiscal year 1937–38, as compared with the fiscal year 1935–36.

Let us analyze the farm export situation a little further. In doing so we must bear in mind that two of the greatest droughts in our history held down farm exports, while at the same time they increased competitive imports from 1935 to 1937. Similarly, extremely plentiful harvests in 1937 and 1938 have had the reverse effect on our trade. Secondly, let us bear in mind that the short crops were marketed during years of exceptionally good demand, so that the shortage of exportable supplies and the need for imports was even greater than would otherwise have been the case. Conversely, the bumper crops were faced with low industrial production and an inactive market, so that exportable surpluses mounted rapidly and imports fell off. It is necessary, therefore, to analyze the situation beyond the figures presented in the tables above. This further analysis seems to support the favorable conclusions indicated by the general figures.

Of the $106,000,000 increase in exports of farm products other than cotton to the 16 trade-agreement countries, as shown in the second table above, $45,000,000, an increase of 141 percent, the largest part, was recorded for exports to Canada. Practically all of this increase occurred in items on which Canadian duties were reduced by the terms of the trade agreement. Moreover, expansion in the quantity of our exports to Canada of some leading commodities on which Canadian duties were reduced was proportionately much greater than the expansion of our exports of these same farm commodities to the rest of the world. Not only were drought-affected commodities, such as wheat and oats, expanded but other leading items, such as grapefruit and fresh apples.

I cite these facts particularly and consider them significant, because Canada's economy is quite similar to our own. Her cycle of business activity has been comparable to our own. To some extent at least her farm production suffered from the same droughts that we experienced. Consequently our farm trade with Canada ought to be distorted somewhat less by this factor and by the factor of business activity than that with other countries.

The next largest part of the $106,000,000 increase in exports of farm products, other than cotton, occurred with the Netherlands, which rose by $28,000,000, an increase of 224 percent. Here also the increase took place in items upon which the Netherlands' duties were reduced by the terms of the trade agreement. The third largest increase occurred in exports to Belgium, which rose by $19,000,000, or an increase of 208 percent. Some of the trade-agreement countries do not show equally favorable results—five of them, in fact; but four of these five—Colombia, Haiti, Honduras, and Nicaragua—are predominantly agricultural countries where farm products could not figure prominently in the trade agreements. In the case of France, the fifth, failure of French economic activity to recover substantially in the last few years from its own depression has restricted imports under the agreement quite materially.

Such import statistics as are available from the trade-agreement countries themselves from 1934 to 1937 confirm the above analysis. Such statistics are available for the 11 most important of the 14 countries with which trade agreements were in effect in 1936. In 10 of these 11 countries the United States proportion of total imports has risen since the conclusion of the trade agreements. The only exception is Brazil, where large sales by Germany had, until 1938, increased its share in the Brazilian market and reduced the shares of other countries, including the United States.

The truth is that agriculture of every type in the United States is suffering either directly or indirectly from world conditions. The California prune grower has had his export markets to Germany and Italy, previously his largest buyers, almost completely destroyed, and no trade agreement is responsible for this. The cotton grower has been affected by the increase in cotton plantings in other sections of the world, and so on down the line. World agriculture is suffering from almost every possible ailment. There are countries which are trying to raise enough wheat to be self-sufficient, and using land on which wheat never should be raised and which ought to be used for other purposes. Germany, and perhaps some other countries, are using substitute products on a grand scale. Even the world's eating habits are changing. A machine tender probably eats a third less than would his ancestor who used a pick and shovel. Trade agreements are not responsible for these shifts in occupations or in tastes for food. If we are producing more farm products at home than our mechanized Nation will consume, and if it is costing us more to produce some of these products because our soils are wearing out and require fertilization, the trade agreement, with its reopening of old export markets and the development of new export markets for farm products is the sound and sane solution. Foreign markets can be had by this means without sacrifice of our domestic economy.

Neutrality

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 23 (legislative day of Tuesday, January 17), 1939

ARTICLE BY DR. CHARLES A. BEARD

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Neutrality: Shall We Have Revision?" by Dr. Charles A. Beard, published in The New Republic for January 18, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEUTRALITY: SHALL WE HAVE REVISION?—THE PRESIDENT'S POLICY—AND THE PEOPLE'S

(By Charles A. Beard)

Forces are being lined up for a terrific battle over the revision of the neutrality legislation at the coming session of Congress. It

is well known that advocates of collective security, largely drawn from the old League of Nations groups, are preparing to press for changes in the law that will give the President the power to discriminate among belligerents and to use the material resources of the country to implement whatever foreign policy he may choose to adopt in that connection. This will include the authority to perform unneutral acts when war begins; that is, to enter the war on the side he favors, first, by using hostile measures against the designated enemy and then, when retaliations come, by accepting the challenge of arms. To put the case in another way, it will in effect transfer the power to declare war from Congress to the President.

The real issue is, therefore, Shall Congress surrender to the President its constitutional power to declare war?

Before considering this issue, it is appropriate to come into the clear in the matter of neutrality.

It is widely assumed that neutrality means that we maintain complete impartiality or equality in the treatment of belligerents, while remaining at peace and abstaining from acts of violence directed against the one or the other of the contending parties. This is an entirely false conception of neutrality as a fact. No policy of neutrality can result in an equal treatment of belligerents, for the treatment they receive under strict neutrality will depend upon the posture of their affairs and the nature of the conflict.

For example, in case of a European war, any policy of neutrality that allows any sea-borne trade to continue will favor the European powers that command the seas.

The essence of neutrality is not equal treatment of belligerents in fact. The essence of neutrality is abstention from war, abstention from hostile acts by the Government and abstention from changing the policies of the Government for the benefit of one belligerent or the other, after the war has begun.

Hence if Congress confers upon the President the power to alter commercial or other policies of the United States for the benefit of the one belligerent or the other after war begins, it will confer upon him the power to perform unneutral acts, that is, hostile acts, easily leading to war.

The latest revision of the neutrality acts already confers upon the President this power in certain respects. This revision was effected under the pressure of the collective-security advocates, with the aid of President Roosevelt and the State Department. It permits the President, after a war has begun abroad, to add articles and commodities to the primary list of contraband goods (munitions) which cannot be carried on American ships. In other words, the present law permits the President to alter the rules of the game for the benefit of the one belligerent or the other after war has started, that is, to perform unneutral acts, hostile acts.

What the advocates of collective security now demand of Congress is a more fundamental alteration. They are proposing to give the President full authority to use the economic power of the United States against any belligerent that he may designate as soon as war has started or at any time after it has started. Such a law should be called "An act for allowing the President of the United States to enter any war that begins abroad."

This is the issue and it should be argued on its merits as such.

Personally I am opposed to any legislation of this character.

Advocates of such legislation have called opponents bitter names. They have said that we are immoral, foolish, short-sighted, and stupid. One distinguished advocate has said that we are like Cain who murders his brother and then asks whether he is his brother's keeper. I do not propose here to answer in such terms, for the matter of American foreign policy does not seem so simple to me as black and white. There are fine-spirited and honorable men and women in America who sincerely believe that the last war was really "a war for democracy" and that, if the United States would join the League of Nations or underwrite Great Britain and France, peace could be maintained for the United States and throughout the world.

In fact, some of them put all the blame for the troubles of the world on the American people. "We fought and ran away," says Mr. George Norlin. "We left the League of Nations, the child begotten of American aspirations, a foundling upon the doorstep of Europe; we crawled into our own skins * * * and so we made the world safe, not for democracy, but for gangsterism."

In my opinion this is a simplification of the World War and world history that will not bear the test of fact and is unjust to the American people.

Many American people who were in favor of the war at the outset and applauded President Wilson's "war aims" began to have doubts about his "war for democracy" long before it ended. The Sedition Act of 1918 settled it for many American citizens. For others the dream was exploded by the sight of the Versailles Treaty and the conduct of the Allied and Associated Powers after the war was over, especially the invasion of Russia. It seems to me fair to say that Great Britain and France "ran away" and left the American people in the lurch; at least this is as fair as the charge that the American people "ran away" or betrayed their ideals.

But apart from all such recriminations, the situation is what it is now. Do the American people want to put into the hands of any President the advance power to underwrite Great Britain and France secretly and to decide what shall be done in case of another war in Europe? Public opinion polls all indicate they do not.

Does the situation in Europe indicate that this should be done in the interest either of national security or peace?

Who actually knows what the situation in Europe really is? Reports since the Munich affair show that the plans, purposes, and large designs of Great Britain and France at the time were unknown to the public or were at all events very obscure. Already we have had several "explanations" of the reasons for abandoning Czechoslovakia and surrendering the enormous military advantage of her superb defense lines.

We are told that it was all a fixed-up game, that the Governments of Great Britain and France made the war scare for the purpose of justifying their coming to terms with Hitler.

We are told that Great Britain and France were not ready in a military sense to call Hitler's bluff, that Great Britain's rearmament program has been badly carried out, that British munitioneers have made millions in profit without delivering the goods.

We are told that Great Britain and France found the Little Entente unwilling or unready to fight.

We are told that the British Tories and French Tories want to work with Hitler in the business of liquidating Soviet Russia, and this is as plausible as any of the many explanations offered.

What are Great Britain and France really up to? We do not know any more about that than we did in 1914 about all the backstairs negotiations and designs which preceded the World War or in 1915 about the secret treaties.

Yet we are to "collect" with them now, in advance, assure them that we will underwrite them before the game of war starts, or at least will authorize the President to do it. In the light of the last 300 years of European history this seems to me to be no way to conduct the foreign policy of the United States.

If we are to collect with Great Britain and France, we should do it openly and on specific terms. Wilson made no advance terms in 1917 and see what we received at Versailles. To agree to cooperate on exact terms is one thing. To give to the President the power to make a secret underwriting at his pleasure is something entirely different. It is shutting our eyes and leaving our fate in the hands of the President and the State Department.

With all due respect for the President and the State Department, the American people seem to have decided that they do not want to make this surrender, and in my judgment they are absolutely right. If the surrender is made by modifications of the Neutrality Act through the use of weasel words, then the verdict of the people who will have to pay, suffer, and die will be flouted by the Congress of the United States. It seems preposterous to charge the President with seeking a dictatorship because he wants a reorganization of the Federal administration and then turn around and make him a real dictator in a far more important matter—the power to maneuver the country into a position from which war is the only escape.

On these grounds I hope that opponents of the collective-security group will rally in full force against its efforts to rewrite the Neutrality Act in the direction of establishing executive supremacy. I hope also that they will urge Congress to strike out of the act the discretionary powers already conferred upon the President, namely, the power to widen the list of proscribed commodities that are not to be carried on American ships.

This does not mean that the United States will be or should be indifferent to everything that Germany, Italy, and Japan do. It means no unconditional surrender to them. The United States would still be free to negotiate treaties. Congress would still be free to declare war on the three troublemakers. The President would still be free to lay his views before the country with reference to policies to be pursued.

A tighter neutrality law would merely limit the President's power to do what Woodrow Wilson did in 1914, 1915, 1916, and 1917 behind closed doors. It would force a definition of issues if there is to be a war, an open definition convincing to the country and Congress.

If the official directors of our foreign policy would quit preaching sermons to the world—sermons which they have had to eat again and again—if they would keep their powder dry, if they would turn solemn and inscrutable faces to the three world troublemakers and let them guess, then the country would be less confused and the way would be prepared for the support of necessary decisions when and if decisions become necessary. But with all the sermonizing, preaching, lecturing, and sentimentalizing, with the air full of rhetorical smoke, it would be dangerous for Congress to surrender its power over war to the Executive department, no matter who is President.

There is the issue. It is nothing less fateful than that.

Preparedness for Defense

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESSES BY HON. KEY PITTMAN, OF NEVADA, AND HON. ROBERT A. TAFT, OF OHIO, JANUARY 22, 1939

Mr. PITTMAN. Mr. President, on Sunday night last the distinguished Senator from Ohio [Mr. TAFT] and I had the

privilege of speaking over the Forum of the Air with regard to the question of preparedness for defense. By reason of a previous appointment, I was unable to remain to hear the address of the Senator from Ohio, but I am sure that it was an able address, and I am sure also that all Senators desire to read it, as I should like to have an opportunity of doing. So I ask unanimous consent that the address delivered by me and the address delivered by the Senator from Ohio following my address be published in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

RADIO ADDRESS BY HON. KEY PITTMAN, OF NEVADA, BEFORE THE AMERICAN FORUM OF THE AIR, JANUARY 22, 1939

The subject for discussion tonight before The American Forum of the Air is Preparedness for Defense. There is no more vital question that confronts our Government and its citizens today. The magnitude and details of defense and the manner in which our military instruments shall be used are military problems which obviously should be determined by our military experts. Although I served upon the Naval Affairs Committee from 1913 until 1922 and on the Foreign Relations Committee since 1916, I fully realize that such experience does not constitute me an expert even in naval affairs and that such knowledge as I may have then obtained has become obsolete in the rapidly changing conditions of warfare. I have, however, been in a position during the last 23 years to keep in touch with changing world conditions. It is these conditions that, in my opinion, require extraordinary preparations for defense, which I will discuss as frankly as I may tonight.

And let me state in the beginning that I do not speak as an officer of the United States Government, as chairman of the Committee on Foreign Relations of the United States Senate, or with authority from any officer of our Government. I speak my own personal beliefs and opinions. I take entire responsibility for what I may say.

It was evident to every informed person from the experience derived in the World War and the circumstances leading up to it that nothing could prevent a repetition at some time of a similar war, probably even more widespread, dreadful, and destructive in its effects, unless the governments of the world solemnly bound themselves together with the irrevocable intent to settle international controversies that might lead to war, through arbitration, adjudication, or other peaceful means.

Immediately after the World War the League of Nations was created and its covenant adopted to accomplish the settlement of international controversies through peaceful methods and, insofar as possible, to enforce just peace. It had adequate support by several strong governments and the power to enforce obedience to the mandates of the Covenant without resort to war.

Then came the treaty outlawing war as an instrumentality of governments, commonly known as the Kellogg-Briand Treaty; and the Washington treaties of 1922, including the Nine Power Pact with regard to China. No stronger treaties, either bilateral or multilateral, could have been conceived or executed. Christian and humane people throughout the world looked upon these accomplishments with gratitude and abiding faith.

What has been the result of these treaties, the consummation of the statesmanship of the world? They have utterly failed to accomplish their purposes.

In 1931 Japan upon a framed excuse invaded Manchuria, then a part of China. China under the terms of the Covenant of the League of Nations carried the controversy to the League. Japan appeared on her own behalf. The case was tried. The League of Nations by unanimous vote, with the exception of Japan, held that Japan was guilty of violating the Covenant of the League of Nations and adjudged that Japan should immediately withdraw her military forces from Manchuria. An independent international commission, upon which the United States had a member, investigated in Manchuria and reported its findings and conclusions. These findings and conclusions unequivocally held that there existed no legitimate excuse for the invasion of Manchuria by Japan, and that there was no excuse for Japan to continue military operations in Manchuria. The Secretary of State of the United States on behalf of our Government protested to the Japanese Government that the invasion of Manchuria was a violation of the Nine Power Pact to which China, Japan, and the United States were parties together with other governments. Unfortunately, all the other governments parties to the Nine Power Pact made no protest to Japan. Japan defied all the great governments members of the League of Nations, the United States, and the opinion of the civilized world, and continued the war until Manchuria was conquered. It became a puppet government under the domination of Japan. And Japan has continued her conquest of China in violation of the Nine Power Pact, in violation of the rights of American citizens, and in disregard of the laws of justice and humanity.

Mussolini disregarded the warnings of the League of Nations and invaded Ethiopia. The League of Nations found Mussolini guilty of violating the Covenant of the League of Nations. Mussolini challenged the decision and continued the conquest. Nothing was done. The League surrendered and Ethiopia was conquered.

Hitler then defied the League of Nations, feverishly built up his army, his air force, and his navy, advanced to and fortified the Rhine, invaded Austria, destroyed its sovereignty and made it a part of Germany. And then came the Sudeten incident and the surrender of Munich.

Is there any intelligent, informed man or woman in the United States who does not realize that the sanctity of peace treaties has been destroyed? Is there any intelligent, informed person that can show any good reason today for placing any reliance in a peace treaty?

Helpless, trusting China, relying upon the Nine Power Treaty, made no preparation for defense. Witness her pitiful situation today. Ethiopa relied upon the justice and the power of the League of Nations. It made no preparation for defense. Witness the humiliating position of Ethiopia today. Austria relied upon the League of Nations and made insufficient preparations for defense. Austria is no more. Czechoslovakia, created by the dominating governments of the League of Nations, and by the League promised protection—Czechoslovakia, whose independence was not only guaranteed by the League of Nations but by an alliance between France, Russia, Poland, Rumania, and Yugoslavia, has been cut to pieces and its bleeding remains dominated by Hitler.

And if peoples cannot place reliance for security in peace treaties, what other alternative is there save preparation for defense with force? There are those in our own country who declare that the building up of strong armaments in this country will lead us into foreign wars. This can never happen so long as our Government maintains its fundamental principles of foreign policy—of nonalliance, nonintervention, and noninterference in the domestic affairs of other countries. What good reason has anyone to believe that this policy will be abandoned? This policy has been pronounced by the President of the United States. This policy has been adopted by the overwhelming majority of the Congresses of the United States. This policy is believed in and sustained by the overwhelming majority of the people of our country.

Are we distrustful of ourselves? Are we so intimidated by the fear of fighting that we are willing to submit our country to the danger of conquest rather than to provide our soldiers and our people with modern arms and instruments of defense? Do we not know that fear of fighting for liberty has always ended in loss of liberty? Was the suffering and death of our Revolutionary forefathers a mistake?

It is insinuated by a Member of the United States Senate that the United States is responsible for the wild race between the powerful governments of the world for superiority in armaments. What an unkind, unpatriotic, and untrue charge. In 1921 our Government called a great peace conference to be held in Washington. This conference was participated in by all of the powerful military governments. At that conference treaties were adopted for the limitation of naval armaments and the maintenance of the status quo of fortifications of insular possessions in the far western Pacific. Recognizing that the conquest or domination of China by any outside government would probably result in widespread war, the conference adopted the Nine Power Treaty, each adherent solemnly pledging itself for all time to respect the political and territorial integrity of China. They all promised, in addition, not to take advantage of any disturbance in China as an excuse for the violation of such treaty.

The United States, in its intense desire for peace, made many vital sacrifices to secure the ratification of those treaties. It made far more sacrifices than did any other government. Time and again since those treaties were adopted the United States has endeavored to obtain the further limitation of naval armaments. These efforts failed.

When the Naval Armaments Limitation Treaty, adopted at Washington in 1922, expired, Japan refused to extend its life, and the armament race was madly renewed and is now proceeding to the limits of the capacity of Japan, Germany, Italy, France, and Great Britain. Apparently Great Britain and France were a little too trustful and a little too slow in starting.

There can be no other excuse for the surrender of Munich.

The United States also has fallen way behind the leaders in this armament race. Particularly is this true with regard to air forces and air and naval bases. It is argued, however, that our country is in no danger. Those who make this argument are thinking only of the present, or at most of the near future. The German-controlled press issued the same propaganda. A leading Berlin paper recently asked, "Who in the world is thinking of attacking America suddenly?" Their answer is, of course, "No one, suddenly." But the question that the responsible, informed representatives of our citizens must be thinking about is, "Who in the world is thinking of attacking America, not suddenly, but in 2, 4, or 6 years from now?" The trend of events should be a sufficient answer to impel the President and Congress to start preparations for successful defense. Let us remember that we are competently advised, even if we have not already learned from experience, that it requires several years to make the necessary preparations to successfully meet attacks by powerful countries, and that there is greater necessity for expeditious preparation on the part of the United States who may have to singly and alone defend our broad domain against the attacks of powerful, allied governments. And we expect to defend ourselves without alliance with any other country.

The contention that airplanes soon become obsolete and that it is a useless extravagance to build them until they are needed for war is thoughtless. At the beginning of our entrance into the World War a great body of executives, inventors, and mechanical experts consumed 18 months in an endeavor to design a perfect airplane engine, during which time we constructed no airplanes and our war aviators over there were compelled to use any old foreign plane that was turned over to them. The fatalities in these worn-out planes were tragic. We cannot delay the building of airplanes until the perfect plane is developed. Unless organizations

are created and maintained to construct the present imperfect planes, then perfect planes will never be constructed. Unless a sufficient number of planes are always available for teaching the art of flying, then we will not have sufficient trained aviators in time of need. God forbid that we should ever be compelled to place our untrained boys in battle planes to fight against the expert aviators of military powers.

"But why all this preparation for war, when there is no possible danger of war being brought to our shores?" is earnestly asked by sincere, peace-loving men and women. They believe that such an event is impossible. I believe that it is possible. I must be governed in my actions by my own information, knowledge, and beliefs. I doubt if there was a statesman or historian in the world who 8 years ago imagined the present astounding and threatening conditions could possibly develop in half a century. Then there seemed to exist throughout the world a stronger desire, determination, and organization for peace than at any time in history. Substantially all governments had entered into bilateral and multilateral treaties for the settlement of controversies by arbitration, adjudication, or other peaceful means. The League of Nations was apparently well organized, respected, and strongly supported. In fact, it appeared to have the power to enforce just peace. Great Britain and France, the two great European democracies, were the dominating forces in Europe. Today every peace treaty has been torn up as a scrap of paper. The League of Nations is lying helpless upon its deathbed. Great Britain and France no longer maintain the balance of power in Europe. Great Britain and France, through the fear of the airplanes of Hitler, witnessed Hitler's invasion, subjugation, and annexation of Austria without protest; ignored France's promises of protection to Czechoslovakia and abandoned her to the domination of Hitler; withdrew France's promises of protection to Czechoslovakia, Poland, Rumania, and Yugoslavia.

Today Hungary is in an alliance with Germany, Italy, and Japan against communism. That alliance by another name would be called an offensive and defensive alliance. What can any of the small democracies of eastern Europe do except, under present conditions, to yield to the demands of Hitler? As the power of these governments decreases, the power of Hitler increases. And when this domination is consummated, will his hunger for power and his fanatical zeal to establish his ideology of government throughout the world be satiated? Every act of this great genius leads to the conclusion that his ambition and his zeal will never be satisfied. Next may come under his domination the less strong democratic powers in western Europe. Why not? He certainly desires them; in fact, he requires them, if my conjecture as to his program be true. What is to prevent him from accomplishing his desires? Then the Ukraine. Maybe he will await the results of the war in China. Of course, it is possible that a combination of governments may develop or other unforeseen events happen that may stop the advance of the dictatorship governments. I hope so, but we cannot take chances.

The military clique in Japan has for years had the ambition and the fixed policy to dominate all of eastern Asia and the islands in the western Pacific. That clique is now, and since 1930 has been, in complete control of the Government of Japan. This control has been obtained and maintained with military force. The consummation of the plan, however, has been obstructed. China is still fighting. Japan is still fighting stubbornly, but with tremendous loss and suffering and without victory in sight. Probably there will be no attack on Russia unless and until Japan's armies or a major portion of them can be withdrawn safely from China. Complete subjugation of China might easily mean the conquest of Russia or large portions of her territory. Mussolini apparently will have to await the conquests of Hitler before all of his ambitions can be supported. Then he will be aided in his aspirations and plans relative to the Mediterranean area.

Spies and propagandists are crawling through the jungles and the alleys of the cities and through the army posts of South America, cunningly injecting their revolutionary poison into every weak or ambitious person. Do not such possibilities present a situation where it is possible for the dictator governments to control Europe and Asia and to generate revolutions and war in South America? Our interest is only directly concerned with our own territory and the independence of our neighbors, the South and Central American republics. I assert that possible danger to our country demands that our Government and every peace-loving, humane, and patriotic citizen will resist with every legal means short of war the advance of these dictatorial governments toward our country and our neighbors and that if such advance is not stopped that then we be prepared to repulse them with armed force.

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, JANUARY 22, 1939

On January 4 the President of the United States devoted his annual message to Congress to an appeal for increased armament. He pictured a world about to be enveloped in the flames of war, and he pictured the United States as surrounded by deadly armaments and threats of new aggression. He appealed for increased appropriations for adequate defense. His message was followed several days later by a program calling for approximately $525,000,000, of which only $200,000,000 is to be spent in the fiscal year which ends July 1, 1940.

There can be no difference of opinion among Americans on the principle of providing for this country a completely adequate defense against attack by foreign nations. The amount proposed for expenditure over the next 2 years does not seem to be excessive, although there may be differences of opinion on the exact number of military airplanes which it is necessary or desirable to construct at one time. It should be remembered, however, that the appropriation for Army and Navy has increased from $520,000,000 in 1934 to $1,100,000,000 in the regular Budget for 1940, even before we add the additional $200,000,000 requested for 1940. The committees of Congress will examine carefully the details of the national-defense program and will provide sufficient funds to give us the most modern and adequate defense; and there will be no partisanship involved in that examination.

But the message of the President suggests that he favors a foreign policy very different from mere defense of the United States, and one which in the end would require much greater armament. A year ago in Chicago he declared his belief that we should "quarantine the aggressor nations." Now he says, "The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one, we must now make up our minds to save all." It is somewhat difficult to see how we can save democracy and good faith among nations by any policy of mere defense of the United States. The President says that we cannot safely be indifferent to international lawlessness anywhere in the world, and cannot let pass, without effective protest, acts of aggression against sister nations. It is true that he admits that the American people are not yet willing to go to war in other parts of the world, but he says, "There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people." He declares against neutrality legislation and implies that he favors the repeal of the neutrality law. All this cannot mean anything except that the President wishes power granted to him by Congress to favor one nation or another in any dispute that arises and to employ economic sanctions or embargoes against a nation that he does not like, at the same time that he assists those that he does like.

The President's views are apparently reflected by the Senator from Nevada who has preceded me this evening, and who is chairman of the Foreign Relations Committee of the Senate. On December 22, 1938, after declaring that the people of the United States do not like the Government of Japan, and do not like the Government of Germany, but saying nothing about their feelings toward the Government of Russia, Senator PITTMAN said, "The people of the United States have the right and power to enforce morality and justice in accordance with the peace treaties with us, and they will. Our Government does not have to use military force, and will not unless necessary." The necessary implication is that he would emply not only economic sanctions, but military force if necessary, to enforce morality and justice throughout the world. On January 10 Senator PITTMAN advocated an embargo on all war materials to Japan, while permitting such materials to go to China.

In my opinion, such a policy leads inevitably to foreign war. It is contrary to the traditional policy of the United States from the days of George Washington. The position of this country has always been that it would remain neutral in any foreign war, no matter how much its sympathies might be on one side, as long as its own rights or those of its citizens were not infringed upon. This is a policy which was emphatically reaffirmed by the American people in 1920, when it was proposed that we join the League of Nations.

There is much to be said in theory in favor of a general agreement for collective security, by which a number of nations, sufficiently strong to dominate the world, undertake to prevent aggression, even though their collective action leads to war. There is a reasonable chance that such a policy might succeed. Our people, however, refused in 1920 to adopt it, and the efforts made under the League of Nations, without our cooperation, have now completely broken down. But the policy of the President and Senator PITTMAN under present conditions is not the policy of a League of Nations; it is completely original. No one has ever suggested before that a single nation should range over the world, like a knight errant, protecting democracy and ideals of good faith, and tilting, like Don Quixote, against the windmills of fascism. The unsoundness and danger of such a course was eloquently set forth by Senator BORAH over a national radio forum on March 28, 1938.

Of course, such a policy is not only vain, but almost inevitably leads to war. If we enforce an effective embargo against Japan, driving its people to starvation, as Senator PITTMAN suggests, it would be only natural for Japan to attack the Philippines, and our whole standing and prestige would become involved in an Asiatic war. If the Spanish embargo is lifted and an American ship carrying munitions is sunk by an Italian cruiser as it approaches Barcelona, it is hard to see how we could avoid a controversy with Italy, which might flame into a general war. We apparently are asked to line up with England and France, and probably Communist Russia, without even knowing what their policies may be, or whether they will back up the stand that we may take.

It is proposed that we repeal the embargo against Government Spain. But this embargo is not only an embargo against Government Spain but against both Government Spain and the Franco insurgents. There is no partiality in our position. It happens that Franco is supplied by Italy and Germany, and the only reason why Government Spain is hampered is that England and France are enforcing to some extent an embargo against Government Spain. Yet we are asked, in defense of democracy, to do the very thing the great democracies of Europe, on the very doorstep of Spain, and infinitely more concerned than we, are apparently unwilling to do themselves.

I have received this week over 25,000 letters and telegrams regarding the lifting of the Spanish embargo. It is physically impossible for me to reply to all of these communications. Several weeks ago I took a definite position against lifting the Spanish embargo, because I feel the policy declared 2 years ago is impartial and more likely to keep us out of war than any different policy which we might adopt at this time.

Congress was wise in passing the neutrality bill, which prohibits the shipment of arms, ammunition, and implements of war to belligerent states. I believe the President should long ago have found a state of war to exist between China and Japan, which he had full power to do, so that munitions might not be shipped either to Japan or China. The neutrality law intends that we shall not manufacture munitions for foreign wars. It provides, further, that in case of war, nations must come to this country and pay for all articles other than munitions to be shipped abroad before they are shipped. Its purpose is to reduce the chances of our becoming involved, and I believe it will assist greatly the accomplishment of that purpose. It is in accord in spirit with the whole policy of American neutrality for 150 years.

But now it is suggested that the whole world is different. It is said that distances are so short we cannot possibly avoid being involved in a general war. I don't believe it. I think if we are sufficiently determined not to become involved, we can stay out. We learned our lesson in 1917. We learned that modern war defeats its own purposes. A war to preserve democracy resulted in the destruction of more democracies than it preserved. We may go in on the side of France and England because they are democracies and find before we are through that they are Communist or Fascist.

Not only that, a war, whether to preserve democracy or otherwise, would almost certainly destroy democracy in the United States. We have moved far toward totalitarian government already. The additional powers sought by the President in case of war, the nationalization of all industry and all capital and all labor, already proposed in bills before Congress, would create a Socialist dictatorship which it would be impossible to dissolve when the war ended.

The United States is in a fortunate position, a selfishly fortunate position, if you please. In Europe races are so mingled that no one can draw boundaries without leaving minorities which are a perpetual source of friction. In the end a war seems unfortunately probable—a war likely to destroy in a few short years the civilization which Europe has taken centuries to build. In that war the United States need not and shall not be involved. We have an isolated location, and it is still isolated in spite of all the improvements in air transportation. The best military authorities say that we can defend ourselves, and the Caribbean Sea south of us, if we maintain an adequate navy and an attendant air force. During any war we can be self-sufficient. This very position makes it less likely that any nation would wish to attack us.

There is a general illusion that we see in Germany and Italy forces which threaten to overwhelm England and France and march on to attack the United States. But this is surely an imaginary fear at the present time. There is no reason to believe that Germany and Italy could defeat England and France in any protracted war. It is hard to see what they would gain even after a successful war by an attack on the United States. Certainly the physical strength of our position would make any nations hesitate, no matter how strong they might be. The picture presented this evening by Senator PITTMAN simply will not bear the analysis of calm examination.

It is natural that the sympathy of our people should be strongly aroused when they see what is going on under the totalitarian governments. Perhaps the President should tell them what we think of them, especially as the day seems to have passed when nations go to war because others call them unpleasant names. But the great majority of the people are determined that those sympathies do not lead us into overt acts of embargo, blockade, or economic sanctions.

Considering the attitude which the President has taken, it seems essential that Congress shall strengthen the neutrality bill rather than repeal it. It seems essential that the President shall not have discretion to take sides in foreign wars, or impose sanctions against those nations which he might find to be aggressor nations. It seems wise not to repeal the Johnson Act, as is now being suggested, and to maintain a policy of lending as little money as possible abroad, for foreign loans today are certainly made precarious by the possibility of war and likely to stimulate temporarily a production of exportable goods which cannot be sustained. Congress is the body upon which is conferred by the Constitution power to declare war. It should not permit the Executive to go so far toward war, without consulting Congress, that Congress and the people no longer have the power to prevent war.

I do not say that some special situation may not arise in the future under which it may seem desirable to go to war as the first step in an effective defense. But if such a situation ever arises it should be undertaken deliberately, after a thorough public discussion by the people and by Congress as the representatives chosen by the people.

Many justifiable criticisms can be made of the Neutrality Act, and of any special type of neutrality. But the horrors of modern war are so great, its futility is so evident, its effect on democracy itself so destructive, that almost any alternative is more to be desired. The people of the United States are overwhelmingly in favor of keeping out of other people's affairs, no matter what their individual sympathies may be for or against those people. They will not support armaments required to carry out any such policy as that suggested in the President's message and supported by Senator PITTMAN.

Foreign Relations

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, today at the Carlton Hotel was held the annual meeting of the Coalition of the Patriotic Societies representing about 123 patriotic American societies. At today's meeting I delivered an address and was afforded the use of a Nation-wide hook-up on the National Broadcasting Co. The title of my address was "Uncle Sam Should Keep His Nose Out of the Internal Affairs of Other Nations." I ask unanimous consent that that address be printed in its complete form in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, President Roosevelt has repeatedly stated that he hates war.

We all hate war.

You hate war and I hate war. The American people are unquestionably against the United States participating in another world war, or any war.

The question before us today is how to stay out of war. I am very happy indeed to be provided the opportunity of asserting that the best and only means by which we may successfully avert war and stay out of war is to keep our skirts clear of any foreign entanglements and participate in no foreign embroilments

In other words, the best way for us to insure ourselves against becoming again involved in another world war is to keep our nose out of other nations' business.

The illustrious Father of his Country, George Washington, expressed this idea in the form of one of the greatest questions ever asked the Nation: "Why leave our own to stand on foreign ground?" That really is the best advice that I can give to you, the American people.

I am happy to be able to advise you that in my opinion the great majority of the American people know that I am right when I say that it is none of our business what sort of governments the peoples of Germany, Italy, Russia, Japan, or the peoples of any other nations of the world choose for themselves. What right have we to tell the German people, or any peoples, under what sort of government they should live? What right have we to criticize the people of Italy for the sort of government they choose to live under? Or what right have we to demand that this or that country have the sort of government that we would choose for them. Why that holier-than-thou attitude which would superimpose our governmental dress on the nations of the world?

We are all against war because we recognize that our brief participation in the World War, which lasted from April 6, 1917, to November 11, 1918, has to date cost the American taxpayers more than $69,000,000,000, and before we will have finished liquidating the debts incurred as a result of that brief participation in the World War the American taxpayers will have paid out more than $100,000,000,000.

We went into the World War with the idea of saving Christianity and democracy. Have we accomplished either?

We went into the World War with the idea of ending all wars. Have we been successful?

We went into the World War with the idea of saving Great Britain and France and her allies from annihilation at the hands of the Central Powers. We went into the World War believing at the time that if we did lend a helping hand to those nations that were on the brink of defeat that they, Great Britain and France particularly, would be grateful for our aid. Have they shown any appreciation? Appreciation, my friends, is pretty much limited to anticipation of favors.

At the close of the World War the United States had under arms and in uniform more than 4,400,000 men, established at tremendous expenditure of energy and money. At the end of that war the Allies were indebted to Uncle Sam to the extent of about $22,000,000,000. Uncle Sam, being the big-hearted man that we have always found him to be, forthwith cut that indebtedness in half and virtually gave to the Allies $11,000,000,000. Of the $11,000,000,000 remaining they have never liquidated the interest, much less the principal, and perhaps never will. Nor have they, the Allies, in the slightest degree evidenced any appreciation of our having saved their hides. Gratitude is no virtue among nations.

We know that the World War, which we had hoped would end all wars, has not been successful in ending war. Within the past 3

years more than 3,000,000 combatants and noncombatants, innocent children, defenseless women, and frail old men have been slaughtered in Spain, Ethiopia, and China. In addition thereto, we know that the persecution of the minorities in Russia alone has brought about the death, the murder of anywhere from four to seven million Ukrainians in that portion of the Soviet Union lying east of Poland and north of Odessa, on the Black Sea. As for saving Christianity, we know that the churches in Russia have been closed, that religious ceremonies are forbidden, that thousands of priests and followers of the gospel have been brutally murdered; that in Mexico, our sister Republic to the south of us beyond the banks of the Rio Grande, communism likewise has run rampant, that priests have been murdered, that nuns have been attacked, and that the places of worship have been closed. Turning to the peninsula of Europe, in Spain we find that the same religious persecution, the same destruction of churches, the same murder of priests, and the same attack upon nuns has taken place as likewise transpired in both Russia and Mexico.

I am against war.

You are against war.

The 130,000,000 people of America do not want war.

I repeat that the best way for us to stay out of war is to keep our nose out of other nation's business.

I condemn, I do not condone, I view with horror the persecution of the minorities which the press reports is being carried on in Germany. My heart is in sympathy with the minorities of any country upon which persecution is being practiced. I look with horror upon the slaughters in Spain, where more than 1,000,000 people have been killed since the outbreak of the revolution there in July of 1936.

I am appalled and horrified when I bring myself into realization of the fact that almost 2,000,000 people, Chinese and Japanese, have been killed during the present undeclared war in Asia, and I am particularly sorry for the women and the children and the aged.

But my first thoughts are for the American people and my first sympathies are with the American people. Yes, my sympathies, my deepest sympathies are with the persecuted minorities of Germany, and the persecuted minorities of other countries, but I am not willing to have the United States go to war over the minorities of any country of the world.

We must reflect upon this. You must decide.

If the minorities in Germany are being persecuted and I have no doubt but what they are being persecuted, that is not sufficient cause for the United States to break off its diplomatic relations or to go to war, because those constituting the minorities in Germany are not American citizens. So if they are not American citizens then why should we imperil the safety of the 130,000,000 people of the United States of America by incurring the enmity of the 80,000,000 people of Germany and crystallizing their hatred of us?

Say what you please, there is a radical distinction between the peoples of Germany and the Government of Germany.

I ask what have the people of Germany done to the people of the United States that should warrant resentment, and after all, what has the Government of Germany done to warrant our severing diplomatic relations with them?

It must be admitted that we have virtually severed diplomatic relations with Germany on account of their treatment of minorities and on that account alone.

Now, if we are going to be consistent we must of necessity sever relations with Mexico.

As a matter of fact, there is more reason why we should sever our diplomatic relations with Mexico than there was for our severing diplomatic relations with Germany. Below the Rio Grande there reside 20,000,000 of our neighbors, constituting the population of Mexico, and there anarchy rules.

It is a government of anarchy. They fly the red and black flag of revolution. The workers international is a hymn of hate against all foreigners, including Americans.

They teach hatred in their schools. They broadcast it. They print it in their press. Fact of the matter is neither private property nor individual investment is safe. Human life is worthless. There they are purging the country of all foreign capital by assassinations and by wholesale confiscations. They have closed their churches, murdered priests, assassinated nuns, confiscated farm lands belonging to Americans, and stolen oil wells dug by American capital. When the Mexicans confiscated the oil fields belonging to Britain, John Bull immediately severed diplomatic relations with them. When the Mexicans confiscated oil lands belonging to Uncle Sam we closed our eyes to these confiscations, murders, and assassinations. If we are to be consistent, it follows that we should sever diplomatic relations with Mexico, Spain, Japan, Russia, and Italy, as well as with Germany. Why? Because in Spain the churches have been closed and murder is everywhere. In Asia the Japanese are carrying on an unholy conquest and murdering millions; in Italy the minorities are being persecuted, and they are the same racial minorities that are being persecuted in Germany, while in addition thereto the Italians in their unholy conquest of Ethiopia murdered hundreds of thousands of defenseless Abyssinians, and last but not least—there is Russia.

Russia owes the American Government, according to my recollection, around $600,000,000. They have closed the churches, murdered priests, assaulted nuns. They are sending propagandists to this country to destroy our form of government. They murdered millions in the Ukraine in 1933 and 1934. If diplomatic relations are to be severed with any country, it should be with Mexico and Russia, and if diplomatic relations are to be severed with Germany they should certainly be severed with Italy, because Italy is persecuting the same racial minorities as are being persecuted in Germany.

So let's be consistent, but above all, let's stay out of war.

My friends, the spirit of hate is sweeping the world. Let us not become enmeshed in this spirit of hate. Why should we be taught to hate our fellow man? What Christian doctrine can induce hate? Does it not usually arise from ignorance?

I wish to say again that in order to stay out of war we must keep our nose out of other nations' businesses.

Let's attend to our own business.

Let's put our own house in order before we tell other nations of the world that theirs need dusting.

Let us abandon the attempt to clothe other peoples with our political dress and habiliments, for democracy was tailor-made for the American people.

Let us abandon attempting to pass Sunday blue laws policing the political morals of the governments of the world.

Let us stop criticizing the political habits of the 2,000,000,000 people of the world until we have at least had time to wash behind our own ears.

What we should do is to open our eyes and put our ears to the ground and ascertain the changes which are taking place so rapidly over the face of the earth.

Germany is making tremendous headway economically by way of trade penetrations throughout the world, and particularly in the Balkans. She has made strides across the Atlantic in her penetrations of Latin-American countries, notably in Brazil, Guatemala, and Salvador.

We must meet the world problems with which we are confronted today, particularly as relates to world trade. It won't do us any good to hate, particularly as it relates to trade. It won't do us any good to hate Germany, who is making such prenomenal progress in her trade penetrations, nor will it do us any good to hate any other country that is making efforts to outstride us in this direction. What we must do is to ascertain the best manner and means by which we can outstride and outdo commercially Germany and those nations that are providing us with the greatest competition in world trade.

Instead of meddling with the internal affairs of other nations, I think from now on we should attend to our own business, keep to our own "knitting," and attempt to provide employment for the ten to twelve million God-fearing men and women who are walking the streets ill-fed, ill-clothed, and ill-sheltered.

Recently it was reported by an international committee that 70 percent of the world's unemployment is to be found here in our own United States.

My friends, tomorrow, with all its great promises and poor performances, would not hold one-half the heartaches for these, our unemployed and indigent, if you, the American people, with your profound sympathy and understanding, start the the slogan "Our people and our country first."

The Government and Banking

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

ADDRESS BY MARRINER S. ECCLES, DECEMBER 1, 1938

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the Government and Banking, delivered by Marriner S. Eccles, Chairman of the Board of Governors of the Federal Reserve System, before the New York Chapter of the American Institute of Banking in New York City, December 1, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are accustomed to hearing so much criticism of our economic and political system that we sometimes forget what has been accomplished under it. Yet no other form of human association and endeavor has produced the benefits to all classes of people that have resulted from this system of representative government and of private enterprise under which individual initiative, in the creation of new inventions and the production of new material comforts and all of the countless things that go to make life

better, has flourished as it cannot flourish under any form of regimentation or dictatorship.

As one of its beneficiaries, no one is more desirous than I am of preserving the system that has made possible this country's amazing development and progress, nowhere more evident than in this great city of millions of people. If we are to preserve this system and encourage it to reach still greater heights of human advancement and accomplishment, it is essential that all who are in places of responsibility in banking, business, labor, agriculture, and government understand the nature of a capitalistic democracy, in which the dominant incentive to individual initiative is a profit motive.

The three main factors necessary for the creation of real wealth are manpower, natural resources, and capital, of all of which we have a greater abundance than we have yet learned how to utilize fully and continuously. How may these elements be combined most efficiently and effectively to produce a steadily rising standard of living for all of us under our system? It seems to me to be evident that, first of all, every possible opportunity must be provided for individual initiative—for capital to find profitable outlet in the production of a maximum of goods and services and for labor to have continuous, profitable employment. Neither capital nor labor can be expected to function otherwise, and when they fail to produce the Nation suffers irreparable loss. That is the kind of waste which we can least afford. The opportunity, therefore, to realize a fair return is of first importance. For capital this must make allowance for investment and risk taking. For labor it means, in the broadest sense, the ability to purchase the goods and services which the economy is capable of producing. For the farmer it means that he must receive a return upon his services and investment reasonably commensurate with what capital, industry, and labor receive.

To my way of thinking, the role of the Government, which is not animated by the profit motive, should be that of a coordinator, to adjust and adjudicate conflicting interests so that they will not result in injury to the public. The Government must be impartial. It must be representative of all of the diverse elements of the country and not be moved by favoritism toward special interests. In striving to prevent or to correct abuses, or to remedy maladjustments that inevitably develop under the free competitive interplay of economic forces, it must not resort to punitive or coercive methods. Such methods destroy confidence in the Government's impartiality and tend to paralyze the initiative vital to private enterprise.

While the practical application of these general principles to the complex problems of today is far from simple, the principles do not change, though the problems do. So far as I am concerned, I am not willing to abandon the principles; but I am conscious of the necessity for constantly adapting and improving the mechanisms for dealing with changing conditions domestically and internationally.

I think that most of us, as never before, are concerned about the future—about the future of capitalistic democracy. We hear it said that democracy is challenged by dictatorships; that it is on trial today; that it fails to meet fundamental needs for a maximum production and distribution of goods and services, as is evidenced by the millions of men and women, citizens and voters, who lack an opportunity for profitable private employment and are supported by public or private charity or by made work. For nearly 10 years, it is true, our own country has been unable to maintain a national income anywhere near up to the high levels of which it is capable. Yet I am sure that all of us here believe that only under a democratic capitalistic system can we ultimately secure the greatest degree of well-being and human happiness for all of our people.

We can and we will meet that challenge, successfully, by making our system function so that every able-bodied citizen who is willing to work will be able to find profitable employment in private enterprise upon which our system depends. When I consider past achievements, the contributions made by American initiative and enterprise to the economic and industrial development of the country, I feel that there can be no justification for discouragement, if we all will quit calling names, if we will generate more thought and less heat, and set ourselves to the task of understanding the nature of the economy in which we live.

What we seem to lack is sufficient understanding of the nature of the capitalistic democracy under which we desire to live. We cannot have a system of laissez faire, even if we would, if by that we mean that the Government should be passive, letting nature take its course and doing nothing to moderate the destructive extremes of ruinous inflations and self-accelerating deflations. It may be that such extremes are self-correcting, but if so, in our complex economy today, it would be at a cost that I do not believe the people of a democracy would tolerate. We must not have a completely controlled economy. That would be regimentation, not capitalistic democracy.

What, to my mind, we can and should have is the fullest possible encouragement to private enterprise upon which our system essentially depends. Private enterprise, business, industry, agriculture, have always, even in the depth of depression, provided employment and income for the overwhelming majority of our people. At best, Government, through relief, made work, or otherwise, can hope to provide for only a relatively small proportion of the total. Certainly we cannot substitute government for private enterprise and still have our system.

It follows, therefore, that the basic objective of national policy should be the maximum encouragement to private enterprise so that it may furnish the greatest possible employment and the greatest possible production and distribution of goods and services. To this end, it is essential that Government shall not, as a general principle, discourage, displace, or undertake to compete with private enterprise. Having given the fullest encouragement and opportunity to private enterprise, then it seems to me that the Government has a responsibility in a democracy to provide for those for whom private enterprise has failed or is unable to provide.

That this is a collective responsibility, that private enterprise cannot be expected to assume it, and that the Government alone is able to assume it, seem to me to be inescapable conclusions. I shall not undertake here to go into the question of how the Government should discharge that responsibility, but I want to emphasize the importance, as I see it, of a clearer recognition of the fact that in a democracy business and industry cannot sensibly object to having the Government provide for those for whom private enterprise does not make provisions, if Government has first given private enterprise every reasonable opportunity for profitable operation and for giving employment.

Beyond the fact that, as I view it, no other course is possible in a democracy from the standpoint of political, social, or humanitarian considerations, I am convinced that there are sound economic reasons which should appeal to bankers, industrialists, and businessmen generally, why the Government should maintain a volume of expenditure necessary to sustain consumer buying power. We know only too well from experience of the variability of employment, and hence of buying power. Our objective is the highest possible degree of sustained employment, and I cannot regard as either novel or revolutionary the theory that as private employment diminishes, from whatever cause, the Government can in part compensate for it by increasing expenditure.

It seems to me that our banking and business leaders who are concerned about the preservation of our institutions, who do not want regimentation or dictatorship, may well consider the possibilities of and lend support to Government policy designed to offset economic extremes and to stabilize economic progress. I feel that, functionally, the Government through monetary and fiscal policy, through taxation, through Budget and other policy, can do much to make economic progress smoother and steadier, with the main objective always of a maximum of employment in private enterprise. I realize that many of the older generation who were brought up under other economic conditions and other rules, which may have sufficed for those times, are reluctant or unwilling to accept the idea that Government should assume such broad responsibilities.

The bankers of the present day, I am convinced, cannot in their own interest fail to face the alternatives presented by radically changed and rapidly changing conditions today. They must recognize the nature of the banking function in relation to the economy as a whole. The primary purpose of the banking system is not simply to provide a safe place for people to deposit their money. That is a secondary consideration. The broader purpose of the banking system is to play a vital part in the process of production and distribution of goods and services. This part consists of creating and maintaining an adequate supply of money; that is, of bank deposits, which we use for money in most of our transactions. It is commonly believed that a bank, in making loans or investments, merely loans or invests its deposits. This is largely true of an individual bank, but the banking system as a whole creates money by its lending and investment operations. Conversely, when loans and investments decrease, deposits—that is, money—decreases correspondingly. Because of this function of creating money, the banking system as a whole plays a role of the greatest importance in the functioning of a debtor-creditor economy.

You are well aware of how, after 1929, the supply of bank money diminished rapidly as deflation proceeded. As loans were collected and investments were liquidated, the supply of money correspondingly diminished. This process continued until 40 percent of our volume of bank money had been extinguished, and at the same time the turn-over or velocity of the supply diminished. You are well aware of the accompanying disturbances; of the enforced sale of inventories; of constantly reduced prices; of the stoppage of all capital expansion; of the steadily shrinking or vanished market for practically all securities. Even 3-percent Government bonds sold down as low as 83 at a time when the national debt was half of what it is now.

The solvency of innumerable banks was destroyed. Currency was hoarded on an unprecedented scale. Nearly one-third of our able-bodied workers were forced into the great army of unemployed. The solvency of our insurance companies was impaired, and confidence in the dollar, both at home and abroad, declined. The incomes of our investing classes were destroyed or greatly reduced. These processes, instead of bringing about confidence and liquidity, undermined both to a point where the entire banking system collapsed and precipitated the bank holiday.

This situation, let me point out in passing, brought about high interest rates, which some of my banking friends feel are essential to our well-being. What caused the high interest rates at that time? It was because the supply of money was rapidly diminishing and the opportunity to make good loans became more and more limited. This condition did not protect the savings of our people. It largely destroyed the income of debtors, individual and corporate,

thus bringing about innumerable defaults and making it impossible to pay any return on countless bonds, mortgages, and other investments representing our savings.

We learned that deflation is as disastrous as inflation. Loans and investments which were perfectly good during the period of full employment when the national income was high became temporarily bad when the national income fell from $80,000,000,000 to $40,000,000,000 a year. We had the high interest rates, but that did not protect our savings or protect the depositor. We also discovered that although tax rates were lower then than they are now, the tax burden then was far heavier in relation to our ability to pay. The Government made desperate but unsuccessful efforts to balance the Budget and did nothing to "destroy confidence," but there was no confidence.

I do not wish to censure the individual bankers for what they did, for they could do nothing else if they wanted to keep their banks open. What was required, however, was collective action on a scale which only the Government could undertake. You are familiar with the various actions taken to meet the emergency situation.

If the Federal Reserve System could have loaned them as it can now on any sound asset, or mortgages, bonds, collateral loans and other bank assets, the pressure could have been greatly relieved. But the Reserve banks were restricted to lending on a narrow range of technically liquid paper. As a basis for help, this was soon exhausted, and the banks were then forced to dump their other assets on a distressed market which was made worse by the unloading. It ought to be clear from this experience that the individual bank cannot provide its own liquidity, nor can technical rules provide it, except by restricting the banks to superliquid commercial paper and Government bills, the supply of which is so limited and the yield so low that the banks could not survive if their earning assets were confined to such paper.

Testifying in connection with the Banking Act of 1935, I undertook to point out the dilemma that faced the banks. I said then that, "If they go into the longer-term lending business they run the risk of depreciation and of inability to realize quickly upon their assets in case of need. If they do not go into this business, they cannot find an outlet for their funds. Their earnings will suffer and the justification for their existence diminishes."

It seemed to me then, as it does now, that the dilemma has to be solved by allowing the banking system to adapt its credit policies to current requirements of the community, particularly in making longer-term amortized loans. I was gratified to note the recent report of the Reserve City Bankers' Association on this important subject. With this general purpose in mind, I had advocated in the Banking Act of 1935 a clear recognition of the principle that liquidity should be provided collectively, not by individual banks confining themselves to superliquid commercial paper, but by the Reserve banks being in a position to lend on all sound assets. Thus the emphasis would be taken off the variable yardstick of fluctuating market values and put where it belongs on true worth, measured over a longer period and by broader experience. At a time when the normal security and money markets are demoralized, the Reserve System is the only means whereby liquidity can be provided, because it can convert sound but temporarily unmarketable assets into money.

One problem which concerns you as individual bankers is the relative scarcity of opportunities to make loans or investments outside of the field of Government and municipal securities. You are naturally concerned because of the bank-earnings picture, and I quite understand and sympathize with your viewpoint. We must realize, first of all, that banks today are living in a very different period from that of the twenties. Then they had the opportunity to loan their funds readily on a profitable basis. At that time the call-money market was absorbing something like $4,000,000,000 to $5,000,000,000 of bank funds at a profitable rate of return, and these loans were looked upon as very liquid and sound. During that period we were not surfeited with billions of dollars of foreign funds also seeking an outlet in our market. At that time banks were permitted to underwrite securities and they had security affiliates. In other words, the banks then had a very much broader field for outlet of their funds than is the case today.

More than ever today the banking system should be permitted to adapt its lending policies to current borrowing needs of the community. It should not be hamstrung by archaic rules and regulations, and, as I have indicated, much has been done to remove restrictions so far as bank examination and investment policy is concerned, and through the Reserve System, under the Banking Act of 1935 and its regulation A. The effect of these steps has been to broaden the lending field of the Reserve System to provide liquidity in case of need, so that the banks need not be restricted to superliquid loans.

If the banks do not meet present credit needs, they will not be able to survive; the public is likely to demand and Congress to enact legislation setting up Government agencies that will meet the needs. And that, in turn, apart from the competition, puts added burdens upon the Government. So far as I am concerned, I want to see those burdens lightened by releasing private energies and so far as possible by utilizing existing private instrumentalities essential to the economic system.

It is not realistic, it seems to me, for us to complain because interest rates are low. We must learn to recognize the close interrelationship of all of the factors in the picture and realize that the solution of the individual bank's problem lies, as it does with industry, not in distributing a small amount of its product at a high rate, but in expanding the market so that the returns, even at low rates, will exceed what would be earned by the marketing of a restricted high-priced product. Similarly, as to taxation, our views are likely to be somewhat narrow. What we are interested in, as I see it, is not so much tax rates by themselves. What we really are concerned about is how much we have left over after we pay the taxes.

We would do well to ponder the fact that taxation in the United States—that is, all taxation, national and local combined—for the past 3 years has averaged around 17½ percent of the national income, whereas in Great Britain all taxation has averaged around 20 percent in the same period. But here is the difference: Our national income during this period has been averaging only about 75 percent of the 1929 national income, whereas in Great Britain the national income has averaged around 110 percent of the 1929 level, and last year was about 118 percent of the 1929 level.

In other words, while the tax rate is higher in Great Britain, it is applied on a relatively much higher national income, so that what is left over after paying the higher tax rates is comparatively larger. To put it another way, if we assume that our national income averaged $88,000,000,000, which would be a comparable percentage with Great Britain, and that our tax ratio were 20 percent, as it is in Great Britain—or higher than our tax ratio is now—we would be collecting nearly $18,000,000,000 a year in taxes, which would be between seven and eight billions more than we are collecting now. This, of course, would more than take care of all deficits and leave a substantial surplus. Even after paying this higher tax rate, we would have $70,000,000,000 of national income left over, whereas before paying any taxes, our national income has averaged roughly $60,000,000,000 in the 3 years referred to, or approximately $50,000,000,000 net after paying the taxes. This, you will note, is $20,000,000,000 less than would be the case if we paid the higher taxes of $18,000,000,000, but paid them out of a high national income of $88,000,000,000.

Does this not demonstrate that a high tax rate does not necessarily impoverish a nation, and that the real point is not the rate but how much is left after paying taxes? And, above all, does it not indicate why our major objective must be to reach a maximum of production and employment which are synonymous with an increased national income? That, as I see it, is the one sure way and the only way in which we can achieve the balanced budgets which we all wish to achieve. Does it not indicate, also, that to attempt to cut down expenditure, whether private or public, before we have reached a national income reflecting reasonably full use of our manpower and productive facilities, would be a very shortsighted repetition of a mistake which has been made before?

It seems to me that all of us, and particularly those of you who now occupy or will in due course occupy positions of responsibility in the banking world, must look at these fundamental problems from a far broader standpoint than has been typical of most of us in the past. Speaking as one who spent 20 years as a banker before coming to Washington, I feel that the bankers should realize clearly the part that the banking system as a whole plays in creating and maintaining conditions conducive to production and full employment—the ultimate end and aim justifying the existence of our economic system, and that we should lend support to policies designed to call forth a maximum of production and therefore of employment under the incentive of the profit motive—the mainspring of our system. We must learn to distinguish clearly between measures that encourage and those that discourage private activity, private investment, and risk-taking, for manifestly only as private activity thrives can the Government's burden of caring for those in economic distress be reduced. We have much to learn, but we can approach sympathetically the problems of so shaping monetary, fiscal, and taxing policies as to create a climate in which private enterprise may have full play to enrich human existence even beyond the great contributions it has been able to make in the past. These problems are essentially economic and not political.

No central banking policy, nothing that the banking system of itself can do, can provide an adequate productive use of created funds. It is, therefore, necessary for us to recognize that outside the banking field itself there are heavy responsibilities upon any government in a democracy to adapt other policies to the revival and maintenance of private activity at the highest possible level. It is clear from past experience that when national income begins to decline rapidly, when unemployment begins to develop on a large scale, from whatever cause, no government in a democracy has any choice except to try to arrest the cumulative deflationary forces. We cannot expect private capital to employ people when they cannot be profitably employed because there is no demand for their products. We cannot expect private capital to expand facilities and thus give employment when excess capacity is developing as it is bound to do as deflation sets in.

Positive action by the Government is essential at such a time to increase consumer buying power and to provide the employment that otherwise would not be provided. To this end, the Government, through its borrowing power, must temporarily take over and put into action the otherwise idle funds of investors, and when, as happened after 1929, there is a vast shrinkage in the volume of bank money, it must create new money by the sale of securities to the banking system and put this newly created money to productive use.

When deflation has been arrested, we must adapt policy to sustaining an orderly recovery, avoiding the pitfalls recently experienced as a result of excessive inventory accumulation and excessive extension of consumer credit in relation to net income, of inadequate capital expenditures in such basic industries as railroads, housing, and utilities, and of wrong timing of public with private exepnditure in 1936 and the Government's too sharp withdrawal of funds from the spending stream in 1937. We must better understand the bad effects of unbalanced price conditions, whether resulting from ill-advised price, wage-and-hour policies by labor and industry, or from other causes, such as a failure to sustain agricultural income. We must recognize that taxation policy should be closely integrated with monetary and fiscal policy—that taxation is not a separate matter concerned only with the raising of revenue, but that the type, the timing, and effect of taxation upon the stimulation of private enterprise or upon restraint if a speculative boom threatens must be considered. In the past we have applied taxation policy with perverse effects upon the economy, by trying to increase or at least failing to decrease taxation in depression when the burden becomes insupportable, and by reducing taxes in boom times when we should retain or increase taxes as a means of needed restraint.

We need to recognize that the principle of a flexible Budget is a necessary safeguard of private capitalism, and we must learn to use it as one instrumentality for moderating economic extremes of inflation or deflation. Once the principle is understood—though I recognize that this is a very complex problem—it may be that tax policy will prove a useful aid not only as a stabilizing influence but as a mechanism for timing and directing a flow of funds in the economy as a whole, so that tendencies toward accumulation of idle funds may be offset, or conversely, when there is need for more capital accumulation, it can be stimulated. In other words, it seems to me that we may well consider the influence that tax policy may have in contributing to a well-balanced relationship between consumer buying power on the one hand and savings and investment on the other hand. Such a balanced relationship is essential if we are to maintain reasonably full employment which, in turn, is a necessary condition not only for the protection of existing values of loans, investments, and other forms of capital, but also to provide further opportunities for profitable investment of new savings.

I have only touched upon some of these larger questions, which I know to be complex and controversial but which seem to me to be inseparably interrelated. I have sought to suggest a general approach which I feel the bankers, especially the younger men in the profession, might well consider if they clearly recognize the public responsibility that rests upon the banking system. Once that responsibility is recognized, it seems to me that they should be willing to adapt banking policy and banking machinery, including the present badly coordinated banking structure, to present-day national needs. They should be willing to approach sympathetically questions of Government policy, closely related to banking policy and directed to the same ultimate goal of giving the fullest possible expression to and thus preserving a capitalistic democracy.

Capitalistic democracy has more than justified itself in the past. There is no reason, except our own failure to understand the nature of our economy, why it cannot achieve even greater results in the future.

Status of Puerto Rico

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

STATEMENT BY HON. EDWARD R. BURKE, OF NEBRASKA

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the RECORD a most enlightening news interview with the junior Senator from Nebraska [Mr. BURKE]. It concerns the status of Puerto Rico under our present economic program, and has appeared in numerous newspapers of the country.

There being no objection, the interview was ordered to be printed in the Appendix, as follows:

The relationship of the Territory of Puerto Rico to the United States is probably subject to more misunderstanding on the part of the people and the Congress than any of our insular problems. We are favored with an island whose population is composed of over 1,800,000 American citizens, who are subject to the labor and social reform laws of the Federal Government. Their citizenship status differs in no way from the residents of any State in the Union, and their daily lives are governed by the same laws and under the protection of the same Constitution.

Following the War with Spain Puerto Rico chose to become a part of the United States, and since that time she has developed her social and economic structure as an integral part of the social and business life of the United States. She has developed those industries best suited to her soil and climate, with the understanding that her products were to be entered into trade on the continent. She has been entirely dependent upon continental farmers and factories for her food supplies and for virtually all other necessities for a comfortable standard of living in exchange for her products. Though Puerto Rico is subject to the general laws just as if she were a State of the Union, the Territory must pay the same minimum industrial wages paid on the continent. She sends her delegates to the same Presidential conventions. Ninety percent of her purchases are made from United States farms and factories. She is subject to the same shipping rates and coastal laws. Her men are in the same army and navy, and she fights for and under the same flag. In the matter of population, area, and national resources she stands well up among the States of the Union.

Despite these facts there still exists in the United States a mistaken idea that in some way Puerto Rico should be considered as a foreign nation, while in fact she faces the same competition from foreign nations as do the States of the Union.

A good example of our failure to treat with the problems of Puerto Rice in the true light of the Territory's relationship to the United States may be had from a brief analysis of our trade arrangements with Cuba. Cuba, being a foreign nation, is, of course, not subject to the minimum-wage and other social-reform laws of the United States. But she has been granted trade concessions far beyond those granted to the American citizens of Puerto Rico who are subject to such laws. Although sugar is the lifeblood of Puerto Rico, we permit them to sell here only 815,810 tons of sugar, or a per capita quota of 0.453 tons. Cuba, on the other hand, is permitted to sell to American citizens a total of 1,954,350 tons annually, a per capita sales which is 0.035 tons above Puerto Rico. In other words, each American citizen of Puerto Rico is allowed to sell less sugar than the foreigners of Cuba. In view of the fact that our laws seek a standard of wages and living for Puerto Rico which equals that of the continent, such treatment would seem far from equitable.

Our trade agreements with Cuba increased that nation's favorable balance of trade with the United States by about $71,000,000 during the 4 years following the beginning of our trade-agreement program. Much of this has been taken from Puerto Rico, as evidenced by the fact that the trade balance of the island actually decreased during this period by over $33,000,000.

By our overgenerous comparative treatment of Cuba we have seriously damaged the pineapple industry of Puerto Rico. We injured her coconut industry in favor of West Indies possessions of Britain. Now we threaten the destruction of her rum, sugar, and tobacco industries. In general, we are creating a situation whereby we may very justly be accused of overlooking or neglecting the welfare of 1,800,000 Americans.

Puerto Rico buys $65,000,000 annually from American farmers. The island has never attempted to develop a foodstuffs industry because she rightly assumed that, as an integral part of the Union, she would be able to enter her best-adapted products in the free course of American trade in exchange for our products. If we are prohibiting the island from taking its righteous place in our national economy, we should reverse our policies.

We have been spending millions of dollars in an effort to pull Puerto Rico up by her own bootstraps. The effort has been far from successful. Only by internal prosperity can she become economically sound, and it is much wiser to give her the opportunity to develop her own industries with the full protection accorded a State of the Union than to subject our island citizens to the humiliation and necessity of relief.

Plans for Defense

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

LETTER FROM MAJ. GEN. WILLIAM C. RIVERS IN THE NEW YORK TIMES OF JANUARY 15, 1939

Mr. NYE. Mr. President, the New York Times of Sunday, January 15, 1939, carried a letter written by Maj. Gen.

William C. Rivers on the subject of Plans for Defense. I ask that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of January 15, 1939]

PLANS FOR DEFENSE—A REMEDY IS SUGGESTED FOR COSTLY DUPLICATION

To the EDITOR OF THE NEW YORK TIMES:

Your editorial Bases for the Navy comments on the report of the naval board which has been studying the subject of naval air, submarine, destroyer, and mine bases in accordance with a provision in the special Naval-Increase Act of the last Congress directing that such a survey be made.

You state: "The principal recommendations urge the establishment of air and submarine bases in Guam and of an air base at Wake Island. Both these islands lie in the western Pacific, far beyond Hawaii and not far from Japan, the Philippines, and the troubles of the Orient. It is evident, therefore, that these proposals raise large questions of foreign policy."

Your editorial of May 9, 1938, commented favorably on the recommendation for the first two of the proposed new naval air stations—at Kodiak Island, in the Aleutians, and at Midway Island. You explained that these two bases are for defensive purposes—to aid the defense of the west coast of the United States. That editorial concludes: "In all, this bill seems to serve definite notice of our intention to strengthen and consolidate our position in the eastern Pacific. There is no mention of bases in the western Pacific—and rightly so. For the establishment of strong naval or air bases within easy cruising or flying radius of the main islands of Japan—as, for instance, at Guam—would serve no good purpose and would not be consistent with the present foreign policy of our Government."

ADMIRAL LEAHY'S OPINION

This new report of the naval board considers 41 bases in all—in the Atlantic, the Caribbean, and the Pacific. The board recommends improvements in a number of existing bases and suggests the building of many new bases. Nine new bases in the Pacific are recommended, in addition to our great base at Hawaii—2,300 miles west of San Francisco. These include the proposed bases at Kodiak Island and on Midway. The seven other Pacific new bases would be at Guam and on Wake Island and on the small islands running down to Samoa. Only Guam and Wake are west of the 180° meridian line.

Several things come to mind with reference to this plan for a tremendous addition to our fortifications in the Pacific Ocean. First are Admiral Leahy's statements to the Naval Committees last winter. Our principal authority on naval matters said that the Navy would be "seriously inadequate to the task of sending a naval force to the Philippines," even after the increases in the fleet are completed.

Again, "I doubt if we could undertake such an expedition with three times the increase." Also, "the defensive line of the American Navy at the present time reaches from the Aleutian Islands to the Hawaiian Islands, to Samoa, and to the Canal."

COSTLY UNDERTAKING

Next is the great cost of fortifying such a number of bases—the forts, heavy guns, artillery soldiers of our Army to man the guns, and so on. Third is the threat to Japan. Our placing a base at Guam on the flank of Japan would be a strategic threat to Japan. If Japan were to set up a base on the flank of our territory, say, in the Gulf of Lower California, it would be a threat to the United States.

Then there is the inaccessibility of Guam. Guam is nearly 4,000 miles west of Hawaii. The long sea route is a hazardous one; it is flanked by numerous mandated islands of Japan. Of course, Guam, as well as Manila, can be easily bombarded by airplanes from several Japanese bases. It is farfetched to designate Guam, or Manila, as a base—6,200 miles and 7,500 miles, respectively, from the west coast of the United States. The customary strategic designation would be to call a fortification at either of these ports simply a salient—an exposed and indefensible salient.

You remark that the Navy and the Army should take care that their bases are not duplicated. The Army searches for an air base in Alaska, in the northeast and the southeast of our country; so does the Navy. Each service establishes at Washington a medical plant—two of the world's greatest hospital plants within 3 miles of each other. They operate two great air fields at Washington—separated by a wire fence. The immense training fields for aviation of the Navy stretch across the country from coast to coast. These are paralleled by perhaps even larger training fields for Army aviation.

NEW CABINET JOB

Who is to minimize or put an end to this? Who is to coordinate the three armed services? Who is to study plans such as this one for bases over far-flung seas—before the plans are sent to the Congress? Who is to inspect the relative progress of the Army and the Navy? Practically always the civilian heads of the Navy and the Army become partisans. Elihu Root frequently said that as the Secretary of War he considered himself the attorney for the Army. Who is to be a nonpartisan attorney for the national defense?

The remedy for much of the duplication is fairly simple. To have one Cabinet minister of defense—one fairly able and moderately experienced man. Every other important nation has such a defense minister. He would soon arrange that in each House of Congress there would be one national-defense committee. Now there are two in each House.

However, the New York Times opposes such a useful reform. There was little or no support for the recommendation of the Federal Aviation Commission of 1935—that Congress provide for a thorough study and investigation of the subject of the best organization of the defense forces.

WILLIAM C. RIVERS,
Major General, U. S. A. (retired).

New York, January 12, 1939.

Farm Legislation Before Congress—Article by A. W. Ricker

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

ARTICLE BY A. W. RICKER IN MINNESOTA LEADER, OF ST. PAUL, MINN., JANUARY 21, 1939

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a very able article written by A. W. Ricker, editor Farmers' Union Herald, and published in the Minnesota Leader, of St. Paul, Minn., January 21, 1939, entitled "What Will Congress Do for the Farmer?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT WILL THIS CONGRESS DO FOR THE FARMER?—FIRST OF A SERIES OF ARTICLES ON FARM LEGISLATION BEFORE CONGRESS—THE LEADER WOULD LIKE COMMENT AND SUGGESTIONS ON THE MATERIAL OF THE SERIES

(By A. W. Ricker, editor, Farmers' Union Herald)

The 1939 Congress will not agree on any long-term agricultural program.

Two reasons move us to make the prediction.

First, there are as many differences of opinions and lack of opinions among Congressmen and Senators about the farm problem as there are among farmers themselves.

Second, Republicans and Democrats are now laying the basis for the 1940 Presidential campaign, and practically everything done in Congress will be done, not from the standpoint of what is good for the people, but of what will get votes for the Republican or Democratic Parties. And in both parties there are two factions, a right and a left wing, and these two interparty factions are more opposed to each other than are the Democratic and Republican Parties themselves.

One of the factions, or "blocs," composed of 16 Senators, including the two from Minnesota, and a number of Congressmen, has introduced into the Congress a farm-commodity price-fixing bill.

PRICE-FIXING BILL

We have not seen the bill, but we have heard enough about such a program to know what it is. It is proposed to fix a price by law on that part of the principal farm commodities which are consumed in the United States. Dealers in farm products would be licensed and subject to a fine if they pay less than the fixed price on that portion of the product to be consumed in the United States. The bill, we assume, provides a formula for figuring cost of production. We assume this because all the other price-fixing bills have provided a formula. The formula considers the farm a factory and the farmer a manager. As manager, the farmer is to be allowed a salary and all members of the family who work are to be allowed wages. An accounting system is set up allowing for depreciation of machinery, interest on investment, etc. The result of all this as applied to a 10-year average production of farm commodities gives a cost-of-production index. And since to arrive at the average cost of production requires that the poor farmer be averaged with the good, and the poor land averaged with the good, the price index which results from such an average is pretty high. It would bring the price of butter up to around 60 cents per pound, pork about $16 per hundred, corn

around a dollar per bushel, etc. These, be it remembered, are prices at the central market and do not represent the prices which consumers would pay at the retail stores. This makes a very attractive program for farmers, and one need not wonder that it has great appeal.

FARMER-WORKER INCOMES

During the late political campaign in Minnesota we distributed thousands of copies of a farm pamphlet in which it was shown that here in the United States the farmer's share of what the consumer pays for a dollar's worth of bread is 12 cents. The farmer's share of the beef dollar is 40 cents, of the pork dollar 40 cents, and the veal dollar 44 cents. It will be found that the market price paid to the farmer for other products, and what the consumer pays for these commodities will show the same relative disparity.

We do not have figures at hand to show how much of the consumer's dollar a wage worker gets for producing the things which farmers buy. The figures, however, when arrived at would show the same disparity.

Moving the price index upward, both of wages and of farm products, without interfering with the profits of disribution will not solve either the farm problem or the labor problem.

As proof of the foregoing the following figures are cited, taken from a recent survey made by Cornell University: "Farm prices of foods are now 99 percent of pre-war, costs of distribution are 178 percent of pre-war, and retail prices of foods at the stores 140 percent of pre-war." The city consumer eats food not at the 99 percent received by the farmer but the 140 percent demanded at the stores.

Cooperation must be used to remove the exploitation and the high cost of distribution before the problem may be solved. And in the end the problem will be solved only when workers and farmers solve it together.

But there are many wage workers who think their economic problem may be solved by higher wages alone, and there are perhaps as many farmers proportionately who think the farm problem is merely one of price levels.

Workers who think of the problem only in terms of wages, and farmers of prices, both ask Congress for price fixing by law.

If both groups were successful in putting themselves on price-level stilts, the relationship between the two would not be changed. It would take more wage money to buy a pound of pork chops and it would also take more money to buy an hour of wages. In between the two groups of producers are the financiers, distributors, and speculators whose rate of profit would rise with the prices of wages and commodities.

BEYOND THE A. A. A.

The late Republican platform makers here in Minnesota contented themselves with merely declaring that the farmer ought to have cost of production plus a profit. This, we assume, is a little better than the average cost of production.

Politicians are getting themselves in pretty hot water, however, by making promises which they cannot and, in a lot of cases, have no intention of trying to fulfill.

The New Deal farm program has not achieved its goal set by the Adjustment Act passed by Congress in 1933, and that is the reason for agricultural pressure on Congressmen to do something other than what has been done.

The goal of the Triple A was prices of farm products raised to a parity purchasing power with those of labor and industry, and this has not been achieved.

We should study, however, two outstanding things with respect to the alleged failure of the New Deal farm program. First, the Supreme Court annulled the essential elements of the original Adjustment Act in 1934. Second, the reactionary judges of 1934 would, in the opinion of the writer, have annulled a price-fixing act also.

Under the original Adjustment Act we had a domestic-allotment program for wheat, which was working well. We had price-making marketing agreements for tobacco and other products which worked. We had a corn-hog program which did not work to the satisfaction of hog growers.

After the court decision came we substituted a soil-conservation program, which is capable of vast benefit to agriculture, as soon as it can be divorced from price-making or price-affecting devices.

We would like to dwell at this point long enough to catalog the beneficial things which have been done for agriculture by the New Deal, and likewise discuss the mistakes and failures, but in the limits of this article we cannot do so.

We of the Farmers Union here in the Northwest have directed our legislative work toward such emergency measures as getting Government relief for drought-stricken farmers, reducing interest rates, scaling down debts, securing crop insurance for wheat, which we hope to extend to other crops; securing Government aid and protection to co-ops, and things of a like nature. We are trying to help our farmers by such governmental aids to live and stay on the farms until we can build a cooperative system which will safeguard both workers and farmers and make both secure and reasonably comfortable.

In this respect we are following the footsteps of the farmers and workers of Norway, Sweden, Denmark, and Finland. The farmers in these countries get from 30 to 60 percent more of the consumer's dollar than do the farmers of the United States. In Denmark the farmers own their own meat-packing plants, as well as creameries for the manufacture of butter. In the cities the workers own the stores. In Sweden the co-ops own factories, and by such ownership have broken the power of the trusts. We do not believe that we can solve the farm problem by legal price fixing such as that proposed by the 16 Senators. If such a law were placed on the statute books, we doubt if it would stay there long, because it would raise prices to consumers to a point where the consumers would rebel.

The Current Agricultural Problems

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

STATEMENT BY EXECUTIVE COMMITTEE OF THE NATIONAL GRANGE, JANUARY 22, 1939

Mr. LEE. Mr. President, on January 22, 1939, the executive committee of the National Grange issued a statement on current agricultural problems, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

1. The Nation is confronted with two major issues—falling farm prices and continued unemployment. Any program that brings to agriculture a larger share of the Nation's income and makes farming profitable will go a long way to correct the problems of unemployment.

2. To bring this about, we ask for amendments and simplification of the Farm Act. The American market must be given to the American farmer so far as he is able to supply it.

3. We ask for adequate appropriations for our experiment stations, to enable the States to launch immediately a new program of research in the effort to find new uses for farm products and for the introduction of new crops to take the place of some of the acreage now devoted to the production of surplus commodities.

4. Honest branding of foods and fibers will help agriculture and the consumer as well. For example, 600,000,000 pounds of shoddy and wool substitutes have been used in the manufacture of clothing and fabrics during the past 6 years. Wool labeling legislation should be passed at this session of Congress.

5. Special emphasis should be placed on new uses for cotton, and every effort made to assist the growers of this staple, who are in great financial distress.

6. We favor the continuance of marketing agreements as an aid in the orderly distribution of farm products.

7. We ask for the continuation of the helpful policies of the Farm Credit Administration and favor the lowest interest rates on farm loans consistent with a sound lending policy.

8. We favor a sound long-time policy of land utilization, providing for the retirement of submarginal land, reforestation, and the protection of water and wildlife resources, together with soil conservation and the prevention of erosion.

9. Our goal should be the preservation and prosperity of the family-sized farm. Corporation and chain farming should not be encouraged by the Government. A limit of $5,000 should be placed on benefit payments going to individual farmers or corporations.

10. We favor continued private ownership and operation of the railroads and advocate the taking of proper steps by Congress for the rehabilitation of the roads. We do not favor the imposition of uniform regulations on all modes of transportation and are opposed to the repeal of the long-and-short-haul clause of the Transportation Act. No unnecessary restrictions should be placed on water transportation.

11. The Government should pursue a policy calculated to restore employment in private industry, thereby increasing the purchasing power of the consumer. There must be team play between agriculture, industry, and business to make the country permanently prosperous.

(The statement was signed by L. J. Taber, of Columbus, Ohio, master of the National Grange, and by the following members of the executive committee: Fred J. Freestone, New York; E. A. Eckert, Illinois; and Ray W. Gill, Oregon.)

An Economic Program for American Democracy

EXTENSION OF REMARKS

OF

HON. THEODORE F. GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

EXCERPTS FROM AN ECONOMIC PROGRAM FOR AMERICAN DEMOCRACY

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from An Economic Program for American Democracy.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

I. THE CRISIS OF THE AMERICAN ECONOMY

The economic development of America may be divided into two periods. The first, beginning when the earliest colonists set foot on our shores, was the period of economic expansion. It came to a dramatic close with the collapse of 1929. The second period has so far been one of economic stagnation.

By economic expansion we mean an increase in the aggregate national output of goods and services. This aggregate, measured in terms of money, is called the national income, and to its formation individuals, associations of individuals, and governments all contribute. Throughout the nineteenth and early twentieth centuries the national income grew. There were, to be sure, periodic setbacks; but each successive trough was higher than the preceding trough, each successive peak higher than the preceding peak. From a total of a few score million dollars in the late eighteenth century the national income grew to the vast total of $83,000,000,000 in 1929, an expansion unrivaled in the history of the world. Why?

Basically, the reason is simple and well known. The American people had a continent to settle and build up. Great cities were constructed, industries sprang up where none existed before, railroads and highways spanned the continent. The national income of each year included a substantial addition to the basic plant and equipment of the Nation. The purchasing power distributed in this vast constructive adventure furnished an ever-growing demand for articles of consumption. Rapid increase of population, resulting from an excess of births over deaths as well as from a steady stream of immigration, supplied the necessary labor force and constituted a seemingly ever-expanding market for the products of industry. Quantities of manufactured goods were imported from the older industrial countries of Europe, partly in exchange for the products of American agriculture, partly for promises to pay in the future. Waves of great fortunes showed by their origins the dominant economic activity of successive generations of American businessmen: First shipping and trade; then urban real estate; then railroads, finance, and the exploitation of natural resources; then industry and finance; and, finally, public utilities and finance—each in turn gave rise to a new crop of American millionaires.

During all this period Government played the role of fairy godmother to the American businessman. The rich national domain was parceled out with the generous hand of an indulgent parent—franchises, rights-of-way, patents, and other valuable privileges were to be had for the asking. Only occasionally did the Government see fit to call a halt to excesses or intervene in the interests of the common man. And the American people, with few exceptions, held their peace, took the bad along with the good, and found the system satisfactory. Why? Because it worked. For all its waste, inequities, and injustices this system did increase the national income, not only absolutely but also per capita; it built up a continent and established the richest country on the face of the earth. For these things the American people were grateful and they displayed their gratitude with unlimited tolerance and generosity.

From a world viewpoint the settlement and industrialization of the North American continent was the most spectacular achievement of western capitalism. It was, however, by no means the only such achievement. Everywhere the frontiers of civilization and trade were pushed outward. The manufactured goods of the European nations flooded the newly opened overseas markets; this was followed closely by machine technique hand in hand with the capital necessary to make it effective. In this way Africa, South America, Asia, and Australia were all brought within the ambit of capitalism, while on the European continent itself industrialism steadily spread into areas where formerly the modes of a simple agricultural economy had prevailed. Thus the economic systems of the whole world were geared to expansion, and their healthy functioning depended upon the continuation of the basic conditions of expansion—the availability of new lands and new markets. From this it follows that our analysis, while directed specifically to the development of the United States, applies, so far as broad principles are concerned, to the development of the entire capitalist world.

It must not be supposed that the changes which underlay the reversal of trend from 1929 to the present time came about suddenly and without forewarning. From small beginnings around the turn of the century they cumulated, snowball-like, until by the end of the twenties they had altered the whole structure of our economy.

Two facts stand out as basic directives of the new course. The first, generally known as the disappearance of the frontier, spelled the end of expansion into new and unsettled territory. The second, a decline in the rate of population growth, served notice on American business that neither the labor force at its disposal nor the market for its products was indefinitely elastic. Taken together, these two facts could lead to only one conclusion, the extensive period of American economic development was coming to a close; henceforth development would have to be increasingly intensive in its character. The disappearance of the American frontier, morever, presaged the end of world expansion into new areas. The fact of arriving at the limits of expansion was no less significant for the industrial nations of Europe than for the lands in which the event occurred.

The full implications of this great change were hidden from the view of contemporaries and are beginning only now to impress themselves upon observers of the economic scene. The field for intensive development was still immense. Our population was moving into cities which had to be built up and provided with essential public utilities; the automobile, bringing in its wake a vast demand for more and better highways, was the direct cause of a whole new set of social habits, and with them of new needs. Businessmen and governments extending past trends into the future, continued to make large outlays for the years ahead. In so doing they drew resources into the orbit of production and distributed enough purchasing power to provide the American people with a slowly rising standard of living in the present.

Then came the World War and its aftermath. For a decade and a half America became the provisioner of half the world. The promises to pay which had been made during the nineteenth century were brought back with goods and services; the trend reversed itself, and America accepted a mass of promises to pay with scarcely a thought as to how they could be met by the impoverished countries of Europe and South America. Agriculture boomed for a time, and then, following the cessation of the extraordinary wartime demand, slumped off never to recover. Industry continued to prosper throughout the twenties. The demand for housing and buildings of all kinds burst through the barriers which had held it back during the war years, and America experienced its greatest building boom. The national income continued to climb, reaching, as already pointed out, an all-time high of $83,000,000,000 in 1929.

Housing and automobiles were the backbone of the prosperity of the twenties. Houses were built to fill the gap occasioned by a still growing population and the cessation of construction during the war. Automobiles, along with a mass of subsidiary and complementary products, were produced for a predominantly new demand. In other words, the greater part of the houses and automobiles built during the twenties constituted a net addition to the Nation's total stock of those commodities, and only a relatively small part went to replace houses and automobiles which had worn out. When, during the closing years of the decade, the new demand became saturated, the replacement demand, though gradually increasing, was not nearly sufficient to maintain those industries on the scale to which they had been expanded. The backbone of the prosperity was broken; the great industries which had been primarily responsible for it ceased to distribute enough purchasing power, and quickly the whole economic structure collapsed.

What chance is there that these or other industries will resume the upward trend sufficiently to lift the whole national income onto a higher plane? The rate of growth of population has slowed down to a snail's pace by now; cities have almost ceased expanding; the resumption of foreign lending on a large scale is out of the question; no new industries capable of leading the way are in sight. The country needs rebuilding, to be sure. But business can see no profit in tearing down what already exists no matter how inadequate it may be. Business operates for a demand it sees in the offing, not for a demand which its own activity can alone create. The failure to build for the future means a failure to distribute purchasing power in the present.

We reach the conclusion that the expansion of the nineteenth and early twentieth centuries was based on building for the future, which carried with it an adequate demand for consumable goods and services in the present. Building for the future was good business in an expanding economic universe with a rapidly growing population. When the limits of expansion had been reached, when the rate of population growth slowed down, building for the future became an increasingly hazardous adventure. Its volume contracted and with it the ability to buy in the present. Expansion fed upon itself in the past; contraction feeds upon itself in the present. These are the basic changes which underlie the reversal of trend from 1929 to the present.

The severity of the great depression of 1929–33 was due to the fact that upon a basic change in trend there was superimposed a violent cyclical downswing. The national income fell in 1932 to half its 1929 magnitude, and it might well have sunk even lower had not the Federal Government, driven on by unparalleled distress among the people, embarked upon a spending program which put a bottom to the vicious spiral of deflation. Government spend-

ing initiated a recovery movement which carried through to 1937. But less than a year after the Government began to withdraw from its active role of distributor of purchasing power the economic system went into another tailspin, unmatched in steepness even by the collapse of 1929. At the peak of the recovery movement in 1937 national income was still 15 percent below the 1929 level, while the number of unemployed—approximately 10,000,000—was perhaps three times the number unemployed in 1929. Had the national income grown between 1929 and 1937 at the same average annual rate as it grew between 1920 and 1929, it would have been nearly 40 percent larger in 1937 than in 1929. Instead it was 15 percent smaller. If any demonstration were needed that a basic change has come over the structure of the American economy, surely this is conclusive proof.

II. THE EXPERIENCE OF THE LAST 5 YEARS

* * * * * * *

One of the lessons of the past 5 years has been the striking demonstration of the efficacy of public spending in promoting national well-being. Viewed merely in terms of the direct objects of expenditure—the provision of relief and temporary jobs to the unemployed, benefit payments to farmers, the development of useful public projects, and the restoration of the Nation's financial structure to solvency—the Federal Government's program of increased expenditures has been of inestimable social benefit. But these direct gains, important though they were, were less significant than the secondary effects of deficit spending in producing a marked expansion of general industrial activity and private employment. On the basis of a careful study of Government receipts and disbursements, it has been computed that the net expenditures of the Federal Government tending directly to expand the Nation's income averaged $3,000,000,000 a year from the middle of 1933 to the middle of 1936, as compared with an annual average of only one and three-tenths billion dollars in the preceding 3½ years. By the latter part of 1936 the national income had reached a level equivalent to about $70,000,000,000 per annum as compared with $41,000,000,000 in 1932–33, both the physical output of mines and factories and the average prices received by farmers for their produce had more than doubled, and some 8,000,000 more workers were employed in private jobs than at the depth of the depression.

The decisive importance of public spending for national well-being has been further underscored by the events of the past year, when an abrupt curtailment of net Federal expenditures was followed by a severe contraction of economic activity. The net contribution of the Federal Government to the Nation's income was sharply reduced in the latter part of 1936 and early 1937, and for the year 1937 as a whole there was no significant net excess of expenditures over receipts. The consequences of this sudden curtailment were not immediately reflected in the Nation's economic life, but in the late summer of 1937 there began the sharpest decline on record in industrial activity and employment.

* * * * * * *

It is frequently said that public spending in some fashion prevented "natural" recovery by impeding the resumption of private investment. This assertion is precisely the opposite of the truth. In fact, public spending generated the forces which led, in 1935, 1936, and early 1937, to marked growth in private capital outlays. * * *

* * * Capital expenditures by manufacturing and mining concerns to replace and expand their plant and equipment, after averaging three and one-tenth billion dollars a year in the 3 prosperity years before 1929, had been curtailed by 1932–33 to the level of eight or nine hundred million dollars a year, little more than one-fourth the predepression level. Under the impetus of a rising consumer demand for the products of industry, such expenditures rose to one and four-tenths billion dollars in 1934, one and seven-tenths billion dollars in 1935, two and three-tenths billion dollars in 1936, and three and two-tenths billion in 1937. In addition, capital outlays in agriculture, for farm improvements and machinery, were as large in 1937 as in 1928 or 1929. In other words, the rate at which private capital expenditures were being undertaken in 1937 compared favorably in three important fields—manufacturing, mining, and agriculture—with that of the late 1920's, the high point of the American post-war prosperity.

* * * * * * *

If the volume of private capital outlays in several important industrial fields was as large in 1937 as is here described it may well be asked why the recovery movement did not sustain itself after the Federal Government's net contribution to community expenditure had been curtailed. * * *

* * * * * * *

* * * In several important fields, notably the railroads, the public utilities, and residential construction, capital outlays had shown only a sluggish revival during the recovery years, and it is necessary to examine the obstacles to further expansion in these areas.

With respect to the railroads, it had already become apparent in the 1920's that this was a declining industry. Automobiles and busses were encroaching upon passenger traffic, while trucks and pipe lines were diverting freight business. Although much railroad rolling stock is worn out or obsolete, and its replacement by new equipment would enable the railroads to handle more economically the traffic which remains, the inflated financial structure of the roads—a legacy of generations of predatory manipulation of railroad finances—made it impossible, under conditions of a long-term declining tendency in traffic volumes, to obtain funds through the flotation of securities. The inflated capitalization and banker control of the railroads presented in 1937, and still presents, a major obstacle to substantial investment in this field.

Although the electric power industry, unlike the railroads, still appears to be relatively well situated from the standpoint of possibilities for long-term growth, its phase of youthful, spontaneous expansion came to an end in the decade of the twenties, and further vigorous growth in this industry must depend in the future much more largely upon wise public policy. Despite the frequent statements of public-utility company executives that great expansion programs would immediately be undertaken if the holding-company legislation were repealed and Government competition in this field allowed to lapse, it appears that the generating and distributing capacity of power companies in 1937 was adequate, except in a few scattered localities, to provide all the power which the public could afford to consume at prevailing rates for electricity. During the present decade the previous rapid growth in electric power consumption has been checked; the rate of depreciation of capital equipment in the utility industry is slow, and much of the existing equipment is relatively new. These facts, rather than Government policy, explain why capital outlays by the electric power industry in 1937 were only a little more than half as large as in the late twenties.

* * * * * * *

In the field of residential construction, also, there were serious obstacles in 1937 to a further revival of private investment activity despite the existence of enormous long-term potentialities for expansion. The living conditions of the urban poor are appallingly bad, and the provision of decent homes for this important group of our population ought to furnish a large field for capital expenditures for many years. City slums are no new feature of American life, however; the private building industry has never been able to make slum clearance a profitable enterprise, and this field is likely to remain untouched by private initiative. In other words, this great social need cannot be translated into effective demand without extensive governmental assistance, and activity in this field was confined in 1937 to a few Government-sponsored projects.

The traditional domain of the private building industry—the construction of new homes for the medium- and upper-income groups—was held back in 1937 by several serious obstacles. Although the average rate of residential construction during the thirties has been little more than one-quarter of the average rate during the twenties, there has been no evidence in most of our cities and towns of a serious shortage of housing accommodations for the middle- and upper-income groups. The declining rate of population growth, combined with the postponement of marriages during the depression and the movement of population from cities to rural areas, serve to explain the absence of large unsatisfied demands. In addition to this basic limiting factor, building costs were relatively high, interest rates charged by mortgage lenders were excessive, and the organization of the construction industry along local handicraft lines was unfavorable to the development of efficient and economical methods.

During the past year Government action has made some headway in removing the obstacles to a revival of house building. Sums have been appropriated for slum clearance; interest charges by mortgage lenders participating in the mortgage-insurance system have been reduced; and, through recent Government-sponsored housing projects, substantial strides have been taken in the direction of extending economical mass-production methods to home construction. The spotlight of publicity has been focused on the high level of building costs and costs have as a result been perceptibly reduced. Because of the active steps taken by the Government during the past year the impediments to a revival of construction activity have been diminished, and the outlook for this industry is more favorable than it was in 1937.

We may conclude that the opportunities for profitable investment in factories and mines had been rather fully exploited by the spring of 1937, and that there were serious obstacles to expansion in the other major sectors of private investment activity. Under these conditions the abrupt curtailment of net Federal expenditures in the second half of 1936 and 1937 was bound to produce a sharp contraction in income, employment, and output. This was especially the case since State and local authorities were no longer making capital expenditures for roads, schools, and other public construction projects at anything like the rate which had prevailed in the twenties. For a time speculative building up of inventories by business concerns and heavy installment buying by consumers served to delay the impact of reduced net Federal expenditures, but only to intensify the sharpness of the blow later on. In the summer of 1937 the cumulative contraction of the Nation's economic life set in, and the subsequent reduction in industrial employment and output was even sharper than after the 1929 collapse.

We have seen that public expenditures during the years 1933 to 1936 did produce a cumulative expansion of American economic activity and did generate a relatively large increase in capital expenditures in important industrial fields, notably manufacturing, mining, and agriculture. But owing to deep-seated historical causes having nothing to do with the spending program itself,

private investment in other fields did not have sufficient potentialities for expansion, and did not respond vigorously enough to fill the gap left by the sudden curtailment of Government spending in late 1936 and 1937. Consequently a violent contraction of national income was inevitable. This contraction did not indicate a lack of effectiveness of the 1933–36 spending program, but rather demonstrated the indispensability of continued public spending under present-day conditions.

The implications of this experience for Government policy should be plain. The Government must assume responsibility for maintaining the national income at a sufficiently high level to assure full and effective utilization of our human and material resources if needless hardship and suffering are to be averted and a decent standard of life for the common man attained. The notion that public spending can safely be resorted to only as a temporary, emergency device must be abandoned. A program must be developed which recognizes the necessity for permanent public investment. The outlines of a program adapted to present-day requirements are set forth in the next section.

III. A Program for the Future

(A) THE IMMEDIATE PROBLEM

The immediate problem facing America is to raise the national income to a level at which all of our resources will be employed; the long-run problem is to keep it there. Not much need be said about the immediate program. The foregoing survey of New Deal experience indicates clearly enough the direction in which the solution is to be found. The Government's contribution to incomes raised the national income from $40,000,000,000 in 1933 to $70,000,000,000 in 1936. A new spending program, provided it is undertaken on a large enough scale, will unquestionably have the same effect again.

The instruments for carrying it out are, moreover, ready to hand. First and most important is the Works Progress Administration (W. P. A.). * * *

The current recovery program should be financed—just as the 1933–36 one was—through borrowing. Banks, insurance companies, and wealthy individuals have large cash reserves for which they can find no attractive investment outlets. In putting this money to work through its recovery program the Government will be performing a vital economic function. No one will be the loser; rather, everyone will gain thereby. The very institutions and individuals from whom the money is borrowed will find their incomes increasing with the general increase in the national income. As to the Government's own finances, the increase in tax revenue will be far more than enough to meet the interest on the additional debt. From 1932 to 1937, $15,500,000,000 was added to the gross public debt. The annual income of the Nation increased by $30,000,000,000 in the same period. As against an increase of only $258,000,000 in the annual debt charge, tax revenues went up $4,400,000,000 per year. This was clearly a borrowing program that paid for itself handsomely.

(B) THE PERMANENT PROGRAM

* * * The national income can be looked at in two ways: according to the way it is spent and according to the way it is earned. On the spending side the Nation uses only part of its income for consumption purchases. The rest is saved; that is, it is withheld from consumption and either allowed to accumulate in a bank or is invested in securities, an insurance policy, or a personal business. On the earning side, the national income is received in part by those engaged in the production of goods for current consumption; in part, by people engaged in building durable capital structures. Wages, salaries, rents, interest, and profits paid out in the construction of houses, roads, railroads, public-utility plants, and the like fall in this category. So long as corporations and individuals who have the power to spend money on capital goods decide to pay out at least as much as the whole country is simultaneously deciding to save no serious difficulty develops. But this balance is precarious. There is no necessary equivalence between the two sets of decisions. On the whole, the country's saving is inflexible—both because of the unequal distribution of income and the prevalence of saving through institutions. This means that an unfavorable change in the investment outlook causes little shifting from saving to spending on consumption.

Investment demand, on the other hand, is highly variable. Even in the period of its great expansion the American economy was subject to periodic set-backs because of temporary choking of investment outlets. Today the country is faced with a long-run change in trend. Private enterprise, even at its best, is unable to absorb the whole of the savings the country tends to pile up. In the absence of supporting measures by the Government, the result is a collapse of economic activity and a decline in the national income to poverty levels.

The danger of such a decline can be attacked from two sides. On one side, redistribution of income from the saving to the spending sections of the community will reduce the country's saving and increase its consumption. On the other, new fields for the investment of savings can be developed. A careful consideration of the country's needs leads us to advocate an attack on the problem from both sides at once.

First, as to consumption. There can be no doubt that the lower-income families in the country need more money to spend on ordinary articles of consumption. According to an estimate of the Brookings Institution, even in 1929 about 70 percent of the families in the United States had incomes of less than $2,500. Twenty-one percent were below the $1,000 line. Clearly there was plenty of room even in that prosperous year for increased consumption on the part of the mass of the people. Had the then-existing Government been looking for ways to maintain full employment of the country's resources, there was plenty of opportunity for expansion in meeting the consumption needs of the mass of the people. There was no need to search for new and strange fields for investment.

On the other hand, it would not be good public policy at this stage in our national development to rely entirely on increasing consumption directly through redistribution of income as a means of sustaining stable prosperity. Most important of the considerations against such a policy is the fact that there are vast fields in which investment, particularly public investment, is needed. In some fields, notably the provision of low-cost housing, public investment is a necessary adjunct of a consumption-increasing policy. Since private enterprise has been unsuccessful in the provision of new housing for the lower-income families, public agencies must themselves undertake extensive housing construction if the dwelling standards of these families are to be raised. Large public investment in building schools and hospitals will similarly be necessary if the country is to provide itself with more adequate education and health services. Other investment fields—highway building, conservation of natural resources, flood control, city planning, etc.—though less directly related to consumption, are just as important to the increasing well-being of the Nation.

* * * * * * *

4. Financing the investment program

The long-range public-investment program should be financed chiefly through borrowing. This will, of course, mean a steadily increasing total of public debt. To many people—perhaps to most people—the prospect is terrifying. The public debt, they say, cannot continue to increase forever. The Government will never be able to pay it back. The burden of taxation will eventually become intolerable. These and other apprehensions are the result in part of confusion—in part of hostility to the extension of conscious social action in the economic sphere.

Much of the widespread confusion on the subject of debt arises from an understandable tendency on the part of the average person to reason from his own personal experience. The wage earner, the salaried worker, and the farmer know that, so far as they are concerned, debt usually means trouble. They certainly cannot go on increasing the amount of their debts indefinitely. They may be called on to repay all or a part of what they owe, and they must be prepared for this contingency. They know, too, that any increase in their debts inevitably means the deduction of an additional slice from their income to meet interest payments. No wonder they consider debt something to be avoided and look with alarm at the continued increase in the debt of the whole Nation.

Few people are accustomed to thinking in terms of the economy as a whole—much less in terms of the economy as an expanding organism. They could scarcely be expected, therefore, to realize that what applies to personal debt does not in the least apply to the business and public debt of the entire Nation. The fault lies not with them but rather with the economists and publicists who have failed in their responsibility for educating the public on so important a matter.

If we look at the whole Nation as a going concern, we see that its internal debts, business and governmental, are merely another aspect of its assets. Debt in the broad sense is the obverse of investment. This fact, taken for granted in business accounting, is entirely ignored in our present method of Federal budgeting. An expanding economy not only can, but must, continually increase the total volume of debt outstanding. The long-term debts of business and governmental agencies in the United States increased from $38,000,0000,000 in 1913–14 to $126,000,000,000 in 1929. From 1921 to 1929 the increase was from $75,000,000,000 to $126,000,000,000. This growth in debt was an inevitable accompaniment of the large volume of corporate and public investment that characterized that period. In the period of recovery since 1932 attention has been concentrated on the increase in the debt of the Federal Government. For purposes of comparison with earlier years, however, it is necessary to look at the country's entire debt. State and local governments, public utilities, railroads, and other business corporations should be included along with the Federal Government. From 1932 to 1937, while the Federal debt was increasing by $15,500,000,000, the State and local governments actually reduced their debt slightly, and the net increase in total corporate debt was probably not more than $1,000,000,000. Taking $16,000,000,000 as a rough estimate of the increase in debt from 1932 through 1937, we get an annual average increase of $3,200,000,000. This must be compared with the annual average increase of over $6,000,000,000 in the prosperous decade of the twenties. Clearly the total debt, corporate and public, has not increased by an excessive amount since 1932 if the experience of former years is taken as a basis of comparison.

* * * The expansion of debt at a rate sufficient to absorb the Nation's savings is both sound and necessary. This rate could be excessive only in the sense that the rate of savings itself was excessive. Thus, what we should worry about is not the increase in the debt but the increase in savings beyond the amount that can be absorbed by investment.

* * * The payment of interest on the public debt does not in itself constitute a deduction from the Nation's income. What the Government raises in taxes to meet debt charges it pays out again in interest to the holders of its bonds. The extent to which a burden is involved depends on who holds the bonds. This point is of importance in considering the extent to which the debt will impose a burden on future generations. The same generation that pays the taxes inevitably receives the interest payments. It is thus up to each generation to determine by the way it apportions its taxes how much of a real burden interest payments on the public debt shall be.

* * * No one complained during the nineteenth century that the mounting total of interest payments due from this country to English and other foreign creditors was impoverishing the Nation. Quite the contrary, they looked with equanimity on the steadily growing debt, since they realized that it provided the essential means with which the productive equipment of the country was being built up. * * *

Government credit: It is important to realize that a threat to Government credit is a political, not an economic, issue. Under modern conditions a large part of the investable funds of the country are in the hands of a few large financial institutions—banks, trust companies, and insurance companies. The men who control these institutions have it in their power, if they disapprove of a government's program, to refuse to buy its bonds and hence "weaken its credit." With the large excess bank reserves and surplus funds seeking investment, which characterize our present-day economy, such a refusal could only be considered political in its implications. Should such an eventuality arise, which it may be hoped is unlikely, the Government would be forced to take measures to protect the community by extending the already recognized principle of public control over the financial system. The Federal Reserve banks would provide a first line of defense. But selling bonds to the Reserve banks would not be a satisfactory permanent solution. If the commercial banks should continue to refuse their cooperation, the public would clearly be justified in assuming control of the entire banking system.

* * * Until our resources are fully employed there can be no danger of general inflation. For when they are idle, additions to money expenditure mean additional men hired and additional goods produced.

* * * * * * *

IV. CONCLUSION

* * * Here in America we can save our free democratic institutions only by using them to expand our national income. For private enterprise, left to its own devices, is no longer capable of achieving anything approaching full employment of our human and material resources. This the experience of the last decade has taught us. No one is to blame for this state of affairs; its explanation lies in the structural changes in the economies of the capitalist world which we have already analyzed. Those businessmen who profess to see the origin of our difficulties in uncertainty and fear of what the future will bring forth are simply mistaking symptom for cause. They lack confidence in the future because the future holds insufficient promise of profitable investment and expanded markets. The policies of government which businessmen are wont to hold responsible for their lack of confidence in the future arise in part from a desire to preserve to business its paying customers, in part from a realization of the necessity for eliminating serious abuses from our commercial and fiscal practices, and in part from an insistent demand on the part of the people that labor be given the same opportunity for self-organization that business has long enjoyed. Surely measures as wise as these would not prevent businessmen from providing for the requirements of an expanding economy, nor would their abrogation induce investment in the face of a contracting trend. President Roosevelt was entirely justified, we believe, when he recently stated that "the problem of bringing idle men and idle money together will not be solved by abandoning the forward steps we have taken to adjust the burdens of taxation more fairly and to attain social justice and security."

* * * The malady of industry is the loss of customers and profits, which only Government intervention can restore to it, for the fate of business, like that of farmers and workers, is bound up with the trend of the national income. And it is clear by now that an outlay on investment and consumption adequate to raise the national income to higher and higher levels can be brought about only by a conscious social endeavor.

The need for immediate action to achieve this end cannot be overemphasized, for the danger exists that businessmen, obsessed with a devil theory of government, will attempt to use their economic power to suppress democracy and place in its stead a dictatorship supposedly dedicated to the fulfillment of their desires. Should they succeed, it would then be too late to correct a grievous error, for, like the sorcerer who could no longer control the forces of the nether world which he had called up by his spell, business would be overwhelmed by its own creature. Such a dictatorship would revive economic activity, but it would be actively devoted increasingly to producing weapons of death and destruction, which must sooner or later be used to plunge the country into a holocaust of slaughter and bloodshed.

Third Presidential Term

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, January 24 (legislative day of Tuesday, January 17), 1939

ARTICLE BY J. J. PERLING

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by J. J. Perling entitled "The Third Term Legend."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE THIRD TERM LEGEND—MUSTY FILES OF FADING LETTERS IN THE HANDWRITING OF WASHINGTON, JEFFERSON, AND OTHER PATRIOTS WHO ESTABLISHED THE REPUBLIC—THEIR PRIVATE THOUGHTS EXPRESSED TO TRUSTING FRIENDS—EXPLODE A POPULAR "TRADITION"

(By J. J. Perling)

Whatever may be the personal preference of Franklin Delano Roosevelt, there is increasing probability that a surge of popular sentiment will force his nomination in 1940. And it is equally probable that to forestall his nomination and to prevent his election political enemies, alike in his own party and in the Republican camp, will lessen their attacks on his policies which won the support of the masses and, instead, seek his defeat with warnings against "third-term Caesars," which kept Republican nominations from Ulysses Grant and Theodore Roosevelt. We will hear much about the "American tradition," which restricts a President to two terms: we will be told with tiresome frequency that George Washington and the founding fathers opposed a third term as dangerous to the Nation's liberties. Like many "facts" memorized in our credulous schooldays, we have come to regard as truth these misstatements; yet, in the fading handwriting of George Washington and Thomas Jefferson and those who framed the Constitution, we find ample proof that those who founded the Republic actually considered it essential to the welfare of the Nation that Presidents should, by the vote of their countrymen, be permitted to serve more than two terms.

Despite the oft-quoted Farewell Address, it is certain that it was the counsel of the Father of his Country which kept from the Constitution any restriction of the people's right to reelect the same man to the Presidency as often as they wished. Even though not generally known, it is certain that Thomas Jefferson was ready to run for a third term if it were necessary to keep reactionaries from succeeding him. Certain it is, too, that the hand of Gouverneur Morris, which drafted the Constitution, also penned the letter which urged Washington to serve a third term.

In the Convention which framed the Constitution in 1787 there were many viewpoints on every phase of the Government which a new United States would require to remedy the weaknesses of the supplanted Confederation. It was an unprecedented experiment in democracy; and, as the New York delegate Yates recorded in his secret journal, James Madison boldly proclaimed: "The government we mean to erect is intended to last for ages." Regarding a Chief Executive there were frequent and prolonged debates, both as to the mode of his selection and as to the length of tenure. Some delegates argued that the people themselves were not qualified to select a Chief Executive, and there were persistent efforts to entrust the choice to the National Legislature or to the Governors of the States. Those who championed popular government insisted that unless the people themselves elected their President, his eligibility should be restricted to a single term. This was parliamentary maneuvering which resulted in defeating the plan to let Congress appoint the head of the Federal Government. Thereafter, those who toiled most to assure the establishment of an enduring, stable Republic were averse to limit the continuance in office of any President whom the people wished. James Madison's record of the daily deliberations in the Convention reflects this conviction of patriots like Rufus King, who "did not like the ineligibility. He thought there was great force in the remark of Mr. Sherman, that he who has proved himself most fit for office ought not to be excluded by the Constitution from holding it. He was much disposed to think that in such cases the people at large would choose wisely." And Gouverneur Morris summarized the kind of President those founding fathers hoped would always head the Nation: "It is necessary, then, that the Chief Magistrate should be the guardian of the people, even of the lower classes, against legislative tyranny, against the great and the wealthy, who, in the course of things, will necessarily compose the legislative body."

Having determined the method of choosing a Chief Magistrate, there were still divergent opinions concerning the length of his term of office. That sage philosopher Benjamin Franklin counseled shorter terms, because he regarded the Presidency as "a state of servitude" and believed that a faithful Executive should be relieved of the burdens of the office and "be promoted to civil life." The Presidential term was finally fixed at 4 years; but the framers of the basic law imposed no restriction upon the number of terms a President might serve. Thus, there was left to the people themselves the right to determine at the ballot box how many terms a President should hold office. The dominating opinion of the Constitutional Convention was cogently expressed by Alexander Hamilton in the Federalist; pleading for the ratification of the Constitution, he argued that any limitation on the reelection of Presidents "would be depriving the community of the experience gained by the Chief Magistrate in the exercise of his office." We know that John Jay sent a copy of this discourse to George Washington; Jay's accompanying letter is still extant.

Washington, as presiding officer, made no public comment; but, after the Constitution had been framed, declared himself opposed to any restriction on the terms any President could serve. Writing to Lafayette in 1788, he said: "There are other points in which opinions would be likely to vary as, for instance, on the ineligibility of the same person for President, after he should have served a certain course of years. I confess I differ as to the necessity or expediency in that appointment. * * * I can see no propriety in precluding ourselves from the services of any man who on some great emergency shall be deemed universally most capable of serving the public."

But, exclaims the reader, did not Washington say that it was more consistent with our form of government to "rotate" the Presidency? Yes; he did—a decade later. It was a last desperate afterthought to justify his own retirement. For many weary months Washington had sought to convince his Cabinet and his closest friends that his return to private life was warranted by his advanced years, his impaired hearing, and his fancied inability to cope with international problems. He was tired of public life in New York, then the National Capital, 4 days' journey from his beloved Mount Vernon. No one can read his letters and fail to sense how deeply this great patriot longed for the peace of his Virginia estate, permanent reunion with his family, and surcease from the continued slanders of his political enemies. Though now Washington's memory is revered and his patriotism acclaimed, in his own day there was vituperation of his character, aspersion of his motives, belittlement of his ability. After 3 years of his first term he had enough of the Presidency, and was determined to refuse even a second term. Thomas Jefferson has left us a detailed record of his conversations with Washington during the closing months of 1792, and remarks that the Father of his Country would discuss other subjects "merely to have an indirect opportunity of telling me he meant to retire." As early as May of that year, Washington asked James Madison to outline a "farewell address" for him. "Turn your thoughts to a valedictory address from me to the public," he wrote; and, apprehensive that his countrymen would not regard personal factors alone sufficient to justify retirement after a single term, he suggested that Madison include in the proposed declaration references not only to his impaired health and merited respite from long public service but also that "the spirit of the Government may render a rotation in the elective offices of it more congenial with their ideas of liberty and safety." Washington's own draft was corrected by Madison, Hamilton, and others; each deleted words and sentences which they deemed either unnecessary or susceptible of misinterpretation; each inserted new phraseology. Thus, Washington's final Farewell Address was written, in part at least, before his first term had expired; and those who quote it as the first President's injunction against a third term overlook entirely the personal factors which, from his very inauguration, prompted Washington to seek retirement.

Clearly, those who labored with Washington to establish the Republic did not attribute his retirement to any dominating belief that a President's service should be restricted to two terms. Of this we have proof, penned by the very hand which had drafted the Constitution. When George Washington died at Mount Vernon there was found among his letters one which, several days previously, had been received from Gouverneur Morris, with whom the first President had long corresponded and whom he always addressed as "an affectionate friend." These two patriots had sat together in the Constitutional Convention; and it is mainly to Gouverneur Morris that we owe the clear diction of the adopted Constitution. In his letter he calls upon Washington to accept a third term. Anticipating that, Washington, now still more loath to reenter political life, might reply that in his Farewell Address he had eliminated himself as a candidate for another term, Gouverneur Morris wrote: "But you may say that you stand indirectly pledged to private life. Surely, Sir, you neither gave, nor meant to give such a pledge, to the extent of possible contingencies." What were the "contingencies" which, in the opinion of this founding father, required that Washington serve a third term? The danger that there might be elected another man without Washington's high ideals and without Washington's experience. There would be no more reason, Gouverneur Morris writes, for Washington to refuse a third Presidential term when the Nation needed him than to have refused a new commission to command the Army, and this Washington had accepted although he had previously resigned his commission after 8 years' service. Knowing that Washington's main aversion to a third term was his keen desire to enjoy life at Mount Vernon, Gouverneur Morris suggests that the capital was no longer in New York but in the new Federal City on the banks of the Potomac, and thus Washington could serve a third term and still be near his Virginia home. Now his letter did not reflect merely his own view; Gouverneur Morris was spokesman for other great Americans without whom there would have been no United States; John Jay, Rufus King, Alexander Hamilton, James Otis, and other "founding fathers." What George Washington would have replied, we do not know; the letter reached him on December 12, and the Nation's greatest man died 3 days later. But we do know what he had written to Lafayette, and we do know that, after retiring as head of the American Armies, he again accepted their leadership when danger threatened the Republic.

And what did Jefferson think? Yes; Jefferson favored "rotating" the Presidential office—but not when a defender of the people's liberties occupied the Chief Magistrate's chair, not when there was danger that a reactionary would succeed him. "Rotation in office"—in congressional halls as well as in the Presidential chair—was a cardinal tenet of Jefferson's political philosophy. "To prevent every danger which might arise to American freedom by continuing too long in office" he fought also to limit the length of service of Members of the Continental Congress, and to prevent the reelection of those who had served longer than 2 years. How many Senators or Representatives today would espouse this Jeffersonian doctrine that it was unwise and undemocratic for a Member of Congress to serve longer than a 2-year term?

What Jefferson feared, in the absence of limiting the term of the President, was expressed in a letter to Washington dated May 2, 1788, before the election of the first President: "The perpetual reeligibility of the President I fear will make the office for life first, and then hereditary." Jefferson was then in France, and hereditary monarchs alarmed him not merely because of his belief that those governed should select their rulers, but also because of the mediocrity of European rulers. "There is not a crowned head in Europe," he wrote, "whose talents or merit would entitle him to be elected a vestryman by the people of any parish in America." When the American people elected an able Executive, George Washington, Thomas Jefferson wanted him to serve for life so the Republic would thrive in the face of European dangers.

Thus, theoretically, Jefferson favored limitation of Presidential office holding, but stern reality—the need of a strong man in whom the people had confidence—led him to change his mind. In a letter to his friend Francis Hopkinson, even before Washington took his oath as first President, the author of the Declaration of Independence wrote: "Since this thing (the reeligibility of a President even for a third term) is established, I would wish it not to be altered during the life of our great leader whose executive talents are superior to those I believe of any man in the world." And, to other friends, he repeated his fear lest the Constitution be changed to restrict the length of service of Washington—the paramount reason to continue Washington in office being the need of his superior executive talents. It is very intriguing to imagine what Jefferson would say now regarding Franklin Roosevelt when there is a growing belief that his continuance in office is essential to ward off the dangers of fascism. Since the European democracies surrendered at Munich and Hitler sneered that only in the totalitarian states could the heads of government talk in the name of the people, it has become clear that only Franklin Roosevelt now has the popular support that can challenge the boasts of dictators, that he, preeminent among American public men, has the experience and the resourcefulness to cope with the far-flung machinations of the varicolored shirt movements, and that he alone commands the prestige to which the world, and our American neighbors particularly, will give heed.

More than that, after Thomas Jefferson had been elected for a second term, he himself would not have hesitated to have become a candidate for a third term to save the Republic from those whom he considered the Fascists of his own time. That he made clear in a letter to John Taylor in 1805; the author of the Declaration of Independence planned to retire at the end of 8 years, but he declared, "There is, however, but one circumstance which could engage my acquiescence in another election; to wit, such a division about a successor as might bring in a monarchist." Were there any risk that his retirement from the Presidency would endanger the democratic principles for which he fought, Thomas Jefferson eagerly would have sought a third term.

Thus reads the record: Certainly there is nothing to warrant the assertion that Washington, or Jefferson, or the leading founding fathers were unalterably opposed to a third term. How, then, arose this prevalent idea that a third term was "un-American"? It was conjured up by shrewd political strategists who could find no other means of obstructing candidates with great popularity. The use of altruistic shibboleths to effect designs not so lofty was evidenced in the recent cry "self-determination for minorities" with which Hitler sought to justify the rape of a small democracy. When ambitious men were seeking to win for themselves a nomination or an election which, by overwhelming popular support, was likely to fall to another, they created slogans calculated to arouse the fears of liberty-loving Americans: "Save the unwritten law," "Uphold the American tradition," "Don't give him what Washington refused."

Obviously the question of a third term arises only when a President serves so well that a second term was already accorded him by the voters of the Nation, and they still want him to continue as their Chief Executive. But even a second term is a distinction granted to but very few of the men who have occupied the President's chair. In the hundred and fifty years since the founding of

the Republic, 32 men have served as President of the United States; only 11 of them have been elected twice to that high office—Washington, Jefferson, Madison, Monroe, Jackson, Lincoln, Grant, Cleveland, McKinley, Wilson, and Franklin Roosevelt. Two others have served for more than a single term; being Vice President, the death of the elected President elevated them to the Chief Magistracy—Theodore Roosevelt and Calvin Coolidge. The assassination of William McKinley within 6 months after his second inauguration left almost a full term for Theodore Roosevelt to serve, followed by his own election which kept him in the Presidency 4 years more. Similarly, when Warren Harding died suddenly, Calvin Coolidge finished the unexpired term and continued President for an additional 4-year term through his own election.

In the first half century from the beginning of the United States to the Civil War only five Presidents completed two elected terms: Washington and Jefferson had no desire to endure a longer period of the unbridled malice of political scandalmongers; Madison and Monroe had little expectation of winning third terms because of the party strife which marked the closing years of their administrations. As regards Andrew Jackson, however, his hold on the masses would probably have swept him into office a third time, even though his choice by the people, as in a previous election, might have been defeated by the manipulation of the electoral votes in the House of Representatives. To prevent a recurrence of such circumvention of the popular will by the lower House of Congress, Jackson repeatedly proposed a constitutional amendment to change the prevailing election method, and with it he advocated the restriction of the Presidency to two terms. In fact, after his own second election, his message to Congress urged that a President's "eligibility should be limited to one term of either 4 or 8 years." But, even though he followed Washington's example of closing his administration with a farewell address, Jackson voiced no warnings in it against third terms; for his own retirement he gave as a reason that "the time has now come when advanced age and a broken frame warn me to retire from public life."

After Jackson, for 40 years, came Presidents who could not solve the Nation's problems; these were elected for single terms. Then the people found Abraham Lincoln; him they elected a second time, but an assassin's bullet cut short a term hardly begun. How much happier would have been all America—particularly the Southland—if the great emancipator had completed his second term. Would he have accepted a third term to finish humane reconstruction and to heal the Nation's wounds? That we can only speculate; no "tradition"—not even Supreme Court pronouncements of constitutional prohibitions—swerved Abraham Lincoln from the paramount task of saving the Union.

Abraham Lincoln indulged in no denunciation or renunciation of a third term; but his successor, Andrew Johnson, who had not the least prospect of even a second term, urged upon Congress a constitutional amendment to limit a President to a single 6-year term and Supreme Court judges to 12-year terms. The Journals of Congress reveal an interesting sidelight on these two men who together were Members of the House of Representatives in 1846: Andrew Johnson introduced a resolution to rotate Federal officers, limiting their services to 8 years; but Abraham Lincoln, who expressed himself eloquently on other subjects, sat silent.

It was almost a hundred years after the inauguration of the first President before scheming politicians raised the third term as an issue to defeat the nomination of a popular President whose reelection at the polls was almost certain. Ulysses S. Grant was ending his second term in 1875 and despite the many blunders and delinquencies of his administration, he still enjoyed a tremendous popularity among the people, which would probably have continued him in office for another 4 years. But his political enemies willed otherwise, and in their frantic search for a means to alienate the people's affection for their Civil War idol they created a new slogan: "The American tradition against a third term." Controlling State conventions, they began early to pass resolutions calling upon Grant "not to violate the example set by the founding fathers." With unprecedented speed and without a single moment's discussion, the dominated House of Representatives, on December 15, 1875, forced through a similar resolution. Grant observed what every schoolboy already knew, that there was no constitutional prohibition against a third term, and that "until such an amendment is adopted the people cannot be restricted in their choice." To the president of the Pennsylvania Republican State convention Grant wrote: "It may happen in the future history of the country that to change an Executive because he has been 8 years in office will prove unfortunate if not disastrous." However, he disclaimed any desire for a third term. As Thomas Jefferson before him and Grover Cleveland later, Grant was not convinced that there was any compelling contingency to make imperative 4 years more of public service. Said he: "I would not accept a nomination if it were tendered, unless it should come under such circumstances as to make it an imperative duty—circumstances not likely to arise." The Republican nomination went to Rutherford Hayes, whose election has been questioned ever since. The political bosses were jubilant; they had succeeded in preventing the people themselves from deciding at the ballot box whether or not they wanted Grant to serve a third term.

This, in brief, is the history of Presidential terms. Unacquainted with the private correspondence of the founders of the Republic, indifferent writers have embellished their chronicles with the legend that our early Presidents regarded as undemocratic service beyond two terms. This legend, distorted by calculating politicians and glorified as a tradition, has been revived and propagandized whenever the people themselves appeared likely to choose again a President who had already served more than a single term. We have already seen how superficial is this interpretation of our early history: the legend is controverted conclusively by the yellowed pages of letters penned by Washington, Jefferson, and others among the founding fathers.

What's the Matter With New England?

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1939

Mr. LUDLOW. Mr. Speaker, until the last few days, I never dreamed that a fallacious economic idea could take root in the soil of New England. I always had supposed that a fallacious economic idea would be an exotic weed in that country of sound traditions and sound principles and, that, if some wild wind from the wild west should blow such an idea over to our New England friends, it would be anathema to them and would find no lodgment in their sane and well-established order.

I had always been led to believe that, if the remainder of our country should become specked and worm-eaten with fantastic economic heresies and fly-by-night panaceas, there—in conservative old New England—would always be found the sound and solid core of America. Whenever any disbeliever has traduced New England in my presence and has intimated that she might not be quite as sound as she seemed, I have resented the implication and have responded in the words of her idolized son, Daniel Webster: "There she stands; behold her, and judge for yourselves!"

I was not prepared, therefore, for a sudden drop in my confidence in New England's conservatism which took place when a group from New England swooped down upon our subcommittee on deficiency appropriations a few days ago and advocated a proposal which, according to my way of thinking, makes Sockless Jerry Simpson, of Kansas, look like a neophyte and poses Gen. Jacob S. Coxey in the unenviable role of a piker.

This story has to do with timber—logs, if you please. Everybody has a real heart feeling for the victims of the New England hurricane. Everybody would like to help them and no one would deny to them the largest measure of relief a generous and sympathetic Government can bestow without doing injustice to the distressed taxpayers of the country who have to bear the enormous weight of the relief burden. The able spokesmen of New England wangled out of tough Jesse Jones—how they managed to do it I do not know—an agreement to make Reconstruction Finance Corporation loans through the Disaster Loan Corporation, amounting to 80 percent of the value of timber blown down by the hurricane and held in private holdings. Then they tried again and were lucky in getting another 10 percent, or 90 percent in all. This was a contribution of almost unimaginable liberality to the relief of the hurricane victims. Still dissatisfied, the New England delegation then appeared before our subcommittee and pleaded for an appropriation to make up the remaining 10 percent, so that benevolent Uncle Sam would "loan" to every farmer and private landowner 100 percent of the value of his blown-down timber. Under the proposed arrangement the so-called "loan" would really be a purchase, as the Government would take title and hold the bag while it undertakes to find a market for these vast timber accumulations.

It was a field day for eloquence and a poor day for logic. To my mind it was a most memorable hearing, for it showed how far we have wandered from the safe, high road of soundness and reason into the labyrinths where all thought is centered on the notion of letting the Federal Government do everything and pay for everything.

After listening to the splendid speeches that were delivered, one would almost have concluded that Uncle Sam not only is a very heartless cheapskate for not wanting to loan 100 percent on these privately owned logs but that the owners, in addition to the 100-percent loan they are asking, are entitled to a bonus for bringing the matter to his attention, thus permitting him to do the right thing.

As the speeches proceeded I could visualize a representative of the United States Government going to the owner of a log and saying:

"This is an extra nice log. It is worth $100. The Government, in order to help you, will lend you $90 in cash on it."

And I could hear the owner as he replies under the spell of the modern philosophy:

"Don't be picayunish. I expect you to lend me $100 on it."

This is new and strange doctrine. On the farm where I grew up, in the backwoods of Indiana, there had been long before my birth a hurricane of such fierceness and intensity that it almost made over the landscape and left a tangled mass of fallen trees and intertwined debris. I can see my father now, in hickory shirt and overalls laboring with that tangled mass. Steeled as he was in the theory of local responsibility and initiative, I think his democratic soul would have rebelled if it had been suggested to him that he was entitled to a check from Washington to pay 100 percent for all of his fallen trees. Such suggestions were never heard in those days.

What does it all come down to? It comes down to just this: If persons who suffered in the New England hurricane are entitled to be reimbursed in whole from the United States Treasury, then every other person who suffers from any act of God, now or at any time in the future, is entitled to similar reimbursement; and if this is a just procedure for the present and the future, it would have been a just procedure for the past clear back to the beginning of the Republic. It follows that if this rule is to be adopted for the present, it should in justice be made universal for the future. It also follows that recompense should be made in the form of an adjustment check to every person whose ancestors suffered from an act of God, and if the amounts due and unpaid would inflict too heavy a strain on the Treasury, those descendants should at least be given credit on their taxes.

Years ago a distinguished Kansas editor wrote an editorial that echoed around the world entitled "What's the Matter With Kansas?" The burden of his argument was that Kansans were short on raising staple crops and long on raising Hades. If I would not run the risk of being accused of facetiousness I would advise him that the time has come when he should write another editorial apologizing to his people and suggesting that the conservative capital of America should be moved from Boston to Topeka. I am afraid—awfully afraid—that New England, where we have always expected to find our paladins of soundness and conservativism is raising too much heresy, and what can we expect of the remainder of the country when staid old New England gets that way?

New England papers please copy.

Democracy Rises Above the Fog

EXTENSION OF REMARKS

OF

HON. J. HAMILTON LEWIS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESS BY JOSEPH B. KEENAN

Mr. LEWIS. Mr. President, I present for the RECORD an address delivered by Hon. Joseph B. Keenan, the distinguished Assistant to the Attorney General of the United States, touching affairs of government. The address is entitled "Democracy Rises Above the Fog." I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy and proud to inaugurate this new democratic forum. We could not have chosen a better way than this for the self-education and self-discipline that our party needs if it is to remain young enough and vigorous enough to continue to lead the American people. We could not have chosen a better time than this to hold our forum, for in meeting this afternoon we reaffirm our belief in the necessity in any healthy society for free discussion.

We reaffirm this belief at a time when democracy in other parts of the world is in retreat before the forces of fear and intolerance. We reaffirm it at a time when, if the farmer looks up from his field or the worker from his machine, he sees a dark sky growing darker.

Not only is democracy in peril, but nations are already locked in armed struggle; the future no man can foretell.

At this time we have one all-important task; it is to close ranks. Our task is to make democracy continue to work.

It was very fitting that the President's thoughts in his annual message should go back to Lincoln. For, like him, we now begin to see that what American democracy means above all other things is personal liberty.

Over three-quarters of a century ago Abraham Lincoln, standing upon the battlefield of Gettysburg, epitomized it all in language destined to live forever, in those simple lines, great because of their very simplicity, when he said: "This Nation was conceived in liberty * * *."

The Americans of Lincoln's day, both North and South, were engaged in a great struggle testing whether such a nation "so conceived and so dedicated could long endure."

Today we are engaged in a similar struggle, again testing whether such a Nation so conceived and so dedicated can continue to endure. Testing whether or not the economy, political and social, built upon the concepts that all men are born free and equal, that there is an inherent dignity in human personality, and that life, liberty, and pursuit of happiness are something infinitely more than ringing word and phrase can continue to survive.

Democratic government has been receding step by step all over the world. I do not believe I am blindly partisan in saying that the United States is the last stronghold of that fighting faith of equal rights of all.

It will not long be so unless we are ready to put new meaning in an old phrase—what our forefathers called eternal vigilance. To live up to it today we must be much more flexible than were our ancestors, for time now shows a greater impatience with us than it ever did to them. The industrial revolution has made the hands on our clocks move with the swiftness of a well-geared six-cylinder engine. The radio, the press, and the airplane have been ruthless erasers of the calm, slow flow of months into years. Today we talk in minutes. When someone acts 3,000 miles away we feel the effect upon us within the hour. Gone forever are the days when Andrew Jackson could win the Battle of New Orleans against the British 3 months after the peace treaty to end the war had been signed.

We must get used to a whole new tempo of thinking, to a much faster pace of acting.

Our political system of democracy has, ever since the Revolution when we won it as our birthright, gone hand in hand with an easy-going and slow-moving economic system. There was much to go around, so much cream to be scooped off the top of our natural resources and virgin markets that we didn't have to think very closely about things and we didn't have to act very quickly after we had thought about them. We always had a green light. There was no fast rushing traffic and, therefore, we could cross the street at any time in leisure.

Now things simply rush upon us. No one has time to think twice about crossing the street. We must learn to get safely over in the short time allowed.

The confusion, the fog in which America has been feeling its way for the past 10 years, is, I believe, mostly because we have been trying to accustom ourselves to this new tempo. I think we have been partly successful. The human race can get used to anything if it relies on its instinct to hang on in the clinches and if it uses its courage to experiment boldly.

In the last 6 years we have had a courageous President who has somehow taught us to keep our feet in the modern rush, who has somehow convinced us that we cannot afford to be afraid of what is happening around us. We have learned to use new tools that so far have been adequate to handle the stress and the strain of the machine age. But we must go farther.

I would like this afternoon to develop in my own way what I think was the most modern note in the President's message to the Congress on the state of the Union. That was the relation of Government investment to private business. As the President pointed out, we have now learned enough from experience and we have solved enough of our immediate problems so that we can now go ahead and tackle our big problem—the full employment of our labor and capital to produce the greatest possible volume of goods and an ever-rising national income.

Last night I was reading at home a little book; you can almost call it a pamphlet. The name of it is An Economic Program for

American Democracy. It was written, not by New Dealers but by seven economists who are teaching at Harvard, our oldest university. This small dollar book I found refreshing. I don't agree by a long shot with everything it says, but it tells us where we have been better than most other things I've read the past few years, and where we ought to go if we want to keep out of trouble. It talks about the way to get this ever-rising national income.

As I read this book I thought back again to my worries about my own children as millions of fathers today must be worrying about theirs. We cannot let an entire generation of our youth be idle even if we wished. America must profit from the example of tired old Europe. For youth abroad has not been content to be idle. It is the backbone, the driving force, of fascism abroad. Youth in Europe has been converted into a storm trooper. And American youth will not stay idle. As a matter of fact, Americans by tradition have always found idleness most distasteful. Tired and weary European people may be content to live on the dole, but, whether it be our Puritan conscience or not, our people are always driven to work whether they need it financially or not. The desire to work is almost the first principle of Americanism.

We must bring work to young America, but that task is indeed a hard one. Everyone knows that the average youth must look for a job. He cannot be expected to make it himself. We are inhibited by the rules of democracy, which are the rules by which we play the game. As the President pointed out, dictators bring capital and manpower together by force, and by using main force are at least temporarily successful at it. They have shown that it is possible for governments to do many things which orthodox economists claimed was not possible without a complete break-down of the economic system. They have in their way—and we must not forget that it is not our way—solved, at least for the moment, the problems of idle men and idle capital. Since we cannot play their game we must let the minds of the Nation be bold in finding democratic methods of achieving the same results permanently and within the framework of our system of free private enterprise.

In seeking for those ways, private business leaders and government alike, all over the democratic world, have over the past 10 years experimented with one economic theory or another.

We cannot afford to waste our capital, our labor, and our youth. We lose far more by not giving our men jobs than by any civilized method we take to give them jobs. And if we do reach our goal of finding useful jobs for all our unemployed and then manage to raise the national income to, say, $80,000,000,000, the well-being from that increase in national income will more than pay for anything it costs us.

The fact of our experience and the experience of other countries is that when the Government has been building bridges and sewers and hospitals and schools and roads and power plants and improving forests and rivers and land, private business has flourished and made profits and jobs. And when government has ceased to do these things, the initiative of private enterprise dries up.

It is the blunt truth that in our mature economic system private money will not take risks unless public investment, through government, goes ahead to take the first risks. Private business cannot make profits if we attempt to balance the Budget at our present level of national income.

More and more, a new generation of businessmen see that the conditions under which business can be done at a profit today are as different from the conditions under which business could be done at a profit in 1928 as conditions then were different from those of 1828.

Some of the men who have reached the top of big business are about ready to retire and don't feel they need to bother to learn anything new.

There is a layer of men right under them, the men who have worked up the ladder with their eyes on the top until they are just on the trembling verge of reaching the thrones—and the emoluments—when the others retire. Those feel they can't afford to do anything that would jeopardize their succession to the throne by expressing opinions that the present heads wouldn't like. So if they do learn anything new they are reluctant to voice their views, much less put them into execution.

"Then"—as someone has described this hierarchy—"under them is a layer of fellows from 55 up and down—the 55 bracket. They know they're going to be in business a long while yet—under new conditions—and they're terribly anxious to make the transition to new conditions as soon as they can. Those are the people for whom Government effort at the present time is preserving our system of private profits. And those are the fellows to whom Government must look for help in its efforts to save that system. All you Government fellows can do is hold the line until this 55 bracket is strong enough to challenge the men ahead of them. But I do hope they'll get up their courage soon."

More and more as we have let our minds be bold we have realized that profits for businessmen in this country, with all that implies for the employment of the rest of the population, has always depended upon Government investment, invisible or otherwise. Little by little it has dawned on us that we always had something like the W. P. A. and the P. W. A. in this country—some investment of public funds that speeded up private enterprise. At one stage the Government transferred to private persons part of the public domain worth far more than we have invested in Government funds in the last 6 years. And at another time we paid for orders to American producers for goods to be shipped abroad by making huge foreign loans which we were never able to recover.

Now for the first time that stimulant to private profit has become conscious. We now see it. We are now certain that the one most necessary factor in creating employment is a bold program of Government investment in the things the people of the United States need if they are to be as strong and able as they can be.

Such a program, far from endangering our system, is the one single thing that will preserve it. That way lies profits for businessmen, employment for all who are employable, and a rising national income which will not only meet the cost of the program but provide a rising standard of private living and private opportunity for all our people.

But if we are going to solve this problem of idle men and idle capital without abandoning our democracy, each one of us must be ready to make the concessions necessary for its democratic solution. We must begin to understand that paying taxes when we have income from which to pay them and risking capital when we have capital to risk are small costs to pay for the privilege of living in a free country.

Scorn if you will our own W. P. A. workers, but they are doing infinitely more useful and productive work than the military squadrons and storm troops into which the dictators regiment their unemployed.

Strong dictators may spend less for education and social services than democratic governments, but they do not remit those savings to the taxpayer. They require more and more taxes for their military establishments. And when they can no longer raise the tax rates they resort to forced loans and capital levies.

Businessmen who worry about the size of their taxes when this administration makes public investments ought to remember two things: One, before the present Democratic administration was making these investments there were no profits at all to be taxed; and, two, the amount the American businessman has for himself after taxes—the amount he can do with as he pleases—is greater than any other businessman in the world.

Undistributed profits do not have to be taxed by the dictators, because undistributed profits, if there are any, have to be invested as the dictators direct. Jurisdictional strikes and labor factionalism do not worry dictators, because what is the free labor market of a democracy becomes the conscripted labor corps of the dictator.

Farm prices and the income of the farm tenant are not worries of dictators because the produce and the labor of the farm alike are commandeered.

The dictators do not worry whether or not business has confidence. It does not matter. For, under dictatorship, business is no freer than labor and agriculture. High finance may help the dictator seize power, but once the coup d'état is accomplished, the dictator becomes the piper and calls the tune. The dictator no longer needs the help of high finance at election time, for there are no elections.

The American people want no dictatorship. They cherish their democracy.

But they must have more than intelligence to preserve their way of life. They must have the will and the courage to act on that intelligence.

For no St. Michael with a flaming sword is going to guard this Garden of Eden for us. We must depend upon ourselves and upon our mutual trust that each of us will hold his sector of the front.

Modern businessmen must come through and assert their leadership of modern business. Government cannot hold their sector of the front forever.

Labor must stop fighting with itself in order that it may be able to hold its sector of the front.

And people in politics and government must do their part, too.

There is a tendency around the time of a national election to think too little about government and too much about politics.

And everywhere among those who think too much about politics you hear it whispered that the ideal candidates for both parties in 1940 should be "stuffed shirts," who would antagonize as few people as possible.

No reactionary or still-stander, even if presented by that deceptive description "middle of the roader" can satisfy either the immediate demands or the ultimate aspirations of the American people.

There may have been times in our history when it made little difference to the people whether we had a "stuffed shirt" at the White House—times when it would have made little difference if there had been no one at the White House.

But our times are not and will not be such times.

In the light of the speed at which we are now rushing by events, to have a stuffed shirt dummying at the controls of the mighty mechanism of the United States Government would be like putting a baby in the cab of a mountain locomotive. It would be an unspeakable tragedy, an unspeakable betrayal of the American people by those who maneuvered it, and a betrayal which I am willing to prophesy would be thoroughly avenged by the American people when they discovered how and by whom they had been maneuvered into it. Nothing could be more dangerous to the preservation of our democracy.

As a contemporary historian has pointed out with some wonderment, six out of our first seven Presidents were men of outstanding ability. Only four out of the next 22 could fit that description. That is an appalling record. At one time in our history we could afford that luxury. Today we have to scrape hard enough for the necessities of life without bothering about luxuries. We cannot afford a weak Executive any more than can a private business. We must always remember that the best protection of our Constitution against dictatorship is not a weak constitutional Executive but a strong constitutional Executive. The lesson of Europe is our red flag of warning. All dictatorships in the world

today have come because of weak constitutional leadership. Dictators do not grow to power from within constitutional government, but strike swiftly from the outside when constitutional government has become too weak to resist. That is our twentieth century lesson No. 1.

You have heard in the past few months the frightful word "purge," and it has perhaps sent a chill of fear along your spine, because of the stories that you have read about foreign countries.

But let us not frighten ourselves with words.

Our American political vocabulary is full of horrible sounding words—candidates are cut, knifed, steamrollered, and maltreated generally, all on paper, however, and without shedding their blood. But the American people did not believe that the President was a dictator and that he was having your representatives tortured and murdered and their bodies buried in quicklime in the dungeons of the secret police. When a word like "purge" is imported from abroad, to apply it to our democratic methods of action, don't forget that the word is only a deceptive figure of speech.

But since this deceptive figure of speech has come into our political life, I will accept it and use it here and now. In this time when America suffers from the effects of depression, and when on top of that we are disturbed by the dangerous aspects of world affairs, we need well to purge ourselves of all that makes us weak.

Let us purge ourselves of superstitious reverence for words without meaning. Let us not bow down idolatrously before the name of liberty while we carelessly destroy the substance of liberty for our fellow citizens.

Let us not blindly worship the word economy, while we waste the soil and forests and mineral riches that ought to be carefully saved for our children, and while we waste the skill and health and courage of our people in idleness and want. Rather let us look to the true wealth of our country, the vast and beautiful land that our fathers won for us to be an estate for their descendants forever.

Let us, finally, purge ourselves, in this time of trial, of that false patriotism that is well called the last refuge of a scoundrel. Let us rather enlarge our understanding of patriotism. For true patriotism is more than a far-off willingness to fight in a war that we hope will never come, or dying by proxy by sending someone else to war. True patriotism is also an everyday willingness to give our time and money to the service of our country. Not because a dictator will punish us if we fail to obey, but because the protection and advance of democratic liberty are our joy and our happiness, we give ourselves to America as free men and as the sovereign owners of this great Nation.

We the people of the United States are a free people, holding in our sovereign power, under God, the decisions of our own path. We shall keep that sovereignty, and shall keep the mastery of our own fate, if we shall first rule ourselves in the interest of all. Let us not carelessly leave the destiny of our country to others. Let us each one, as best he may know how, play his own part. Let us build on this continent a nation that will shine as a light in the dark world—a beacon of hope to all who in the shadow of fear long for the dawn of liberty, security, and peace.

Government Spending

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESS BY MARRINER S. ECCLES AND LETTER TO HON. HARRY FLOOD BYRD, OF VIRGINIA

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by Marriner S. Eccles on January 23, 1939, on the subject of Government Spending. I also ask to have printed a letter written by Mr. Eccles to the junior Senator from Virginia [Mr. BYRD]. I may say that I have submitted the address and letter to the Senator from Virginia and he has assured me that he has no objection to their introduction in the RECORD.

There being no objection, the address and letter were ordered to be printed in the RECORD, as follows:

A week ago tonight Senator BYRD, of Virginia, spoke over this station on Government Spending. I am grateful to the National Radio Forum, conducted under the auspices of the Washington Evening Star, for this opportunity to speak to you on the same general subject.

What I say represents my own viewpoint as it is now and as it has been consistently for more than 8 years. I do not speak for the Board of Governors or for the Federal Reserve System. I speak merely as one who has had more than 20 years of practical experience in banking as well as in various business and agricultural enterprises, and who happens to occupy a public office concerned with banking, fiscal, and monetary problems. These are economic problems and I have always approached them from an economic rather than from a political standpoint. In fact, I cannot approach these questions from any other standpoint for I have never taken an active part in politics and I have never sought a public office.

The greatest of all domestic problems before this country today is to find steady jobs in private enterprise for all of our unemployed who are able and willing to work.

The fundamental issue between Senator BYRD and myself is whether the Government can and should contribute to bringing about an increase in private employment by borrowing idle money, and lending and spending it, at a time like the present when there are millions of people who cannot find jobs in private industry, when there is an abundance of natural resources, unused productive facilities of all kinds, and billions of savings and of bank credit waiting to be used.

In the limited time at my disposal tonight, I cannot deal with all of the misconceptions of my position under which Senator BYRD evidently labored in his recent statements on this subject. This I expect to do by letter at an early date. The issue between the Senator and myself is not personal, and I ascribe to him, as he does to me, the fullest degree of sincerity.

At the outset I want to clear away some of the more glaring misconceptions of my views. I do not believe in Government spending at any time for spending's sake. I do believe in Government deficit spending in depression periods as a supplement and stimulant to private spending, using only the manpower, materials, and money that otherwise would be idle, and using them only in a way that avoids competition with private enterprise. I believe that inefficiency and waste should be eliminated. Government should get the maximum of value for the money it spends, recognizing the size and inherent difficulties of the unemployment and relief problem—the objective always being a maximum of private employment. I abhor politics and favoritism in any phase of Government expenditures. I am as anxious as anyone to see the Federal Budget balanced. In my judgment this cannot be accomplished until the national income is higher than it will be this year. I do not believe it can be done at this time either by reducing Government expenditures or by increasing Federal taxes, particularly those that bear most heavily upon consumption. I believe that the only way the Budget can be brought into balance is through increased Federal revenue from an increased national income.

I am just as much against inflation as I am against deflation. However, we do not want to stay in a perpetual deflation because of fear of inflation. Inflation can and should be prevented, and this can be done by giving adequate powers to the Treasury and the Federal Reserve System. I do not see how it would be possible to have a dangerous general inflation so long as we have a large amount of idle men and unused resources. Long before inflation could develop we would have a volume of business activity that would increase the national income to a point where the Budget could easily be balanced. I do not believe, and I have never said, that the Federal debt should continue to grow indefinitely and no part of it ever paid. I do believe that it cannot safely be reduced except when national income is high and when private debt is expanding. Reduction of Government debt at such a time would tend to counteract any trend toward inflation that might develop, just as expansion of the Government debt during depression tends to offset deflationary developments.

I realize that Government spending is not a cure-all or a remedy for all of our problems or for special conditions that may be retarding private employment and investment. Everything should be done to bring about a prompt solution of these problems. In the meantime I can see no practical alternative except to sustain purchasing power through public employment until private employment substantially increases.

The viewpoint which I have outlined relative to the need for Government spending is strongly opposed by Senator BYRD, by most of the press, and by many of the bankers and large business interests of the country today. Most of them still demand, as they did at the bottom of the depression in 1932, that Government expenditures be cut and that the Federal Budget be brought into balance in order to reestablish confidence. Only in this way, they believe, will jobs be provided in private enterprise.

I quite understand why so many of our bankers and businessmen have this viewpoint, for I did also until about 1929. I knew from experience that private investments had led the way out of past depressions without Government spending.

In the face of fundamental changes that have come over our economy—changes that I think many of our businessmen and bankers either have not fully perceived or fully appraised—I can no longer bring myself to believe that the Nation can risk stopping its support to the unemployed in the hope or expectation that, upon doing so, private enterprise will move forward on any scale sufficient to give them jobs.

To discuss these fundamental changes adequately would take more time than I have on the air. I can only remind you that we are no longer a nation with rapidly expanding markets at home

and abroad, as we were through most of our history. We are no longer pushing our frontiers westward and opening up vast new territories to settlement. We no longer have great incoming tides of immigration. The day has passed when millions can follow Horace Greeley's advice and go west when they fail to find employment or opportunity in the populous eastern centers. The era of railroad expansion has come to an end.

We no longer have expanding foreign markets. We are now a creditor and not a debtor Nation, as we were before the war. We are no longer willing to lend billions of dollars abroad, as we did in the twenties, to enable foreigners to absorb American products.

The rapid growth of the automobile and related industries, which were important factors in the expansion of the twenties, has been greatly slowed down. There are not immediately visible vast markets awaiting production by existing industry. Nor does new invention and new industry, which I should especially like to see encouraged and stimulated, hold out prospects for enough investment and employment to absorb great numbers of the unemployed at this time.

If I felt that the Government were risking a dangerous inflation, or that it could not afford the expenditures because of the size of the national debt, I would not advocate a continuance of the present stimulus—on the basis of a deficit. I do not share these fears. I do not agree with those who believe, as Senator BYRD does, that the Government is like an individual in its fiscal affairs and, therefore, should not spend more than its income but should always balance its Budget and keep out of debt.

I do not scorn the old precepts of thrift and frugality, as the Senator has said. One of the most familiar of these time-honored sayings is, "Neither a borrower nor a lender be." Admirable as these maxims are for the individual, they cannot be applied realistically to business or to the Nation. If there were no borrowing or lending in the business world, there would be no business except by the primitive methods of barter. Borrowing and lending means creating debt. We have never had a period of prosperity without an expansion of debt. Conversely, we have never had a period of deflation without a contraction of debt.

I would like to see more equities and fewer debt forms in our economy, but it operates now very largely by the process of debts being created and extinguished. To recognize that debt expands with prosperity, which we all favor, does not mean that one is in favor of debt but only that under our system we cannot have the prosperity which we all want without the debts which we all dislike.

It is beyond dispute, I think, that as debt contracts or expands, business activity rises and falls, and that national income increases or decreases in relatively greater volume. Thus, from 1929 to 1933 total debts, both public and private, contracted by 14 percent. Yet at the same time national income fell by more than 50 percent. As a result the private-debt structure, even though contracted, was so large in relation to the diminished national income that debts became insupportable. Hence our entire financial structure collapsed and general economic paralysis resulted.

Had the Government been like an individual, nothing could have been done to help the situation. We ultimately found that only the Government, under such conditions as existed, was able by its lending and spending to stop the tide of deflation and bring about the upturn that we have since had, though it is still far short of the goal of full recovery. However, acting on the advice of the business and financial leaders of the country, the Government did attempt to act like an individual from 1930 until the end of 1933 on the theory that the Government could not afford to do otherwise, and that, in order to maintain confidence and keep money sound, it must balance the Budget. Most of you haven't forgotten the results.

Of course, the Government could not balance its Budget, because the incomes and profits of the taxpayers continued to fall or to disappear. Therefore, the Government's revenues fell faster than it was possible to reduce expenses. Consequently, it had a total deficit of more than $7,000,000,000 for the calendar years of 1931, 1932, and 1933 while it was pursuing the policy advocated by those who believe as Senator BYRD does. And, mind you, all this happened during the period when everything was being done that business leaders thought would encourage business, even to the extent of setting up the R. F. C. to provide money to support the private financial structure. At the same time the same business and financial leaders, some of whom were the beneficiaries of Government lending, contended that the Government's credit was such that it could not afford to come to the financial assistance of millions of unemployed through creation of beneficial public work in the absence of private work.

The deficits incurred in 1931, 1932, and 1933 cannot be considered as being of what Senator BYRD chooses to call the pump-priming variety, because they resulted largely from decreased Federal revenues rather than from increased Government expenditures. During this period we had no increase in the national income. In fact during this period the sum of the annual losses in the national income, compared with the 1929 level, amounted to $120,000,000,000. This staggering loss, to which Senator BYRD makes no reference, resulted from our failure to utilize our idle human and material resources. This is the kind of waste that the Nation can ill afford. We had no increase in the national income until a comprehensive lending and spending program was launched, beginning in 1934, giving aid to farmers and home owners and creating jobs through relief and public works.

Let us now consider the years 1934–37, inclusive. In this period the Government made cash loans and expenditures, including the soldiers' bonus, of $11,000,000,000 more than it collected, including pay-roll taxes. This largely resulted from a deliberate policy of stimulating recovery in private activity. During this period the national income rose from approximately $40,000,000,000 in 1933 to about $70,000,000,000 in 1937. The combined increases in the national income for these 4 years, as compared with 1933, aggregated $70,000,000,000, or more than six times the Government's cash deficit of $11,000,000,000 for the same period.

And then what happened? During the year 1937 the Government contributed about $3,000,000,000 less to the buying power of the public than it did in the year 1936, so that its cash receipts were only about $400,000,000 less than it spent. This too-rapid withdrawal of the Government's stimulus was accompanied by other important factors, including sharply increased construction costs, large-scale speculative inventory buying, a too-rapid expansion of short-term installment credit, serious conflicts between capital and labor, and a widening spread between agricultural and industrial prices. The result was another period of rapid deflation in the fall of 1937, which continued until the present spending program of the Government was begun last summer. The national income has been rising steadily ever since that time.

In the light of this record of the last 9 years—a record which Senator BYRD denounces as one of "fiscal insanity"—does it seem reasonable to believe that, as the Senator said in his letter to me—and I quote—"For every dollar the Government borrows and spends in pump priming, private enterprise is deterred from spending two"? If Senator BYRD really believes this, he should be exerting all of his influence in fighting for an immediate, instead of a gradual, balancing of the Budget, in order to reduce Government expenditures by at least $3,000,000,000. Such a reduction, according to his unequivocal statement, would bring about an expansion in spending by private enterprise of $6,000,000,000 a year. I am convinced that the exact opposite is true. Accordingly, I believe that the country can well afford to have the Government continue its stimulus to consumption and thus to business at this juncture.

We might have had about the same results with less Government spending had some of it been directed into other channels or had it been better timed, or if private activity had not felt that there were deterrents due to Government policy; but of one thing I am certain—whatever the deterrents have been, Government spending has not been one of them.

As to the burden of the Government debt on our children and our children's children, which also disturbs the Senator, if they reduce the national debt it will probably be because their national income justifies the reduction, and it will be no more of a burden on them than was the reduction of nine billions of the war debt during the twenties. In fact, we could have paid off much more of the war debt if we had not had three major income-tax reductions which helped to encourage stock-market speculation and the making of uncollectible foreign loans.

Why not worry also about the burden of all of the private debts on our children and their children, because these debts will also be passed along to future generations who will have to pay the cost of servicing or paying these debts just as in the case of the Government debt. We should know that all debts, both public and private, are passed along from one generation to the next, just as all assets, both public and private, are handed down from one generation to the next. It may be that Senator BYRD would be less worried if there were no debts, but in that case there would be no banks, insurance companies, or other financial institutions.

The Senator has warned you that the total debt of all public bodies in the United States now amounts to $430 for every man, woman, and child; that it is a mortgage on you and your property, and that your children and grandchildren will have to pay off this mortgage. But he failed to tell you who owns the mortgage. You, of course, know that it is owned by all of the people and amounts to an average of exactly $430 owed to every man, woman, and child. In other words, all of the people are borrowing through their public bodies from all of the people.

The whole problem of internal debt, public and private, must be considered in relationship to the total real wealth of the Nation. Our total debts are great or small, depending upon total national income. The British public debt a century ago was equal to $4,000,000,000. At the present time it is $40,000,000,000, or 10 times greater. Their debt has grown, but the income of the British people has grown much faster than the debt. While doubtless it would be better for them if they had less public debt, it cannot be said that the debt has either bankrupted or impoverished the British nation, because their standard of living has increased during this entire period.

Now, make no mistake, I am not advocating ever-increasing debt, but I am merely pointing out that we should see the problem of debt in its true perspective. I do not think that alarmist talk about it is calculated to help recovery or to induce private capital to go to work.

As to the argument that the British achieved recovery by balancing their budget, it would be well for those who cite this to remember that while our national income was falling 50 percent their Government never permitted theirs to fall more than 10 percent, and that British rates of taxation, if applied to the United States, would very likely balance our Budget. Their balanced budget is not due to the fact that they spend proportionately less than we do, but because their income and inheritance taxes are relatively much higher.

Individuals and corporations may become bankrupt, but no nation having the human and material resources of the United States need impoverish itself by borrowing from itself. The only way that

we can impoverish ourselves is by failing to utilize our idle manpower, resources, productive facilities, and money in the production of real wealth.

I have been talking so far about the economic aspects of the problem of government fiscal policy. In conclusion, I would like to say a word about the human or fundamental aspect of this problem.

We did not hesitate to have the Government borrow billions of dollars to protect this country against a foreign enemy during the World War. In 1 year alone we created a deficit of $13,000,000,000, as much as the entire cash deficit of the Government during the past 5 years. We are again proposing to spend billions for preparedness. Yet at the same time many are quibbling about $150,000,000 necessary to help protect our human resources.

The same Government credit that can be used to protect human lives in time of war against the encroachment of a foreign enemy can also be used in times of peace to protect these human lives against demoralization and despair. There is no more limitation upon a government's ability to fight a depression than there is to fight a war. Both depend upon our human and material resources, brains, and courage—and upon nothing else.

The danger for the future of democracy comes from within as well as from without. The leadership of this country, both in government and in business, must realize that if the American liberal tradition is to be preserved, then for the millions of our citizens the right to work must also be preserved.

DECEMBER 22, 1938.

HON. HARRY F. BYRD,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In the course of your speech attacking the Government which you delivered in Boston on December 10, you so grossly misrepresented my own views that I feel compelled to address this letter to you in order to keep the record straight. You professed to quote from my speech before the New York Chapter of the American Institute of Banking on December 1, but it would appear from your misquotations that you had not done me the justice of reading my speech before you assailed it.

I cannot leave uncorrected the impression conveyed by your speech that I am an advocate of reckless, wasteful, ever-increasing spending by the Government. As a banker and businessman for more than 20 years before I came to Washington, I have a vital interest in the maintenance of our economic system and of our democratic institutions. I am quite as concerned as you are to maintain the solvency of the Government and to avoid the evils of inflation. However, I am equally in favor of avoiding the evils of deflation. I think I may be forgiven for feeling some impatience when a responsible public official like yourself so misconstrues my viewpoint as to make it appear that my advocacy of properly directed and properly timed Federal expenditures, for the primary purpose of stimulating private enterprise, is based on any other principle or purpose than to aid in bringing about the greatest possible degree of sustained employment and production of real wealth by private activity and enterprise, which, in turn, is the surest safeguard of our democracy as it is of the solvency of our Government. Only in this way, by restoration of national income, can we reach and maintain the balanced Budget which I am as desirous as you are of achieving. You have every right to disagree as to the efficacy of fiscal, monetary, and other policy in effecting stimulation in depression or retardation in a period of unsound expansion. I, of course, reserve the right to present the other side of the case. But I am convinced that it deserves consideration on its merits, without rancor or misrepresentation.

It is evident from the program you presented in your Boston address that you and I have a fundamentally different conception of the responsibility of government and of the functioning of the economic system. Your program makes only five specific recommendations, all calling for immediate and drastic curtailment of Government expenditures.

You appear to believe that a large part of the Government's expenditure is "waste." You are fearful about the Government's credit and alarmed about the "burden" put upon the country by the public debt. There is not space within a letter adequately to discuss these matters, but in view of your program and since you saw fit to make a personal attack upon me, I feel that it is in order to raise a number of questions with respect to each of the foregoing considerations.

As to the "burden" of debt: The pertinent facts are the volume of total debt in the country, the interest on that debt, and the income out of which interest may be paid. You failed to mention any of these pertinent facts. Are you aware of studies made by a distinguished group of scholars, under the auspices of the Twentieth Century Fund, indicating that the total of all domestic debts, both public and private, is no greater today than it was in 1929? That being so, does it not give a one-sided and alarming picture of the country's debt situation to concentrate attention solely upon the increase in the public debt without regard to the contraction of private debt, and without regard to the increase in population and in the material wealth of the country since 1929? Is it of no significance that, owing to the decline in the rate of interest, the total of interest payments today is far less than in 1929? Is it of no significance that, while the burden of interest payments has been lessened, national income, out of which debts are serviced, increased since the low point of 1932 until in 1937 it was $30,000,000,000 more than in 1932? Is it of no significance that the interest on the Federal debt amounts to only a little more than 1 percent of our national income? Finally, is it of no significance that as a nation we owe our debts to ourselves and not to a foreign country?

As to your concern about the burden of taxation, have you not overlooked the fact that as national income increases, tax revenues increase, even without a rise in tax rates? National income increased from less than $40,000,000,000 in 1932 to approximately $70,000,000,000 in 1937. Tax receipts of the Federal Government increased from $2,080,000,000 for the fiscal year ending June 30, 1933, to $6,242,000,000 for the fiscal year ending June 30, 1938. The country paid about $4,000,000,000 more in taxes, but it had $30,000,000,000 more of income a year out of which to make these payments. Would you have the public believe that the country was better off in 1932 with lower taxes and a lower public debt than it was in 1937 with higher taxes and a higher public debt?

Since 1937, national income has temporarily contracted, due to a combination of factors, one of which was a too-sharp and too-rapid reduction, amounting to more than $3,000,000,000, in the Government's net contribution to community buying power in 1937 as compared with 1936. The Government's net contribution to purchasing power is the amount that the Government expends over and above the amount it collects. On this basis, the Government not only drastically withdrew its stimulus to consumption in 1937, but contrary to your apparent belief, actually had a balanced cash Budget and a cash surplus of about $100,000,000 for the period from June 30, 1937, to March 30, 1938.

So much for the debt "burden." Turning to the question of what is to be entered upon the credit side of the ledger as an offset to the increase of the public debt, you evidently contend that nothing is to be entered; that the Government's expenditures, for which the debt was incurred, represented "waste."

Is it "waste," as you seem to think, to have the Government borrow and put to use otherwise idle funds of individuals and corporations? Is it "waste" to have the Government, by borrowing from the commercial banks, replenish the supply of bank deposits which contracted by one-third because of debt liquidation during the deflation, and put this newly created money to work providing employment and thus utilizing manpower and productive facilities that otherwise would have remained idle? Is it "waste" for the Government to expend these newly created and these otherwise idle funds for roads, slum clearance, bridges, schoolhouses, hospitals, and a host of other useful and necessary things that are needed by the community but are not supplied by private enterprise? Are these additions to our national wealth, additions resulting from public expenditures that are based upon increase of public debt, more "wasteful" than the expenditures in the late twenties, based upon private debt, whereby billions of dollars were diverted to uncollectible foreign loans and to build at inflated prices huge skyscrapers, office buildings, and apartment houses, many of which never have been sufficiently occupied to maintain the investment?

Do you think it was "natural forces" that produced the recovery after 1933? Do you think that the restoration of the national income from less than $40,000,000,000 to approximately $70,000,000,000 came about in spite of and not as a result of Government expenditures? If so, why was it that for more than 3 years after 1929, when we did not have the legislation or expenditures to which you so strenuously object, there was no recovery, but instead a continuing deflation until the Government intervened on a comprehensive scale, replenished bank deposits, and put these funds, together with stagnant funds held by individuals and corporations, to work? This, of course, increased the public debt after private debt had rapidly contracted. Doubtless had the Government been adequately prepared it could have spent money more efficiently and more productively. Yet, in the light of all of the foregoing considerations, how can it justly be said that the Government's expenditures were "waste"? What to my mind is the real and irreparable waste, which the Nation can least afford, is that which results from failure to use our human and material resources productively.

As to the Government's credit: Why do you suppose it was that in 1932, when the Government's debt was about half of what it is now, 3-percent Government bonds sold down as low as 83? If the Government's credit is as precarious as you told your Boston audience, why is it that 2½-percent Government bonds today are selling at a premium of more than 102? How does it happen that since 1933 foreign capital has steadily flowed into the country from abroad if the credit of the country is in jeopardy, as you contend?

Early in your speech you extolled "those time-old virtues of thrift, frugality, self-reliance, and industry." Somewhat later, however, you expressed alarm at the increase in debt of the last 5 years. I am at a loss to understand how you reconcile these two ideas. Certainly if it is good for people to save, i. e., practice the virtues of thrift and frugality, it must also be good that someone should borrow money and put it to productive uses. Private enterprise has in the years since the depression began been in no position to employ profitably anywhere near the total of the country's savings, because there was not sufficient buying power in the hands of the public to purchase the output of existing facilities of production.

In connection with the question of debt, you also make the curious statement that some day the whole amount must be repaid. Such a statement reflects a misunderstanding of the fundamental nature of our capitalist economy. Debts and obligations of various kinds are but the other side of investment, and if we ever tried to liquidate the whole amount of them, or even any substantial fraction, we would precipitate a crisis so severe that general economic paralysis would result. When there is contraction of total debt, private and public, we have deflation. We have never had prosperous conditions without an accompanying expansion of debt, either private or public, or both.

Do you think, as your speech seemed to indicate, that in a democracy the government has no responsibility for creating debt in order to give employment at times when private indebtedness is

contracting and private enterprise is unable to do so? Do you consider, as your speech implies, that Government debt is evil, whereas private debt is not? One would gather from your attitude that if a private contractor, for example, borrows money to build houses you would commend him for "raising capital for private enterprise," whereas if a Government housing authority borrows money for the same purpose you would denounce it for "incurring debt."

Do not the same general economic considerations apply to both private and public debt? Is it not true that the creation of too much debt relative to the creation of real wealth is inflationary and, therefore, bad, whether that debt be created by public or private activity, or both? Can it be said that the creation of debt, either public or private, that utilizes productively otherwise unused human and material resources, that creates real wealth, that adds both to existing real wealth and to national income, is an evil? Is not the exact opposite true?

While you say that everyone in need should be provided for, I find this statement hard to reconcile with your broadside attack on the organization that has carried most of the task of seeing to it that those in need are kept from want and starvation. You assert that "millions of able-bodied citizens rely upon the Government for support and have ceased to exert their efforts for self-help to obtain private employment." So far as I know, there is not the slightest evidence to support such a sweeping assertion. Any honest American citizen must resent the insult this implies to millions of self-respecting men and women.

You stated that you are concerned about "the character of the individual citizen" and "the dignity and the rights of the individual." So am I. I believe, however, that the most basic right of all is the right to live and next to that, the right to work. I do not think empty stomachs build character, nor do I think the substitution of idleness and a dole for useful work relief will improve either the dignity or the character of the people affected. We cannot expect to preserve our free institutions in this country if we condemn a substantial proportion of our people to prolonged idleness on a bare subsistence level of existence. Further than the right to eat and the right to a position, I think the individual, whether rich or poor, has a right to a decent place to live. I think he has a right to security in old age and to protection against temporary unemployment. I think he has a right to adequate medical attention and to equal educational opportunities with the rest of his countrymen. The Government expenditures which you condemn have in large part been the means of translating these basic rights into realities. Anyone who is genuinely sincere in his concern about the rights, the dignity, and the character of the individual citizen, far from seeking to tear down what has already been done, will want to have a hand in expanding and improving this work for the future.

There are many other questions which it seems to me your address and your attitude leave unanswered. I do not profess to know all the answers to the many complex and difficult economic problems confronting the Nation, but I am convinced that if your program of sudden, drastic retrenchment were followed, we would witness another sharp reversal and renewed deflation. And I, for one, am not prepared to believe that this Nation is doomed to stagnation, to a low level of national income, to a wholly unsatisfactory standard of living instead of the high standards, the achievement of which depends only upon our correct understanding of the operations of our economic system. I am convinced that your program is not only a defeatist one, a program of retrogression and not of progress, but that it would jeopardize the salvation of our democracy which I know you are as sincerely desirous of preserving as I am.

We disagree fundamentally and completely on how best to accomplish that end, but of one other thing I am also persuaded, that we will not find the answers by indulgence in name calling such as marred your Boston address. We will find the answers by recognizing clearly what the problems are, by understanding how our economy functions, and by working out practical solutions in an atmosphere of calm reason instead of intemperate denunciation.

Very truly yours,

(Signed) M. S. ECCLES, *Chairman.*

Community Federation of Boston

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. DAVID I. WALSH BEFORE COMMUNITY FEDERATION OF BOSTON, JANUARY 23, 1939

Mr. LODGE. Mr. President, I ask unanimous consent that there may be printed in the RECORD the very eloquent address delivered by my colleague the senior Senator from Massachusetts [Mr. WALSH] in Boston last Monday night at a meeting of the Community Federation of Boston.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We have assembled tonight to salute and felicitate the charity-minded volunteer workers who are now to begin the task of soliciting funds for the maintenance and support of the private charitable agencies which will carry on during the year 1939. What an ennobling spirit is visible here. An entire community has turned aside from the daily struggles of self-interest, forgetting all social and class differences, imbued with the spirit of philanthropic service, to plan and work together for the welfare of its afflicted.

The importance of this great humanitarian objective is obvious to all. The mere enumeration of the list of private charitable and philanthropic services to humanity that we are seeking to aid cannot fail to stir our most generous impulses and arouse us to tireless endeavor.

One hundred and fifty private agencies, serving over 300,000 people in 46 cities and towns of greater Boston, including all the large hospitals, services in the interest of children and the family, public-health nursing, aid to the handicapped and those in charitable institutions—indeed, for all private activities dedicated to the service of humanity—are embraced in this program.

The first thought that naturally arises is, Why do not the many governmental relief agencies take care of these urgent and compelling social needs? Why must our citizens of city and State be called upon to augment the finances provided by taxation for what is primarily a governmental responsibility? That much Federal, State, and local financial aid is available to certain needy persons because of age and physical disability is evident; nevertheless, very much indeed remains to be done each year through private effort. We are not in any manner in conflict with the regular designated welfare activities performed by the local, State, and the Federal Governments. They are indispensable. They have a wide and important field of usefulness, but they are not everything. There must be a combination of private as well as public giving. The coordination of both is indispensable. We must have both.

There is something more than public relief implicit in the very character of this campaign to raise funds. It symbolizes the recognition by the communities of greater Boston of an obligation that goes deeper than the mere granting of relief according to the cold and impersonal measure of the scientific yardstick. It encompasses not only the willingness to provide for the weak and the afflicted, but, what is far more commendable, it announces our strong determination to dispense in accordance with need that charity and that benevolence which springs from the noblest impulse implanted in the human breast because it prompts warm and sympathetic care and attention for those unfortunate of our neighbors who live in our midst and whom we are intent upon helping in some manner different from the benefactions of formal, official philanthropy.

The Federal and State social-service worker must continue, but it is unthinkable that the work of the home-visiting nurse and doctor, the Sisters of Charity, the Salvation Army, and innumerable other private and religious welfare agencies should be crippled in their ministrations to the millions of underprivileged throughout the Nation to whom they bring aid and comfort. Public funds do not and cannot reach these agencies. They rely upon private giving. Be it said with pride that in the past the necessary money has been given gladly and generously by hundreds of thousands of philanthropic citizens of every walk and station of life. Through the funds realized by these Nation-wide community chests, millions of persons have been restored to health, encouraged to renewed interest in life, and rehabilitated to positions where they are once again able to provide for themselves and their families.

I wish to dwell for a moment very briefly upon the patriotic side of the community drive service. That we are responding to one of the cardinal principles of every religion is self-evident. But, in my opinion, in undertaking this great work we are fundamentally sustaining and preserving the integrity of our democratic form of government.

Authoritarian governments are jealous of private institutions of every character, just as jealous of private instrumentalities of benevolence as they are of religious agencies and in fact of all organizations functioning within the state that are not operated by the state itself. One of the dictators of Europe has proclaimed this principle: "There must be nothing within the state that is not part of the state." Tyranny and private philanthropy are irreconcilable. It is, therefore, decidedly in the interest of democracy that we should foster and encourage institutions of private benevolence in the same sense that we should exercise eternal vigilance in the preservation of the inalienable rights guaranteed by the Constitution.

With no intent to discredit the fine services rendered by governmental relief agencies—and they are many—I think we all feel that the less politically administered relief for the afflicted classes of our needy, the better. The Government must continue to do its share, especially in times like these, for those in want through no fault of their own, but we will never agree, while the spirit of service, civic pride, and patriotism throbs in the American heart, to a surrender of our private charitable and religious institutions to the demands of the authoritarian state.

This meeting tonight, this great outpouring of generous-minded men and women, proves unmistakably that Massachusetts citizens

are determined to assist those, who, for one reason or another, often for reasons beyond their control, are unable to care for themselves in times of adversity, illness, or need. The agencies furnishing this service, wherever located, stand as mute testimonials of the generosity of our people and shine as beacon lights of hope and cheer to millions of our fellow citizens. Even during the lean years of the present decade, our citizens have responded with generous contributions in support of the community program. This meeting means that we are determined to continue the accomplishments of the past and to extend militant support for all our useful and necessary agencies of private philanthropy.

We are proud of our greater Boston record and of Massachusetts, which has always given generously to the needy. The aid that once was given casually and haphazardly and without organization has now grown by leaps and bounds through unity of action and careful planning for the care of those who are beneficiaries.

This great and representative meeting is a real mobilization. It is a mobilization of citizens, not in preparation for war, but in preparation for the ever-present conflict against disease, misery, poverty, and destitution. Think of what this meeting means for benefactors and beneficiaries alike. What a message of cheer and hope goes forth from this hall tonight to the thousands of underprivileged and needy, hopefully looking to this community fund for relief and succor.

Does it not also bring closer together the citizens of our greater city? We organize in trade and in industrial effort, but there is an activity which brings us closer spiritually. "Be a good neighbor" is fittingly suggested as our slogan. Let me add that the good neighbor is not the one who lives only for himself and his family, but is one who by standing up resolutely for his own takes a friendly, helpful, unselfish interest in the welfare of others. He cooperates with his neighbors and takes an active part in every generous movement for the commonweal.

That fine citizen Charles Francis Adams, who through these many years has been an inspiration to all of us in his work for humanity, is here. The ministers of all religions, who know better than any of us the sorrows, the sufferings, the needs of the poor, as well as the unrecorded but inestimable services to humanity of these private charitable agencies, are here, too, to invoke divine blessing on our work. The Governor of the Commonwealth, the mayor of Boston, are here. These men are good neighbors. Everyone in this great auditorium is a good neighbor. Let us spread the good-neighbor idea, constantly extending our ranks in number and influence—in giving and helping.

Our appeal is to the souls of men. What a personal privilege and opportunity it is to have a humble part in this labor of brotherly love! Our appeal to our fellow citizens is not merely for statistical charity, but for the expression of a noble sentiment, a sentiment that is regulated, guided, and directed by the spiritual in human nature, a sentiment that is influenced by the highest religious concept in our nature. That sentiment is charity as distinguished from mere relief. Charity embraces not merely giving but giving through motives of love.

Tonight we appeal to all who have means, the means which have been given them by the Creator, not for luxury or waste or selfishness or greed but for the welfare of others as well as of themselves, to cooperate with these private charitable agencies which have organized to aid their fellow citizens who lack the means to give shelter and food to the poor, medical assistance and hospital care to the unfortunate, rest places and homes for the aged and the homeless. In brief, our appeal is to men and women whose hearts are warm, whose love of their less fortunate fellow beings is aglow.

May I add there is special need this year for us to redouble our zeal and enlarge our efforts?

We want, above all things, good will. We want with that the willingness to work, to serve under whatever direction may be necessary, to work as energetic, warm-hearted crusaders, never forgetting that our gospel is the gospel of hope, of love, of charity, and our objective is to bring cheer and help to the lowly, the unfortunate, and the suffering.

Let me add we must have a real sense of the needs of the poor and underprivileged among whom we move in everyday life, to catch the spirit of this campaign. We must enter into this work with real enthusiasm and with a consciousness that the faith in the good works of our fellow citizens is alive and not dead. If we do this the results will be abundant and eloquent.

And lastly, our reward. The gratitude of those who have naught else to give but gratitude, the benediction of the aged, the prayers of the orphaned, and the silent approving voice of our own conscience. At the end of this campaign, which can and will be successful, we can share the spirit that prompted Holy Job to cry out:

"The ear that heard me blessed me, and the eye that saw me gave witness to me; because I have delivered to the poor man that cried out; and the fatherless that had no helper. The blessing of him that was ready to perish came upon me, and I comforted the heart of the widow. I was an eye to the blind, and a foot to the lame. I was the father of the poor." (Job xxix.)

National Defense

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESS BY HON. GERALD P. NYE, OF NORTH DAKOTA, TUESDAY, JANUARY 24, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the Appendix an address on the subject of National Defense, delivered over the radio by the Senator from North Dakota [Mr. NYE] on Tuesday, January 24, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

National defense has never been a partisan issue. But there are features about the present and pending defense program which seem to be inviting and winning a very definite division. This division might find the Republican Party accepting the challenge which is presented by these certain features. The challenge is not one which might involve the party in anything resembling a jeopardizing of American security against possible foreign foes. It is in no degree a challenge that would take the party into mere quibbling over what is our exact need in the way of national defense. The challenge, rather, is one inviting the Republican Party to insist upon getting a dollar's worth of defense for the dollar spent for defense and of guarding against an easy drift into other people's wars.

It is not for me to here speak for the Republican Party. I could not venture such speaking even though I saw the party's national-defense policy more clearly defined than it now is. But as an individual member of the party I see very definite tendencies today which are more sharply defining the issues and differences growing out of the administration's national-defense program. I see members of the party weighing the proposition and asking if by chance the defense program is not instead a work program or pump-priming program. I observe others privately, and some publicly, inquiring if the President's program might possibly be in furtherance of understandings with other nations. And I see the Republican Party, as such, in the House of Representatives moving very definitely into a determined position which finds it wanting to make certain that the rearmament program projected by the administration shall be directed exclusively to the defense and security of this Nation rather than toward dangerous intervention in the international frictions and discords of other peoples. More than that, I see, as all readers of recent weeks must see, that the party and its spokesmen are fast reaching the conclusion that there can be no intelligent policy of national defense without a knowledge of what is our foreign policy. That can mean but one thing, namely, that we may hope for a declaration of foreign policy by our Government; a declaration subject at once to the approval or disapproval of the people and their representatives.

There are those who insist that we have no foreign policy. There are some of us so mean as to put two and two together at times and make the result read four when we insist that our foreign steps in given instances would indicate that our foreign policy was shaped and dictated by the British Foreign Office. Whatever may be the facts, the truth remains that the United States is today without a declared or defined foreign policy. Our foreign policy today is what the President may permit it to be. Our policy tomorrow may be contrary to that of today, but again it is what the President permits it to be. One day the policy seems to be such as requires no great additional outlay in the way of preparation for war. The next day the policy is definitely calling for such an outlay in the way of war preparedness as would multiply the present Budget plan by a hundred or a thousand.

The absence of a policy, or dependence upon a policy to be shaped by other nations, or a helter-skelter policy of foreign relations creates for our Nation a most dangerous, say nothing of uncertain, issue of defense. It is a situation that ought to be corrected. There is only one corrective—the careful defining of a foreign policy to be brought out into the open. That such may be an early accomplishment is a hope, a hope born largely out of the very positive interest the Republican Party is showing in the question at the present time.

There is rare departure by Americans from the common desire that our country be adequately prepared to defend itself and its

institutions. I should count myself derelict in my duty if I found myself ready to jeopardize American security against attack by refusing the machines, equipment, supplies, and men necessary to repulse any possible attack upon us. But I am equally derelict in my duty if I become party to a rearmament cause that entertains large prospect of inviting war and that is sponsored by man-made hysteria which can but lead my country under a greater load of debt and into greater economic difficulty.

It has been my rather studied observation that we can contemplate an annual stirring up of feelings of insecurity. This stirring quite invariably precedes the advent of the annual supply bills of our Army and Navy. A very thorough study of the question during recent years has established beyond any question the fact that there are some forces that stand to profit in a large way from larger armament outlays. It is another observation by more than myself that armament races are not as a rule followed by peace. There isn't much comfort in the knowledge that we are now being urged to be a leading factor in the greatest armament race of all time—and we the Nation upon this earth least needing to fear attack against or upon us.

Under the existing and pending plans the Congress is being asked to approve a program in the name of national defense that calls for an outlay of somewhere between one and one-half and two billion dollars. Compare this with our 1914 Budget in the name of defense and it will be noted that we are now being urged to spend for that cause easily six or eight times as much as was true before we went forth to end war. Note, if you please, the week by week background built by those leaders who shape our foreign policy from day to day, those leaders who recommend now what shall be spent for defense—recommendations, incidentally, alleged by authorities to be afforded over the heads of our military experts in both Army and Navy.

For months and months these leaders concurred in that Senate leadership which wanted to take profit out of war and write a strong policy which some want to call neutrality but which more properly should be titled "A policy to help this Nation keep away from another experience of helping others to win wars only to be denied the chance to win the things we thought the winning of the war would bring." Leadership has spoken often and eloquently of determination to mind our own business, keep out of other people's wars, and fight our way out of the domestic economic wreckage the last war gave us. Along last summer there came a rather abrupt change of front on the part of this same leadership. Suddenly we found ourselves being urged to get hot under the collar about other people's wars. When the American gunboat *Panay* was bombed and sunk in an Asiatic war zone, fans were busy striving to drive hates to flames, only to be followed by American discovery that the *Panay* was pursuing the policy of protecting American shipping interests bent upon getting profit out of other people's wars. Then out from almost nowhere came the President's Chicago bridge-dedication speech crying for permission to erect quarantine signs around the island of Japan. Then came the urge to give the President a big stick for use against those he might choose to hold at fault. Step by step came one cause after another which was utilized to demonstrate need for less attention to our domestic difficulties and failures and more attention to dangers from abroad. Causes thus utilized and forced in December reached proportions which found the country on needles and pins and seriously questioning ability of America to save herself from foreign foes ready to pounce upon us. One would have been inclined at moments to believe that Italy, Germany, and Japan had suddenly mastered their neighbors in Europe and Asia and were now turning all their military strength, multiplied by 10, upon our east and west coasts and upon South America at one and the same instant. Fortunate, indeed, was the fact that the broadcast artists who, dramatizing an imaginary attack from Mars, frightened thousands of American listeners into basements, operated at a time divorced from that hour of hysteria.

Go back over these months and observe the effort expended and the direction assumed by the present administration. Hark to the appeals for change in our existing "stay out of war" laws, changes which would let the President pick the aggressor nations and operate against them, as though such a step would be short of war itself. Such a policy would only have Congress abandoning whatever power it has left in the matter of taking the Nation to war or keeping it out. Hark to the appeals for sanctions and a united front by democracy; listen to the appeals to prejudices that we all entertain. Run over these months just passed and observe what led up to the wild national-defense plans which responsible officials were calling for, to be suddenly modified, as in the President's message to Congress, when it was found that the hysteria was losing its force and that there was determination in Congress to avoid anything resembling a stampede into the wildest kind of arming.

Surely, world progress in armament, threatening men in leadership in some nations, and a world filled with large uncertainty is definitely dictating some additional preparation for war on our part. But what kind of preparation shall it be? The kind that has us perfecting our defenses against attack? Or the kind that is going to have us looking for trouble and preparing for it, however far from home we may encounter that trouble? That is the question Congress must answer in its present encounter with the defense program.

If it is a national defense against attack we want, let us have what the calmer experts may declare to be our needs, and I don't mean alone experts who feel that their recommendations to Congress must be in keeping with the executive budgetary plans and program.

Is it strictly a national defense that we are being asked to afford now? If it is, what are we to make of this constant official agitation for larger powers to be granted the President for use in dealing internationally; what about the larger club wanted by the President? If it is only national defense we are being asked for, why must we be asked to supply more of this, that, and the other thing than are possessed by those against whom we feel we must afford a defense—those who must come tremendous distances from their bases of operation? If it is only defense against attack that is involved in the present defense project, what are we to make of the wish to start operations looking to fortification of Guam? If this is but to afford larger preparation to defend the Philippines, then let me ask: How soon must we fortify still more islands to defend Guam?

Let's have an adequate national defense by all means, one that none dare even test. But let us at one and the same time make certain that we are not launching upon an unending program calling for expenditures that would be as crushing upon us as they must be crushing upon any nation or nations that ever undertake a preparation having any chance of success in an attack upon the United States or any part of North or South America. And let's not forget that we've a sizable war to win right here at home, the war against suffering and need that exists in a land of plenty, and, however unpleasant it may be to do so, acknowledge that we have thus far rather miserably failed to win that war. It will be our best policy to win that war at least before we adopt as ours the causes making for trouble in other lands. Who will cite one cause abroad that invites a step by America that might ultimately cost the life of one American son?

Libel and Slander in Radio

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1939

STATEMENT BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following release which I issued in connection with my introduction of a bill amending the Judicial Code in relation to the civil liability of radio broadcasters concerning suits in defamation:

A publisher of a newspaper usually has uppermost control of his own company, and can easily protect himself against libel. He has the direct supervision of his writers, and can blue-pencil anything. The editors of his paper can accept or reject the work of the reporter. The publisher, therefore, should be held responsible for libelous and slanderous statements in his paper. His responsibility should be of the most onerous character for he wields a sword that can mow down ruthlessly or destroy a reputation at will. A written word that is poisoned with libel spreads rapidly. Anyone controlling such dynamite must exercise the greatest vigilance and be held to strict accountability. A publisher can easily protect himself against libel by care and vigilance.

The broadcaster, on the other hand, in many instances, cannot exercise such vigilance. He cannot control that which is spoken over his station. Be he ever so alert, the speaker may often get in, edgewise, damaging utterances. He cannot stand guard as effectively as a publisher or editor of a paper or magazine or pamphlet.

Furthermore, it is often impossible to prevent orators over the radio from uttering slanderous statements. A "mike" may be set up at a political meeting, or in a banquet hall. The owner of a station may have asked for a copy of the script, and the request may have been refused. The importance of a speaker or the occasion may make the speech of real value and consequence. The owner can exercise no power or control over the speaker. The owners of radio sets are anxious to get the words of the particular speaker on particular occasions. Someone is slandered. Is it fair to hold the owner of the radio station responsible for these

slanderous utterances when he had no opportunity to stop or prevent them?

Speakers, and particularly officials of public life, resent censorship. They are loathe to present in advance copies of their orations, and when they do so they are reluctant to accept the suggested changes. They have pride in authorship. They rebel against the revision of the text.

We should not compel the broadcaster to censor save to prevent readily ascertainable libel and/or slander. He should, of course, exercise some initiative and be fairly vigilant, but behind that vigilance there should not be the stalking specter of a suit for defamation. That fear should be removed and he (the broadcaster) should not be liable, except where he is absolutely and directly responsible for the utterance of the orators or failed to exercise due and reasonable vigilance to prevent the damage. It might be argued that because a broadcaster can call for the script of the radio talk he should be held responsible for the statements made over his station. In refutation, it should be remembered that writers and orators and officials are very loathe to submit scripts in advance, much less allow scripts to be doctored.

Moreover, whenever a station picks up the broadcast of a foreign distant station and cannot anticipate the speaker's statements, then the broadcaster is without any opportunity whatsoever to censor any libel or slander contained therein. Of course, he can "pull the switch" and cut off the speech. But that is a step which a broadcaster is obviously very hesitant to take and, in any event, a step which would be of very little aid because it is a remedy that can be exercised only after the "words are out" and the damage done; a remedy that only can prevent continued damage.

A speaker of great prominence makes a statement and 30 or 40 stations carry it. The name of the orator or official is sufficient to enlist tremendous interest on the part of the radio fans. He advertently or inadvertently makes a statement derogatory or, from a legislative standpoint, slanderous and libelous. Should these thirty-odd broadcasting stations be held liable? They have no control of the speaker, were unaware beforehand of his utterances, and were perfectly innocent of any wrongdoing. It is unfair and unjust, therefore, to hold them in any sense liable for the defamation.

A most unusual case showing the need for relief was brought recently by an attorney in New York. His name was pronounced exactly as one of the names used in a fictitious firm name of lawyers on a burlesque program. Two comedians over the radio imitated and burlesqued the activities of a small-town and picayune law office. The name of the fictitious firm was Beagle, Shyster & Beagle. The meaning of the word "shyster" is obvious. The word "beagle" is the name of a well-known type of hunting hound whose habits of chasing hares very likely is symbolic of "ambulance chasing." Complaints were received from two sources, one from a professor of a well-known law school whose name was spelled "B-i-e-g-e-l" but which was pronounced the same as "Beagle," and the other from an attorney in New York by the name of Beegle but whose name was also pronounced as "Beagle." A letter of apology was sent to the professor and he was satisfied. The attorney, however, commenced suit in the Federal court in New York for injury to his reputation.

I could cite more cases to show the dreadful disadvantage under which broadcasters work and the great need for remedial legislation.

It can well be seen that the radio industry can find little comfort as regards the present laws governing libel and slander. The newspaper rule of absolute liability is the general standard adopted, and if it is to be considered as the controlling precedent there is little relief in sight insofar as the courts are concerned. What is needed, therefore, is remedial legislation which recognizes the differences in the nature of newspaper publishing and broadcasting.

To that end I am offering a bill amending the Judicial Code in relation to the civil liability of radio broadcasters concerning suits in defamation. When this measure is taken up in committee for study and discussion I shall endeavor to have it so amended that the provisions thereof shall supersede all State law and practice on the subject in question.

I speak of libel and slander in my bill because both may be involved, since in many instances the address is submitted in writing in advance to the broadcasting station or released to the newspapers. Courts have considered the release libelous even if not actually published.

My bill is herewith set forth in full:

"*Be it enacted, etc.*, That the Judicial Code is amended by adding after section 274d the following new section:

" 'SEC. 274e. That the owner, lessee, licensee, or operator of a radio broadcasting station, and the agents or employees of any such owner, lessee, licensee, or operator, shall not be liable for any damages for any libelous and/or slanderous and/or defamatory statement published or uttered in or as a part of a radio broadcast by one other than such owner, lessee, licensee, or operator, or agent or employee thereof, if such owner, lessee, licensee, operator, agent, or employee shall prove the exercise of due care to prevent the publication or utterance of such statement or statements in such broadcast.'

"SEC. 2. Section 274e, added to the Judicial Code by this act, shall not be applicable to or affect any cause of action existing at the time this act becomes effective."

Human Rights or Property Rights—Their Perpetual Struggle for Supremacy

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MARCH 15, 1937

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following speech delivered by me on the floor of the House of Representatives on March 15, 1937:

The SPEAKER. Under special order the gentleman from New York [Mr. SIROVICH] is recognized for 1 hour.

Mr. SIROVICH. Mr. Speaker, ladies and gentlemen of the House, man is governed by three basic instincts; first, that of self-preservation or the will to live; second, self-perpetuation or the will to love; and, third, self-expansion or the will to possess more. The third instinct, which is the will to more, is characteristic of man only. Animals, not being conscious of the future, and satisfied with what they have for the moment, are possessed of the first two instincts, but have no will to more. Only man wants more than he needs.

The world of man has been made possible by the threefold extension of his personality; first, by his physical or biological extension, which resulted in the establishment of civilization; second, by the expansion of his mind, which resulted in the establishment of culture; and, third, by the expansion of his will which created for him his social, economic, and political fabric. The basic difference between man and animal is that the former has the ability to create tools, while the latter has not. Animals do not make tools. Man's tool-making ability is a compensation for his natural weakness. He is the weakest of all higher animals, not only as far as his senses, but as far as his limbs are concerned. The bull moose has a greater audibility and the eagle a greater visibility than man. The reindeer and the ostrich can outrun him just as fish can outswim him. Finally, man is earthbound because of the lack of wings, and is helpless in the struggle with higher animals because of his weak hands. However, by his tool-making skill and by his ability to create implements, instruments, and apparatus he cannot only overcome the higher animal, but he can perform functions for which nature has not equipped him.

Through the development of transportation he extended his legs. Through the perfection of radio and telephone he has extended his ears. Through the invention of the microscope and telescope he has extended his vision. Through the development of shipping he can outswim any fish, and through the creation of aviation he has, so to speak, grafted wings upon himself, and can outfly any bird. In short, through the extension of all the five senses—hearing, seeing, feeling, tasting, and smelling—he has been enabled to outgrow his actual physique and matters of nature. The extension of the five senses, through the perfection of tools, machinery, and equipment, has resulted in the creation of civilization. To retain his impressions of nature he created art; to prolong his memory he invented writing and printing; to find his way in nature he created principles of mathematics and science. Culture is thus an extension of the mind, as civilization is an extension of the body. The expansion of his will, to the will to possess more, which is one of the sources of his economic creativeness, is a double-edged sword in the struggle for his existence. This uncurbed expansion of the will, the will to possess more, resulting in the vast accumulation of wealth by individuals, is the cause of all wars, rebellions, revolutions, and other economic upheavals. The will to possess more is thus one of the sources of man's brutality and cruelty, and is more powerful and more unyielding than the will to life, or the will to perpetuate one's self, because this will to more draws from two sources—the physical and the spiritual.

The will to more draws from man's vision, from his consciousness of the future, from his gift for abstractions, as well as from his physicial will. Hence the phenomenon that rich men who lose their fortune, or part of their fortune, commit suicide, although they are still very far from the poorhouse. To preserve his wealth man would transgress all boundaries of law and decency, and resort to means which are degrading and debasing. It is for this reason that all forces of the spirit have united to curb the will to more. Religion, politics, ethics, law, and the state are vying with one another to limit the sphere of that will. For the sake of its own existence the state must curb the will to more of the individual or of a group of individuals. The law by delimiting this

sphere of the right of the individual is already curbing the will to possess more. All postulates of social justice arise out of a vehement negative attitude to the will to more. All true ethics teaches man not to exploit his fellow men, and tries to impose limitations upon his will to more. The basic religious document of civilized humanity, the Decalogue, is dedicated to the delimiting and curbing of the will to more. Without these forces trying to bend and control the will to more, the life of man would differ but little from that of the jungle, and man would reduce his fellow men to a beast of burden or to a part of nature.

In the jungle the rule of unregulated freedom prevails. Animals can roam as they please and move about unhindered. It is the perfect order of laissez faire. The result is that the mighty devour the weak, and its order of life is might makes right. Instinctive brute force rules. This jungle rule when applied to human society manifests itself in two forms: First, in the unregulated freedom of the laissez faire, an order in which the economically powerful may devour the economically weak; or, second, when the king of the jungle has imposed his will upon the other creatures and made himself dictator, thus regulating the rule of force. This regulated rule of force of the jungle when applied to organized society is fascism—either right or left fascism. In the Fascist state, like in the jungle, when the lion or the tiger asserts his will, the dictator imposes his will upon his fellow men without regard to their desire, wishes, ideas, or welfare. If jungle chaos is laissez faire, jungle order in the state is dictatorship.

There could possibly be no objection to either the laissez faire order of things, or to dictatorship, if man were only a part of nature and nothing more, like the tiger, lion, or any other ferocious animal. But man is more than a part of nature; he stands on the threshold of two worlds—the physical and the spiritual. He is a citizen of both and governed by both. Such is not only the dictum of all true religions and philosophy, particularly of Biblical religion, in which man appears as the crown of creation and is God's main care and concern, but it is the dictum of our own experience of our own recognition. If man were only a part of nature, he would be as unproductive as the animal. Animals have no mathematics, have no science, have no religion, have no law, have no ethics, because they are not spiritual beings. These creations of the spirit could only emanate from spiritual beings, consequently man cannot be said to be just a part of nature and entitled to the same rule as the jungle. The law by which he lives must be a human law and not a jungle law.

No other spiritual force in history has dedicated itself to a greater and more bitter struggle against the will to more, than the two Biblical religions, Judaism and Christianity. These two religions are anthropocentric in character, visualizing man as a center of all things and as a most important phenomenon in the universe. In these two religions man appears as the crown of creation, as the object of God's interest and care. God is not interested in oxen or sheep, in tigers or leopards; he is interested in man exclusively, because man alone has the spark of the divine Spirit. God, the source of all goodness, wants man to be good, and His greatest message to man is: To be good, to be just, to be righteous to his fellow men. This anthropocentric world concept spells human rights. All other religions of antiquity have been cosmocentric or naturalistic in one form or another, and have either belittled the importance of man, as was the case in Brahmanism or Buddhism. Or they have taken an indifferent attitude to him, as was the case with the religions of classical antiquity. The negative attitude to man in the East has resulted in the caste system culminating in the establishment of untouchability, which is only an application of the jungle rule that might makes right. The indifferent attitude to man in the West has resulted in slavery. If man is not the most important phenomenon in the cosmos and is only a part of nature, he must be subject to nature's rule exclusively, and nature's rule is jungle rule in one form or another. This cosmocentric world picture spells property rights. Both untouchability and slavery are forms of jungle rule. What a depraving force slavery is we all know. It was only recently abolished in this country. But what untouchability signifies, as a system of cruelty to man, you may guess from the fact that the untouchable is not permitted to drink water from the spring, but must drink it from the sewer. The spiritual father of fascism in the Western World, Friedrich Nietzsche, in singing the praise of his superman, tacitly approves the law governing the untouchables. The rule of might makes right is a direct result of the cosmocentric world picture with its universalism, pessimism, defeatism, and fatalism. In cosmocentric philosophy there is no hope for man as a spiritual being. Man is just a part of nature's fabric, and must be governed not only by its laws but also by its rules and whims. The cosmocentric theory of life says nature first and man afterward, because he is only an insignificant part of nature. The right of nature precedes the right of man. Property being dead, nature precedes human rights.

Nature is composed of four parts: Inanimate nature, which is dead nature, our Mother Earth. In its bowels it contains gold, silver, platinum, copper, iron, oil, coal, etc. It represents our natural resources. It stands for material wealth, property rights. Second, vegetation, plant and flower nature, which is poetic nature. Third, the birds that fly in the air, their melodious and mellifluous songs pealing from their throats, which is idyllic and lyric nature; and, fourth, jungle nature, which is animal nature. Here the strong eat the weak. Might is right. Instinctive brute force rules. The classical order is laissez faire—leave everything alone.

It was against these sinister forces and doctrines of man's position in jungle nature that Biblical religiosity, with its lofty anthropocentric world-concept, arose in rebellion and proclaimed the doctrine of the holiness and the dignity of man, of his spirituality, and of his special position in the cosmos. It proclaimed the doctrine that man as a spiritual being can never be a means to an end, but only an end in himself, and must not be exploited or oppressed. Thus, it preached the gospel that human rights precede property rights. It proclaimed the doctrine that all men are equal before God, because He created them all. He is their common Father and Judge. It proclaimed the doctrine that man is equal before the law and before the state, just as he is equal before God. It was out of this religious democracy that political and juridic democracy grew. The equality of all men before God, before the law, and before the state, and the right of all men to life, liberty, and to the pursuit of happiness is not compatible with either social, political, or economic oppression. [Applause.]

The two Biblical religions make man so important that in the Old Testament—Exodus, 32—Moses causes God to change His will and decree, and in the New Testament the Son of Man, Jesus, becomes the Son of God. The New Testament, far from being a denial of the Old, only magnifies and intensifies the doctrine of the Old Testament with respect to man. Whatever the theological difference of both religions, they agree upon the basic doctrine—that man, being the most important phenomenon in the universe, is not a part of nature only, and that his mission on earth is to walk the path of truth, righteousness, and justice, and thus make the attributes of God his guide in life.

The Son of Man, who became the Son of God, is the Redeemer, the Messiah, the harbinger of hope, and the Great Comforter. He is opposed by the figure of Caesar. Caesar spells despotism, cruelty, cheapening of human life, human degradation, and the reducing of man as a means to an end. It is surely no coincidence that Christianity arose at the time when Roman Caesarism was running wild, transforming the world of man into a valley of tears, attempting to perpetuate misery and suffering, and making human life almost meaningless. There is no more dramatic meeting in all the world's history than that of Pilate and Jesus. In that fateful meeting, where the Saviour said to Pilate, "Give unto Caesar that which belongs to Caesar, and give unto God that which belongs to God," the struggle of anthropocentricism, or human rights, challenged cosmocentricism, or property rights. Caesarism and Messianism faced each other and announced their determination to oppose one another for all future days until a day after eternity. Pilate, speaking for Roman Caesar, represented materialism, brute force, totalitarianism, dictatorship, and property rights. Jesus, speaking for the Spirit, represented goodness, justice, liberty, freedom, and human rights. This struggle between Caesarism and Messianism is now going on the world over. [Applause.]

If Biblical religiosity, dedicated to a life-and-death struggle against the will to possess more, has partly failed in its mission, it is primarily due to the medieval church, which, instead of continuing to fight Caesarism and all that it stood for, has made peace with him, and also to the fact that medieval Christianity has made peace with the diluted Hellenism and succumbed to the spirit of ancient Rome long after physical Rome was destroyed. As a result of these developments, the medieval church, instead of fighting the will to possess more, became itself the very embodiment of that will, for it attempted to hold both powers, spiritual and temporal. To do so, it had to ally itself with sinister forces, to make all sorts of political deals, which, as a rule, are not compatible with true religion. But, after centuries of medieval darkness, western humanity found its way back to the original sources of religion and culture through the Reformation and the Renaissance.

With the rediscovery of the Bible, through the Reformation and its translation into German and English, and through the rediscovery of Socrates and Plato by the Renaissance, man was rediscovered. In the Dark Ages man—individual man—meant nothing. He had no rights, he had no claims, he had no dignity, nor any aspirations, ideals, or visions. For almost 1,000 years, from the destruction of Rome up to the Reformation and the Renaissance, man vanished completely from the picture. He reappears again with these two great world historic movements. Jacob Burckhardt, the great historian of the Italian Renaissance, states that its greatest deed was the rediscovery of man, as a spiritual being, and as a world unto himself. This rediscovery resulted in the new plastic art that was dedicated to man exclusively. The great Dante appeared with his powerful Divine Comedy, Petrarch, Boccaccio, and the magnificent sculptors and painters of the Renaissance, Leonardo Da Vinci, Michelangelo, Raphael. They painted human figures in contradistinction to the artists of the Orient, who had produced still nature. In the Orient, where human life is cheap and valueless, there is no art with man as a center. But the art of the Renaissance is exclusively human, because man occupies the center of the stage. The Protestant Reformation, too, has rediscovered man. Martin Luther is the first great religious figure in the Germanic world who is concerned with man and who is worried about the individual and the individual soul. This is also true of Melanchthon, Zwingli, Erasmus, Kant, Goethe, Beethoven. This era of enlightenment brought forth such great intellectual geniuses as Galileo, Copernicus, Kepler, Newton, Leibnitz, and Spinoza, who thought in terms of mathematical formulas and developed the sciences of mathematics, physics, algebra, geometry, that paved the way for the development

and perfection of the machine age by fertilizing the soil of invention, a century later. In England the beginning of the Reformation actually coincides with the Magna Carta, the first primitive document to deal with the rights of man. And at the height of the Reformation in England the famous English poor law was enacted, providing for the economic relief of those in distress and need. Western history since the Reformation and the Renaissance is a history of one uninterrupted struggle, of all forces of the spirit against the will to more. It is a history of the social, political, and economic emancipation of man. At times this process was interrupted by certain reactions, but still it went on, after overcoming these reactions—often in a more lively tempo.

Humanism is the name of the great cultural movement given by history to the anthropocentric tendencies which developed in the western world since the Reformation and the Renaissance. With the rise of humanism there developed new tendencies in jurisprudence, economics, and politics, and culminated later in the phenomenon called enlightenment, which dominated the entire eighteenth century. But man as a source of all certainty, of all intellectual authority, and as a source of everything in philosophy, science, and other branches of culture was established in the French Renaissance by the brilliant philosopher Descartes, who has summed up the greatest philosophic truth of all times: "I think, hence I am," thereby making human thought the source of all positive knowledge. There is a direct development from Descartes to the enlightenment movement of the eighteenth century with his gospel of the rights of man. All the trends, currents, and ideas of that movement have had but one objective and one goal, to emancipate man from the shackles of political, economical, social, juridical, and ecclesiastical despotism. The real significance against the struggle of so-called Popery in England was a rebellion against ancient Rome expressing itself in despotism, autocracy, and political absolutism, and its will to possess more, with which the medieval church was permeated.

Most modern historians agree that one of the main causes of the French Revolution was the prevalence of ancient Roman law in France, with its attending cruelties, brutalities, and barbarism. The powerful attempts made to emancipate man, socially, economically, and politically, led to the actual dissolution of legitimism—the king's rule by the grace of God. Under legitimism, the country was considered the personal estate of the king, and not the property of the nation. The king was identical with the state and not the nation. Louis XIV expressed it in the formula "L'etat c'est moi"—"I am the state," Republicanism as a form of government, and its corollary, democracy, and all that goes with it, are the direct results of the humanistic movement, in the last few hundred years.

The political emancipation of man stimulated by such eminent anthropocentric scholars who loved their fellow man, as Montesquieu, who fought for parliamentary constitutional government in France, Rousseau, who in his great book, the Social Contract, destroyed the principles upon which the divine right of kings existed, and battled for the sovereign right of the people to choose their representatives, and Voltaire who pilloried and excoriated the cosmocentricism of the church instead of battling for human rights, later followed by the great American patriots and pioneers who fought for human rights, as Thomas Jefferson, Thomas Payne, Benjamin Franklin, James Madison, and George Washington. These men brought about the French and American revolutions, which overthrew feudalism and legitimism, and cleared the way for republican and democratic government, thereby necessitating an economic reorientation which found its expression in many new schools of economic thought in France, England, Germany, and America. They finally culminated in the one or the other forms of socialism. All these new schools of economic thought stressed economic democracy versus plutocracy, and man's rights versus property rights. If living man and not dead nature is the center of things in life, the conclusion is inescapable, that human rights must precede property rights; in short, that living man has more rights than dead nature. [Applause.]

When feudalism and legitimism were destroyed by the mighty revolutions at the end of the eighteenth century and agricultural slavery was abolished, the western world was about to experience the economic ideal of the Bible, "every man shall dwell in his own vineyard," for the enslaving feudal law was no more. But no sooner was feudalism overthrown and agricultural slavery ended, than the machine age began and introduced industrial slavery. By the time feudalism as a primary economic force was destroyed, the villager was so impoverished that the city, with its industrial opportunities, looked to him like the promised land, and he soon exchanged it for the factory. The landed gentry was unable to halt this process because it could not answer the challenge of the new rising economic force, called capitalism, which ultimately developed into industrial plutocracy. The factory offered a full year's work, while the farm only offered 6 months' employment. For this reason the factory in the city attracted the farmer with a magnetic force and within a short time the entire landscape underwent a radical change. Innumerable villages were deserted and the city slum was born. This process is best described in Oliver Goldsmith's famous poem, The Deserted Village—"Ill fares the land, to hastening ills the prey, where wealth accumulates and men decay." In the city the farmer found, not the promised land, but the unexpected slum. Escaping starvation and misery in the village, he found slavery and squalor in the city. How this new slavery affected the life of the people, the life of the masses, can clearly be seen from the child-labor bill introduced in the English Parliament in 1815 by Robert Owen.

The bill prohibited the employment of children under 10 in textile factories and permitted no more than 10½ hours of work for anyone under the age of 18. The bill was considered revolutionary. The then master of the political destinies in England, Robert Peel, who was himself a manufacturer, caused it to be postponed because it was not compatible with his own interests. In 1818 it was reintroduced and passed the House of Commons but was defeated by the Lords. One year later the bill finally passed through both Houses of Parliament. However, it was so modified, crippled, and emasculated that it became meaningless. It applied only to cotton, and not to textiles. It allowed 12 hours of work, and the age limit of a child was fixed in the bill as 9 and not 10. After the age of 9 a child could work in the factory 15 to 18 hours a day.

It was this shameful exploitation of labor by capital and the reducing of man to a machine, making human beings slaves of the machine, that stimulated and called forth the powerful socialistic and communistic movements in the first half of the nineteenth century.

The enslavement of man in the preindustrial era was carried out in the name of the despot, who was supposed to rule by the grace of God. The industrial enslavement through the nineteenth century was carried out in the name of that infamous economic and political dogma, laissez faire, a principle invented in pre-Revolutionary days, when the despotic and corrupt government under Louis XV held sway. The middle class hated that government and resented their interference in any sphere of life. The representatives of that middle class pleaded with that government to leave them alone. "Laissez faire", they cried—"Leave us alone!" With the ushering in of the industrial era, this almost forgotten principle was reintroduced by the captains of industry to enable them to exploit the masses shamelessly. Their slogan, too, was a minimum of government—"Laissez faire", they demanded; "Leave us alone." In this cry they were reinforced by the Manchester school of political philosophy, and such men as Adam Smith, Jeremy Bentham, David Ricardo, Thomas Robert Malthus, and John Stuart Mills, who fought for the philosophy of the economic jungle, the principle of laissez faire—"leave business alone." They established the theory that the government was there only to prevent crime and had no right to interfere in any other sphere of the activities of the citizens, especially not in the economic and social sphere. So dogmatic became that principle that when the Public Health Act was introduced in the English Parliament in 1848 and, in spite of strong opposition, was passed as a result of the activities of the commission revealing most appalling unsanitary conditions in most of the big English cities, the Economists, a periodical which represented a view of the followers of the laissez faire principle, also opposed it on the ground that it was an interference of government with business. The prevalence of the laissez faire principle for many decades made the development of industrial monopolies and economic imperialism possible and led to a complete enslavement of the masses, with its attending phenomena—poverty, ignorance, slums breeding disease, and crime. It is not blind chance that the debasement and degradation of man by industrial lords coincides with the rise of cosmocentricism, materialism, and naturalism, culminating in the sanctification of property rights, throughout the last half of the nineteenth century. The anthropocentric world picture was again replaced by a cosmocentric world concept, with the usual result, that property rights were stressed and the representatives of human rights were decried as radicals and revolutionaries.

Just as man disappeared from view throughout a thousand years of the dark Middle Ages, so he has disappeared from view, since industrialism reached its highest peak, in the development of the great industrial and financial combines.

The combines, monopolies, trusts, and corporations are doing to man today what feudalism did to him in the Middle Ages—exploiting him by reducing him as a means to an end only, commercializing him as a tool of the machine. In Russia if a human being kills his fellow man the maximum penalty he receives is 10 years, but if a human being destroys a machine he is shot. Thus the machine has become king, representing property rights, while the human being has become the machine's economic slave.

With this debasement of man goes the degradation of science. It is today the servant of industry, just as philosophy was the handmaid of theology in the Middle Ages. Pure science is no longer an ideal worth the efforts of man's life, but it is only valuable to the extent that it serves the purpose of industry, which in turn serves primarily the purpose of a select few at the expense of many. The moment the great physicist or chemist appears, he is captured by the interests and made to serve the purposes of science only as applied to industry. If these processes will continue much longer, modern science will go the way of Greek philosophy in the beginning of the Middle Ages. Just as medieval theology used Aristole to prove its dogmas and doctrines, so an Einstein or Michelson may be used one day by capitalistic industry to prove its social and economic contentions. This will to possess more, as it expresses itself today in the transactions of capitalistic industry, has created a one-sided value of life. And what is this value? More money, more wealth, more power, more influence—more, more, more; always the will to possess more. [Applause.]

Everything becomes subordinate to these primary aspirations, to which there is neither logic nor justice. Modern astronomers

speak of an expanding universe. Whether the universe is expanding or not cannot be proved scientifically; it is still a hypothesis; but that the will to possess more in the form of corporations, trusts, and combines is constantly expanding to the advantage of the few and to the detriment of many. The corporation or the juridic person, as the courts have defined the corporation, has enabled a few to expand the will to possess more to dazzling depth and amazing heights. This juridic person called "corporation" has rights and duties of its own which are not the rights and duties of the original members thereof. Consequently the corporation is only a magnified will to possess more; but, on the other hand, it is not endowed with the qualities of the subject of the simple will to possess more. The corporation has no human sympathies, no compassion, no mercy, and no ethical consciousness and no conscience. It is an economic Frankenstein driven by the one powerful instinctive force—to acquire more, to grab more, and to get hold of more. And the process of this expansion is comparable to the hot lava of a volcano, that destroys everything in its wake. The corporation is not an invention of religion or ethics; it is not an emanation of the anthropocentric world picture of Christianity, but of the cosmocentric world concept of ancient Rome.

The term in ancient Roman law corresponding to the modern corporation is collegium, universita, or corpus. As a rule, it is called collegium. This collegium remained in existence, although all its original members were changed. Like the modern corporation, it was governed by its own bylaws, and, like the modern corporation, there was in the Roman collegium a complete separation in law, between the right of that collegium as a body and those of its individual members. It is interesting to observe that the Roman conception of the corporation was kept alive mainly by the ecclesiastical bodies, organic parts of the medieval church, which was overwhelmed with the spirit of ancient Rome, whose laws were inspired by the motive of might makes right. The original Roman terms for corporation, collegium, or universitas, having been adopted later by religious, ecclesiastical, scholastic, and charitable groups and societies, the English lawyers during the time of the Renaissance and the Reformation upon coming in contact with societies and groups of the above-mentioned nature, adopted the original Roman name corpus, for corporation. The origin of the corporation of England coincides with England's rise to an economic power during the reign of Queen Elizabeth.

The corporation is a magnified will to possess more and the most powerful instrumentality in the accumulation of wealth in the hands of few. Its interests are represented by lawyers who learn to think and do things only in terms of corporations. In the cause of their activities the corporation lawyer looks at the world around him only from the vantage point of the corporation and its interests. In days gone by, when the economic forces in America determined political processes, the political powers would express their gratitude for the services rendered to them by corporations, by appointing corporation lawyers to the Supreme Court, which, according to the Constitution, was to have appellate jurisdiction only, with such exceptions and under such regulations as Congress shall make. As a result of this development we see a court with appellate jurisdiction usurp the power of the legislative and executive branches of the Government. The people elect legislators to make laws and a President to administer these laws, but then comes the Supreme Court, whose members are only Presidential appointees, and void all that was voted for by the people. The result is that America, instead of being a democracy, ruled by a majority of the people, has slowly been turned into a nomocracy; that is to say, a system of government ruled by a rigid and almost immutable law, in whose shaping the people have no part and in whose development the people have no influence. The ancient Greek term "nomas" signifies the static, rigid, and almost immutable law, in contradistinction to thesis, which was the dynamic and living law, subject to change and development and independent of vested interests. Nomocracy, or the rule of rigid law, is the end of all democracy. For in the nomocratic system of government not the will of the majority is the source of law but dead legal formalism, developed by vested interests of the corporations and their lawyers, in shaping the destinies of the country and its people. Nomocracy in ancient as in modern times is the emanation of cosmocentricism, naturalism, and similar sinister philosophies, which are rather medieval in character.

Ancient man thought in mythological and theological terms. Man of the Middle Ages thought in mathematical terms—Descartes, Spinoza, Kepler. Eighteenth century man thought in critical terms—Kant's Critiques of Pure and Practical Reason—and modern man thinks in sociological terms. The Supreme Court jurisprudence is archaic, because it is theological, formalistic, static and the impression it gives is, that law is not here to serve man, but that man is to serve the law, to bow before the dead legal formula

All law is either dynamic or static, either nomos or thesis, either dead or living law, either legal theology or ethics reduced to the juridic formula. The law of the majority of the Supreme Court as it expressed itself in its recent anti New Deal decisions is static and not dynamic, dead and not living law, is legal theology and not jurisprudence, permeated with the spirit of ethics. In those decisions the majority of the Supreme Court take the position of the church of the Middle Ages, whose representatives said "the church is like the rock in the ocean." The waters come and go but the church stands forever. Man comes and goes but the church is eternal, and therefore the church is there not to serve man, but man is there to serve the church. The majority decision of the Supreme Court in its anti New Deal decisions says the legal formula is eternal, and the law is not here to serve man, but man is here to serve the law. No matter what happens in life, the judicial formula stands and life must adjust itself to the legal formula.

It is against this medieval tendency expressing itself in cosmocentricism, property rights, naturalism, and the debasement of man, that the great spiritual forces of our time have risen in rebellion, with the object of restoring to man his dignity, his rights and his position in life—that of an end in himself. Destiny willed it that these spiritual forces to restore to man his rights shall originate in America. This great American civilization of ours must be considered a synthesis of Asia and Europe. Asia is the mother of all religions, Europe the father of science and philosophy, and America the child of both. "And the child shall lead them" was already predicted by the mighty prophet Isaiah. That prophecy of the Bible is now being fulfilled.

In the course of its history, America has experienced three great crises, which shocked it to its very foundation, the first crisis bringing to the fore the fateful problem, "Shall America be free, or a dependency of a foreign nation?" This crisis was overcome by the heroic deeds and leadership of George Washington. Seventy-two years later the second crisis arose, "Shall slavery continue or not?" It was solved by Lincoln. He, like Abraham of old, sacrificed not his son but himself on the altar of human freedom. Seventy-two years still later, in 1933, a third crisis shook America to its very foundation. Then another great leader arose, Franklin Delano Roosevelt, to give man a New Deal, and to free him from the shackles of plutocracy, combines, monopolies, and trusts and give him a minimum of economic security. Franklin Delano Roosevelt is, indeed, a great Biblical figure, for what is it he said and demanded that wasn't preached and proposed by the prophets of old: Micah, Amos, Isaiah, Jeremiah, Hosea, and Jesus? Is it not the same message to man, social justice, economic justice, to lessen man's worries and to give him peace of mind at all times, whether employed or out of work? What is old-age pensions, unemployment insurance, minimum wages, maximum hours, collective bargaining, abolition of child labor, and security for farmers, if not Biblical ideas? [Applause.]

To carry out this program, it is necessary that the sovereignty of the people, permeated by cosmocentric decisions of the majority of the Supreme Court, be restored to the people. Democratic government is impossible when a body, not elected by and not responsible to the people, can nullify the will of the people, its representatives, and its Chief Magistrate. I say, that to turn the Supreme Court into what the Constitution meant it to be is not a mere governmental reform but is a great world historic deed. For it will open new avenues of progress and will help to make human rights supreme. While the shadows of the Middle Ages are now darkening Europe, a progressive democratic America must be a source of inspiration and courage to all those elements in the Old World, who exhausted themselves in warding off the onslaughts of all sinister forces against humanism. The courageous attempt of President Roosevelt to weaken the citadel erected to protect property rights as against human rights—that is to say, to reduce the Supreme Court to what the Constitution meant it to be—is in reality a continuation of the process begun by the Reformation and the Renaissance. [Applause.] European fascism to the right and to the left has interrupted this process. Franklin Delano Roosevelt, disregarding these sinister forces, has picked up the historical thread and is continuing the great spiritual movement known as humanism. He is the only statesman of our time who, by his New Deal policies culminating in the reform of the cosmocentric attitude of the majority of the Supreme Court, is trying to restore to man his rights, without bloodshed, without a display of brute force, and without deviating one inch from the course of the American historical process. [Applause.]

To sum it up, throughout the ages we see two opposing antagonistic forces in perpetual struggle for supremacy; anthropocentricism versus cosmocentricism; idealism versus naturalism; ethical law versus jungle law; regulated freedom versus regulated force; autocracy in all its forms versus democracy; and human rights versus property rights. In the course of this struggle between these two gigantic forces empires were destroyed, civilizations perished, and nations ground into dust. We now face this tragic issue, and we must face it courageously and manfully. We have got to ally ourselves either with the forces of medievalism, reaction, and darkness or stand squarely for humanism, progress, and enlightenment. I, for one who is conscious of his duties as a representative of the people, choose to ally myself with the leader of the Nation, Franklin Delano Roosevelt [applause], who stands for human rights, for progress, and for justice. I stand loyally behind him, because justice should not and cannot be compromised. The issue is property rights or human rights. Does might make right or right make might? You either stand for regulated force or regulated liberty. We cannot bargain with human rights, as we cannot bargain with our conscience. [Applause.]

Nothing is more symbolic of modern corporation cosmocentricism than the Laocoon, the great artistic masterpiece of ancient Greece in the Louvre in Paris, showing the figure of a father and two sons being crushed to death by a great python snake. As the snake entwines the bodies of the father and the two sons, you can behold the pain, agony, and suffering undergone by these three human beings as life is crushed out of them. The modern cosmocentric corporation is comparable to the python snake, in the Laocoon. The masses of our people are being exploited, bled white, and crushed

by the corporation, as the father and the two sons of the Laocoon group are being crushed by the python snake. The modern cosmocentric corporation is economically, socially, and politically a sinister force whose background is a cosmocentric, naturalistic world picture in which human rights are subordinated to property rights. It is against this sinister force, which deprives man of his birthright by enslaving him economically, socially, and politically, that the twentieth century must rebel in order to bring freedom and happiness into the homes of the American people.

If we continue to struggle, to battle, and to legislate for human rights, in order to enable our citizens under the guiding leadership of that great Biblical, patriarchial, and patriotic character, Franklin Delano Roosevelt, to put into fruition the realization and ideals embodied in human rights for which he is battling, we will be enabled to bring about in our Republic the brotherhood of man and the fatherhood of God, and thus continue to dedicate and consecrate our Nation upon the altar of true constitutional democracy that it may live on throughout the ages. [Applause.]

Mr. SACKS. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Pennsylvania.

Mr. SACKS. Does the gentleman know whether there was ever a physician on the Supreme Court?

Mr. SIROVICH. In the present Congress of the United States we have two or three physicians. I have the honor to be one of them. I desire to call to the attention of my distinguished colleague from Pennsylvania [Mr. SACKS] that in the little town of Barberville, Ky., over 100 years ago, was born to humble parents a son, whose name was Samuel F. Miller. He studied medicine for 1 year and practiced it for 20. He was a great humanitarian. He administered to the sick, needy, and destitute without compensation, and gave of his today that others might have their tomorrow. He then moved to Iowa. There he studied law during his spare time, and was admitted to the bar. In the great conflict of the Civil War, which was waged for human rights to abolish slavery, a vacancy occurred in the Supreme Court of the United States. The beloved, amiable, humane President, Abraham Lincoln, in 1862 selected this distinguished physician, learned in medicine and acquainted with the law, as Associate Justice of the Supreme Court of the United States. In many of his decisions he contended that the Constitution of the United States must be interpreted as a live, dynamic document that should not act as a strait jacket to imprison the anthropocentric rights that human beings were clamoring for. I sincerely hope when the time comes for President Franklin Delano Roosevelt to appoint additional Justices to the Supreme Court of the United States that, like his great predecessor Abraham Lincoln, he, too, might find some worthy physician or surgeon learned in the law and appoint him to the Supreme Court, that he, too, may interpret the law from an anthropocentric viewpoint, extending liberty, justice, and humanity to those who are living for a better day to arrive in this great Republic of ours.

Mr. ROBSION of Kentucky. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. ROBSION of Kentucky. Permit me to thank the gentleman for his very gracious reference, and I was happy to have the opportunity to hear this eloquent and learned speech by my distinguished friend from New York.

Mr. SIROVICH. May I state to the distinguished son of Kentucky [Mr. ROBSION] that I have always entertained the greatest respect and admiration for his human qualities, for his gracious disposition, and for the amiable way in which he has always battled for human rights. In stature he is at least 6 feet and 3 inches, and in personality and appearance the distinguished Representative of Kentucky [Mr. ROBSION] has always appeared to me another Abraham Lincoln. I know the people of his district have the same affection for him that we Members of the House who know him have.

Mr. ROBSION of Kentucky. If the gentleman from New York will yield further, I am reminded that when I first became a candidate for Congress a friend of mine said, "You remind me of Abraham Lincoln." I stretched up about 6 inches, but he said, "You need not stretch up; you are just as homely as Abraham Lincoln, but you never did have the sense and never will have the sense of Lincoln." [Laughter.]

May I say that Samuel F. Miller was a physician and surgeon until he was nearly 40 years of age, when he took up the practice of law. He and Silas Woodson, who later became one of the great Governors of Missouri, were partners in the practice of law in my little home town of Barbourville, Ky. Their law office, a little one-story frame building, still stands. Over the door is written "Attorneys at law, Silas Woodson and Samuel F. Miller." May I say further that Chief Justice Taft said of Samuel Miller that next to John Marshall he was the greatest influence on American jurisprudence.

Mr. SIROVICH. Apropos of the remarks of the distinguished gentleman from Kentucky as to the humane virtues and qualifications of Dr. Miller, I am reminded that all great events have responded to the mystic number 3. The ancient Brahmans had three gods, Brahma, Vishnu, and Shivu. The Hebrew patriarchs were Abraham, Isaac, and Jacob. The Egyptian deities were Osiris, Isis, and Horus. Christianity has Father, Son, and Holy Ghost. Masonry has King Solomon; Hiram, King of Tyre; and Hiram Abif. And Kentucky has produced three great men that I love, Abraham Lincoln, Dr. Samuel F. Miller, and the genial gentleman from Kentucky [Mr. ROBSION]. [Applause.]

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. MASON. I have been very much interested and instructed by the gentleman's scholarly address. I believe every Member of the Congress places human rights above property rights, although some of us cannot see how you can separate them, and I believe every Member of the Congress wants to solve the social problems that we have in this day and age, but our problem is to determine which of these two solutions is the better—the packing of the Supreme Court or amending our Constitution to see to it that it will enable us to solve the problems that confront us The gentleman's scholarly address arrived at the conclusion that we should, and we must, solve these problems, but it did not convince me that the one solution that has been proposed is the true solution. Personally, I feel the only solution is the solution that was laid down by the men who drew up this Constitution, and that is the solution of amending it by and through and of the people. [Applause.]

Mr. SIROVICH. Let me answer the distinguished gentleman's question as a humble physician and Member of Congress and not as a lawyer. He has stated that every Member of Congress places human rights above property rights. If that economic philosophy were carried into realization through legislative enactment, and be approved by a majority of the Supreme Court of the United States, there would be no necessity for increasing the present number of Justices of the Supreme Court of the United States. Let me digress for a moment to state to the Members of this House that there are various ways in which the Supreme Court of the United States could be curbed, so far as interpreting the Constitution, by the Congress of the United States. At the time the Constitution was formed by 54 members of the Constitutional Convention a plan was formulated, which is now in the Constitution, which gives Congress the right by a two-thirds vote of its House and Senate to override a Presidential veto. James Madison, who was one of the authors of the Constitution of the United States and contributed greatly to its perfection and development, as a delegate to this Constitutional Convention, formulated the idea that Congress should have the right, by a two-thirds vote of the House and Senate, to override the judicial interpretations of the Supreme Court. This formula was known as the Madison plan.

However, several delegates to this Constitutional Convention called to the attention of James Madison the fact that Congress was not in session all the year around, and since a decision of the Supreme Court might be handed down after the adjournment of Congress it would necessitate Members of Congress returning to Washington to override a judicial decision. It might take 3 or 4 months for the Members of Congress to come, from Maine and Georgia, as modes of transportation were slow and cumbersome. On accoun of this situation James Madison abandoned this plan as impracticable.

However, the Constitution provides many ways in which Congress can change the Supreme Court of the United States. First and foremost, I desire to state to my distinguished colleague from Illinois that five or six times in the history of our Republic the Congress of the United States has numerically enlarged the membership of the Supreme Court. This is within the framework of the Constitution, and no one has ever challenged the constitutional right of Congress to increase or diminish the number of Justices of the Supreme Court of the United States. [Applause.]

Jefferson, Jackson, Lincoln, and Grant increased the number of Justices of the Supreme Court during their administrations, ranging from 5 to 10 and back to 9, as we have it today. In the United States at the present time we have 10 circuit courts and we are supposed to have one Justice of the Supreme Court of the United States preside over each circuit. Nine cannot fill the job for 10, because these 10 were present during the administrations of Grant and Lincoln.

Now, can anyone challenge the right of the Congress of the United States to increase the number of Supreme Court Justices? Six precedents for that right exist today. It is thoroughly constitutional. It is an aspersion upon the intelligence of any man to say that that right, which has been established by the Constitution, should be characterized as "packing the Court." If the Congress of the United States shall authorize our great President, Franklin Delano Roosevelt, to increase the number of Justices upon the Supreme Court, it will enable the President to dilute the cosmocentric, naturalistic, materialistic property rights decisions that have been repeatedly handed down by a majority of the members of the Supreme Court of the United States invalidating human rights. [Applause.]

Throughout the length and breadth of our country tons of propaganda through newspapers, magazines, periodicals, and publications, as well as the radio, are being disseminated to misinform, to misinterpret, to prejudice, and poison public opinion against the ideals for which the great President of the United States is battling. Human rights must be the master of property rights.

I now come to the question that my distinguished colleague from Illinois has propounded, in which he suggests that we should proceed to change these conditions that he is opposed to by the process of amending the Constitution of the United States. Let me call to his attention that the Constitution states that we have the right to amend the Constitution for any purpose through a two-thirds vote of the House and Senate, and then to be approved by three-fourths of the States of the Union. This constitutional provision enables 12 States, representing 5 percent of the voting population of our Nation, to overcome the will of 95 percent of its

people. However, amendments to the Constitution may be effected through conventions held in the 48 States of the Union or through the legislatures of their respective States adopting the amendment, which then becomes a part of the organic law of the Nation.

I, for one, thoroughly agree completely with the President of the United States that in this great emergency of our Nation, in which one-third of our Republic, 40,000,000 people, are living in hunger, in misery, in poverty, in penury, and in want; one-third ill-fed, ill-clad, and ill-nourished, and ill-housed in a land of plenty, something must be done to guarantee economic security to the homeless, to the helpless, and to those who are looking to the Democratic Party of our Nation through a vote of confidence of 46 States out of 48, that they approve the political philosophy and the economic interpretations of the President of the United States to make our country the greatest and most glorious in the world. The time for decisive action has now arrived. It has taken 16 years to amend the Constitution of the United States to put through the income-tax provision, after one of the Justices of the Supreme Court turned a judicial somersault overnight whereby the Court voted 5 to 4 to declare the income tax unconstitutional. Here in this great Congress of the United States there are sitting many of my colleagues, who 13 years ago voted in favor of submitting a child-labor amendment, which would emancipate the children of our Republic under 16 years of age from working in the mills, in the mines, in the looms, and in the factories. This amendment, passed by Congress 13 years ago, has not been approved as yet by 36 States of the Union. Thirteen years have elapsed. I am ashamed of the conduct of many legislative representatives in the Assembly of New York State, both Republicans and Democrats, who have voted against the privilege of emancipating the flower of our Nation, the American children, from being the economic slaves of industry. [Applause.]

Mr. Speaker, ladies and gentlemen of the House, to me the issue is clear-cut. If we are to preserve this great Republic for which millions of men and women have sacrificed their lives in times of war and peace that our institutions should be preserved; if the blood that hallows the battlefields of our Nation, North and South, East and West, as well as abroad, shall not have been spilled in vain, the time is now propitious and the moment has arrived when America shall proclaim to the world that democracy must live, that the cry of suffering humanity must be heard, and the only way that it can rightfully be answered is by appointing, in conformity with the Constitution of the United States, legally and lawfully, men of learning and patriotism who will have the courage to proclaim the economic philosophy that human rights must be conserved and preserved so that this Republic may go on and endure forever and thus make the world safe for democracy. [Applause.]

[Here the gavel fell.]

Mr. WOODRUFF. Mr. Speaker, I have also been intrigued by the splendid oration of the gentleman from New York [Mr. SMOVICH]. I have been instructed, I have received this afternoon information about history that I overlooked in my high-school and college days. As I say, I have been intrigued, I have been pleased with a great part of the splendid oration just concluded.

Liberalism

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Tuesday, January 17), 1939

ARTICLE BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the distinguished senior Senator from Pennsylvania [Mr. DAVIS] entitled "The True Liberal," published in the Weekly News of West End, Pittsburgh, January 19, 1939. This is a message in keeping with the true tradition of forward-looking republicanism.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Weekly News of West End, Pittsburgh, Pa., January 19, 1939]

THE TRUE LIBERAL

(By Senator James J. Davis)

Liberalism has fallen into ill repute in America because it has become a hiding place for radicals, extremists, and those who have more faith in violence than in good will. The true liberal does not speak the language of class conflict or hatred. He does not ask for special privilege for business, for labor, for agriculture, for the unemployed, or for any one group whose partisan claims might bring disaster to less-favored or unorganized citizens. This country belongs to all the people rather than to any special group. The true liberal seeks the welfare of all. The truly liberal Republican speaks for all American citizens, each of whom has an equal claim on the Government for the maintenance of his individual rights under the Constitution.

When any party permits itself to become the special interest organization of any one group, whether it be of business, labor, or agriculture, it ceases to be a national party. America does not want a party which speaks for business alone. America does not want a party which speaks for agriculture alone. America does not want a party which speaks for labor alone. When any national party puts itself forward to speak for one great group as over against another great group, it has gone off-balance and will soon feel the condemnation of the public as a whole directed against it. The most obvious characteristic of the present administration is its lack of national vision. It has been playing both ends against the middle so long as to be guilty of the very worst sort of group conflict. It has sought to set labor against business, agriculture against the city dweller, the public monopoly against the private corporation, the Government bond against the private investment, and those who have not against every citizen who has a single dollar invested in real property. Any government, such as this Government, which has shown itself to be antibusiness, anticourt, antiprivate investment, and antiprivate organization, is certain to be disbarred finally in the court of American public opinion. Such a government might be able to carry on in some parts of Europe or Asia, but never permanently in free America. Liberal Republicans simply will not stand for it.

The liberal Republican puts his confidence in the proven realities of experience. He follows the principles of Jefferson and Lincoln. Thomas Jefferson wrote the Declaration of Independence with the landmarks of political tyranny in the Old World steadfastly before his eyes. Abraham Lincoln signed the Emancipation Proclamation in an age when human servitude was a terrible reality beyond all question. Both Jefferson and Lincoln spoke of conditions which directly confronted them. They were not dealing with the past or with the future primarily, but with the pressing realities of the times in which they lived. Today the liberal Republican follows their high examples. He speaks for great hosts of Americans who see our country sacrificed to false gods and are determined to tear down the pagan altars which have been recently set up in free America. We face cruel realities as did Jefferson and Lincoln. We face a crisis even as they did. The liberties of the American people are being dishonored and debased. We know it. As liberal Republicans we are determined to restore the ideals of Jefferson and of Lincoln and to return to the justice and liberty for which they gave their lives.

The liberal Republican stands for jobs and employment first. This administration has put everything else first. Under the N. R. A. it put Government monopolies first. Under the A. A. A. it has put crop reduction and less work for farmers and farm labor first. Under the T. V. A. it has put the Government's visionary idea of electric energy first and crippled private business, which holds the greatest hope of large-scale private spending and employment. Under the N. L. R. B. it has put its one-sided interpretation of labor organization first and has refused the stability of justice necessary to industrial progress. Under the W. P. A. it has put the perpetuation of its own partisan power first and has degraded and debased those who have been forced to receive its aid. This administration has put court-packing, governmental reorganization, and its personal party purges above the Nation's need for new jobs and employment opportunities. This is so clearly an assertion of fact that no informed person can deny it. The liberal Republican stands first for jobs and employment opportunities which governmental certainty and business stability alone can give.

The liberal Republican stands for public spending as a stimulus to private enterprise and not as a permanent cure-all. This administration has attempted to make increased public spending as permanent as its own tenure of office. Those in authority know that their power will last only so long as they spend their way to political command. Hence every year sees an increase of public spending and an increase of the national debt. There are no indications of retrenchment by Congress and approved by the taxpayers.

The most effective method of perpetuating the type of patriotism that is more powerful than battleships, or a million bombing planes, is to make certain basic principles of American freedom stand untouched. The patriotism of the American people must never waver, and we will always be a united, cohesive citizenry, as long as our individual liberties are left intact. These principles represent human rights American citizens will always be eager to defend, even though it may cost them their lives.

To make certain the patriotism of the American people is a flame that burns with equal brilliance in times of peace, as well as in war, our defense objectives must also include a national policy that promotes respect for those who have worn the uniforms of our military forces in the past.

Each new generation must be educated to the realization that our country has always been victorious on the battlefield because of the loyalty of its citizens. The young men of today, who may be our soldiers of tomorrow, must understand that our Government will always be grateful to those who have served on the

firing line in time of war. Adequate compensation, hospitalization and pension benefits, decent jobs and economic security for veterans and their dependents will demonstrate this appreciation in a manner that will encourage the loyalty of future generations. Neglect of the veteran and his problems is certain to breed suspicion and distrust in the minds of these young men who may be called to volunteer their services in another emergency.

The money we spend for veteran welfare may appear to be a considerable item on the Federal Budget, although it is only an insignificant proportion to the amount we spend for guns and ammunition. But if we undermine the patriotism of our soldiers of tomorrow by neglecting the veterans of yesterday, the billions we pour out for national defense will bring nothing but disunion and disaster; so spoke our commander in chief of the Veterans of Foreign Wars of the United States.

The National Defense

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Tuesday, January 17), 1939

ARTICLE BY COL. FREDERICK PALMER

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article by Col. Frederick Palmer, who is one of the leading military authorities in the United States, on the subject of national defense.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES WELL GUARDED—EXPERT SAYS AMERICA IS SAFE FROM ATTACK BY ANY GROUP OF POWERS—SECURITY IN OUR FLEET—NAVIES OF JAPAN, ITALY, AND GERMANY ARE BUILT TO DEFEND HOME WATERS—OUR NAVAL LINE FAR OUT—AND OUR HARBORS HAVE DEFENSE GUNS THAT NO BATTLESHIP MAY APPROACH

NEW YORK, January 22.—All the soil under the American flag and that of our neighbors is safe from attack by any power or combination of powers within sight today. In businesslike realism let us see why this is so.

Since we are between two great oceans, with two coasts to defend, we should consider the threat of the rising power of Japan just as matter of factly as any threat from the Atlantic side. Should we fortify Guam our Navy has an outpost 4,000 miles from San Francisco, and any worry about what Japan can do to us in case of war is further diminished, while Japan begins to wonder what we may do to her.

Until the Munich agreement and reported Nazi and Fascist activities in Central and South America, the potential enemy we had in mind was Japan. Our battle fleet, our first line of defense, long had been concentrated on the Pacific side.

A STRONGER NAVY

Built and building, the strength of our Navy is about 3 to 2 against Japan. That is, so far as we positively know.

No European power ever has been able to conceal the laying down of a major ship from rival intelligence services. The Japanese can, thanks to their racial physiognomy. No observer, not born with slant eyes, can get within 10 miles of Sasebo, Japan's great naval base on its landlocked island sea. Surveillance sharpens as a foreigner approaches a shipyard. Every workman is pledged to secrecy.

We employ no spies. But other nations still are uncertain whether Japan actually is building two 40,000-ton or 45,000-ton battleships, larger than any we are building. Be the report true or a bluff, we would avoid any risk by keeping pace.

If the need should come—and for that we build—our fleet will not meet the Japanese in battle off the Pacific coast. Our line of naval defense is drawn far out at sea, from Samoa to the Aleutian Islands, which extend from the mainland of Alaska toward Siberia. Midway is our key Gibraltar outpost of Hawaii, with its heavily fortified Army, Navy, and plane bases.

DISTANCE A GREAT FACTOR

The 3-to-2 ratio is not to be considered on the flat basis of $3 to $2, 3 tons of steel to 2, or 3 men of equal skill to 2. As well might we consider that, of two prize fighters of about equal power, one who had fought five hard rounds and was winded should be pitted against the other who was fresh.

That is the weakness of a navy far from its bases against a navy close to its bases. The loss of power in ratio to distance has increased with the increase in the size of fleets and their complicated requirements on the sea, under the sea, and in the air.

Our own fleet at sea, ready for battle, as it always is, comprises about 150 ships, including all auxiliaries. Where 3 to 2 applies to two navies equidistant from their bases, it may become 3 to 1 for a navy close to its bases against a navy far from its bases.

Any fleet at war is dependent upon its supplies. In the final test, it cannot steam without oil. Its planes cannot fly without gas. The farther it is from its bases, the farther it has to send, under exposure to attack, any crippled ships for repairs, and the longer line of communications it has to guard against raids by planes, cruisers, and destroyers.

BUILT FOR ACTION FAR OUT

Our fleet has a long steaming radius. It is built for action far out at sea as the soundest means of defense on the vast expanse of the Pacific. The Japanese Fleet, built for the defense of home waters, as the German and Italian Navies are, has a shorter steaming radius.

With our policy strictly that of defense, then, in case of war the Japanese Fleet would have to steam 3,000 miles before it reached our naval-defense line.

Fully protected by the defense guns of Hawaii, we should have the advantage of choosing the battleground. It takes no war college strategist to see that we should welcome the Japanese fleet steaming past Hawaii and then cut its communications and strike it in the rear.

In case the Japanese Fleet set as its goal not our Pacific coast but the Panama Canal, it would have to go still farther, with a still longer line of communications, on an absolutely suicidal mission.

The Panama Canal is our lifeline for the movement of our fleet from coast to coast. Its imperative security from any danger of damage includes not only naval defense, but garrison, heavy gun and anti-aircraft-gun defenses, which we have been steadily strengthening. And more than that. There must be utter care against sabotage or anyone's reaching the locks with a charge of explosive.

THE FASCIST AXIS

Now, let us accept the alarmist eventuality of an attack on us by a combination of the Rome-Berlin axis and Japan. I have heard talk even of an invasion on both our east and west coasts at once. The imagination of a second-grade fiction writer can picture a Japanese general shaking hands with a German and an Italian general in the Mississippi Valley, a swath of devastation behind their conquering armies.

But, first, they would have to get their armies across the sea, which we found to be quite a little job in 1917–18. The nearest German or Italian bases to us are 3,000 miles away, and the nearest Japanese more than 4,000. Before the Fascist powers could establish nearer bases they would have to overcome not only the British and French Navies but our own, which, with our bases at our back, is equal to the combined Japanese, German, and Italian Navies.

Grant that Japan, all its strength occupied in China, and Germany and Italy, fully occupied in Europe, had cleared the way and had armies to spare and the ships to transport them across the Atlantic and Pacific Oceans.

Their transports must have harbor protection. All our harbors, east and west, have coast-defense guns which no battleship, let alone a transport, may approach. All on our east coast are nature's own gift for mine fields.

CHANGED SINCE 1917

Our submarines would not all be destroyed. Where we had not a dozen up-to-date planes in 1917, we now have 3,600. We should establish both a submarine and plane danger zone for enemy transports.

The three enemy powers would have to bring their planes on aircraft carriers, and the most they could bring on their carriers, built and building, would be 500. Aside from all their guns, ammunition, and food supplies, they would have to bring, in the colossal tonnage required, many regiments of antiaircraft guns as protection from our planes.

Where in 1917 our total of Army Regulars and National Guard was 244,000, it now is 496,000. We should have at least 6 months of home preparation before the seas were cleared. The three powers would have to start with at least a million men.

In 6 months we should have 2,000,000 men trained to arms; in a year, 5,000,000. How many could the three powers maintain so far from home? In the summer of 1918, our War Department concluded that 3,000,000 were all we could maintain in France.

All our mind energy, our resources and industrial production would be bent on one objective, while over our railroads and motor highways would speed supplies and reinforcements to any given point of danger.

In the present outlook, it is a fantastic possibility that any enemy could effect a landing in force or a bombing raid upon our own soil or that of our neighbors. The army and navy staffs of the world know that this is so. Why, then, the rush for large increase in arming? That is our military secret in time of peace, which, it now seems, may be safely revealed.

American Peace and How To Obtain It

EXTENSION OF REMARKS
OF
HON. ERNEST LUNDEEN
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO, JANUARY 26, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an able address delivered by the junior Senator from Colorado [Mr. JOHNSON], former Governor of that great State, before the Fourteenth Women's Patriotic Conference on National Defense, January 26, 1939, in Washington, D. C. Without fear or favor he deals in a masterly manner with our foreign policy. The problems of Europe, Asia, and Africa are seen in the clear light of a statesman of courageous independence, and his clarion voice calls us back to our own firesides and our own people. It is the address of a great American, who sounds that noble sentiment, America first.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A GRAVE RESPONSIBILITY

A grave responsibility rests upon you who are privileged to be delegates to this Women's Patriotic Conference on National Defense. You will go out from this educational conference not as mere individuals returning to your pleasant homes, reporting an enjoyable time in the Capital City, but you will go forth a well-informed group of enthusiastic emissaries qualified to advocate sound public policies and able to intelligently teach and preach the lofty ideals of patriotism and peace and thus make a further splendid contribution to a better understanding and conception on the part of the American public of the status of the security of your America.

One accustomed to such gatherings as this notable conference can sense deep, soul-stirring emotions in this assembly of patriots. Just to look into your serious and determined countenances gives one a renewed assurance of the straight thinking of American women and causes one to instinctively feel that no matter how difficult may be the problem, American women shall not fail.

PEACE THE OBJECTIVE

Perhaps I had better say at this point that I take it for granted that you agree with me that adequate national defense at its best is only a means to an end and is not an end in itself, and that the real end which we seek is peace. I have not the slightest interest in national defense other than its insurance features against war. I most sincerely hope that every delegate to this convention agrees with me that peace is the real objective and that an adequate national defense is the best-known method for securing it.

PREPAREDNESS

We have heard ministers of the gospel, following in the footsteps of the Prince of Peace, with the spirit of brotherly love in their hearts and the Golden Rule draped about their shoulders, earnestly preach preparedness from their holy pulpits. We have listened to astute and learned diplomats in secret sessions in hushed tones frankly discuss the likelihood of world wars that day by day are developing just around the corner and have heard them plead eloquently with tears in their voices for American preparedness.

We have sat at the feet of Army and Navy experts and listened to them pessimistically view with alarm the strength of the potential enemy and the wretchedness and weakness of our own Military Establishments and have heard them warn us again and again of the necessity for preparedness. We have read every line that we could find published in the daily press concerning international maneuvering, repeating the grave dangers of imminent war and pointing out the absolute necessity for preparedness.

NATIONAL DEFENSE NOW POPULAR

Today American military security for our land and adequate national defense are very popular and represent the very latest model and style in the new attire of public opinion. Everyone believes in these things now, but this fine group of courageous women can well remember that year after year in your conferences here and in your meetings at home you have fought this fight almost alone, and that you were backed only by the veterans' patriotic organizations. It must indeed be very gratifying to you who have carried the torch of national defense sentiment to see the long period of hard, thankless, unappreciated service that you have rendered in behalf of your country bearing fruit now.

You have accomplished much but the victory is not yet complete. There is still work to do. The fight for peace must go on. The whole situation in all of its phases must be studied diligently and that study must be followed by suitable action, but first we must thoroughly understand all phases of this confused and involved problem.

WISHFUL THINKING

It is indeed the hour for impassionate, thoughtful meditation and a time for the exercise of good common sense. After all the evidences that we have before us of disconcerting circumstances shall we fail to awaken to our dangers and stubbornly refuse to permit ourselves to take the ordinary precautions of the prudent and the wise. Is it possible that we are a victim of wishful thinking, believing that because we want peace and tranquillity therefore there will be peace and tranquillity? Such a dangerous illusion would indeed need to be consigned forthwith to the same scrap heap set apart for obsolete armaments. Every city needs an up-to-date fire department and an efficient police department and every nation needs to protect herself against potential enemies wherever they may be. We would laugh at a city if they suddenly developed a fire phobia and instead of acquiring fire-fighting apparatus they began running around in circles too excited to do anything other than pull their hair, wring their hands, and wail and weep in a loud voice. The United States of America must seek to avoid so foolish a predicament. We ought to strive for peace with cool heads and kindly, God-fearing hearts; and if we are diligent and reasonably prudent we will find that honorable peace for which we seek.

INTERNATIONAL SITUATION

Perhaps a brief, sketchy review of the international situation will be in order. Much of what I have to say on that subject has been repeated in every talk made here, but so pertinent a matter to the cause in which we are interested will bear repetition. I shall strive to give you some new angles and new slants upon the general subject of American peace as affected by the international situation.

It is common knowledge that this is a period of great unrest among the nations of the earth. Solemn and sacred treaties between the powers are nothing more than scraps of paper. The powerful European democracies and the powerful European dictatorships no longer make any pretense of even acknowledging the debt for money borrowed that they owe America. Alliances that once were binding to the death are quickly broken today for the sake of political expediency. Find out where a nation's advantages for the moment lie, and you will know upon whose side she is ready to fight. Principles and ideals seem to have disappeared from the earth. Yesterday Italy allied with France fought Germany; today Italy allied with Germany is ready to fight France. Yesterday Japan and Russia were allies, today they are ready to fly at each other's throats.

FRANKENSTEIN OF ARMAMENTS

According to the statisticians, the seven leading nations in the world spent $15,000,000,000 for armaments in 1938, which is five times as much as these same nations spent annually for that purpose just 5 short years ago. Little wonder that the world is now accurately described by keen observers as an armed camp. Small wonder that economists pessimistically predict that every one of these seven powers because of these gigantic expenditures is headed for certain bankruptcy. No wonder that scientists with long faces paint a dark picture of certain destruction of civilization by this Frankenstein of armaments that is being created so deliberately. We need not be surprised that noted sociologists are desperately discouraged since they realize that eventually labor must out of misery and deprivations foot this awful armament bill. It should, however, be pointed out that in this futile, wicked armament extravaganza America has reluctantly followed and never led and now stands next to the foot of the class of great powers in armament expenditures; little Italy alone ranking below us.

NATIONS FORCED INTO THEIR OWN BOUNDARIES

Tariff barriers that have been erected by all nations, the many injustices in the Treaty of Versailles, the inequalities in the distribution of the world supply of gold, and the world-wide armament race have brought about a rapid and definite trend toward nationalism throughout the world. Add to that trend the political ambitions of men, the pride of races, and the demand for security by the masses, and you have the sources of the spirit of aggression that is sweeping the earth. These direct causes have forced nations into a program of seeking self-containment and have compelled them for the sake of self-preservation to accept voluntarily or otherwise a national economy based upon self-containment. When a great people are forced to live within their own boundaries by circumstances over which they have no control and when there is not a self-sufficiency of physical necessities within those prescribed boundaries, such peoples have but one remedy, and that is the extension of their boundaries until they do provide within their own country those physical necessities.

PEACEABLE APPEASEMENTS

Germany covets the Ukraine and the fertile valley of the Danube; Italy, an African empire and political control of Spain; and Japan, the exploitation of the backward, conglomerate so-called nation of China. They covet these lands for the natural resources that will enable them to round out their respective economies. England and France, who, because of the production of their colonies, have an

excellent supply of natural resources, are not hard to satisfy if they be permitted to hang onto the colonies and territory which they already possess. They will offer little resistance to the totalitarian governments even though they heartily disapprove of the methods of such governments so long as their own boundaries are not molested or disturbed. "Peaceable appeasement" is their foreign policy, and that means in plain, understandable English that they will close their eyes while Germany, Italy, and Japan extend their respective boundaries. The so-called sell-out of Czechoslovakia at Munich told a lurid story, because we first learned at Munich that Germany has the cities of London and Paris at the mercy of her flying armada of countless, relentless bombers that make no pretense of hesitating to destroy helpless noncombatants. Hitler will spare these cities only so long as England and France give him a free hand in his march to a self-contained Germany, and proud England and sulking France without adequate air defense have no other alternative than to accept Hitler's terms. Hitler needs oil and wheat and both are almost within his grasp, perhaps, without the firing of a single shot. Russia, China, Africa, and Spain will have to look after themselves. England and France, to save their own cities from destruction, have abandoned these countries to the aggressors.

POWER AND DOMINATION

When we contemplate the overnight acquisition and miraculous development by Hitler and Mussolini of the modern implement of war, the airship, we should find a most valuable lesson. Today experts estimate that Hitler alone can drive from the skies in a few short months' time every unit of aircraft operated by the combined powers of France and England. Such a rapid development of power and domination is unsurpassed in all history.

INDUSTRIAL COMPETITION

When Germany once fixes her new boundaries and has an inexhaustible supply of natural resources assured, she will undoubtedly give America real competition for world supremacy in the industrial arts and sciences. It is my prediction that this period of boundary adjustments is to be followed by the most intense industrial competition the world has ever known and that nations able to reach the goal of self-containment will make internal progress in living conditions far beyond our poor imaginations to believe.

HATE AND PILLAGE

The civilized world has been shocked, grieved, and outraged at the persecution of religious and racial minorities in central Europe, but the matter definitely cannot be either adjusted or assisted in its solution by a declaration of war. America, however, should assume a very definite world leadership in finding the solution to these uncivilized outbursts of hate and pillage. This is a matter that by its very nature should lend itself to adjustment at the conference table. There is plenty of room some place on this old planet for every human being, regardless of his race, his religion, or his color.

WESTERN HEMISPHERE HAS DICTATORS

Deeply devoted to democracy as we are as the chosen way of life for ourselves, we should not be ready to declare war on a nation simply because they have chosen to live under a dictator. Democracy can neither be promoted nor spread by the sword by outsiders. It must spring from the heart of the individual citizen within a country. America cannot consistently go too far in condemning dictatorships, because she is pledged to protect dictatorships in the Western Hemisphere by both the Monroe Doctrine and her very prudent policy of being a good neighbor, and it cannot be denied that there are many dictatorships in the Western Hemisphere, although none of them can be called aggressor nations. The recent conference at Lima was an excellent start in developing friendship and trade in South America and unmistakably marked further progress in the commercial and industrial development of the Western Hemisphere.

OPTIMISM

Everything in the world picture, however, does not spell gloom. Nature has separated us from the aggressors of Asia by 5,000 miles of friendly Pacific, and has removed us from the aggressors of Europe by 3,000 miles of the stormy Atlantic. Political circumstance has given to us as our neighbor on the north the finest, peace-loving people inhabiting this good earth, and we stand about as much danger from attack from the neighbors on the south as does a Rocky Mountain lion stand in danger of being set upon by a couple dozen harmless little chipmunks. Our situation, political and natural, is indeed a most happy one.

NO WAR IN SIGHT

Think of Switzerland, located in the midst of aggressors, with aggressors to the north of her and aggressors to the south of her, and no appreciable military defenses. Think of Sweden, with her great supplies of iron ore—the greatest supplies in the world of a resource that should make every aggressor's mouth drip with greed and envy—and no military establishments. Think of little Denmark, with her fertile fields and her strategic location to control the North Sea, and no pretense of military protection. None of these thrifty little nations seems to be in the slightest bit of danger. They have learned the wisdom of minding their own business and of going ahead sawing their own wood. If we were in their shoes with our inspired fear complex, and our busybody attitude, we would die of fright. The unvarnished truth of the matter is that there is no likelihood of an American war in the next 20 years unless we ourselves start one or permit clever foreign diplomats to maneuver us into one just to pull their own chestnuts out of the fire.

DO NOT WASTE BORROWED MONEY

But does that mean that we should complacently fold our hands, serenely satisfied with our own importance and our own imagined security, however well founded it may be, oblivious to world-wide developments and events? Most certainly it does not! It does mean, however, that there is no immediate emergency in national preparedness facing us that should cause us to rush in pell-mell, slinging borrowed money to the right and to the left and to the greedy profit-plus munition makers, nor does it justify raiding the Public Treasury and establishing "pork barrel" projects in obscure places in the sacred name of national defense. We are not rushed for time. No one is about to commence shooting at us. Adequate armament and peace security should be reduced to an exact mathematical science and approached intelligently with fixed determination, but without either fear, hysteria, or the beating of drums.

PLANNING FOR DEFENSE

Blueprints of our defense needs can be carefully and painstakingly prepared and developed by our splendidly educated and equipped Army and Navy engineers and experts. Comprehensive and adequate plans for efficient and practicable industrial mobilization should be evolved now for the potential mass production of munitions and implements of war by our industrial giants, to be paid for on a fair and patriotic basis with unconscionable profits deleted. A healthy domestic economy should be adopted by our country that does not contemplate piling crushing debts upon posterity. When these basic and first things are done first we can be made ready for whatever future destiny is to be our fortune.

Peace for the United States

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. HENRY CABOT LODGE, JR., OF MASSACHUSETTS

Mr. NYE. Mr. President, last evening the junior Senator from Massachusetts [Mr. LODGE], addressing the Fourteenth Women's Patriotic Conference on National Defense, devoted himself in a way which interested me in no small measure to the subject of a determination to keep out of other people's wars. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mme. Chairman, Mr. Secretary, fellow Members of Congress, officials of veterans' organizations, and members of the Women's Patriotic Conference on National Defense, it is a privilege at any time to have the opportunity to address an organization like yours which is so consistently devoted to the inculcation of patriotism, both in fair weather and in foul. It is, however, a particular inspiration to be the speaker before you this year when so many dangers are threatening the world and when the problem of war and peace is overshadowing every other concern. As one who is too young to have been a veteran and who regards himself as the beneficiary of their sacrifice, I feel myself especially honored. As an organization which is interested in peace and which believes in acting before the emergency is upon us, you, of course, know that while the issue of war and peace depends in the last analysis on the mental attitude of the individual citizen, that there are steps which government can and should take to avert war. Let us consider some of these steps.

First. We can legitimately expect, for instance, the executive branch of our Government to show common sense in the day-to-day conduct of foreign policy. This is something which legislation cannot guarantee but which counts for more than many laws.

Second. Among the laws which would be helpful would be an act which would enable us to prosecute a future war with a minimum of waste, both in life and in public money. We already have the National Defense Act of 1920 which sets forth our military organization in time of war. Congress should endeavor to draft laws as soon as possible which will set a ceiling on prices so that profiteering as nearly as possible be eliminated. In the event that the tragedy of war should again smite us, Congress should set up a

rigid tax schedule which will as nearly as possible make any future war a pay-as-you-go and not a bond-supported war. This tax schedule should square with the very correct idea that "war is hell." The fact that such a law existed ahead of the emergency should be widely advertised, and the knowledge that we were ready strategically, economically, and fiscally for war would be a powerful deterrent to the domestic waver of the bloody shirt and to the militarist abroad.

Third. Consideration might also well be given to the effect of foreign trade on the preservation of peace. Of course, no one suggests complete elimination of foreign trade, just as no one suggests complete elimination of tariff barriers. The question is in what direction are we going to move. If we are single-minded about peace, must we not move in the direction of national self-sufficiency? I know that to the classical economist the notion of self-contained nations is abhorrent, and that from the standpoint of everyday business, it is a two-sided question. I submit, however, that if we are wholehearted about peace that this is the direction in which we should move.

Fourth. Inasmuch as public opinion will have the final say, regardless of what you and I may decide here tonight, it is vitally important that public opinion be enlightened. We cannot have an enlightened public opinion without widespread public knowledge of the facts which have a bearing on war. This means publicity. For instance, the facts on foreign holdings of American property and reports of foreign transactions should be widely available. There are literally billions of dollars of foreign investments in the United States. They cannot stay neutral if their owners do not. I believe that we should know these facts.

Fifth. An even more striking example of our ignorance of the fundamentals of war and peace is the refusal of those in authority to tell us about the use to which the $2,000,000,000 stabilization fund is being put. We understand that this money is used in operations in foreign exchange. If the United States Government is influencing the currencies of foreign lands, I believe the American people should know about it. It is hard to imagine a more direct way of interfering with the lives and happiness and general well-being of other peoples. The power possessed by our Government through this stabilization fund is a great power—no less so than the better-known methods of foreign policy. Here, too, we should know the facts.

I have tried to indicate a few helpful steps for the Government to take which would promote the cause of peace. I now come to what is perhaps the most important of them all, the national defense. Your organization is no last-minute convert to the value of a national defense. When others were either indifferent or actually hostile, you were affirming the need of having an Army and Navy which, on the one hand, was in direct relation to the life and the treasure to be protected, and on the other, was developed with due regard to possible threats from abroad.

You have had to explode many fallacies. You have had to listen to the argument that a large Army and Navy would get us into war, in spite of the fact that we have had a war in this country on an average of once every 30 years, and that never were we involved in war because our Army and Navy were too big. Rather, in some case, was it because our Army and Navy were so small that foreign nations felt that they could molest us with impunity. With an Army that ranked seventeenth among the armies of the world, and with a Navy that was far from being the equal of the strongest, there has never been real danger that our national defense establishment would cause any fear or apprehension in the minds of reasonable nations.

You have seen the attempt to achieve disarmament by example, with the United States setting the example. You have noted the various disarmament conferences held in Washington, Geneva, and London, at which no agreement at all was ever reached regarding land or air armament, and at which a treaty regrading naval armament was formulated which finally petered out. It is good to see that so many that were against us then are with us now.

Let us always remember that when Jack Dempsey was champion of the world, nobody ever hit him on the jaw. Let us remember the words of Colonel House, that if we had had an adequate Army and Navy, at the time of the World War, we might have become the arbiter of the outcome without the loss of a single life.

Clearly the threat to American peace is as great as it has been at any time since the armistice. The crisis in which the world now finds itself makes me appreciate the wisdom of your organization, which, I believe, years ago advocated a regular and gradual increment and development program which would have saved us much, both in money and in anxiety, had we had the foresight to adopt it. I say, therefore, let us build up the Army. Let us build up the Navy. Let us make sure that we have an adequate air force in both branches of the service. Let us be industrially prepared. Let us be equally sure in our own minds about the object of this defense establishment. Let us emphasize that word "defense." When I cast my vote for increased appropriations for the national defense, I shall do so on the assumption that that money will go to the defense of American citizens and their homes. I do not have in mind the construction of an expeditionary force. If there is any intention on the part of those in authority to have an expeditionary force, let them say so.

I favor national defense today, just as I have for 15 years, because I regard it as an effective agency for peace. I have so described it to you tonight. If there is a thought in anyone's mind that it is not to be used in that way, let that thought be made clear to the American people. I say to you this evening that we are indeed concerned by the many terrible things going on in the world of which we strongly and wholeheartedly disapprove, but I also say to you—and I cannot emphasize it too much—we want peace.

We are therefore agreed on a strong development of the national defense. But my speech would be incomplete and your thought and mine on this subject would be unfinished, if we were not clear in our own minds as to the kind of foreign policy of which it shall be the tool. To put a loaded pistol into the hands of a calm, moderate, and experienced person is one thing. To give that same pistol to someone who is hysterical and excitable is quite another thing.

In considering American foreign policy we note two possible extremes to which it can go. Most of you remember that soon after the war there were those who believed that the United States could best remain at peace by joining with foreign nations in punishing any nation which went to war. This theory of starting a war to stop a war manifested itself in the desire for American membership in the League of Nations and its Court. As one who believes that this was a most dangerous proposal, however sincerely sponsored, I am happy to think that it is no longer before the American people.

The other direction which foreign policy can take is that of minding our own business. Instead of trying to guarantee peace for all the world at once we make a gradual approach. We strive to maintain peace for the United States, believing that if we do maintain peace for the United States, we are doing our share toward maintaining peace for the world. This is the ideal which we have tried to follow with varying degrees of success since the World War. It is the ideal of George Washington. It is the ideal which the sight of the flag kindles in me.

Of late we have all been shocked by the policies which have been pursued by certain totalitarian states. We have been angered by the organized racial intolerance which has been started and which is still burning like a prairie fire. Citizens of a country which is based on the cornerstone of racial tolerance and which owes its success and its greatness to the fact that it recognizes character and ability, regardless of whence it may spring, we are not only angered by the racial intolerance which we see abroad, but we are aghast at its utter stupidity and colossal wastefulness.

Moreover, who is not moved by the attacks which have recently been made on religion? We are told that in some totalitarian countries unemployment relief, social security, and other governmental functions are conducted more efficiently than they are here. I do not know whether this is true, but even if it were true, I contend that no material service that the government could render its citizens could ever begin to repay the damage which a government does to its citizens when it destroys religion. The sorrows and the blows of life, which all of us must expect, would be beyond human endurance if it were not for religion, and a government that seeks to destroy religion commits its people to an awful living death.

We can agree on the absolute need for religion. If we can agree upon that, it is natural and proper for our Government to protest when anyone seeks to attack or destroy it. Our Government has very properly protested to the outrages of the past year. Let me, however, ask this question: Justifiable and imperative as are the current protests, is it too much to say that the outrages which are now being perpetrated might never have been started had we shown our interest in freedom of religion when it was first attacked and attempts were first made to undermine it?

I refer to the first and chief antagonist of religion, Soviet Russia, which is pledged to the utter destruction of religion. We know that in that country churches were closed up, priests were executed, religious schools were prohibited, and exercises of religion were forbidden to citizens under the penalty of severe punishment. This, however, apparently did not interest the United States at all. In fact, we were so indifferent to this antireligious campaign and the persecution that followed it that we actually recognized the Government of Soviet Russia and, I believe, extended American dollar credits to them.

I refer, for example, to Mexico, where churches were closed, bishops, priests, and nuns were expelled from the country, and every attempt was made to destroy the religious instincts of the Mexicans Yet we continued to praise Mexico, and in the midst of all these persecutions, official spokesmen of the United States paid high tribute to the Government of that country.

There are other countries where atrocities have been committed for some time, which apparently have not bothered the official conscience at all. We have protested the recent actions which have taken place in Germany and countries under the influence of her school of thought. We are right in so doing. I ask, though, with all the sincerity I possess, why was this very commendable stand of the United States not taken before?

In conclusion, I again thank you for the privilege of being here, pledge myself again to the patriotic aims which summon you together. In bidding you good night, let me say as clearly as I can, with no room left for misunderstanding, that I believe that the American people have a wholehearted devotion to religion and to peace. They want their Government to be steadfast and consistent in befriending freedom of religion and unswerving in its pursuit of peace.

Silver Purchase Repeal

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1939

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement in response to inquiries of correspondents regarding "silver purchase repeal," by Senator JOHN TOWNSEND, of Delaware.

In response to numerous inquiries from correspondents and others regarding the effect of his bill (S. 785) to repeal the Silver Purchase Act of 1934 and for other purposes, Senator JOHN G. TOWNSEND has issued the following statement listing the chief questions asked him and his replies thereto:

Question. Have not the purchases of foreign silver under the American program been reduced to a mere nominal amount?

Answer. No. During the last quarter of 1938 the United States imported $72,000,000 worth of silver, as compared with $40,000,000 worth in the corresponding quarter of 1937.

Question. Did not the Government cease buying Mexican silver following Mexico's increase in tariffs on imports of American goods and the seizure of American property early last year?

Answer. No. The Treasury today has no agreement to buy Mexican silver from the Mexican Government or the Bank of Mexico, but it still buys newly mined Mexican silver just as it buys other foreign silver. Mexico benefits from our silver program today just as much as it did before it seized American property.

Question. Would not your proposal to sell silver now held in the Treasury require the withdrawal of silver now held as backing for silver certificates, and thus leave outstanding millions of dollars of unbacked silver certificates which would then be like greenbacks or other fiduciary or fiat money?

Answer. No. There are two reasons why my bill (S. 785) would not do that:

(I) The Treasury now holds over 1,000,000,000 ounces of silver bullion idle and out of actual monetary use, against which no certificates have been issued or put into circulation. This silver could be sold or otherwise used without affecting in any way the amount of silver certificates outstanding.

(II) According to my bill (S. 785), if it ever becomes possible to sell bullion at that time held as backing for silver certificates, an equivalent amount of certificates calculated at the then "monetary value" of silver will be withdrawn. Silver currency, even silver coin, is all fiduciary money in this country today.

Question. Does not your proposal to deprive the President of his power to revalue the silver dollar impair his corresponding power to revalue gold as set forth in the Gold Reserve Act of 1934?

Answer. No. The gold power is completely separate from the silver power.

Question. Will not the cessation of silver purchases prevent this country from ever attaining a ratio of one part silver to three parts gold in the monetary reserves, the stated objective of the Silver Purchase Act, and if so is not such effect of your bill undesirable?

Answer. My bill is intended to have precisely that effect, and there is strong support for the opinion that the 1-to-3 ratio mentioned is meaningless and undesirable, especially since no other government in the world pursues a silver policy such as this country's present one. There is no reason why the United States should finance the demonetization of silver abroad.

Question. Would not cessation of silver imports tend to reduce American exports of goods, and, if so, would that tendency not be harmful to this country?

Answer. Some reduction would undoubtedly occur, although the promised boom to our merchandise exports as a result of this country's silver program has failed to materialize.

Reduction of such United States exports of goods as are now dependent on our silver purchases is, indeed, the chief object of my bill, because the exportation of goods is the exportation of American wealth. We do not export goods just for fun, or to make jobs, any more than people take jobs for the sport of working. Nationally as well as individually we should work, we should manufacture, and we should export goods with the object of getting in return something valuable, consumable, and enjoyable. For Americans as a nation to work hard and produce cotton, wheat, motorcars, and other manufactures, or even just services, and to send or render those commodities, manufactures, and services to foreigners in exchange for a perfectly useless metal to be buried in the ground at West Point is a criminal waste and should be stopped by Congress immediately.

The process of silver buying now going on involves a huge national loss week after week, which is no less real because we as individuals may not have been conscious of it, or because it doesn't seem to come out of our personal pocketbook. The Commerce Department's balance-of-payments statistics will be ample proof of this loss, and already far more than $1,000,000,000 (a thousand million dollars) has been the benefit taken from the American people by those who have sold silver to the Treasury. Apart from this, those who have sold silver to others on a market and at a price artificially held up by the American silver policy have profited enormously.

Question. Apart from China and Mexico, have other foreign countries profited as a result of our silver policy?

Answer. Every silver producing and selling country has profited, including Germany, which has been demonetizing silver; Italy, which called in silver coins to help finance the Ethiopian conquest; Japan; Canada; Russia; Peru; Ecuador; Australia; Spain; etc., and the London bullion market. And it must be remembered that while China and Mexico have received enormous "gifts" from this Nation through its silver policy, the latter caused severe financial crises in China and Mexico, and unfavorable repercussions in many other countries, in 1934 and 1935. The official protests which were sent to this Government are a matter of public record, as is the critical and sarcastic editorial comment on our silver program from many parts of the world, even from the very beneficiaries of our indefensibly wasteful program.

Hon. Homer Cummings

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1939

ARTICLE BY MAX SPELKE, OF STAMFORD, CONN.

Mr. SHANLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Max Spelke, special assistant to the Attorney General:

JUSTICE

(By Max Spelke, of Stamford)

In the first 4 days of the Roosevelt administration, back in March 1933, it was my good fortune to be with Homer Cummings and to watch him assume the great responsibilities of Attorney General of the United States in an emergency appointment due to the death of Senator Walsh. Mr. and Mrs. Cummings had been preparing to leave their Greenwich home and their hearts were set upon the Philippines, where the President had asked him to assume the post of Governor General. Suddenly he was drafted for Attorney General and immediately there were presented to him problems of great moment arising out of the crisis in which the country found itself. Washington was a hubbub of excitement. The banks of the country were closed and from everywhere leaders in industry and finance converged on Washington with petitions for immediate action to prevent a total collapse of our institutions.

Sunday, March 5, was an historic day in the White House and Attorney General Cummings remained in conference with the President from early morning until nearly midnight, joined frequently by others who were outstanding in and out of Government. During that time he rendered his opinion to the President setting forth the powers arising from the banking emergency. People were deeply disturbed and many emotionally upset and worried, but throughout it all I can well remember the calmness, optimism, and good humor of Homer Cummings. As chief counsel for the Government he was a pillar of strength and his judgment was unerring on how to handle the grave situation.

In addition to the general problems of the administration, Mr. Cummings had to concern himself with the proper functioning of the Department of Justice with a personnel of 9,000 people distributed throughout every part of the country and in our territorial possessions, and covering the whole gamut of the law from detection to incarceration in the enforcement field and from customs to constitutional cases in the civil side. He had to take over from an outgoing administration without any preparation and with pressure from every source for patronage considerations.

A Connecticut Yankee became the head of the largest law office in the world with a job to do and a firm determination to see the job through. No amount of pressure could sway him from his purpose to retain certain key men in Justice, such as John Edgar Hoover as Director of the Federal Bureau of Investigation and Sanford Bates as Director of the Federal Bureau of Prisons. Out of a total budget of about $40,000,000, these two agencies expended about one-third of the total and in numbers they represented together close to one-third of the entire personnel of Justice, although the Federal Bureau of Investigation at that time was a

much smaller unit than now. These were top places in Justice but Homer Cummings had spent a lifetime in law enforcement and in the study of prison problems and he felt very deeply that political considerations must not enter into these fields. Not the least of his achievements is that he succeeded so admirably in building up these two agencies into outstanding positions in their respective spheres. Mr. Cummings sought and obtained greater funds and larger personnel for his G-men and he established Alcatraz as a maximum-security minimum-privilege institution to round out the prison work.

Other key men in Justice from the outgoing administration were retained too because of their specialized ability and knowledge of the work—they were "carcer" men. This required firmness, courage, and a deep knowledge of human nature, qualities that we all know Mr. Cummings possesses in large measure. In spite of these considerations his popularity with Congress and with leaders in political life grew because it was soon sensed that nothing was going to shake him loose from his sincere convictions

Early in his term he called together in Washington leading figures in law enforcement for the Attorney General's conference on crime out of the deliberations of which came the series of new crime laws extending the jurisdiction of the Federal Government in order to cope with crimes such as kidnaping, the robbery of national banks, and the transportation of stolen property from one State to another. These new crime laws strengthened the law enforcement agencies and gave the G-men of the country an opportunity to do the great job that has won universal acclaim. Connecticut people have watched with particular interest the successful conduct of law enforcement directly supervised by Norwalk's able Brien McMahon, Assistant Attorney General in charge of the Criminal Division.

There is hardly the space here to enumerate the achievements of justice under Attorney General Cummings; volumes could be written on that score and the record has been testified to by Mr. Justice Roberts at the farewell dinner to Mr. Cummings held in Washington only a few days ago and by Frank Hogan, president of the American Bar Association, toastmaster at the dinner, and by Cordell Hull, Secretary of State, a dinner speaker who referred to Homer Cummings as "one of the outstanding men of his generation."

This unusual man did an unprecedented thing when he went before the Supreme Court of the United States and personally argued the famous gold-clause cases. No Attorney General had ever before assumed such a task but it was considered vital to the country that a favorable decision should be obtained from the Supreme Court and by a memorable 5 to 4 decision rendered by Mr. Justice Hughes the administration was upheld in its monetary policy. On one other occasion, Mr. Cummings found it necessary to appear in court in person on behalf of the Government when he went before the District Court of the District of Columbia to argue against the granting of an injunction in the holding-company cases and here, too, the Attorney General won out on his contention. A contrary result would have led to a chaotic situation with respect to pending litigation by the Government in various courts from Maine to California. At one time the Government had to contend with nearly 2,000 injunction suits that had been obtained in the lower courts restraining the Government in its activities and if this situation had continued much longer there would have been a paralysis of the functions of the Government.

His last official act bears out Mrs. Cummings' description of him when she said, "He is the most civilized man I know." I refer to his last official opinion given to the Secretary of State ruling that a man convicted in present-day Germany should not be barred from entering this country because of "moral turpitude." Mr. Cummings held that an applicant for a visa was not guilty of "moral turpitude" for stating in the application that he possessed only 1,500 reichmarks and being later convicted of making false statements in an effort to remove 30,000 reichmarks, an amount much larger than he would be permitted to take out of Germany. Mr. Cummings took into consideration the "present-day situation" in Germany and said, "I do not think that the case should be divorced from the realities of the world or that opinions rendered heretofore in this country dealing with the moral qualities of crimes of which persons had been convicted by foreign tribunals in tranquil times should be followed in the letter to conclusions antagonistic to the spirit of our immgration law and foreign to the intent of the Congress in passing it." He asserted that concepts of law in Germany were alien to those of this country and said that the members of the Jewish race in Germany were under the severest kind of persecution.

Again I quote from his opinion: "I cannot bring myself to believe that in determining any moral or political attributes of that crime the courts of this country would close their eyes to those factors. Indeed, it would appear that the acts here under consideration were performed under a compulsion as great as it was unjust. The alternatives open to the alien were to remain in Germany and be reduced to a state of penury and serfdom or to seek another life in another land. * * * It was a form of duress which in good conscience we would not be justified in ignoring. I do not believe that the term 'moral turpitude,' as it is generally understood, can properly be ascribed to the conduct of this alien. I advise that you would be warranted in granting him a visa."

And then it was my good fortune again to be present when Mr. Cummings left the Department of Justice and officially turned over to his successor the great responsibilities of the high office of Attorney General of the United States. He put his hand affectionately on the younger man's shoulder and bade him hail and farewell. It was on New Year's Day and before a small gathering of justice officials. The inevitable newsreel men were present and the new Attorney General in his quiet and soft-spoken manner assumed his new duties with a tribute to the work of his predecessor. One felt instinctively in meeting former Gov. Frank Murphy, now Attorney General, that underneath his quiet exterior there was a firmness and a determination possessed to a high degree only by modest men.

At the farewell dinner to Mr. Cummings the new Attorney General was presented to the distinguished audience made up of leading figures in official and business life and was greeted with generous enthusiasm. I looked in on Attorney General Murphy's first press conference held the next day. Leading newspapermen were present, including such Nutmeggers as Heywood Broun, Quentin Reynolds, and Leigh Danenberg, Bridgeport publisher; all were eager to greet Attorney General Murphy and all came away feeling that here was a fine character and a deeply spiritual man. In Connecticut Attorney General Murphy has many close friends, especially in the Stamford-Greenwich area where he visits frequently in our hills country and where he will spend part of the coming summer months, just as he has in the past. He has worshiped frequently at St. Mary's Roman Catholic Church in Stamford during past summers and many look forward to his vacation days in this area.

At this press conference before he was confirmed as Attorney General, he stated that he had written a letter to the Senate Judiciary Committee requesting that he be permitted to explain to the committee his part in the Michigan sit-down strikes, and with customary frankness he appeared before the committee and made a fine impression with his straightforward explanation of those events. The committee unanimously recommended his confirmation by the Senate and he has been confirmed by an overwhelming vote. Attorney General Murphy stated in his press conference that he expected to be an advocate as well as an administrator and that he hoped to go into the courts on behalf of the Government when the situation warranted. His abilities as an administrator have been amply demonstrated as Governor General of the Philippines where he did a marvelous job and again more recently as Governor of Michigan. His abilities as a lawyer have long been demonstrated when as district attorney he prosecuted important cases and later presided as a judge on the bench. Curiously enough, he and Supreme Court Justice Frankfurter, whose names went to the Senate at the same time, both started out in public life as assistant United States attorneys.

It is said of the new Attorney General that he reads daily from the Bible given to him by his mother when he was a lad in a log-cabin home where he was born. I cannot help but feel in talking with the new Attorney General that he has paused over and adopted for his very own that expression from the Prophet, "And what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God."

We Should Provide for a Permanent Civilian Conservation Corps

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1939

LETTER TO COL. ROBERT FECHNER, DIRECTOR, CIVILIAN CONSERVATION CORPS

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me recently to the Director of the Civilian Conservation Corps:

JANUARY 21, 1939.

Col. ROBERT FECHNER,
Director, Civilian Conservation Corps,
Washington, D. C.

MY DEAR ROBERT: It is gratifying to me to know of your recommendation, made in a letter to Vice President GARNER and Speaker BANKHEAD, to the effect that it is your feeling the Civilian Conservation Corps should be put on a permanent basis and the administrative personnel placed under civil service.

I want to strongly support the position which you have taken in this matter. I have long felt that the splendid work being done by your organization makes it worthy of permanency. On every occasion where it was appropriate and timely I have urged that this be done.

I have visited many of these camps and always my admiration has been increased for the program which is so successfully being carried forward under your leadership. This is the type of work which it seems to me can effectively be carried forward under Government guidance and control. The conservation program, from the material side, means that through Civilian Conservation Corps activities we are building a better land in this Nation. On

the human side the program has certainly gone far toward building better men.

I believe the investment made in the Civilian Conservation Corps has been a wise one. It is my considered opinion that it should be carried on. I shall cooperate enthusiastically in support of the permanent establishment of this worth-while agency.

With personal good wishes, I am,

Sincerely yours,

JENNINGS RANDOLPH.

P. S.—As a member of the House Labor Committee, I shall cooperate in every way to secure the passage of the legislation which has been introduced to bring this about.

Agriculture

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1939

ADDRESS BY HON. FRANK CARLSON, OF KANSAS, OCTOBER 26, 1938

Mr. CARLSON. Mr. Speaker, under unanimous consent of the House, I am inserting today in the RECORD a speech I delivered before the annual convention of the Farmers' National Equity Union at St. Francis, Kans., on October 26, 1938. The farmers at that time were suffering seriously because of low farm prices and a greatly reduced agricultural purchasing power, and these conditions still exist. Therefore, Mr. Speaker, I feel that these remarks are pertinent to the situation as it is today.

Mr. Chairman, delegates, and friends, I deeply appreciate your kind invitation to address this annual meeting of the National Farmers Equity Union. Your organization has grown to be one of the outstanding farm organizations in the United States. Your 100-percent cooperative program is the basis of a prosperous and permanent agriculture. Agriculture is America's basic industry and the only indispensable vocation of man. Men must till the soil if we are to have food and clothing for the Nation. A quotation from Thomas Jefferson reads:

"Let the farmer forevermore be honored in his calling, for they that labor in the earth are the chosen people of God."

It is interesting to note that history does not record an instance where any nation suffered economically, financially, or socially so long as those engaged in agriculture were prosperous and happy. The purchasing power of the farmer determines the degree of our national prosperity, or in the words of Gifford Pinchot, "As the farmer prospereth so prospereth the Nation."

This Nation today is suffering because of the low purchasing power of agriculture. It effects the manufacturer, the merchant, the banker, the physician, and the laborer. I think this can best be illustrated by a short story.

One evening a farmer was studying the returns he had just received from a shipment of cattle which had been consigned to the central market. As he studied these returns he soon discovered that the cattle had brought $12 less per head than the note at the bank. He was greatly worried, and after going to bed could not sleep. He stood it as long as he could and finally determined he must get up and call his banker. He called the banker out of bed after midnight and informed him that he regretted very much to disturb him, but he had just received his cattle returns and they lacked $12 per head of taking care of the note. The farmer said, "It worries me so I can't sleep." The banker replied, "Mr. Farmer, you go back to bed. I'll sit up the rest of the night."

It must be remembered that every dollar paid to the farmer for his products gets back into the channels of trade, and when society decrees this shall be a mere pittance of the national income, it follows naturally that the farmer can spend only what he receives. The farmers of our Nation do not ask for special favors, but they are interested in one thing, and that is the securing of parity income, parity prices, or cost of production for the things produced on the farm that they must sell in the public market. Records show that our country has never been on a solid or prosperous basis unless agriculture was prosperous.

FARMERS' SHARE OF NATIONAL INCOME

In 1850 agriculture's total share of the national income was 33.6 percent. This declined steadily until in 1932 agriculture was receiving but 7.5 percent of the national income. This change was caused, no doubt, largely by a shift of our population from the farm to the city during this period, but it shows the inequality of the farm income with the nonfarm income. Not only did agriculture's total share of the national income decline from 1850 to 1932 but the per capita farm income in relation to the national total income also declined from a high point of 67 percent in 1860 to 30 percent in 1932.

In 1936 our national income was $63,799,000,000, out of which agriculture received 9.4 percent, or approximately $6,000,000,000. In 1937 it was estimated that the agricultural income, including benefit payments, was less than $10,000,000,000 out of a national income of approximately $70,000,000,000. Present indications are that the income this year will be more than $1,000,000,000 less than last year. I know you will agree with me that it is impossible to have a sound recovery when the farmer and agriculture, representing about 30 percent of the population, actually receive less than 10 percent of the national income. Is it any wonder that individual farmers are moving from the farms to the cities in order to get the benefit of our great national relief programs?

This agricultural situation is so serious that I am reminded of the following story:

A farmer was driving by a State hospital, and he turned his car off the side of the road under the shade of a tree to tinker with the motor. One of the inmates of the institution walked out to the fence and asked the farmer where he lived. "About 2 miles down the road," he replied. "And what's your business?" asked the inmate, to which the farmer replied that he lived on and operated a farm. The inmate then asked the farmer if he had ever been crazy, and he said "No." The inmate looked at the farmer and said, "Well, it beats being a farmer."

AN EVER-PRESENT FARM PROBLEM

Our farm problem did not come with the depression. Even during the years which we have designated as years of prosperity it was here in an aggravated form. Had our farm troubles begun with the depression we might well hope that when we got back to the favorable condition of 1929 that they would disappear. The truth is they were present then and will continue to be with us. In fact, I ask when has there been prosperity on the farm during recent years, except in times of war or in case of crop failures on a large scale in other countries. The farm question has its roots in conditions other than those superimposed by a general depression. The farmer has produced and assumed that the American people could buy his products. The farmer has not overproduced measured by the needs of the people. He has gone further and produced sufficient to make comfortable all of the people of the land and in so doing has discharged his obligation to society and the country. Unfortunately our national income was so distributed that 80,000,000 people must confine their purchasing to the necessities of life and 50,000,000 must be satisfied with far less. Here is where the difficulty arose. This economic crisis in the life of the farm has not only revealed the tragedy of the farm but the tragedy of the Nation. When one realizes that we have approximately three-fourths of the gold of the world in this country and yet have 13,000,000 people unemployed and that there is dire need and distress in practically every section of the country, one must admit there is something wrong with our economic system. With anything like an equitable distribution of our national income the farmers of the Nation would be in a position to start the wheels of industry and relieve this condition by purchasing needed supplies. Every farm is in need of new improvements, paint, fences, etc., and could and would start the wheels of industry by their purchases. Their purchasing power depends upon a market.

THE AMERICAN FARMER IS ENTITLED TO THE AMERICAN MARKET

The question then arises, Where is this market? Some economists maintain that we must find our markets in Europe or in the Old World. It is my contention that the American farmers' market is the home market; in fact, he is entitled to the American market. Every effort should be made to enlarge our foreign market, but present indications are that there is going to be a smaller and smaller demand for our agricultural products in foreign countries. We know it has been the policy of all nations since the World War to increase their agricultural output. Backward countries with fertile soil and an abundance of cheap labor are supplying and building up production to such an extent that it not only reduces the demand for American products but is actually invading our American market. It seems to me that the only market for the American farmer is here in the United States. The market is here in the homes of millions of our common people and will be found as soon as we restore purchasing power to these people. Therefore, it seems to me that the farm purchasing problem is the most profound problem in our world social structure. It matters not how many billions we pour out in the form of emergency relief, if the 30,000,000 people engaged in agriculture, representing six and one-half million homes, are unable to buy even the bare necessities of life. Therefore, our first step to secure national prosperity should be to insure the American farmer his own market at a fair price.

FARM TENANCY

The alarming rate at which farm tenancy is increasing in the United States is of grave concern to every citizen. From the very foundation of the Nation 150 years ago the ideal held out for American agriculture has been that of farm operators who should own the land on which they live. It is not enough to say that the depression or economic condition of the country has resulted in a great increase of farm tenancy. A thorough analysis of statistics on the subject will show that the 20-year period from 1880 to 1900, when the United States was literally giving away hundreds of millions of acres of land, the number of farm tenants actually increased by 1,000,000 and in the 35 years from 1900 to 1935 a further increase of only 800,000 was registered.

In the year 1880 it was found that we had 4,008,907 farms in the United States. Nearly 74.4 percent were operated by their owners, or only 25.6 percent were operated by tenants. Today over 50 percent of the farm population of the United States is listed as tenants, according to figures submitted by the United States Department of Agriculture. Every year for the past 10 years the number of new tenants has been about 40,000. Fifty years ago 1 out of every 4 farmers was a tenant. Today 2 out of every 5 are tenants, and on some of our best farm lands 7 out of every 10 are tenants. Many tenants change farms every 2 or 3 years and apparently 1 out of 3 change farms every year. At the same time, the number of owners of family-size farms has been rapidly declining.

No country can feel secure when 40,000 farmers become tenants annually. In addition to this large group of new tenant farmers, we have a big army of tenants who have simply farmed themselves poor and almost helpless on submarginal lands. Those of us who read history know that Denmark had a farm problem 60 years ago similar to the one we are now passing through. The condition in that country became desperate, and the nation set up a new program of cooperative financing and marketing for agriculture.

The Denmark system has operated successfully for more than 50 years. Denmark is one of the finest agricultural countries in the world. Here farmers practically run the country on a cooperative basis. During the recent world-wide depression their buying power has been affected some because of the economic condition of England, which is her principal buyer, but otherwise her prosperity has been sustained. Our tenant problem is a serious one, and we must solve it or at least make a serious attempt. This Nation cannot afford to stand by and twiddle her fingers while relief rolls are mounting and while thousands of tenant farmers are eeking out a mere hand-to-mouth existence. This Nation has embarked in a small way on a farm-tenancy program, but this must be greatly enlarged and materially changed if we are to care for the increasing number of farm tenants. Ownership is the best answer America can give to communism. Radicalism, like a diseased germ, can thrive only on misery, but bring it out into the sunshine and happiness and it dies. We cannot build a great Nation on a shifting population of tenants any more than we can build a great building on a foundation of sand. Men, to be good citizens, must be rooted to the soil, and, therefore, the home owner is the best citizen in time of peace. He makes the best soldier in time of war. He has more to live for and, if need be, more to die for. If we want to keep the system of private property in the United States, we must make it possible for more of our people to own property. With such a high percentage of our people who own no property, it is mighty easy for the radicals to persuade them to join the ranks of the destructionists. There are too many who feel they have nothing to lose in an upheavel and might stand to gain in the shuffle. A hundred percent cooperative program would go a long way toward solving this problem.

Concededly, the real problem of agriculture today is to devise some plan which enables the producer to make at least a normal profit without sacrificing his personal liberties or initiative.

FARM CHEMURGY

The most significant and encouraging sign for new agricultural markets is the phenominal growth of the farm chemurgic movement which is based on the philosophy of creating new wealth and new opportunity. Since the farm is a primary source of America's raw material science has a wonderful opportunity to provide new materials and uses for farm products. With the development of farm chemurgy a profitable employment will be secured for idle acres and employment for idle hands will follow. This new agency is meeting the demand for new and expanded markets for our farmers who are constantly facing overproduction. The National Farm Chemurgic Council, Inc., is nonpolitical and nonpartisan, and is conducting an active program based on the cooperation of the farmer, manufacturer, and scientist. In its brief history the chemurgic movement has attracted Nation-wide interest. It is estimated $150,000,000 have been invested in chemurgic industries resulting from public and private research, and all providing new purposes and new markets for farm products.

At present farm products from 40,000,000 acres are being used by chemurgic manufacturers and it is believed that within 10 years, through further research and applied science, that 50,000,000 additional acres will be required to meet the demand of these industries. For many years agriculture had a program of "making two blades of grass grow where only one grew before." The new program must be to find new uses for agricultural products. Great strides have been made in the manufacture of power alcohol. This is a field in which surplus crops could be utilized and it is estimated that the entire surplus could be used in this industry. Methods must be found whereby the price per gallon of power alcohol can be manufactured and be in line with other motor fuels. The dairy industry has developed some interesting new markets and has promise of giving still more in the future. In recent years large quantities of skim milk are being dried and manufactured into powder form.

One product which has become an important commodity in the last few years and which holds much promise in the future is the soybean. The acreage of soybeans in the United States has increased from 2,000,000 acres in 1924 to 5,000,000 acres in 1937. Actual production has increased even faster, rising from 5 to 40 million bushels in the corresponding period. This bean is now used for meal, oil, green beans, and dried beans. At the present time there are 35 mills used for crushing soybeans into oil and oil meal. This oil may be used for glycerine, enamel, varnish, paint, waterproofing, linoleums, soap, rubber substitutes, lubrication, and for human consumption.

Another crop for which new uses have been secured for great value to the growers is the sweetpotato. The sweetpotato today is the source of a new starch which is useful and is being used for laundry work, gumming for postage stamps, envelopes, and labels. Raisin seeds used to be quite a nuisance. Now an oil is made from them and sprayed on the seeded raisins to keep them fresh and soft until eaten. The small seed of a tomato was formerly a waste product of the catsup industry. Today the seeds are crushed and the oil contents used in food and for making fine soaps.

PARITY PRICE CONCEPT

The parity price concept for agriculture, as embodied in existing legislation, recognizes the fact that we must have a free exchange of goods and services on a basis that will mean a fair price to the farmer and furnish him an income basis if we are to have and maintain prosperity. Everyone must agree that our Nation cannot survive if we are to maintain a high price level for industry, a high wage level for labor, and at the same time insist that the farmers sell their products at a world market level. This Nation must work out a farm program that will give the farmers equality in purchasing power with labor and industry. Therefore, I have arrived at the following conclusions regarding the need of a permanent and prosperous agriculture.

CONCLUSIONS

1. Give the American farmer equality of opportunity and a chance to obtain a fair share of the national income.
2. Permit no legislation to be enacted which will result in either immediate or eventual regimentation of the American farmer.
3. Restore the American market to the American farmer.
4. Continue a soil-conservation program to help the farmer improve his land and diversify his crops.
5. Protect the family-size farm by giving greater benefit payments to the small farm on the same principal which provides exemptions and lower-rate taxes for small incomes.
6. Foster cooperation among farmers and farm organizations as a means of solving their problems. Cooperation, to be successful, must be based upon a solid business principle and absolute control by the farmers themselves.
7. The conservation of our national water resources, the preservation of peace and the encouragement and protection of home ownership.

Government Credit Agencies—Bonds and Interest Rates

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1939

Mr. VOORHIS of California. Mr. Speaker, the lower the rate of interest goes the more likely will it become that investment will be made in productive enterprise instead of in the purchase of bonds, mortgages, or other certificates of indebtedness. There are two reasons for this. The first is that, since interest is low, the margin of investor's preference for buying an interest in enterprise instead of buying the right to collect someone's debt to him will increase. The second reason is that the lower the rate of interest, the better chance there is that the enterprise can show a profit from his business.

Now, in recent years two groups of people have been in great distress in the United States because of their debt burdens and consequent foreclosures of their properties—either actual or threatened. These are the farmers and the home owners. In the case of both groups the Government has set up great agencies to try to help them out—the Farm Credit Administration for agriculture and the Home Owners' Loan Corporation for home owners. The rate of interest charged farmers on Land Bank Commissioner loans and the rate charged home owners on loans made to them has not been based merely on the costs of administration plus a margin to cover losses, but has been based upon those factors plus the rate of interest which the Federal Farm Mortgage Corporation and the Home Owners' Loan Corporation were paying on their outstanding bonds as well. If these agencies

had had no outstanding bonds, obviously their rates of interest to their borrowers could have been much lower, fewer home owners would have lost their homes, and more farmers would be in the black today. Let us explore this idea.

The fact is that Government credit agencies assumed burdens that private finance would not or could not assume; and that while the Government was doing this it, as a matter of fact, paid the banking system a handsome gratuity in the form of interest on bonds which the banks "bought" with credit created for the purpose. Take the Home Owners' Loan Corporation, for example. It was brought into existence partly to save the homes of distressed owners from foreclosure; but certainly another function of H. O. L. C. was to take off the hands of the banks of the country great numbers of mortgages that were in many cases not likely to be collected. I do not object to that. It was a good thing to do. But I do contend that had H. O. L. C. not charged so high an interest rate to its home-owning borrowers, some of the homes that it has had to foreclose might have been saved to the owners. And, more especially, I point out that at least one reason why H. O. L. C. charged as high a rate of interest as it did was because it had to cover the interest on its own bonds.

Here is what happened: The banks, exercising their power to create deposit credits, made loans of those credits to home owners secured by mortgages. After the crash of 1929 it became apparent that many of those loans would not be repaid. So the H. O. L. C. stepped in and took over those shaky mortgages. In exchange for them it gave the banks Government bonds. Those Government bonds were as good as gold; they were tax-exempt; and on top of that they bore interest. In other words, the banks originally made loans—not cash loans, but extensions of credit manufactured simply by book entries in the banks' books. Many of those loans turned out to be shaky. So the banks erased their book entries, turned their risky mortgages over to the H. O. L. C., and in exchange got the equivalent of hard cash plus interest.

To be more exact, H. O. L. C. issued bonds and sold them to the banks for deposits in favor of H. O. L. C. on the banks' books. Generally speaking, in other words, the banks created the checkbook money with which to buy the bonds. Then H. O. L. C. drew checks on its accounts with these banks in favor of other banks, or maybe the same ones, and purchased from them the mortgages.

You may be perfectly sure the banks that first loaned money on those mortgages sold no bonds in order to raise funds to make the loans. They created the demand deposits and loaned the deposits to the mortgagors. This is the way our present monetary system works. This great Nation depends for its supply of money on the creation of deposits by 15,000 commercial and investment banks.

The Constitution vested the money-creating power in the Congress of the United States. Yet, to protect a private special prerogative, the right to create credit, the Government gave, first, $3,000,000,000 in bonds to the banks for credit on their books and then paid them the same $3,000,000,000 back again for the mortgages. Interest on the bonds continued and to meet it the home owners' interest had to be kept relatively high, and because of that and other reasons foreclosures ensued and people were put out of their homes.

The same story is true of all the credit agencies of the Government. However well secured their loans may be, however vast the potential reserves evidently present in the taxing power of government, nevertheless, each of these credit agencies first exchanges its bonds with the banks for their privately created checkbook money before it loans money on however good security or for however urgent a purpose.

It would be well to consider the free gifts which these credit agencies have given to the financial interests of the Nation before criticizing them for sustaining losses occasionally in their attempt to relieve agricultural and business distress.

Day by day bank credit, which is the money of America, is created by private investment bankers to finance the purchase of great aggregations of the fixed capital assets of the Nation or to buy in the national debt, or, indeed, to make possible the operations of a Philip Musica. Then why in heaven's name is it not all right for credit to be created on a far broader and firmer base by public agencies of government in order to protect the public welfare?

I ask no special privileges for the Government of my country. All I do ask is the same privileges for that Government, as it attempts to act in the public interest, as are claimed for private interests as they act for themselves.

Then, indeed, farmers, home owners, small-business men, builders, and a host of others could obtain credit at so low a rate of interest that they could pay their debts more easily and keep their homes and farms and businesses running far more satisfactorily.

Puerto Rico's Activities

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, Jañuary 16, 1939

Mr. IGLESIAS. Mr. Speaker, permit me to refer to some of the activities of the great bulk of the population of Puerto Rico. Our little island of Puerto Rico is spending a considerable amount of money to expand its tourist business. During the last few years we have entertained a greatly increased number of visitors attracted by the island's moderate year-round climate, its delightful tropical scenery, and historic forts and monuments. This influx of visitors would be an unqualified blessing to our little Caribbean territory were it not for the fact that too many of our guests are writers, bent upon grasping in several days or a few weeks an understanding of our complex political, economic, and social problems.

Puerto Rico, of course, has no grudge against writers in general. We welcome talented visitors who can tell the world about Puerto Rico and its people. But to interpret Puerto Rico properly to the reading public requires a rather careful understanding of the fundamentals of sociology, political science, economics, and psychology. Unfortunately for Puerto Rico, too many of the writers who visit us have no more than the ordinary 4-year college education, and I suspect that some few of them found it necessary to discontinue their formal schooling at about the sixth grade.

As a one-time editor of three newspapers I naturally am disposed to feel kindly toward journalists, magazine writers, and even columnists. But I am beginning to waver in my loyalty as there accumulates in my files a growing mass of inaccurate, misleading, and, sometimes, vicious comments about our charming but struggling island. All that keeps me from complete despair is the knowledge that the inaccuracies and exaggerations are not intentional—at least the great majority are not.

Right now, as I am setting down my opinions, there probably is another misguided writer somewhere finishing up a sensational article. If this author runs true to form he will tell his readers that "Puerto Rico now faces the worst economic crisis in its history"; "that the plight of the underprivileged and exploited Puerto Rican laborer is far worse after 40 years under the American flag than it ever was under the Spanish rule." The writer is almost certain to state, with no consideration for the tremendous social progress which Puerto Rico has made, that the people live there in abject poverty, and he will be aghast at the shortage of sanitary facilities. Continuing, he is very likely to comment on the high rate of illiteracy and to deplore the fact that only about half the children attend school.

After talking with a few of our "ilustrados," our misguided intellectuals who can see no good in the island because of their own lack of success, our writer will charge that civil liberties are being suppressed right and left, and will review all instances of occasional disorder and violence on the island,

giving the gloomy impression that neither life nor property are safe in Puerto Rico. In short, if he follows precedent, he will attribute to Puerto Rico all the social, economic, and political disorders known to the world. Some commentators have even reported that fascism and communism exist in Puerto Rico, which is absolutely untrue.

I will admit that it is extremely difficult, if not impossible, for even the most able writer to survey conditions in Puerto Rico in 2 or 3 weeks' time and come out with any sort of a sensible or accurate summary of our present status. Indeed, the Brookings Institution, one of our best-known research organizations, maintained a staff of experts on the island for many months and still did not feel that it had found the answer to all our problems, so it is no wonder that an individual writer may make many mistakes if he tries to delve into too many aspects of Puerto Rican affairs in a fortnight's time.

As the island's official representative in the United States Congress, these misleading and unfair statements annoy me greatly. The more accurate and unbiased comments, which sometimes crowd their way into print, unfortunately do not completely offset the more sensational but misleading picture which has been placed before the public to the discredit of the island.

I think I am qualified to speak about Puerto Rico, inasmuch as I was a grown man there at the time of the American occupation in 1898 and have lived there ever since, except for the 6 years I have spent in Washington as the island's Resident Commissioner. Having been in public life all that time as a leader of labor and a member of the insular legislature, I have been close to Puerto Rico's problems and have gained an understanding of the situation there.

Puerto Rico does have its problems, serious problems; there is no doubt about that. The status of the island now is by no means satisfactory, but, on the other hand, it is by no means as critical or hopeless as many writers picture it. Their chief error lies in their lack of standards by which to judge what they see and hear. Compared to some of your fine mainland cities—alongside the Gold Coast in Chicago or Westchester in New York State—Puerto Rico does make a rather sad showing, physically and socially, but compared with the slums of New York and conditions we hear about among tenant farmers in the South, Puerto Rico has not much to be ashamed of, although too many of the writers do not think about that.

To judge Puerto Rico fairly it is essential that present-day conditions be compared, first, with the conditions which prevailed in the past; and, second, with present-day conditions in other nearby tropical areas. On these bases our island can hold its head pretty high, as I shall try to establish.

First of all, we must consider the background of the island, for only in that way can we judge its progress, which, after all, has a strong bearing on its future. Remember that Puerto Rico spent 4 centuries—400 years—as a colony of Spain and was largely neglected during all that time. Spain, like any other world power of that era, was interested in colonies as sources of wealth. Peru and Mexico were just that. They furnished gold and silver and various needed commodities. Puerto Rico, on the other hand, was not even self-supporting. It had no precious metals and no other resources than its soil; consequently the Spanish Government paid slight attention to the island and did little to develop it, either agriculturally or industrially. As a result, living standards were wretched, there was very little capital, literacy was low, and education was the privilege of few. In comparison with its Caribbean and Latin-American neighbors at that time, Puerto Rico was backward and underdeveloped.

As soon as the island became a part of the United States in 1898, and particularly since the Puerto Rican people became citizens of the United States, great progress has been made along many conceivable lines.

Take labor conditions, for example. Some of the writers now claim that the present-day laborer's plight in agriculture and in certain industries is miserable. That may be true, but we have to look below the surface. It is true that many of the laboring class in the country live in crudely built homes with a minimum of furniture and conveniences; that they are destitute. It is true that the dollar wages today are much lower than we would like to see them, but they are about three times as high as in 1898, and are increasing steadily with the help of the labor organizations there. In addition, we have in Puerto Rico, and strictly enforce, a child-labor law, a model workman's compensation law, and an 8-hour day both in the mills and in the fields. Collective bargaining has been practiced between labor and capital for some years and works successfully, and we now have the Federal Wage and Hour Act. Our strikes are settled more quickly and peacefully than before, often with the aid of arbitration.

It is absurd for any writer to say that labor in Puerto Rico is oppressed. I wish to flatly contradict that charge. Our laborers and others in the island enjoy freedom of speech, and of the press, trial by jury, freedom of religious belief, and all the other privileges of American citizenship. We do not vote in national elections, but we have a true democracy in which we elect our own legislature and many other public officials.

Wages are comparatively low, as I have mentioned, but in other ways the laboring class is enjoying conditions which are far better than under the old Spanish rule. Some of our workers receive free homes from their employers, together with lands on which to grow food to supplement their incomes. Free medical and hospital services are available in certain instances. We have no Utopia, that is true, but there is no oppression.

Actually labor conditions in Puerto Rico are superior in certain respects to those prevailing in some poorer sections of the 48 States, and have improved greatly since the American occupation. I can speak on this subject with some knowledge, because I was one of the first labor-union organizers. Indeed, I was put in jail just before the Spanish-American War broke out, sentenced for daring to propose that laborers be given the right to strike and to bargain collectively. I was in jail when General Miles and his troops landed on the island and was released and became an interpreter of the American ideals. Today those rights for which we had to fight and to suffer are enjoyed by every laboring man in Puerto Rico.

Next, let us consider the matter of malnutrition which most of the writers emphasize. No one is starving in Puerto Rico, and plain and modest as the average laborer's diet may be, it is superior to what he enjoyed in 1900 and earlier. We know that because there is more food consumed per person on the island than there was 40 years ago. Local food production has increased at about the same rate as the population in that period of years, according to official Census Bureau figures, but purchases of food from the outside—almost entirely from the farmers in continental United States—have increased sixfold while the population has merely doubled.

Not only is there more food to eat, but the average diet is better balanced than it formerly was. Puerto Rico buys and consumes each year much more of the important nontropical foods, such as meat, lard, wheat flour, butter, and milk, than any of the neighboring tropical countries. The average diet, to be sure, is not what it might be; there are many cases of malnutrition in our island, just as there are in some sections of the States, but there has been much improvement in the average diet and there will continue to be. The Puerto Rican people can purchase the additional foods only because they have a higher buying power than the people of various other countries in that vicinity.

Many of the writers who attempt to solve Puerto Rico's problems seize on the well-exploited idea that we would be better off if we stopped growing sugar and tobacco for sale outside the island and use all the lands to grow foods for local consumption. That sounds fine to anyone who does not know Puerto Rico, but it just cannot be done in such a way. In the first place, some of the foods we now buy from the States cannot be produced successfully in Puerto Rico. It is

impossible to raise wheat there and get anything approaching a satisfactory yield, and we now consume 425,000 barrels of wheat flour each year. Rice yields are far too low even on our best lands, and the same is true of various other crops. Indeed, the limited wages paid to labor in the sugar industry, which is our principal crop and main source of income, will buy more than twice as much food as could be grown on all the sugar lands.

In addition, some of our outstanding scientists—and we have many of them—have determined that, if we discontinued growing sugar and tobacco except to fill local needs and use all the useful agricultural lands on the island to grow food, we could produce only enough to feed the present population very poorly on a minimum diet, far below what the average person wants today in Puerto Rico.

There is a shortage of household possessions in many homes. The average workingman's dwelling is plainly and sometimes meagerly furnished, but as buying power has increased, that condition has improved. We have bought from the States in the last 10 years more than 20,000 refrigerators, 20,000 enameled lavatories, 124,000 metal beds, 15,000 mattresses, 4,000,000 chairs, and millions of other everyday articles which add to the comfort of the people. We could use considerably more of these necessities, but the point is that we already have a great many, far more than we used to possess.

The picture as to education also has been greatly distorted. Against the charges that literacy is low and many of the children cannot attend school, I will make the unqualified statement that Puerto Rico has made more progress in public-school education in the last 38 years than any country ever has made in a similar period of time. That statement can be proved statistically.

For example, when Puerto Rico first became a part of the United States, there was only one building on the island which had been built to serve as a Government school; today there are more than 2,000 school buildings, many of them made from concrete and fine enough to do credit to any rural community in the States. In 1898 fewer than 23,000 children were in school, the total budget for education was only $130,000, and the investment in school property was negligible. At the present time, however, we have more than $12,000,000 invested in school buildings and equipment, more than 265,000 children attend school, and the insular and municipal governments spend in excess of $6,000,000 annually on public education.

Present-day expenditures for schools exceed the insular government's total expenditures back in 1898. Then the government spent only about $3,500,000 for all purposes, and much of that sum went for the upkeep of the army and the church. Speaking in general terms, we have expanded our educational program about tenfold in the 38 years, and the quality of the instruction has kept pace with the growth in facilities and enrollments.

Our record in combating illiteracy is equally commendable if one keeps the past in mind when evaluating the situation. In 1898 only 20.4 percent of the people 10 years old and over in Puerto Rico could read and write, but at present approximately 67 percent, or two-thirds, of the people classify as literate. The showing is less favorable than in any of the States, but represents an improvement of more than 300 percent. Moreover, if I may say so without appearing to reflect on other countries, Puerto Rico has a higher percentage of its population in school, a higher rate of literacy, and spends more per pupil on education than any of its Caribbean neighbors for which figures are available.

If our writers could take the time to seek out these figures, they would be less likely to throw up their hands when they learn that only about half the island's children can attend school. That situation exists because the facilities have not yet been expanded sufficiently to accommodate the remainder. It seems fair to assume, however, that the progress so far is a good guaranty that continued improvement will be effected in the future. After all, we have done pretty well in the short space of less than 40 years.

Our writing friends have been specially lax in their discussion of our sanitary facilities. Many of the homes are, to be sure, completely lacking in what we may call indoor plumbing. At the end of the Spanish regime, however, conditions were deplorable. There was just one city with a sewage system, only eight communities were equipped with water systems, and not one had any facilities for water purification. Now 38 cities have modern methods of sewage disposal, 68 have public water systems, and many have means for purifying the water. Steady progress has been made and is certain to continue in the future.

Our death rate has ben reduced more than one-third in the last 38 years, making the island a healthier place to live. And, believe it or not, we even have been criticized for that accomplishment. The reduction in the death rate, without a corresponding change in the rate of births, has contributed to the increase in population, with the result that we are adding about 35,000 or more new people each year to an already overcrowded little island. Some of the individuals who write about us state that we should have left the death rate alone and thus have prevented the population growth. That, however, is not the American way of life, and not the Puerto Rican way. We intend to continue our progressive improvements in sanitation and to find some other means for dealing with the population problem.

One very common charge is to the effect that the small farmers and landowners are being driven out and that the land is being concentrated into a few hands. That is easily answered by official figures. There were in Puerto Rico in 1935, according to official census figures, 52,790 individual farms; in 1920 there were 41,708 farms. The number of independent sugarcane growers in 1929 was 4,719; according to recent Government figures there were more than 12,000 cane growers in 1935. Actually, then, the number of small farmers seems to be increasing rather than diminishing.

Turning to a different field, what about law and order? I find that many of my acquaintances in the States believe Puerto Rico to be a hot-headed and unruly island. They have been misled by the ample reports of a few unfortunate incidents occurring in recent years. I am well informed on this subject, because I was a principal in one of the events.

A misguided fanatic fired several shots at me while I was campaigning for my second term in Congress in the fall of 1936, and inflicted a flesh wound in my arm. Our chief of police was shot down in 1935, and a regrettable incident resulting in some loss of life occurred in the spring of 1937 when armed radicals attempted to hold a forbidden parade at Ponce. It all sounds bad to be sure, but those are not everyday occurrences.

Actually, Puerto Rico is law-abiding and peaceful on the whole. We never have a kidnaping; there has been only one pay-roll robbery in recent years; and gangsters are unknown. There is a normal amount of petty crime, and we have a small group of radicals who want to upset the state of affairs, but those are insignificant factors in the over-all situation.

This brings us to the subject of independence, about which a great deal has been written and many misunderstandings exist. Because a small group of so-called Nationalists have been able to attract a great deal of attention, the outside world has assumed that they represent the general sentiment of Puerto Ricans. That group numbers fewer than 5,000, however, out of 1,300,000 people, and in no sense reflects the views of the island. A vast majority of the people value their American citizenship highly and hope to become even closer to the United States in the future.

I cannot tell you exactly how many of the people in Puerto Rico would choose independence if the idea were put up to a vote, nor can anyone else quote an accurate figure. I do know, though, that the leaders of the independence movement themselves do not claim that more than 20 percent of the people would vote for separation from the United States, and my own estimate places the figure well below that.

The last of the misleading pictures so often placed before the public is the statement that Puerto Rico is a burden to

the United States, that the Federal Government has poured millions of dollars into the island. Now, let us look at the facts. The United States has been generous with our island, especially during the last few years, but this is another relative matter. Actually reliable Government figures show that during the last 5 years Puerto Rico has had less Government assistance per capita than any of the 48 States, and that it has not participated at all in several of the most important relief funds. Indeed, some of the States have had four and five times as much financial assistance from the Government as Puerto Rico has received on a per capita basis.

As for Puerto Rico being a burden to the Union, the farmers in the States hardly can agree with that charge. For Puerto Rico is the largest single buyer of American-grown rice, buying more than all foreign countries together. It is the second best customer for meat products and the third largest buyer of lard. It ranks second as a customer of potato and fruit growers, and second as a buyer of wheat flour and both tobacco and cotton manufactures. The island buys more dried beans and peas from farmers in the States than are sold to all foreign countries combined. It is one of the 12 largest customers of the United States for all goods combined, spending $20,000,000 last year for goods produced or manufactured here. No; we are hardly a burden.

In addition, officials of the United States Navy Department have just stated that they consider Puerto Rico to be of the most strategic importance in national defense, and plans are under way for establishing there a large naval base to aid in the protection both of our own Atlantic seaboard and of Central and South America. Puerto Rico also is destined to play a highly important part in the success of the "good neighbor" policy, because of its strategic location between the big neighbor to the north and the smaller neighbors to the south.

The selection of Emilio del Toro Cuevas, chief justice of the Supreme Court of Puerto Rico, as 1 of 12 United States delegates to the Inter-American Congress at Lima, and the recent proposal to study the possibilities of utilizing the University of Puerto Rico for the promotion of cultural relationships between the Americas are indicative of the contribution Puerto Rico can make in the success of the "good neighbor" policy.

Puerto Rico has serious problems, as I have mentioned previously, and is handicapped in various ways. But one of our severest handicaps is the poorly informed writers who magnify our difficulties, distort our current status, and completely overlook our tremendous progress. I am hopeful, however, that we can remove that handicap, and the others as well, through the exercise of patience and typical Puerto Rican resourcefulness.

After Roosevelt—What?

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1939

ARTICLE BY HON. BRUCE BARTON, OF NEW YORK

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following article written by Hon. BRUCE BARTON, which appeared in Collier's magazine under date of January 21, 1939:

[From Collier's of January 21, 1939]

AFTER ROOSEVELT—WHAT?

(By Congressman BRUCE BARTON)

Said a prominent Democratic leader 2 weeks before the election: "There's something going on—underneath. I don't understand it, and I don't like it. I have been all over the Central States. When you ask people how they intend to vote they change the subject. They are not talking, but they have quietly made up their minds to do something."

What was going on underneath was the silent protest of several million Americans. Farmers, who are just naturally opposed to being bossed even when prices are high, will have none of it when prices crumble. Small-business men and middle-class folks feel hampered and insecure. Young people, tramping wearily from door to door and finding no door open, are properly rebellious. Mr. Hopkins has assumed that the unemployed could be kept permanently manageable, but even they grow weary of the dole. People in each of these groups made up their minds to express their dissatisfaction in the typical American way, i. e., by throwing a brick through the front window of the administration in power. The Republican Party was the handiest brick.

This is the meaning of the election. Many millions of voters, annoyed at the New Deal, are in the political market for something different. What have we Republicans to offer?

Well, first of all, we are fully conscious that this is the twentieth century, not the nineteenth. The population of the United States in the last century increased fifteenfold. The richest continent in the world poured its treasures into the hands of the world's freest and most energetic people. Wealth grew by leaps and bounds; every new industry found the ranks of its potential customers swelling by the addition of new millions. The major problem was one of production—how to build the railroads and factories fast enough to keep pace with the demand. Even so recently as 25 years ago, when I became actively associated with the sales problems of industry, we could count on an additional million mouths to feed and backs to clothe each year—10,000,000 additional customers every 10 years. Sales were plotted and plant extensions planned on that sound assumption.

Now, with startling suddenness, this picture has changed. The stoppage of immigration and the precipitate decline in the birth rate have halted our population growth. In the kindergartens and the first five grades of the Nation's schools there are today 7.8 percent fewer children than there were 10 years ago. In 1949 there will begin to be fewer children in the first year of high school, and in 1960 there will be fewer brides and grooms. At this point the curve, instead of shooting upward as in the nineteenth century, will begin to turn down.

The task of the nineteenth century was to build for the demands of additional young customers, but today's task is to raise the consuming capacity of older customers. The political party that is equipped to render service in the future must begin by recognizing honestly (1) that the masses of the American people have been thoroughly convinced that they should and can have a better life, and (2) that the process of giving it to them must proceed without the impetus of a rapidly expanding population. Anyone who talks about the "good old days" marks himself as politically incompetent. There can be good days, but never good old days, because the good old conditions are gone.

The immediate obligation of the Republicans is twofold. We have first of all a negative duty. As the minority we constitute what the English delightfully term "His Majesty's loyal opposition." It is our constitutional function to compel the majority to defend its proposals before the bar of public opinion, to make sure that all measures are fully debated, all relevant facts developed, all weaknesses revealed. Our field of operations extends to the administrative as well as legislative aspects of the New Deal, and here a very big job of examination and revaluation needs to be done. The piling of agency on agency, and bureau on bureau, has resulted in forty billions of debt, 11,000,000 unemployed, and a condition approaching administrative chaos.

Democracy will never be saved by bureaucracy. If it is saved at all, the people must save it. Therefore, the party that attacks bureaucracy and seeks to throw the responsibility for self-government back upon the people is fighting for democracy.

HOW NEW IS THE NEW DEAL?

Years ago the historian Buckle pointed out that more progress has been made in the democracies of Europe by repealing bad laws than by passing new ones. The time has come to review the mass of New Deal legislation, preserve the good, and modify or repeal the rest. Both parties are agreed on adequate relief, collective bargaining, the regulation of exchanges, social security, and low-priced housing; these, in principle, have ceased to be matters of political controversy.

But beyond this common ground lies a broad area of rash experiment that is condemned by the whole record of human history. Here it may be truthfully said that little in the New Deal is really new. Its farm program is only an expensive variation of the coffee control that nearly bankrupted Brazil, and the rubber control that failed in England. Its centralized and regimented relief operations, with the unholy effort to influence elections, are as old as the decline of Rome, when emperors sought by "bread and circuses" to keep the masses in line. Its much vaunted discovery that "oversaving" and "underconsumption" are the cause of depressions goes back to de Sismondi, an Italian writer of the early nineteenth century, whose ideas were later appropriated and expounded by the German Socialists. Public works at the cost of deficits and crushing taxes were the chief feature of King Solomon's reign, whose kingdom broke into pieces as soon as he was dead.

Since 1929 the country has been in and out of the throes of the second post-war depression, corresponding to the depression of the 1830's after the Napoleonic Wars, and the panic of 1873 after the

Civil War. Always these second and severer depressions have been characterized by a flock of wild ideas. Every Member of Congress today receives some of these notions in almost every mail.

There is a simple yardstick with which to measure all these panaceas. One has only to ask, "Does the proposal offer an easy solution of an old problem? Does it promise to fix things up without effort or sacrifice on the part of anybody?" If so, it is no good. All the easy solutions have been thought of a million times, and tried repeatedly in periods of depression. One of the best and wisest of my friends used to say, "When I am dead, write this on my tombstone, 'Here lies a man who lived for 50 years and learned only one truth—there is no substitute for work.'" The Republican Party must have the courage to reaffirm this old-fashioned faith. The people may not be quite ready for it, but they will be presently. Having tried all the short cuts and found them ineffective, their common sense will welcome the idea that the way for us all to have more is to produce more, that not money wages but real wages are important, and that only a united effort on the part of industry, labor, agriculture, and government can create an income of eighty-five or ninety billions such as we had in 1928, when there was practically full employment. We Republicans admit that the distribution of the national income was faulty at that time; there was too much money at the top and not enough down below. We favor a fairer distribution, but we favor first and foremost a policy that will create something to distribute.

Space is limited. Let me try to be brief and specific.

Taxation: When Congress met in special session on November 15, 1937, the country was already in the first stages of a depression. The administration, which had boasted that "we planned it that way," sought to laugh off the seriousness of the situation by the feeble expedient of applying the softer word "recession." The Republicans realistically faced the facts. On the first day of the session we met in caucus and committed ourselves to work for the immediate repeal or modification of the capital gains and undistributed-profits taxes. A joint resolution could have passed both houses in 24 hours. It would have liberated vast amounts of "chance taking" capital on which the heavy industries, and hence the prosperity of the Nation, depend. As a courageous move for the reassurance of all industry it would have saved many jobs. The administration fought the proposal with all the power at its command. When, months later, Congress took the bit in its teeth and passed the tax bill, it was too late. The depression had become acute. Men and women who lost their jobs last winter or this spring can lay their troubles at the door of the White House. The Republicans fought to save those jobs.

WHEN TAXES REALLY DESTROY

The United States has no intelligent system of taxation. More than 175,000 separate taxing bodies are empowered to bedevil industry, agriculture, and the worker. The medium-sized business with which I am associated has offices in 6 States; it must file 97 different tax returns—local, State, Federal, and social security. In England it would file one. Here is a tremendous field for simplification and economy. The New Deal has no tax policy except to hunt out every working dollar and slap a penalty on it; there is no appreciation of the sad fact that every dollar collected in taxes is a deduction from the people's purchasing power and hence a brake on production. The only move toward a new philosophy of taxation has been made by a Republican, Senator VANDENBERG, whose resolution for the investigation of so-called "incentive taxation" brought about the appointment of a special Senate committee now in session. The idea is to discover whether the power to tax, which has been properly termed the "power to destroy," can be turned about and made the power to encourage; whether incentive may be extended by lightening the tax burden on productive dollars and increasing it on the unproductive.

Social security: The present law tossed aside the experience of other countries and the advice of experts by dismissing the "pay as you go" policy and providing for a so-called "reserve" of billions. The reserve is not a reserve at all but an out-and-out fraud. The hundreds of millions of extra tax money collected annually is not being accumulated to meet future payments but is being poured out in the T. V. A., or the effort to reelect Senator BARKLEY, or wherever and however the administration may decide. The unnecessarily heavy burden of the pay-roll taxes acts to diminish employment. The law should be revised and the "pay as you go" principle adopted.

Relief: A statesmanlike document presented to the Congress in the last session was the minority report of the Republican House Members on the administration's measure coupling pump priming and relief. Had the recommendations of the Republicans been adopted, the country would have been spared the scandal of relief funds being used to influence elections; the administration of relief would have been decentralized and made nonpartisan; those who deserve help would have been more adequately cared for, and the tax burden decidedly reduced.

The Wagner Labor Relations Act: Designed to guarantee the right of collective bargaining and improve the condition of labor, this act has been followed by an epidemic of strikes and bitter controversies. It is a one-way law. It sets up a board that is complainant, prosecutor, jury, and judge. Before it the employer has no rights, and from its decisions, either as to fact or law, there is no appeal. It was enacted under the mistaken notion that has pervaded so much of our recent legislation that what is good for business is bad for labor and agriculture, and that what is bad for business is good for labor and agriculture.

With the purposes of the act we Republicans are in accord, but it is no secret that the President and Senator WAGNER both are well aware of the defects operating to defeat its purposes. Their hands are tied because the New Deal is politically and financially in debt to the C. I. O. The Republican Party seeks to advance the interests of American labor and promote employment by the wise amendment of this law.

The railroads: The Republican Party would proceed promptly to the reorganization, recapitalization, and coordination of the railroads. The objective must be not higher but lower rates. Prosperity consists of volume of business multiplied by velocity. Make the movement of people and goods swift and inexpensive and you have taken a long step toward full employment, cheaper housing, and the solution of the farm problem.

Government competition with business: Government should never seek to do with taxpayers' money what private citizens can do better and more economically with their own. The acceptance of this principle will mean radical revision of many New Deal policies; we may consider the utilities as just one example. Here is an industry that should begin immediately the expenditure of not less than $3,000,000,000 for modernization and expansion. It is spending practically nothing. Why? Because you, gentle reader, are afraid to put a nickel of your savings into utility stock. We are accustomed to speak carelessly of "capital" and "capitalists." You, with your $100 of savings, are a capitalist, and the total of the savings of millions of people like you constitutes "capital." You want to invest your savings where they will be reasonably safe. You do not want to put your $100 into an electric plant if tomorrow Mr. Ickes can point a revolver at the head of the management and say: "Either sell your plant to the city for 50 cents on the dollar or we will use public money to build a competing plant and put you out of business." This utility deadlock could be cleared up in 48 hours, with full protection of the public interest. The Republican Party would clear it up and in doing so create tens of thousands of jobs.

The farmer: The one best part of the Agricultural Act of 1937 was the section authorizing several million dollars for research in new uses for agricultural products. This provision, strongly urged and supported by the Republicans, has excited only mild interest in the Department of Agriculture, where the thinking is in terms of restriction, cash bonuses, and votes, not of research and new markets.

The present farm problem is a self-evident failure. Each new session of Congress is asked for increased appropriations, yet the surpluses mount, the prices tumble. A sound program will provide for research for soil conservation, for the storage of surpluses, and for low-priced transportation. It will abolish bureaucratic control, encourage low-priced producers to produce to capacity, and help the farmer who cannot produce efficiently to establish himself in some other form of useful activity. Abundance at low prices is the only sound program for the farmer or the industrialist.

Other issues are omitted for the present because of the limitations of space. I wish to conclude with something that seems to me far more important than any specific legislative proposal, a discussion of the spirit in which the Republican Party would approach the whole problem of re-creating the American vision of the future.

A moment ago it was remarked that little in the New Deal is new. But something has happened in the past 50 years to produce greater changes in human life than in the several thousand years before. That something is modern business, with its fairy stepchild, organized scientific research. In 1893 there was a world's fair in the city of Chicago, and 40 years later, in 1933, there was another. The estimate has been made that half of the people who attended the second Chicago fair were supported by industries that did not even exist at the time of the first.

There was no industrial laboratory for scientific research in America at the time of the first world's fair; today there are more than 1,600 such laboratories, and industry is expending $800,000 a business day to find new products and ways of improving present products and producing them more cheaply. Obviously these laboratories and the business organization that has established and now sustains them are the first and most important shock troops in the battle against poverty, ill-health, unemployment, and insecurity. Has any member of the New Deal ever visited one of these laboratories? Has any Washington official ever tried to find out what opportunities for increasing employment and adding to the general well-being are envisioned in the research work now going on? If a man from Mars were to descend upon us and discover the telephone, the automobile, the radio, and a hundred other modern marvels, each one the author of millions of jobs, he would ask: "What has produced these miracles?" And when he was told that they are the products of industry, his natural comment would be: "This thing you call industry must be indeed a wonderful enricher of life. Certainly you should cherish it, and seek to understand it, and encourage it in every way to go forward and produce more wealth for everyone."

DIAGNOSIS AFTER OPERATION

After 6 years of new bureaus, new taxes, new restrictions, and the monotonous repetition of the threat, "If business does not, Government will," someone in Washington conceived the idea that it might be a good idea to find out what business really is and how it operates. The result was the appearance of Mr. Charles F. Kettering, and others of his kind, before the Anti-Monopoly Committee. Mr. Kettering is head of the research laboratories of General

Motors. As the inventor of the electric self-starter, which made the automobile a universal servant and so helped to create millions of jobs, Mr. Kettering gave testimony that, according to the newspaper reports, astonished Senator O'MAHONEY and his associates. They were taken into a world of new ideas and future possibilities that they did not even know existed.

Why did the New Deal wait 6 years to discover men like Kettering? Why, after 6 years of surgical operations on business, does it at long last decide to put away the knife and try to make a diagnosis? How many jobs would have been saved if the diagnosis had been attempted 6 years ago, before the slashing started?

The Republican Party is the party of business (little "b" not big "B") and makes no apologies for that fact. It understands and knows how to promote cooperation. It knows too how sensitive and easily destroyed is that elusive but all-important element called confidence. A single careless remark from the White House to the effect that copper prices are too high is sufficient to set in motion the vicious spiral of deflation. An incendiary speech by Harold Ickes or Robert Jackson is enough to cause thousands of plans for expansion to be laid on the shelf. And taxes piled on taxes eat up the money that used to finance new ventures which, whether they succeeded or failed, were the source of new employment.

Industry is a living body, highly integrated, with nerves extending to every part. Cripple a limb, and the whole body limps; prick even a finger, and the pain is felt throughout. The Republican Party recognizes that there are still business maladies to be cured. But we would proceed cautiously, quietly, with one thing at a time.

America has submitted to 6 years of special emphasis on the inferiority complex. It has been told that its institutions are broken down, that it has no health, no hope. Today there is beginning to sweep over the country a homesickness for the simpler ways and quieter days. In this development, as is usually the case, the shift in popular sentiment is ahead of the perception of the politicians. While the New Dealers are still stirring new crusades, and promising more experiments, the people are beginning to hunger for cooperation instead of strife, for a chance to work and save something again, for peace and a generous dose of quiet. If this yearning increases it spells the New Deal's finish. The New Deal is the child of excitement, rash experiment, fanatical zeal, and sound and fury. When these pass, it passes.

Lifting ourselves by our economic bootstraps is no good. A high wage rate, if offset by high prices, is not progress. Abundance is achieved through mass production, and this means that those who can produce most cheaply, whether in the factory or on the farm, must be encouraged to do more. We merely defeat the whole program if we try by penalties to slow down the efficient producer in order to preserve the inefficient or to reward anyone for what he does not produce. These are simple fundamental principles, and on them the Republican Party would proceed.

But some of us hold that America's economic problems are at bottom spiritual; that what the country needs most of all is not more economic measures but a fresh and hopeful philosophy. What would happen if our leadership should encourage us to try to see how much we can give to the United States? What are the potentialities of America if a spirit of mutual confidence and cooperation can be substituted for class consciousness and organized greed? A people who have conquered a continent in a brief century and a half and turned it into the most powerful nation on earth can solve its problems of distribution and move forward to a life of comfort, security, and good will.

Some months ago a report came out of Washington to the effect that about one-third of the families in the United States have an annual income of $471. Did that seem to you a cause for discouragement? I interpreted it as the greatest challenge and opportunity ever offered in American industry. Suppose by making things better and cheaper we can give to $471 the purchasing power of $800, what a tremendous additional market that will open! Suppose that by cooperation between agriculture, industry, labor, and government we can lift the $800 to $1,200 or $2,500, how much more and better food will be consumed, how many factories will be called upon to step up their production, how quickly the railroad problem will disappear. This, not the dole, is the way to solve the problem of the "one-third who are ill-fed, ill-clothed, ill-housed." This is the program for a country that must have increased production without the stimulus of increasing population.

GOOD NEWS FOR VOTERS

We need more Ketterings in Washington and fewer Ickes and Hopkinses; more men of faith and practical wisdom, and a clean-out of the theorists and the defeatists. We need a leadership that will cry aloud: "The period of abuse, extravagance, and restriction is over." At least 10 years of quiet are needed to give administration a chance to catch up with legislation. In that period we are all going to work, we are all going to save, we are all going to be willing to put forth a little extra effort in order that the country can be made safer for our children and grandchildren. We are going to enlist in a 10 years' war, not against a foreign foe but against poverty, poor housing, worn-out industrial equipment, outmoded products that ought to be cheaper and better.

Already this spirit of noblesse oblige is beginning to be evident. Therein lay one of the most heartening things in the past campaign. In State after State a higher type of citizen entered the race for office; men and women never before in politics turned their backs on comfortable lives and substantial incomes to contend for the opportunity of public service. When you see a Saltonstall, a Vanderbilt, a Barbour, a Taft, and others of their kind ringing doorbells and canvassing the voters, it is good news. It means that those who owe most to America are recognizing their responsibility, that the spirit of sacrifice is at work, and is starting where it should start—at the top.

The Transportation Situation

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25 (legislative day of Tuesday, January 17), 1939

ADDRESS BY D. B. ROBERTSON AT FOURTH ANNUAL ECONOMIC CONFERENCE, WINTER PARK, FLA., JANUARY 26, 1939

Mr. WHEELER. Mr. President, I ask unanimous consent that the very able and illuminating address on the transportation situation, to be delivered by D. B. Robertson, president, Brotherhood of Locomotive Firemen and Enginemen, at the Fourth Annual Economic Conference, Rollins College, Winter Park, Fla., January 26, 1939, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege for me to appear in the environment of this beautifully located college, which President Hamilton Holt referred to as "an adventure in common-sense education."

Transportation appears to be an appropriate subject to discuss in these surroundings, for it was this function of our economic life which brought Florida into the Union. I am told that in 1885, when this fine institution was founded within this lovely lake district of the Ponce de Leon land, there were but 119 white families and 12 Negro families, 2 general stores, a town hall, a public school, the Rogers House, which is now the Virginia Inn, and the Congregational Church. In 1885 the last frontier of America was this fair State. As a former trustee of Rollins, Joshua C. Chase stated at your fiftieth anniversary celebration in 1935, "at that time, 1885, the peninsula of Florida was just beginning to emerge from the wilderness. Florida was really a poor State—its wealth per capita was lower at that time than any other State in the Union. Its resources were hardly in the commencement of their development—no automotive vehicles, no telephones, no radios, no electric lights or electric refrigerators or electric fans. There was no railroad operating between Jacksonville and Sanford. All freight and passengers from the North came by boat from Jacksonville to Sanford to connect with a narrow gage railroad that operated one train daily, each way, between Sanford and Tampa. The train was 1 hour and 5 minutes between Sanford and Winter Park."

Today, because of transportation and the genius of its people, Florida has become one of the great resort empires of the world—the land of flowers. Instead of a population of less than 350,000 in 1885, today Florida is a State with a population in excess of 1,500,000 people. Instead of less than 500 in its population, Winter Park has evolved into a permanent population of over 4,000. Your excellent "suburb" Orlando, with its 50,000 population—another evidence of tremendous growth which reflects the attractiveness of your community to the people of the country—permits us to examine one of the many results of efficient transportation.

You have asked me to discuss the transportation situation. I presume a reason for your courteous invitation relates to my membership on a Committee of Six composed equally of railroad presidents and railroad labor executives, which recently made its report to the President of the United States. At the time the President made this appointment, the carrier managements and labor were in the midst of the closing weeks of a severe controversy which, until it was satisfactorily concluded, delayed the beginning of our task.

We followed the initiative of our great President with assurances from him that he would support our findings. Thus, the job was a serious one. He appealed to us to endeavor to find an answer to this vexing question, as practical men actually engaged in American transportation.

Although the President appointed this Committee in the latter part of September, we did not get into a "huddle over the muddle" until early November. Thus, the Committee, amply provided with excellent technical assistants, had less than 2 months to produce a report with recommendations designed to meet the problem to which the President had committed us. However, with the public

interest primarily in mind, the Committee intensified its activity. We gave our continuous and concentrated consideration to an earnest examination of the problem.

We found that each member was an "individualist." The debates were strenuous and lengthy. To bring forth recommendations, covering such a vast economic problem, required unselfish detachment in our deliberations. This great national transportation problem, which had accumulated over the years—intricate and complicated—has no defined national transportation policy attached to it. Rail, highway, water, air, and pipe-line transport had woven an entangled and vast web of competitive lines, covering almost every section of the Nation. These traffic lines, we found, resulted in serious wasteful competition between the various forms of transport. The capacity of all these means of conveyance was much greater, taken together, than traffic requirements.

So far as the railroads are concerned, they not only suffered from low traffic volume, but also from depressed freight rates affecting a substantial portion of their traffic. We found public regulation complex and unequal. The forms of transport, other than by rail, had enjoyed for years an amazing governmental favoritism. We found that while the railroads were paying 9 cents out of their revenue dollar for taxes, the highway regulated carriers were paying but 4½ cents, and water transportation but 2 cents out of each revenue dollar. Moreover, it was costing railroads for the maintenance and capital charges of their highway, an additional 25 cents out of each revenue dollar, while the other forms of transport received their rights of way without cost. In other words, railroads had a disadvantage amounting to 29½ cents per revenue dollar against their highway competitors. Regulation, taxation, and subsidies were found surprisingly unequal. After a full examination of the wide range of data and surveys placed before the Committee, we resolved that the only possible opportunity to approach a solution was by adopting a policy of "a fair field for all and special favors for none of the various modes of transportation."

We found from the facts, also, that it was necessary to create effective machinery so that this policy could be placed in operation. Therefore, our recommendations were largely premised on the policy and its execution. The straightening out of the transportation muddle is required to bring about a sound, substantial, and sustained revival of business activity. Every phase of our economic and social life is dependent on the harmonious arrangement of these arteries of commerce. The public is entitled to the best service that transportation can provide. The public is entitled to the lowest rates, consistent with the development and maintenance of transportation on a scale sufficient for the needs of commerce and the national defense. No form of transportation should have preferred treatment from Government over and against another form. There should be equality in governmental regulation, imposition, and subsidization.

Unless there is developed a national transportation system, relating to all forms of transport on a coequal basis, there is bound to be an unbalanced economic situation. Thus, we recommended that there be a definite national transportation policy, so that the Nation's transportation system would be amply competent to fully meet the needs of commerce, of the Postal Service, and of the national defense; and that "there should be no further delay in the adoption of a definite national transportation policy, which will provide for fair and impartial regulation of all modes of transport; that such regulation should be so administered as to preserve the inherent advantages of each mode, promote safe, economical, and efficient service and foster sound economic conditions; encourage fair wages, equitable working conditions, established through collective bargaining, and prevent unfair and destructive competition.

In order to improve the machinery for handling this policy we proposed that the Interstate Commerce Commission be given the responsibility for the administration of all regulatory provisions relating to rates, service, valuation, and accounting, covering all forms of transport, together with powers of investigation limited to its jurisdiction.

We found in the present regulatory scheme of transportation that a variety of governmental agencies were involved in unrelated regulation. To continue such a heterogeneous scheme is absurd. Fourteen different regulatory agencies govern the regulation of five different forms of transportation within our national system.

We examined the eight general heads under which the Interstate Commerce Commission now directs its numerous regulatory and administrative functions pertaining to railroads. These related to the Commission's control over rates; over various services respecting the supply, use, movement, distribution, and interchange of equipment, etc.; its control over accounting; its duty to ascertain and report on and keep itself informed of the value of all property owned and used for common-carrier purposes; its control over all construction of new lines and all extensions or abandonments of existing lines, including the power to require extensions of lines in proper cases or the construction of necessary facilities for interchange of traffic between railroads or between railroads and water carriers and to compel the joint use of terminals; its control over railroad finance, concerning the issuance of securities, acquisition of control by one railroad of another or by a railroad of a water carrier or motor carrier, the consolidation of two or more railroads, mergers, leases, interlocking directorates, etc.; the Commission's general power to institute investigations on its own motion into any matters coming within its jurisdiction in order to enforce the act or of making recommendations to Congress with respect thereto; also its miscellaneous duties pertaining to the enforcement of carrier compliance with numerous statutes relating to hours of service, health, comfort, and safety of employees, as well as various other matters.

In addition to these controls over railroads, we examined the Commission's powers relating to regulation of highway transportation. We found that so far as concerns common carriers by motor vehicle, it is almost as comprehensive in scope as that I have described as applicable to the railroads, but by no means so intensive or restrictive.

The Commission's regulation of pipe-line transportation covers only matters of rates, accounting, and valuation.

The Commission's regulation of waterway transportation has little uniformity of application, but Government administration of this kind of transportation is widely scattered amongst different agencies. However, should a railroad own or control a water carrier, the Commission then has full and exclusive control over the matters of rates, accounting, valuation, and the issuance of securities. Hence, we recommended that there be a full equality of regulation over all forms of transportation uniform and similar in character and scope; that this regulation be concentrated into two agencies of Government (the Interstate Commerce Commission and a transportation board); that the jurisdiction of the Interstate Commerce Commission cover rates, services, valuation, and accounting; that its powers with respect to investigation be limited to matters properly falling within its jurisdiction covering all forms of transportation; that the Commission be required by statute to administer, uniformly and impartially, the regulatory provisions relating to all modes of transport, so as to prevent it from dividing or departmentalizing itself along other than strictly functional lines. It was also proposed the Commission retain jurisdiction over the administration of statutes relating to safety, hours of service, etc.

The members of the transportation board would be appointed in the same way and with qualifications and tenure of office similar to those of the Interstate Commerce Commission. This transportation board, it was proposed, should be specifically "charged with the duty of investigating and reporting to the Congress (a) concerning the relative economy and fitness of rail carriers, water carriers, and motor carriers, for transportation service, or any class thereof, with the view of determining the service for which each is especially fitted or unfitted and for which its use should accordingly be encouraged or discouraged in the interest of avoiding wasteful and destructive competition, and (b) concerning the extent to which the three modes of transportation are supported, directly or indirectly, by the use of Government funds, together with its recommendations as to legislation dealing with either of these subjects which it deems necessary or desirable. This should be a continuing duty, but the board should be required to make its first report on both subjects within 1 year from the date of its creation."

The Committee was of the opinion that "equality of regulation can only come through the regulation of like functions of all agencies of transportation by the same regulatory authority." We felt that inefficiency would result if any one regulatory body were burdened with work beyond its capacity. Hence, we recommended that, after the investigation is completed and the report filed, the new board "should be vested with full jurisdiction for the administration, as to all modes of transportation, of all provisions of the regulatory statutes that relate to 'facilities' and 'finance.'" And, as I have already described, that the Board be fully and exclusively responsible "for the discharge of all functions of a research and promotional nature relating primarily to any mode of transportation wherever the responsibility for the discharge of any such function may now be lodged," within the structure of the Federal Government.

We recommended that the rate-making rule, section 15a of the Interstate Commerce Act, be repealed and a new rate-making rule substituted which would apply to all forms of transportation "to the effect that it shall be the duty of the Commission to exercise its authority over rates, so far as is consistent with its duty to protect the public against the exaction of unreasonable and unjustly discriminatory rates, in such way as to permit the establishment, by each mode of transportation, of rates which, as a whole, will be adequate, under honest, efficient, and economical management: (a) To sustain a national transportation system sufficient at all times to meet the needs of commerce, of the Postal Service, and of the national defense; (b) to establish and maintain credit so that capital essential to provide the needed facilities and service may be attracted to the transportation industry; and (c) to afford fair treatment to those having their money invested in the property held for and used in the service of transportation." This proposal did not change the Commission's power to allow "reasonable latitude to modify or adjust any particular rate which it may find to be unreasonable or unjustly discriminatory and to prescribe different rates for different sections of the country." We did not propose any limitation of "the power of the Commission to prescribe maximum and minimum rates or to suspend new rates."

The Committee proposed the repeal of the long-and-short-haul provisions of section 4 of the Interstate Commerce Act. A bill covering this matter has been before Congress for a number of years. Under the present section 4 the railroads are "prohibited from charging lower rates to or from a given point than apply to or from directly intermediate points without first securing specific authority from the Interstate Commerce Commission." This rule has been a serious obstacle particularly to transcontinental railroads in successfully competing with other forms of transportation.

The Committee proposed that there be "a fair and reasonable system of tolls for commercial use of certain inland waters, the

elimination of the Inland Waterways Corporation and the disposal of its properties."

The Committee also proposed that the railroads be relieved by legislation, both National and State, of certain unjust tax burdens and that the Government bear the expense of eliminating grade crossings.

We recommend the adoption of a policy by Government that whenever "in connection with the improvement of navigable waters or the carrying out of flood-control or similar projects, a railroad is required to alter or reconstruct bridges or other facilities, it be reimbursed by the Government for all costs in execess of any direct benefit accruing to it."

We also suggested the repeal of the reduced-rates provisions under the so-called land-grant statutes.

We also proposed the "establishment of a single court vested with exclusive jurisdiction over matters connectd with railroad reorganizations, and composed of judges selected with special reference to their experience in and qualifications for this highly specialized service—the Federal courts to retain jurisdiction over all matters not connected with reorganization. The Interstate Commerce Commission to be relieved of all responsibility in railroad reorganization."

The Committee suggested the "repeal of provisions of the act which make the Commission responsible for the prescription of a general plan for consolidation of railroads, thereby restoring to the carriers all initiative, but requiring approval by the transportation board of any proposed consolidation. Such approval to be granted or withheld in accordance with the considerations set forth in our report, including protection of the public interest and a fair and equitable arrangement to protect the interests of employees affected."

Lastly, the Committee proposed that there be "legislation enlarging the powers of the Reconstruction Finance Corporation to purchase or guarantee obligations of and to make loans to railroads, or to receivers or trustees thereof, and modifying the requirements with respect to the approval by the Interstate Commerce Commission of any such purchase, guaranty, or loan."

If I had time I should be pleased to go more fully into certain of these matters that I have rather hurriedly sketched. It is sufficient for me to reiterate that the task of the Committee was one of huge proportions. We could not attempt to dispose of all problems of transportation. Our approach was more in the light of endeavoring to remove some of the major causes of our transportation difficulties and to be constructively helpful in creating a greater degree of stability in the transportation field.

The aspects of the transportation problem, which I have covered with you today, impress me as sufficient to give you some food for thought in your consideration of it. The problem cannot by any means be solved overnight. There are too many confusing and opposing angles that have contributed toward the present chaotic situation. But I confidently believe that with the support of the President the Committee's recommendations will have the effect, if favorably considered by Congress, of molding our various forms of transport into an adequate national transportation system; one that will meet the full needs of commerce, of our postal service, and of our national defense.

Farm Buying Power

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, January 27 (legislative day of Tuesday, January 17), 1939

ADDRESS BY JOHN NAPIER DYER AT VINCENNES, IND.

Mr. MINTON. Mr. President, I ask unanimous consent that an address recently delivered by John Napier Dyer, a prominent farmer and distinguished citizen of Indiana, before the Rotary Club at Vincennes, Ind., may be published in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today the spotlight of public attention is focused on the economic conditions in agriculture. No one doubts that the return of prosperity to the United States is dependent upon the restoration of buying power to the American farmer.

Every manufacturer, every seller of goods, must take a personal and vital interest in improving the condition of agriculture, for by far the largest potential buying group in this country is the rural population. Forty-four percent of the people in the United States are dependent directly or indirectly upon the farm.

How can the economic condition of the farmer be improved? No matter what differences of opinion may exist as to the methods of bringing quick relief to agriculture, there is unanimous agreement that enduring agricultural prosperity is dependent upon the employment from food and textile resources to feed and clothe the millions of our population who are ill-clothed and lack a full necessary diet, and the maintenance of a price structure for agriculture, away from the vagaries of the speculative system which causes the American farmer to be at the mercy of a speculative set-up with world-wide ramifications. In the staple agricultural commodities price changes of 10 percent are the usual annual fluctuations, and in many instances there is variation of as much as 300 percent in 1 year. The gamblers thrive upon the very thing which brings disaster to the farmer.

Thirty-cent corn, 8-cent cotton, and 55-cent wheat spells ruin for producers of these crops. Also it dooms the great manufacturing industries of the country to idleness and inactivity. It is the principal cause for labor unemployment, with attendant misery and want for the workingman and his family.

Farm buying power results from the American profit system applied to agriculture, which gives the farmer a profit from the operation of his business.

Equality for agriculture is the fair and equitable distribution of the national income, without which there can be no farm buying power.

In our country, where one-third of the people (40,000,000) are ill-fed, ill-clothed, and ill-housed, there can be no such thing as a surplus of the commodities which provide food, clothing, and shelter for the people.

In a land filled with "milk and honey," it does seem lacking in just plain, ordinary, common sense to open our doors for the foreign farmer to overload our markets with more "milk and honey" than we can consume and thereby create unwieldy domestic surpluses to depress the prices which our farmers must sell their products for.

The American manufacturer is protected by a tariff from the inroads of cheap foreign competition. The American market is reserved for the American manufacturer.

American labor is protected from the inroads of cheap foreign labor by an exclusion act which gives to American labor the American market.

The American farmer is entitled to and should, by every element of fair play, have the American market reserved for him. Imports of competitive agricultural commodities should be excluded from our markets. The annual importation of approximately $1,000,000,000 worth of directly competitive foreign farm products is a serious menace to American agriculture and destroys American farm buying power—which in turn closes American factories and creates vast unemployment for American labor. Necessary imports of foreign food and textile products and their substitutes should pay a liberal entrance fee for the privilege of supplying our markets. Prosperity is a tripod supported by three legs—agriculture, industry, and labor—wholly interdependent, without any one of which there can be no economic stability.

Agriculture produces original wealth from the soil—85 percent of all our original wealth is produced by American farmers.

Industry buys the products of agriculture and processes them, thereby creating farm buying power which consumes the products of industry and makes possible the employment of labor. Likewise, in turn, labor consumes the products of both farm and factory, and thereby speeds the process of consumption. Thus is created the cycle of prosperity. Farm to factory to labor to farm to factory in a never-ending, continuous operation, which in the final analysis spells p-r-o-s-p-e-r-i-t-y.

To remove any one of the three legs of prosperity's tripod throws the cycle out of adjustment and destroys the economic structure of the Nation.

Agriculture, as has been sufficiently well demonstrated in the past 18 years, is the keystone of the cycle and is the primary factor which must start the wheels of industry through its ability to create wealth and to insure buying power. Therefore agriculture must be provided with buying power and a price for its products, above the cost of production, is the first step in the evolution of prosperity. Eight-cent cotton, 30-cent corn, 55-cent wheat is not buying power.

Buying power is created out of a price comparable to the price of the things which the farmer will buy out of the proceeds derived from the sale of wheat, corn, and cotton.

A comparable price is then the thing which must be provided for agriculture.

In the good and prosperous years 1905 to 1914 there was a parity relationship in the price of agricultural commodities to the price of industrial commodities. Therefore to recreate farm buying power it is necessary to return to the same price relationships which then existed. This cannot be accomplished by any economic legerdemain nor by the hocus pocus of supply and demand.

In the field of public utilities, to safeguard the interests of capital and consumer, commissions establish equitable prices for service and commodity.

In industry prices are stabilized by agreements. The price of steel rails has not varied in the past 10 years. The retail selling price of automobiles seldom, if ever, varies throughout a season.

Silver: The price is fixed by statute and edict, in the interest of American silver producers and for the benefit of the whole world.

Gold: Thirty-five dollars an ounce is the fixed price in the interest of a stabilized currency and to safeguard the monetary interests of those whose business is money.

What greater public utility is there than food and clothing?

What justification can there be for the depression of the prices of those great agricultural commodities below production cost in our United States?

The prices of gold and silver, public utilities, steel, and automobiles are not created by speculation. Prices are fixed by edict or by the industry itself.

Why not adjust the prices for wheat, corn, and cotton to a figure comparable to the prices of industrial commodities according to the Government price index. Six million farmers cannot do this for themselves. Government is the agency of these 6,000,000 people, and it is the duty and responsibility of government to stabilize business, create prosperity, and do that which will do those things.

An immediate adjustment of prices for wheat, corn, and cotton is the direct road to economic recovery.

Reasonable production control by farmers themselves; elimination of all gratuities to farmers. Protection for the consumer against unreasonable prices at retail, and an assured minimum price for the crop to the producer. The exportable surplus, if any, to be sold in world markets at world competitive prices; the loss, if any, to be paid out of revenues from the tariff on all protected industries.

This means new steady jobs for 10,000,000 unemployed, a quick recovery of railroad earnings, a boom expansion for industry, a revival of home building, the employment of excess capital reserves, the feeding, clothing, and housing of 40,000,000 Americans out of the horn of plenty from the proceeds of the production of 6,000,000 American farmers.

Put agriculture to work at a profit to create the prosperity which Government spending has not, cannot, and will not alone create.

A farmer buying power of $18,000,000,000 will do the trick quick and make the return of a national income of $80,000,000,000 sure and certain.

Aviation and National Defense

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 27 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM COLLIER'S OF JANUARY 28, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD a short editorial from Collier's Weekly of January 28, 1939, on the subject of aviation and our national defense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Collier's of January 28, 1939]

ASK THE MEN WHO KNOW

Members of the administration have been steaming up national-defense talk for months. But among the last persons whose advice has been sought have been Gen. Malin Craig and Rear Admiral William D. Leahy. General Craig is only the Chief of Staff of the Army; Admiral Leahy is nothing but the Chief of Naval Operations.

We suppose the traditional distrust of experts is back of the snooting of these officers—plus the obvious hope of the Corcoran-Hopkins-Williams big hearts to let us in for a lot of new public works and boondoggling expenditures, on the strictly phony pretext that these things build up the country and therefore are a part of national defense.

But, really, it does seem that military and naval professionals ought to have some sort of hearing. They must know a little something—wouldn't you think?—about national defense.

THE RAMPARTS WE WATCH

We spread out here a digest of the best current expert opinion on what we really need for adequate national defense in today's dictator-ridden and grabby world. It's lifted mainly from Maj. George Fielding Eliot's brilliant book, The Ramparts We Watch:

AIRPLANES

We don't need and shouldn't build the 10,000 planes the administration gives out that it wants. The proper figure is about 3,000. As Major Eliot says: "It will provide a striking force of about 1,000 planes under a single command, and capable of rapid concentration on either coast (for which additional bases must be made available). This can do all that can be done against raiding aircraft from ships. The force is markedly superior to the greatest number of carrier-borne and catapulted aircraft possessed by any naval power or conceivable combination of powers. Its losses can be made up much more rapidly by our very extensive airplane industry than can the losses of any attacking force. As to dealing with a serious attempt at invasion, the latter factor will be of great importance and will give us a superiority which will increase proportionately with the passage of time."

No other nation or combination of nations that we may have to fight can ship enough planes close enough to our shores by airplane carriers to launch conquering air attacks on us. Planes don't conquer, anyhow. They only harass—though very severely sometimes, as in the cases of Madrid and Barcelona.

SOLDIERS

We don't need one, two, three, or four million men under arms, European or Asiatic style. For various special services we do need a standing Army of some 230,000 officers and men (present strength, 165,000), plus a National Guard of about the same size, both services thoroughly trained and highly mechanized.

NATIONAL-DEFENSE LAWS

We don't need the elaborate legislation that is now partly enacted and partly ready to shoot through Congress the moment war arrives, and that is all designed to slap a military dictatorship on every man, woman, and child of us. We don't need these laws—that is, unless we are preparing for another foreign war. The politicians tell us—and we believe the vast majority of us hope—that we are arming solely to defend ourselves and maybe Central or South America.

NAVY

Here, again, if we're arming purely for defense, is where we should put most of our defense money. The battle wagons (35,000 tons each, or bigger, if other nations insist) and the auxiliaries that fan outward from them in battle formation are our best defense. With enough fighting ships we can keep this defensive war on the sea, far away from our open cities and exposed farmhouses; can cut enemy sea communications, sink enemy aircraft carriers, checkmate enemy designs on our sea communications or raw-material sources.

All this is mere military expert advice. It doesn't come from such authorities as inland Congressmen, magazine editors, or editorial writers, or other armchair tacticians, inventors, airplane makers, "liberals" who want us to keep Russia safe from Hitler, politicians panting for pork, band-wagon climbers, professional jingoes, or professional pacifists.

You might clip this Collier's editorial and slip it into the mail for your Congressman or favorite Senator, in case either of them hasn't heard that we actually do have military and naval experts in this country. It's just conceivable that their advice may be worth something.

National Defense

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Friday, January 27 (legislative day of Tuesday, January 17), 1939

ADDRESS BY STEPHEN F. CHADWICK, NATIONAL COMMANDER OF THE AMERICAN LEGION, JANUARY 24, 1939

Mr. PITTMAN. Mr. President, I have in my hand a very learned and patriotic address by Mr. Stephen F. Chadwick, national commander of the American Legion, delivered before the Fourteenth Women's Patriotic Conference on National Defense at the Mayflower Hotel, Washington, D. C., on January 24, 1939. This speech was also broadcast over the United States.

I listened to this address with deep interest and great pleasure, and I ask unanimous consent that it be published in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here tonight as the citizens of a great free republic, meeting under the auspices of the women's patriotic organizations concerned with the problems of our national defense, we are free to discuss those problems frankly. Many peoples of the world enjoy no such privilege.

My subject is Americanism. The defense of America and Americanism is the object of our national defense.

The Dies committee has recently given us a well-stated definition of Americanism. They have said: "Americanism is the recognition of the truth that the inherent and the fundamental rights of men are derived from God and not from governments, societies, dictators, kings, or majorities. This basic principle of Americanism is expressed in the Declaration of Independence, where our immortal forefathers said that 'all men are created equal, and they are endowed by their Creator with certain inalienable rights, chief among which are life, liberty, and the pursuit of happiness.'

"Americanism recognizes the existence of a God and the all-important fact that the fundamental rights of man are derived from

God and not from any other source. Among these inalienable rights which are the gifts of man from his Creator are freedom of worship, freedom of speech, freedom of press, freedom of assembly, freedom to work in such occupation as the experience, strength, and qualifications of a man may enable him to secure and hold; freedom to enjoy the fruits of his work, which means the protection of property rights; the right to pursue his happiness with the necessary implication that he does not harm or injure others in the pursuit of this happiness."

The congressional committee said the essence of Americanism is "class, religious, and racial tolerance, and that it should be emphasized in the strongest language possible that the maintenance of these three forms of tolerance is essential to the preservation of Americanism. They constitute the three great pillars upon which our constitutional Republic rests, and if any one of these pillars is destroyed, the whole structure of the American system of government will crumble to earth."

For the protection and preservation of our God-given rights, the committee points out that the Constitution contemplated an independent Congress, an untrammeled judiciary, and a fair and impartial executive; operating under a system of checks and balances. They tell us that "there is involved in Americanism the protection of an unorganized majority from an organized minority as well as the protection of a helpless minority from an inconsiderate and thoughtless majority;" that "the characteristics which distinguish our Republic from the dictatorships of the world is not majority rule, but the treatment of minorities. Dictatorships muster huge majorities at the polls through intimidation and high-powered government propaganda, but these majorities are used for ruthless tyranny over minorities. The majority rule of the American form of Government is distinguished by its recognition of certain rights of minorities which majorities cannot alienate."

Ours is the first Government in the history of the world which declared the rights of men to be God-given, and yet our rights were not accomplished by mere declaration. Every right which as citizens we enjoy, every concept which goes into our definition of Americanism was won for us by the sacrifices of men in arms and by the expenditure of enormous treasure.

The expressions of our rights in the Declaration of Independence came from men who had drunk deep at the wells of human understanding; men who with the history of the ages in their minds, wrote as men inspired. Our Declaration of Independence and our Constitution designed to express and protect men in their rights are as fundamental and as immortal as the day they were written. It is the defense of the rights of men and of the form of Government, designed for their protection, and of the fine civilization which we as a free people have developed, that you are concerned with this evening.

My subject concerns something deeper than men and material; something greater than the naval and military establishments; something more fundamental than finance, for underlying the defense etsablishments of a free people, there must be a morale, an acceptance on the part of the people that those things which the defense establishment seeks to defend are worth the sacrifice, if need be, of those things which our forefathers gave to their accomplishments—the sacrifice of lives and fortunes, supported by the pledge of a sacred honor.

When our first great President addressed the country, after the Revolutionary War, he said: "To be prepared for war is one of the most effectual means of preserving peace. A free people ought not only to be armed but disciplined, to which end a uniform and well-digested plan is requisite." By "discipline" George Washington did not mean regimented. He meant disciplined mentally to the responsibility which forever rests before free people, a reasoned appreciation of their responsibility to preserve and perpetuate the things that make them free—a "discipline" which today cries out for understanding.

Let us appreciate our present situation. Men charged with the conduct of our international correspondence have styled the actions of the rulers of some of the nations as those of brigands, ruling individuals and classes, who in their avaricious ambitions know no international boundaries, or rights of minorities; recognize no religious freedom or tolerance, and who, preceeding by methods of undeclared war, march with barbarous tread wherever unbridled ambition can find a defenseless people to exploit. While these forces are at large on the face of earth, we as a free people for the protection of our Americanism, lest their eyes be turned on us, must be prepared to meet them. We must never suffer their aggression to ripen into invasion of our country. We must through an adequate defense establishment give fiber and tone to the voice of those who speak for us in international affairs, not for the purposes of war, but to the end that the voice of America for the peace of the world will be respected.

If free government fails in America, if we ever become so weak and spineless that we will not protect it, then the thought of men with God-given rights is lost, and the world would again be plunged in a dark age and our children, having no respect for those of us who permitted the situation to arise, would find themselves as defenseless people have been throughout the ages—enslaved, regimented, driven by individual dictators, ruling casts, or classes.

The external defense of America must first be built in the hearts and minds of the American people. The reasons for the defense of the Nation, the preservation of those liberties which are the occasion of our being joined together in national life, should be so taught to the people of our country that there is developed in them a pride of citizenship, an appreciation of its worth, a love of country for which they are willing to pay the cost of defense, and are, if need be, willing to offer their lives to preserve.

There is involved in our Americanism a hope for other peoples of earth—a hope that they might enjoy the life, the liberties, and the happiness which as a people we enjoy. It is disappointing after the attempts which we have made by example and reasoned persuasion that the world is in the condition which we now find it, for we have encouraged the association of nations as peaceful members of an international family. We have aided in the establishment of a recognized international law and courts to propound it. We have offered, as we will always offer, to sit in disarmament conference. We have signed, and will ever be ready to sign, treaties outlawing war, but all about us we see the present apparent failure of this course. We have today no other way to secure the safety of our liberties save to accept the advice of those who have made the defense of the country their life's work. The Legion will follow today, as during the World War we followed the advice and orders of our naval and military authorities. We counsel you good women to do the same, for therein lies our security from without.

There are those who do not want to follow the advice of men who have made the defense of this Republic their life's work; who want to change the wisdom of the founding fathers who gave it to our representatives to declare war, if war as the final arbiter became necessary. They want to take that power away from our chosen representatives, and, unless our land be actually invaded, they want to hold town meetings, a popular referendum to determine whether or not we should defend ourselves. To you, citizens of this great Republic, I tell you that in these days of undeclared war no course could be more suicidal.

Our defense must be sufficiently flexible and we must have such confidence in our chosen representatives that we can entrust to them at all times the right to meet aggression before it ripens into invasion. We should choose representatives worthy of such confidence. If some of our public representatives of today are not worthy of our trust, then let us impress into the public service representatives in whom we have confidence, but let us not abandon the lessons of history and destroy the valuable elements of security which exist in the flexibility found in our representative system of government.

The men of the World War opposed the so-called Ludlow amendment in the last session of Congress, and we will again oppose it. We seek, as we have always sought, only a means of living peaceably in the family of nations, but until others, out of respect for our example, see fit to live peaceably with us we cannot prostrate curselves before their aggrandizement.

I would not feel that I had delivered the full message which this occasion requires if I did not speak the mind of the ex-service men with reference to the defense of our Nation from within.

Again, the underlying support of that defense is in the morale of our people. Ours is a design of government for the protection of all, and when we move to the protection of all we know no minority groups.

Every religious group among the citizens of our country, every individual citizen, every man and every group of men is acknowledged a free conscience and a free voice, but not a voice so free as to transcend the liberties and welfare of all. The thing which protects this freedom of conscience and this freedom of speech, and with it freedom of action, of movement, and of opportunity, is the great overlying Government of the United States of America, under a Constitution which has weathered the storms and vicissitudes of more than a hundred and fifty years.

When will we all recognize and appreciate this fact? When will we have a militant spirit to defend our Americanism from those of the left and those of the right? When will we have the good sense to appreciate that democracy is a thing apart both from communism and from the totalitarian philosophies expressed in fascism and nazi-ism?

If the American people out of the rich educational advantages which are given them will only appreciate what Americanism is and what America is, they will silence once and for all in this country both the advocates of communism and the advocates of the other totalitarian philosophies.

We who want to pursue the American course and settle our problems in the American way are in the vast majority in this Nation of ours. I have been through the length and breadth of it. I know something of the temper of the people. This is not what some of the hirelings of alien philosophies would have us believe, the battleground between communism and fascism, nor are the American people going to let it become such.

The unsocial of the left, who want to overthrow our Government by force and violence, and the unsocial of the right, who want dominion over men through individual power, have no place in the American scheme of things.

Your National Defense Conference would not be complete unless you gave some thought to the problems of our internal defense. We who were your soldiers and sailors in the World War encountered some little sabotage on the part of paid hirelings of foreign governments. We see today those same agencies at work, not alone thinking in terms of sabotage of material, munitions, ships, aircraft, and the like, but daily sabotaging the thing which must at all times underlie the defense of our Nation and our liberties, the morale of our people; seeking to subvert the minds of youth; capitalizing upon our problems of economic distress; preaching their doctrines of despair to accomplish either the one or the other of two purposes, the so-called dictatorship of the proletariat, which means the enslavement of a substantial number of people, or counseling the

philosophy of an individual dictatorship and regimentation, which means the substantial enslavement of all.

This problem is a real problem. Recent disclosures made public through the instrumentality of the congressional committee investigating un-American activities in this country should set every loyal American citizen to thinking. The committee has only scratched the surface of a diseased condition, which, if suffered to continue, will destroy this Nation as effectively from within as it might be destroyed by foreign powers from without.

It is time that we gird our loins for this battle. Its ultimate conclusion will be determined in the intelligence and reason of our people. They must appreciate that everyone who loves liberty, everyone who seeks the right to worship his God according to the dictates of his conscience, everyone who seeks freedom of opportunity for his children, must be an American first, putting Americanism above those things which he has only by virtue of his American citizenship.

As those of us who followed the colors of the Nation in the World War can truthfully say, we did not move into that experience inquiring as to the religious thought of our comrades. We did not inquire into the racial strain. We felt and we still feel that we went forth as Americans to protect those God-given human values which had been developed in this Nation of ours and under our free system of government. We were, and we are today, Americans first.

We cannot be gentiles first and Americans second; we cannot be Jews first and Americans second; we cannot be Catholics first and Americans second; we cannot be Protestants first and Americans second; we cannot be labor or industry first and Americans second; we cannot be blacks or whites or reds or yellows or browns first and be Americans second. Americanism should imply minding our own business and leaving to other peoples of the world the accomplishment of their own destiny—our greatest service can be rendered by demonstrating here at home the practicability of democracy and affording the example of a people living in peace.

"For peace is not mere absence of war, but a virtue that arises from strength of spirit."

The protection of each and every religious and racial group, the freedom of each and every man to work and aspire and live in peace in this country exists in our Americanism. When, oh when, will the American people appreciate this fact?

Dr. Edmund A. Babler State Memorial Park

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, January 28 (legislative day of Tuesday, January 17), 1939

ADDRESS BY HON. HAROLD L. ICKES, SECRETARY OF THE INTERIOR

Mr. CLARK of Missouri. Mr. President, located within a few miles of the city of St. Louis, Mr. Jacob Babler, of that city, gave to the State of Missouri over 1,600 acres of land which is now the Dr. Edmund A. Babler State Memorial Park. Dr. Babler was one of the leading physicians and surgeons of St. Louis. A bronze statue of Dr. Babler was unveiled Monday afternoon, October 1, 1938. The Secretary of the Interior, Hon. Harold L. Ickes, was present, and in the evening Mr. Ickes delivered an address entitled "Our expanding State and National Parks." This address was made at a banquet honoring the dedication of the park, sponsored by the St. Louis Chamber of Commerce, and was broadcasted over a network of the Mutual Broadcasting System.

Dr. Edmund A. Babler was born at Appleton City, Mo., on October 11, 1874. He died in St. Louis, Mo., February 9, 1930.

He graduated from the medical school of Washington University of St. Louis, Mo. After 2 years' extensive travel, visiting hospitals and clinics all over the country, he took up the practice of surgery at St. Louis, where his work soon attracted national and international recognition. He was one of the most widely known surgeons in the United States.

In addition to his practice in surgery he was well known for his writings, and his advice was greatly sought by surgeons all over the country.

Dr. Babler was well known for his interest in charity. He was a bachelor at the time of his death, never having been married.

I ask permission to have Mr. Ickes' address printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is a strong element of personal pleasure in coming to St. Louis to help dedicate the Dr. Edmund A. Babler Memorial State Park. The invitation came to me through one of the most devoted public servants our country has in Washington, Representative JOHN J. COCHRAN, of Missouri. Congressman COCHRAN blends, to a degree which I wish were universal, the interests of his home city and State with the larger interests of the United States. And, knowing his well-deserved reputation as a watchdog of the Federal Treasury, I want to say, as a Federal official entrusted with the expenditure of rather large funds, that I know of no higher compliment than to receive from time to time indications of confidence and good will from this St. Louis Member of Congress.

But I do not look upon the invitation to speak on this occasion as personal. I look upon it as a recognition on the part of those who arranged this program of the new and important partnership that has developed between the State and Federal Governments in the creation and administration of a Nation-wide system of State parks.

In this partnership the Federal Government may perhaps be called the senior partner from the initiative it has taken and the breadth of its activities, but in other respects it is a junior partner, and its hope is to become a silent partner. The National Parks Service of the Department of the Interior helps to establish State parks and helps to plan their administration, but it does so with the expectation that they will become part of a well-planned, well-managed park system wholly under the control of State governments.

This broad program came into being with the administration of President Roosevelt. As far back as 1921 the Director of the National Park Service, the late Stephen T. Mather, called the first national conference on State parks in the State of Iowa. Beginning in 1933, the emergency activities of the National Government produced a double opportunity to promote State parks. On the one hand the resettlement program brought into public ownership a vast, scattered acreage of submarginal lands—forests, swamps, plains, hills—where men had tried to make a living on soil that was not suited to agriculture. At the same time the Federal Government became engaged in vast work programs to combat unemployment. It had C. C. C. camps, transient camps, C. W. A. workers, and later the W. P. A.

Here were two problems—what to do with this land and what to do with this labor. The States and cities began to settle these problems themselves. They saw tracts of Federal land which seemed desirable for recreation grounds. So they asked for them and got them. They asked for the labor to develop them, and the labor was furnished.

But this was a haphazard affair, and many difficulties arose. The National Park Service was in charge of the C. C. C. camps and other work groups in the State parks, and requests came pouring in from the States not only for labor in parks already located but for advice about locations and methods of development. The National Park Service quickly found that the greatest need of all was for Statewide studies of park resources and park needs. So an act of Congress was passed authorizing cooperative studies in any State that asked for cooperation.

This law permitted us to go only where we were invited, and the Department of the Interior strengthened this provision of the law by giving the State a majority on each State planning board, with all plans to be approved by the State and Federal members separately.

How many States do you suppose accepted the offer of Federal cooperation? Just 48. Every State in the Union, and in all but three States the work is actively under way.

The impetus thus given to State-park development may be judged from the fact that State-park acreage has increased 70 percent since the National Park Service joined hands with the States in 1933, and this is only a beginning.

However, this does not tell the whole story. Go into any State where there has been a notable State-park development, and you will find some man, or some group of men, with the vision and public spirit to assume leadership in the creation of the park system. This leadership may come from an intelligent and active governor or mayor, from a well-organized State conservation body, or from a public-spirited press.

Beyond this, and rarest of all, is a leadership which carries fruition within itself, as when a public-spirited citizen gives his own property, his own land, his own money to establish parks for the benefit of the people. I say that this kind of leadership carries fruition within itself. The fruit is in the seed. Let the desire to perform such a service be planted within a man's heart, and if he has the means with which to do it, it is done.

That is the story of the creation of this park that we are dedicating today, the Dr. Edmund A. Baber Memorial State Park, and that is the chief reason why it gave me such pleasure to accept the invitation which came to me to speak at the dedication.

The people of St. Louis and of the surrounding territory do not yet appreciate this gift which Jacob L. Babler has made to perpetuate and honor the memory of his brother. You may think you appreciate it, but you do not. You will appreciate it only when you have come to use this park, year after year, and watch the enjoyment of its use by others. You will appreciate it when it becomes a part of your existence, as Forest Park has become, or the Ozark

Mountains, for those who have the means and the leisure to visit them.

I have been told that when Jacob Babler first offered these 1,600 acres of beautiful hills and woods to the public there was some hesitation on the part of the State or the city of St. Louis—I believe it was the city that received the first offer—some hesitation about accepting it. In fact, I have been told that it was not accepted because the public authorities were unwilling, or felt unable, to finance its support.

I am not offering or implying any criticism of that action; I am citing it only in connection with the course followed by the man who made the offer. You know what the average man would have done. He would have stuck the deed back into his pocket and said, "Well, if they don't want the park, they can go to."

And what did Mr. Babler do? He gave this 1,600 acres to the State, and along with it he gave $1,500,000 as a perpetual endowment for its upkeep.

I never heard a million five hundred thousand dollars talk louder or better than that.

Jacob L. Babler gave this park to the public, together with the generous endowment to maintain it, in affectionate remembrance of a brother who had given part of himself every day for 30 years to the people of St. Louis. If you could add these gifts together, and give them a money value, which you can't do, I think that you would find that the endowment fund for this memorial park is not $1,500,000, but $3,000,000.

As I have reflected upon the name of this park, I came to see more clearly what this gift meant to Jacob L. Babler over and above his desire to contribute to the happiness of the people and to perpetuate the memory of a well-loved brother. In the prefix in the title which associates the name of the park with the medical profession, I could perceive the honorable pride which comes from a sense of high merit, of high achievement, in a kinsman. That, to my mind, mounts higher than family attachment.

I hope that the establishment of this Missouri park will mark the beginning of a new period of progress for your State park system, which is already notable as a result of the setting aside of so many of your big Ozark springs. Missouri is fortunate in having many places of beauty which are either indestructible or in no danger of destruction. You have not done very well, however, in saving scenic resources that were coveted by commercial interests. Years ago this State should have set aside the Elephant Rocks, which have now been hammered to pieces. Your virgin forests of hardwood in the Ozarks have nearly all been cut, but I was glad to learn that you had put a State park around your Big Oak tree, down at Charleston. It is a pleasure to know that national forests are being established in Missouri with emphasis on reforestation and the saving of your Ozark rivers.

If you could bring together the natural beauties scattered through the Ozarks, the big springs and the beautiful limestone caverns and the remarkable granite shut-ins where the rivers carve their way through old rock-bottomed mountains—if you could bring these all into one compact area, and have the Current or the Meramec River running through it, you would have the material for one of the finest national parks to be found in the United States. But since these objects of natural beauty are scattered over the State, you have the opportunity for a system of State parks which would be unrivaled in our country, if you would but reach out and put them under State ownership.

As distinguished from State parks, national parks are usually established to serve several purposes. Most commonly they are set aside to maintain in permanent public ownership land areas of exceptional beauty and grandeur, scenery that exalts the spirit, mountains, glaciers, canyons, and the forests about them, with the birds and animals that are native—and to make them available forever for the enjoyment of the people.

In the Federal-State survey of parks, counts have been made of visitors in park areas of all kinds now established. It was found that there are only two things that will pull people to a park more than 50 miles away—a good swimming beach, and beautiful scenery. Of course, you may say that there is good scenery at a swimming beach. But that is no reason for making a national park of a swimming beach, unless there is some other reason for it.

However, if you combine a beautiful strip of ocean front with an area rich in wildlife, especially if that wildlife is threatened with extermination, then you have the materials for a national park. This is why an effort has been made, year after year for the past 10 years, to establish the Everglades National Park in southern Florida. Unfortunately the State of Florida seems to be lamentably indifferent to this fine objective of the Federal Government. If Florida were alert to the opportunity that it has it would cooperate in the establishment of this park before law-breaking poachers—and I am told that many of these poachers are visitors from the North—have shot and killed all the egrets and herons and cranes and ibises and eagles which in the past have made the Everglades a paradise of tropic wildlife.

I said that there was no reason why an ocean swimming beach should be made a national park, unless it were combined with some other valuable feature. Let me modify that statement. When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean.

When we have reached the point that a Nation of 125,000,000 people cannot set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by the permission of those who monopolize the ocean front, then I say that it is the prerogative and the duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a State park, or anything you please—I say that the people have a right to a fair share of it.

Down at Cape Hatteras, the Federal Government and the State of North Carolina, acting together, are setting up a national seashore 125 miles long, and I am happy to say that it looks as if a great part of this will be donated by its owners. The Cape Hatteras national seashore should be duplicated in many places on the Atlantic, the Pacific, and the Gulf of Mexico.

Until comparatively recently, the impression prevailed in the United States that the only place for a national park was in the far West. There was not a national park east of the Rocky Mountains, except two little areas which merely bore the name of parks. And, because there were no eastern parks, people assumed that there should be none; that nothing could be found in the East of national park caliber.

Finally, however, a start was made toward establishing national parks in the East. We now have the Great Smoky Mountains National Park in North Carolina and Tennessee, which last year was visited by nearly 700,000 people. We have the Acadia National Park on an island close to the Maine coast, and the Shenandoah National Park in Virginia. Two more are being added, Isle Royale National Park, a wilderness area in Lake Superior which is a sanctuary for moose and other wild animals, and Mammoth Cave National park caliber.

These are recognized, all of them, to be worthy additions to our national-park system, and they would have been recognized far earlier had it not been for the obstacle of private ownership. How was this obstacle overcome? By the united exertions of Nation, States, and individuals. Among individuals the generosity and public spirit of one man, John D. Rockefeller, Jr., stands out.

The Rockefellers have established many institutions for public service. They have endowed educational, medical, and philanthropic foundations with hundreds of millions of dollars—sums which, if we lived in a secure world, would make those institutions as enduring as the ground we walk on. But we do not live in that kind of a world. We do not know, from one decade to the next, what will be left of all the chattels and the symbols of chattels in our human society. The gifts which should survive the longest, of the manifold benefactions of the Rockefeller family, are the living forests in the Great Smoky Mountains National Park, in Acadia, and in Yosemite, which John D. Rockefeller, Jr., has presented to the Nation, along with other rich natural gifts. I may say also in passing that there has been a tender by Mr. Rockefeller of a large and needed addition to the Grand Teton National Park of several thousand acres, a gift the acceptance of which has been blocked by near-sighted local interests. I have said that the forests, not the mountains beneath them, should survive the longest, because the living forests, if not destroyed by man, will outlast the rocks through which they sink their roots. And when these forests are put into national parks they are not destroyed by man.

Out on the western slopes of the Sierra Nevada Mountains in California there is a forest which, by our human standards, seems eternal, not through a cycle of change but in the life of the very trees now standing. This is the gigantic forest of Sequoias, the oldest living things on earth.

Because the sequoias are found nowhere on earth except on one little strip of land on a mountainside, because they are the oldest and largest and most majestic of all living things, and because the wood is very poor for lumber, several of the finest of the sequoia groves have been made into national parks and are thus sure of preservation. Others, however, fell into private ownership years ago, and they have either been destroyed or face destruction. One of the largest sequoia groves in existence was cut down a number of years ago. Trees 20 feet and more in diameter shattered to pieces when they fell, and after they were down the owner dynamited them and made the splinters into stakes for grapevines.

The largest sequoia grove now standing—some authorities, at any rate, say it is the largest—is in private ownership. It is called the Redwood Mountain grove, just outside of Sequoia National Park, in California. A few days ago I looked at two photographs taken in this grove. One showed a sequoia 30 feet in diameter, with seven or eight people, looking like pygmies, standing in front of it; a tree so big that if it were cut down you would have to take 11 yard-long paces to measure the thickness of the stump. The other picture showed a California Indian stolidly splitting fence posts out of a fallen giant. At the time the picture was taken he had cut perhaps 2,000 fence posts out of that one tree and had reached the point where it was only 12 feet thick.

Now, here is what is going to happen: Either the Redwood Mountain sequoia grove will be made a national park within the next 2 years or the whole magnificent grove will be cut down for fence posts and grapevine stakes.

Perhaps you are thinking, how can the owners do such a thing? How can they be so unfeeling, so heartless, as to destroy trees thousands of years old, the biggest living things on earth, to make fence posts? It happens that questions like these fail to hit the mark in this instance. In all the years that the present owners have held this grove they have never cut a living tree. The fence posts are being cut from fallen timber. But the revenue from this down timber has not been enough to pay taxes and the taxes are in default. I think that people who will hold property worth several hundred thousand dollars, refusing to cut a tree upon it until they face the prospect of losing it at a tax sale, are pretty good citizens. These people have been asked whether they would sell this sequoia grove to the Nation. Their answer is "yes." I have no doubt, in the circumstances, that it would be easy to agree upon a price.

If Redwood Mountain is to be saved from destruction there must either be an appropriation of money by Congress or somewhere in the private citizenship of this country one or more men must step forward and make the saving of this forest their contribution to their fellow men. It is unfortunate, from my point of view, that it has been the general policy of the Congress not to appropriate for the purchase of lands for parks. I hope that these trees may be saved, but many tragedies have been enacted in this country despite similar hopes in the past. It may be that somebody will come forward, as a few men have come forward in the past, and save this grove for the Nation. I can think of few greater honors than to have one's name carved on stone that will last a thousand years as the savior of trees that will live a thousand years and still be young.

I have spoken of the spread of our national park system from the western mountains to the Atlantic, but still the thought remains in the minds of many that the midcontinent has nothing worth while to offer. To correct this notion, Congress 3 years ago passed a law establishing a national park upon the boundary between the United States and Mexico, a park which might include 1,500,000 acres. This park will come into being when lands suitable and adequate for it shall be donated to the United States. This is the proposed Big Bend National Park, bordering the Rio Grande. Large areas in it are owned by the State of Texas. It contains several State parks. The State is willing to donate the lands that it possesses. Unfortunately, additional lands which must be had to make this a national park are in private ownership and we are in the slow process of acquiring them by donation.

This Big Bend National Park, when it is finally established, will center in the Chisos Mountains, which form what our scientists call a biological island of forested high country surrounded by arid plains and deserts. I wonder how many people in the Middle West, or even in the Southwest, know that in Texas there are mountains 8,000 feet high? How many know that one can stand on the rim of a canyon and look almost straight down 5,400 feet into the Rio Grande? If this national park becomes a reality, we will stop the ruinous erosion now going on due to overgrazing by sheep and goats that are trying to live where cattle and horses starved. We will turn the mountainsides and the badlands and the grassless plains back to the antelope and the deer and the bears, the panthers, and foxes that lived and thrived there before the white man brought what he calls civilization. It is a wilderness now, a poverty-stricken wilderness, but Nature will restore its richness if given a chance.

But I am talking ahead of my turn. The land has not yet been acquired. A year or two ago the Legislature of Texas appropriated $750,000 to buy land in this park area, but the Governor vetoed the bill. A praiseworthy effort has been made to raise the necessary money by popular subscription, but so far sufficient funds are lacking. In this instance, as in others, private individuals must come forward, unless the Governor relents, for no Federal funds can be used for land acquisition. I have faith that this park will come into being. Generous private citizens helped to establish the Great Smokies and the Shenandoah National Parks. Generous private citizens bought a sugar-pine forest to add to Yosemite, donated large areas to build up Acadia, purchased additional lands for Grand Teton, and gave Muir Woods to the Nation.

The national park system of the United States is far from being completed. We need a great national park in Alaska for the special purpose of preserving the Alaska brown bear. These gigantic animals which you know so well in your St. Louis Zoo, the mightiest mammals on the American continent, are headed straight for extermination unless our Government sets aside a sanctuary suitable for their habitat and large enough for their maintenance.

Some people in Alaska dislike these bears because they eat salmon without using can openers. The fox farmers do not like them because they kill foxes. So they call the bears predators. You know our habit. Whenever a wild animal does the same things that we do, we call it a predator or vermin and proceed to kill it off. So in Alaska they are killing off the brown bears just as they are killing off the American eagle. I do not blame any particular fox farmer for killing any particular bear, but surely, in a vast wilderness like Alaska, which is larger than all the States that border on the Mississippi River, with a total population smaller than that of the city of Davenport, Iowa, surely in such a vast and almost empty wilderness, a wilderness publicly owned, we can set aside an area big enough to preserve the Alaska brown bear from extermination. If we cannot, you had better pray that the bears in the St. Louis Zoo live to a ripe old age, because there won't be any more. Civilized man, with emphasis, please, on "civilized," is exterminating everything as big as a rabbit. There are even men who call themselves sportsmen who would go so far as to ravage breeding grounds upon which sportsmen of the future will have to depend for a supply of game.

I have singled out these four possible national parks—the Everglades, Redwood Mountain, Big Bend, and the Alaska bear sanctuary—because they are scattered from the southern tip of the Atlantic coast to the northern reaches of the Pacific, and also because every one of them represents a race against time, in order to prevent destruction of the object it is desirable to save—destruction of wildlife in the Everglades by poachers, destruction of the Big Bend country by overgrazing and erosion, destruction of the sequoias by lumbering, destruction of the Alaska grizzly by wanton shooting.

But beyond all this, I have cited these four projects because they typify a new approach that we must make to national parks. If we are to save great national scenic assets and the wildlife now threatened with destruction, we must save them from ourselves, from our civilization, from our carelessness, from our callousness. How can this be done? By putting conservation ahead of commercialism in appropriate instances, and by recognizing that a dollar spent to save such national resources as these is a dollar well spent, because it is a dollar that will return to us a hundredfold.

We need to go forward in the United States with our national-park program, as we are going forward with this new State-park policy, with our eyes open to larger objectives and our minds hospitable to a new sense of values. The spirit underlying such a program is the spirit that gave the State of Missouri this park which I have come to help dedicate, the Dr. Edmund A. Babler Memorial State Park. Inspired by this generous gift, may you as a State and we as a Nation go forward in harmonious understanding and helpful cooperation to develop, in the spirit that actuated Jacob L. Babler in making this generous gift, a national- and State-park system that will serve all the American people for all time to come.

Training for Aviation Defense

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, January 28 (legislative day of Tuesday, January 17), 1939

RADIO ADDRESS BY COL. J. E. MYERS, UNITED STATES ARMY, RETIRED, JANUARY 17, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered at St. Petersburg, Fla., on January 17, 1939, by Col. J. E. Myers, United States Army, retired, on the subject of aviation training for national defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of national defense, when our great President tells us in no uncertain terms "that probability of attack is mightily decreased by the assurance of an ever-ready defense" we must leave nothing undone that may serve to give us a superiority on land, sea, and air.

War in the making was suddenly stopped on October 1, 1938, due to certain information disclosed concerning air forces abroad, and when nations hesitate to plunge into a war because of the knowledge of the awful destruction accomplished from the air, it is time for any right-thinking American to realize and accept that today we are unprepared to meet our national defense air problems.

Such bold statements may yet shock us into the realization that our homes and loved ones may be in immediate peril in spite of those great protective natural Chinese walls—the Atlantic and Pacific Oceans—behind which we have sat serenely by to watch the sinister power of dictators gather more and more force.

Since large air forces cannot be equipped with trained pilots on short notice, I am sure that every thoughtful person will concede that it is of vital importance to create a state of air-mindedness among the young people of our Nation—a state of mind or cooperative spirit in all undertakings concerning our national air defense.

For this reason we have formed a National Aviation Defense Association which will not only encourage the youth of the Nation in all matters pertaining to aviation but will celebrate a day in honor of all our air heroes and more particularly to the fathers of flight, Wilbur and Orville Wright.

To this end a bill will be submitted to Congress providing for an aviation day August 19 (Dr. Orville Wright's birthday) of each year, and requesting the President to order the naval and military units throughout the United States to assist civic bodies in appropriate celebrations of that day.

How well we may picture the joy and enthusiasm of our school students in the parades and contests to be held in honor of our heroes.

The association desires to promote and to coordinate aviation education in the primary and grade schools in our land. We intend to give the youth of our country the opportunity to become great masters of the air and to give the Douglas Corrigans of the future real and lasting opportunities which they never dreamed of receiving before.

Past history of the World War will give undisputable evidence that great armies of brave patriotic citizen soldiers can be raised and trained in the short period of 3 months' time. How different this is with the question of providing modern equipment and arms to these men who go forth to protect our homes and honor of our country.

We should never forget the old days of 1898, when our troops were sent to Santiago, Cuba, provided with only smoke-producing powder, which made them an easy target for the Spanish soldiers, who were equipped with the latest smokeless small-arms ammunition. Are we to repeat this story of unpreparedness? Who can measure the loss of life and treasure or the sorrow produced in many a family by such short-sighted policy and economy as practiced in those days?

Many of us remember a real lesson from the pitiful picture of the Wright brothers, who were finally forced to appeal to France for sufficient funds with which to build their airplanes. Even today their first plane, which was destined to create a revolution in modern warfare and a monument to war prevention, now rests on foreign soil.

Nearly a year ago the American people were informed through the House and Senate Naval Affairs hearings that there would be no limit to the size of future airplanes and that plans had already been drawn for a ship that could travel 3,000 miles on a nonstop flight at the rate of 385 miles per hour carrying a useful load of 32 tons of high explosive shells.

Mr. Hughes, after his round-the-world trip, startled all of Washington with his declaration that airplanes the size of the Queen Mary, capable of carrying freight across the ocean, could be expected in the near future.

It has been contended that airplanes can be shot down by antiaircraft guns at an altitude of 15,000 feet, but to counter such claims a new invention has made it possible to project great blankets of smoke both vertically and horizontally from an altitude of 25,000 feet or more over the enemy's fleet or over massed troops in the field. It would, therefore, be practically impossible to bring down airplanes, which could not be seen through these screens of smoke.

Assuming, for example, that we are to be attacked by an enemy fleet 1,000 miles off our shore, advance squadrons of our planes carrying smoke-producing bombs would proceed to fly out to checkerboard this fleet with both vertical and horizontal smoke screens, from which their ships must most surely emerge and one by one be subject to attack from our bombing planes and submarine boats, unaided by any real support of concentrated fire from their sister ships.

In this connection I might add a significant incident which was witnessed by one of the national directors of the Aviation Defense Association. He tells of a demonstration of Italian bombing squadrons which made three round trips from its base in one day over the entire British fleet as it withdrew from the Mediterranean Sea.

To the association a proposal will be made to endorse the advancement of our air seacoast defense and to sponsor any measures for the construction of great underground or protected naval and military air bases every 500 miles of coast line in the Americas and to encourage the building of huge international nonstop intercommunicating superdefense highways between these strategic points.

Through the construction of these great bases and highways of communication we will be able to establish a dead line 1,000 miles off our shores through which no hostile ship can possibly pass without being subjected to deadly air and submarine attacks. Thus our Navy will be left free to travel and fight if necessary, upon the high seas while their people at home can rest in that peace and security which can only be established by such measure of preparedness.

In the work of creating this barrier of defense for the Western Hemisphere we must not overlook our neighbors to the north and to the south. They have been invited to cooperate and join with us for the protection of all American people from the restless hordes of Europe and from the alarming signs of the coming Asiatic races.

This is no time for hysterical cries of alarm but rather for a calm consideration for the needs of the Nation for our national defense. But in view of the situation abroad it is imperative that each and every one of us look with concern to our own peace and safety. This is affected not only by the probability of being drawn into the great world war but also by a condition at home of possible internal disorder.

Such a condition of internal disorder in the Americas can be met in part by providing constructive self-liquidating work for unemployed persons. This may be accomplished by combining our railroad systems with great nonstop superhighways, the construction of which will provide proper communication between our naval and military bases and will insure employment for everyone for many years to come.

Back of an aviation day on August 18 of each year are the American Legion and the Veterans of Foreign Wars of the District of Columbia, the American War Mothers, and other national organizations, and I am proud to say that we have also the young men of St. Petersburg, the Jaycee Club, who, armed with the enthusiasm of youth, are determined to make this day a day of success, which it so richly deserves.

The directors of the association are well known to all of you here in St. Petersburg. Time will permit me to give only a few of the prominent men who are supporting this movement. Among them are Lt. Gen. R. L. Bullard, Maj. Gen. Amos A. Fries, and E. B. Winans, United States Army, retired; Bernarr Macfadden, publisher; Gov. Fred P. Cone; Col. James A. Moss, director general, United States Flag Association; C. G. Taylor, president, Taylor Air Craft Corporation; Edward A. Spence; Dr. L. M. Gable; F. R. Francke; R. E. Grabel, national organizer of this city; and the Honorable Maurice H. Thacher, national legal adviser.

To your city of sunshine, happiness, and pleasure comes this honor of being the first to organize an aviation day association, under the direction of the Jaycee Club, of St. Petersburg. To your State comes the honor of being the first State to start the aviation day association under the honorary chairmanship of your Governor.

And, in conclusion, I ask that each one of you lend your support to this purely patriotic noncommercial association in order that the Nation may rest secure in the knowledge that each State organization is working to give every possible assistance to our naval and military authorities for the cooperation needed to bring into existence a state of preparedness so vital to our peace and safety.

The Dies Committee

EXTENSION OF REMARKS

OF

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1939

RADIO ADDRESS BY HON. KENT E. KELLER, OF ILLINOIS, ON JANUARY 20, 1939

Mr. KELLER. Mr. Speaker, I feel compelled to call the attention of the Members of this House to the hearings before what is almost universally known as the Dies committee. Three volumes of these hearings are already off the press, and a fourth one, the last, is expected soon. These hearings are for the special use of the Members of this House and are to be had from the committee for the asking. They should all be obtained by every Member and should be studied carefully, including the fourth volume, before any action should even be contemplated, either by the members of the Committee on Rules or by the Members of this House.

A casual reading of these hearings will show that very many of the Nation's outstanding educators, thinkers, philanthropists, divines, and statesmen are classed therein as Communists or fomenters and abettors of communism.

It is an astonishing fact, but a fact, nevertheless, that the names of most of the forward-looking men and women of the past 25 years are printed under this classification as Communists or encouragers or abettors of communism. Not only are the great and the good now living thus smeared in this Government print, under the seal of this House, but the memories of the great dead are not sacred against these infamous attacks.

I am preparing a partial list of these to be submitted to this House and to the country at large. As a suggestion of what this list will contain, it is only necessary here to say that it includes the name of Jane Addams, one of the unselfish, sainted women of America, who gave her whole life to the service of humanity, now dead these many years. In this list is the name of Helen Keller, whose life and achievements have for many years been an inspiration to the handicapped children of the world. It contains the name of one of the colleagues of the members of the Dies committee who voted his confidence in these men in supporting the resolution which created that committee, Herbert Bigelow, one of the able outstanding courageous men of America, upon whose revered head these hearings heap the ignominy of "Communist sympathizer."

There are hundreds of innocent men and women whom these hearings accuse—not a few only, but literally hundreds, who had no notice of any such accusation and who have had no opportunity of facing their accusers and demanding proof of their crimes or being permitted to defend their characters. These accusations are wholesale, and never a single person has been notified of the accusation, nor a single one been given the opportunity of defending his good name, though every one whose name is printed in these hearings will be proscribed if these infamies are permitted to go by unchallenged, if the wronged citizens are subjected to such un-American abuse. What is going to be the reaction of these American citizens to these charges when they learn they are classed as Communists or Communist abettors and sympathizers? And what excuse can this House give if it votes to extend the time of the Dies committee without first studying with great care these mass accusations? Because it must be clear to anyone that if this House votes to extend the time of the Dies committee, by that vote it approves the statements made in these hearings and makes them permanent in the records of the American Government.

I am told there is already an understanding among a majority of the members of the Committee on Rules to rush

through this new resolution extending the life of the Dies committee, even though the hearings are not yet printed and no study of the hearings has been made. I am loath to believe any such rumor because that alone would be contrary to the customs of this House, or of any and all other legislative bodies.

There is no need for speed in the consideration of this resolution.

If a new committee were appointed, the rules and customs of this House would not justify its going into action during this vitally important session of Congress.

But more important than all this, the House could not justify the assassination of the characters of hundreds of American citizens as the record now stands, without first hearing all before condemning any.

Let all who are on these lists of the proscribed be notified of the accusations against them. Then let them be heard by the Committee on Rules or an independent committee to be appointed for that purpose. When all the evidence of guilt has been presented and the evidence in defense has been considered, let Mr. DIES retract his charges against all who are found innocent and then blazon the names of the guilty to the skies. Such a hearing of the accused alone can justify any action by this House to further put within the hands of this committee the power to smear American citizens by irresponsible pronouncement.

I therefore appeal to the Members of this House to get a full understanding of the tragic importance of these hearings in considering any extension of the life of a committee which has in the name of this body accused so many and tried none.

We cannot justify any action until this whole matter of guilt or innocence has been threshed out and finally decided.

It is perfectly evident that the House does not know what the committee has done in regard to the character assassinations and smearings in which it has engaged. I am sure that if the House can be informed on this subject the action on the resolution will be an entirely different one from what it will be if the matter is permitted to be rushed through.

I, therefore, make this suggestion that you use your acquaintance with the members of the Rules Committee and with your congressional friends to prevent any action by the Rules Committee until the last volume of the hearings is printed and sufficient time given to study the whole 3,000 pages before any report shall be made. Providing for the extension of the life of the Dies committee will be accepted as an expression of the belief of the House in the truth of these statements. It, therefore, occurs to me that every action ought to be taken to prevent any consideration of the extension of the Dies committee until the testimony is all printed and carefully studied. Furthermore, I suggest that each man who has been smeared should demand of the Rules Committee the right to appear before that committee and face Mr. DIES who is also a member of the Rules Committee, and demand proof of his allegations or an official retraction and thoroughgoing public apology.

I am writing to 50 men and possibly a hundred along this same line. If it strikes you as it does me, it will be unnecessary for me to suggest that you wire the chairman of the Rules Committee, Hon. ADOLPH J. SABATH, and Miss Mary Thompson, clerk of the Committee on Rules, and demand these two things: The delay here suggested and the right to appear and face Mr. DIES in a public hearing.

I am submitting for the RECORD as a part of my remarks a radio address which I delivered over a national hook-up over WOL, Washington City, Friday evening, January 20, 1939, as follows:

SCHOOL FOR SLANDER

The American people very properly always want to know the facts about everything that interests them or that may affect them.

I think this is especially true at the present time concerning what is known as the Dies committee.

The so-called Dies committee was authorized by House Resolution 282 "for the purpose of conducting an investigation" into the facts of un-American activities in the United States.

It was not for the purpose of going out and attacking either the institutions or the personnel of the American Government.

The Dies committee heard more than 100 witnesses, filled four thick volumes with testimony printed at Government expense, and has filed a report with the House of Representatives.

In this report, Chairman MARTIN DIES declares that he has looked upon his work and finds it fearless and free from partisanship. On the basis of past performance he now asks the House of Representatives to continue his committee for 2 years and to appropriate $150,000 for its work.

On the basis of past performance, I am forced to disagree with Mr. DIES and to charge that the real purpose of his committee, as conducted by him, was not to uncover facts relating to foreign influences, but to engage in partisan politics.

The history of congressional investigations is a long and, for the most part, honorable one. Past congressional investigating committees have been distinguished for the scrupulousness with which they sought and handled the evidence which came before them.

They first attempted to lay basic ground work of knowledge on the general subject which they were to study. When they were well grounded in basic facts they set about to accomplish their field work. They were careful to secure from reliable sources such basic documents as bank records, books of account, correspondence, etc. They questioned all possible witnesses to establish a basis for corroborating particular facts and examined the credibility of witnesses before bringing them to the stand. It has been the standard practice of congressional committees to invite or subpena to their hearings all persons whose names or activities might be attacked or mentioned adversely by the other witnesses and give them the opportunity to defend themselves. It has been the standard practice to put not one witness, unsupported by documents or previous study, on the stand, but as many as may be found necessary. These are the practices which have been followed in practically all investigations which had respect for fact and veracity.

But there has been an exception, and that a most notorious one. That exception has degraded the high prestige of congressional investigation. It has violated all the canons of common sense, all the rules of congressional decency, and all the examples set by previous congressional committees. This exception is the committee headed by Hon. MARTIN DIES, of Texas. Under his direction it has evolved a technique of investigation peculiarly its own.

Witnesses were summoned without regard to their credibility or allowed to testify at their own request and at their own expense without examination into the motives that animated them.

Not the slightest attempt was made either in the field or after these witnesses arrived in Washington to examine any documents, books of account, or correspondence, or to obtain any corroborating information as to their reliability.

A few feeble gestures in this direction were made during the last days of the hearings, but by that time the record was full of a type of "evidence" for which Mr. DIES has been apologizing ever since. Mr. DIES claims that his evidence would be admitted by any court in the land. I agree with Mr. DIES that courts would accept the evidence presented before his committee. They would accept it, however, not to establish the facts testified to but to reveal the mental state and the disreputable character of the witnesses themselves.

Practically all of the evidence was hearsay. It came not from people who are participating in un-American activities, or those who knew the facts directly, but from people telling about other people and what they thought or had heard it whispered that these other people did, said, or believed. Not one of the principals actually engaged in un-American activities was brought before the Dies committee to be confronted with documentary evidence and to admit or disclaim guilt. No reputable officer of any organization alleged to be found engaging in un-American activities investigated by Mr. DIES was called by him to testify. The documents offered were not those secured and examined by the committee and identified by responsible persons. They were whatever books and papers witnesses happened to bring with them. The record is absolutely barren of any examination of books of accounts or records of any organization concerned.

Congressman DIES has made much of the fact that he was limited as to funds and failed to get cooperation from administrative agencies of the Government. He has used this argument to excuse his committee for setting an all-time record for what President Roosevelt characterized as "unfair and un-American" methods of procedure.

In choosing its chief investigator it was not lack of funds but lack of even the most elementary regard for the public interest that led the committee to select Edward F. Sullivan for the job. Any inquiry into Mr. Sullivan's past would have revealed its unsavory character and established the total unfitness of Sullivan to serve as anything but the object of investigation himself by a committee authorized to look into un-American activities. Government agencies, of whose uncooperative spirit Mr. DIES has complained, would have been glad to tell him the facts about Sullivan.

Sullivan was at one time on the pay roll of the Railway Audit & Inspection Co., a notorious antilabor detective agency. Just what Mr. DIES' ace investigator did in the line of labor espionage is not known. But the un-American activities of the Railway Audit & Inspection Co. in fomenting labor disputes for its own profit and interfering with the rights of workers are matters of public record. Mr. Sullivan's part in these activities might well have been a matter of interest to the Dies committee.

Affidavits in the possession of Labor's Non-Partisan League establish that Sullivan had long been busy in labor affairs. Sometimes he was trying to bribe labor representatives to make false statements about their union or union officials. On at least one occa-

sion he offered to make a cash sale to labor representatives of information damaging to the employer representative with whom they were negotiating. With apparent impartiality, Eddie Sullivan would sell to either employers or workers if the bid was high enough.

Sullivan did not confine his work to the labor field but also took a flier in politics. Like the Dies committee which hired him he played anti-Roosevelt politics, and played them in the name of Americanism. During the 1936 Presidential campaign the malodorous James True and Associates came into considerable prominence. Operating under the Rome-Berlin-Tokyo-Dies slogan of "save America from the Jewish Communists," this subversive outfit conducted a campaign of slander against the President of the United States. The associates in James True and Associates were none other than Chief Investigator Sullivan. Typical of the kind of un-American propaganda spread by True and Sullivan is the following quotation from their bulletin, Industrial Control Reports, of August 1, 1936:

"Previous to Communist outbreaks in Europe, the Governments of Germany, Hungary, Spain, France, and England became infested with a preponderance of Jews, just as our Government has become infested under the reign of Roosevelt. This also follows the scheme of the protocols of Zion and is another fact that must be faced."

Sullivan, as chief investigator, naturally did not see fit to call James True as a witness before the Dies committee, nor to investigate his own anti-Semitic and anti-Roosevelt past.

The report of the Dies committee stresses the importance of racial and religious tolerance to the American way of life. Yet it put in charge of its investigation a man who had instigated prejudice not only against American Jews but had carried on anti-Catholic propaganda as well.

Mr. Sullivan's past was a secret only from the committee that employed him. It was so well known to labor and progressive groups and to the newspapermen who covered the Dies hearings that in due time it caught up with him. A storm of protest demanding that the Dies committee investigate its own investigator finally broke. Weeks later, the committee let Mr. Sullivan go—"for reasons of economy" as Mr. DIES was at pains to explain. The committee has never offered the public any apology or explanation for the character of its "ace sleuth" nor for its failure to investigate his past record before or after hiring him.

So remarkable an "investigator" naturally turned up some remarkable witnesses. And naturally he showed a great reticence to inquire into their records and credibility. Sullivan was as ready to accept witnesses on their own recommendations as the Dies commitee had been to accept him.

Mr. DIES has repeatedly insisted that he didn't believe everything he heard. But he has never disclaimed the testimony of particular witnesses, nor made available to the public the facts that bring their credibility into question. He has never explained to the public, nor to the Congress, that Alvin Halpern, a witness brought to Washington by Investigator Sullivan, has a police record in Massachusetts, and was sentenced for larceny in a District of Columbia court on the same day he told all to the Dies committee.

The committee had printed at public expense hundreds of pages of "testimony" by one Walter Steele. Did the committee base its report, or any part of its report, on Steele's testimony? Mr. DIES has not told us. But the report itself would seem to indicate that the committee put some credence at least in Steele's smear of every organization in the United States, from the Catholic Association for International Peace to the Junior Red Cross. Excepted only were the 114 organizations Steele himself claimed to represent. And these included the American Vigilante Federation, the Associated Farmers, and the American Indian Federation. The Associated Farmers, untouched by DIES, are now under investigation by another congressional committee which has startling evidence of their un-American activities. The American Indian Federation is a racket which preys on poverty-stricken Indians, extorting $1 from them on the promise that they will each receive $3,000 in return from the Federal Government.

Mrs. Alice Lee Jemison, another spokeswoman for the American Indian Federation, smeared the Department of the Interior and the officials of the Indian Service before the Dies committee. Later she appeared before the Senate Judiciary Committee to protest the appointment of Felix Frankfurter to the Supreme Court.

Finally, the American Vigilante Association, which Steele also represented, and to which he presumably gave a clean bill of health, has been roundly denounced by the late Speaker of the House, the Honorable Henry T. Rainey.

The Dies committee did not question Mr. Steele about his questionable sponsors, nor did it embarrass him by asking about his own activities. Steele is editor of a scurrilous, un-American magazine, the National Republic. This magazine and Walter Steele himself are tied up with the anti-Semitic and un-American Silver Shirts. But this also was a matter of no interest to the Dies committee. It would take all the time and money that the Dies committee had at its disposal to expose the shady histories of its star witnesses.

It heard with interest the story told by William Gernsey, who, by his own confession, worked as a labor spy in the employ of the Corporations Auxiliaries, a private espionage agency.

It heard Jacob Spolansky, who perjured himself before the committee when he testified under oath that he had never been a labor spy; this in spite of the fact that the records of the General Motors Corporation show that they paid him $480 for labor espionage; this in spite of the fact that Spolansky also did labor espionage for the National Metal Trades Association and for the Chrysler Corporation.

It heard C. Nelson Sparks, one time mayor of Akron, and respectfully addressed him as "Mayor Sparks." But it did not ask him about his work as coorganizer with Pearl Berghoff, of the notorious Akron Law and Order League; nor did it remind him that the strong-arm methods in which he engaged with "Stinkfoot" McVeagh and "Chowderhead" Cohen, legendary figures in America's strikebreaking history, elicited a sharp rebuke from the press and the chamber of commerce of his own city.

Perhaps some of the witnesses to whom the Dies committee gave its critical attention belong in the category of Edwin Banta, whose flights of imagination can be explained on the ground that he has been an inmate of the Bellevue psychopathic ward. To this class belongs Albert Littock, who was expelled from the Farmer-Labor Party of Minnesota as a mental case.

But most of the witnesses were not so crazy that they didn't know that they had been called in to do a political job.

Mark Gehan, who brought Kittock on from Minnesota, was well aware of the election that could be influenced by testimony before the Dies committee. He and his brother were both active in the campaign of the Republican candidate for Governor in Minnesota. Gehan met DIES in Detroit and showed him the cooperation Federal agencies are charged with withholding. Gehan saved DIES a lot of trouble by getting six blank subpenas, dashing home to round up witnesses to smear Governor Benson and the Farmer-Labor Party, and hauling them back to Washington to testify. By Gehan's own admission, there would have been more than the six anti-Benson witnesses who finally appeared, except for the fact that DIES had improvidently run out of subpenas.

Harper Knowles is perhaps the most vicious example of the committee's political skulduggery during the election campaign. For some time prior to 1936 Knowles was head of the California American Legion's committee on subversive activities. His misconduct in this capacity was so notorious that the State convention of the Legion held in Hollywood in 1936 repudiated Knowles. Without authorization from the Legion and entirely on his own hook, Knowles then set up what he called a "radical research department." He told the Dies committee that he spoke for the California Legion's "radical research committee," of which he was chairman, and that the voluminous brief he had prepared was submitted on behalf of the American Legion, Department of California. The Legion promptly denied both Knowles and his brief. But Mr. DIES did not take out the statement of Knowles or announce the Legion's repudiation of his story. Knowles' closest associate is Col. Henry R. Sanborn, professional vigilante and leader of the ax-handle brigade in the Salinas lettuce strike of 1936. Knowles has been the secretary of the Associated Farmers for some time. In September he took leave of absence from this position, probably to prepare for the Dies hearings.

What is the Associated Farmers? The La Follettee committee has just completed its investigation of this organization, which is probably the most dangerously un-American cabal to flourish on American soil. It is financed by big industrialists, the railroad and utility magnates, and the corporation "farmers." It has a 100 percent anti-New Deal program.

If the La Follette committee holds hearings on the Associated Farmers and makes the full story public, we shall have a startling exposure of what un-American activities really mean and of the sources from which the overthrow of democracy is threatened.

Why did DIES shield the Associated Farmers and use their secretary as a star witness? The reason was purely political. The Republican candidate for the Senate in California, Phillip Bancroft, has long been active in the Associated Farmers. He withdrew from the position of vice president of the Associated Farmers in order to run for the Senate. Knowles' purpose in offering his services to the Dies committee (at his own expense) and DIES' purpose in giving him the opportunity to testify were the same. Knowles appeared before the committee in order to smear Sheridan Downey, Bancroft's Democratic opponent in the election, and the Democratic candidate, Governor Olson.

The Knowles-Bancroft-Associated Farmers-Dies plot was defeated by an aroused electorate in California. The Democratic candidates were elected and the Associated Farmers suffered, their candidates and their program were repudiated. But this victory for the New Deal and its progressive supporters should not blind us to the dangers inherent in what Chairman DIES is pleased to call his "unbiased and nonpartisan" method of conducting an "investigation."

In Michigan the job against former Governor Murphy, now United States Attorney General, was done by the perjurer Spolansky, by Ralph Knox, an expelled member of the auto worker's union, and by Paul V. Gadola, among others. Gadola is the Republican judge whose writs ordering the evacuation of the two strike-bound Fisher Body plants in February 1937 the sheriff refused to execute.

Speaking of the need for national unity, the President, in his opening address to the Seventy-sixth Congress, said:

"Even a nation well armed and well organized from a strictly military standpoint may, after a period of time, meet defeat if it is unnerved by self-distrust, endangered by class prejudice, by dissensions between capital and labor, by false economy, and by other unsolved problems at home."

In the name of Americanism and of racial, religious, and class tolerance, the Dies committee has fomented mutual distrust among all sections of the American people. The very character of the witnesses to whom it gave a forum is evidence of that fact. The testimony to which it listened without rebuke is rife with prejudice and incitement to prejudice. The committee's report expressly calls for an investigation of the National Labor Relations Board, presumably along the lines which have characterized the committee's antics in the past. Such an investigation would permit the Board's enemies to air their views as "facts." It would allow lawbreaking employers to make a case against the Board before a congressional committe, ignoring the fact that courts where rules of evidence and the practices of American jurisprudence prevail have in most instances decided the case already, and in favor of the Labor Board.

Ex parte proceedings against Cabinet officers, the President's wife, elected officials, and the representatives and organizations of labor do not make for tolerance nor for national unity. They sow distrust of government, of progressives by other progressives, feed the unfortunate division in the ranks of labor, and undermine by discrediting the democratic process itself.

The introduction of racial and religious prejudice into a national election campaign is no service to party or national unity. Anti-Semitic propaganda was rife in New York, California, and Minnesota during the fall campaign. Yet the Dies committee, far from investigating the sources of this propaganda, piled fuel on the flames. It accepted with complacent approval attacks on the Nonsectarian Anti-Nazi League and the American League for Peace and Democracy, joining in the cry that those who protest against Nazi instigated anti-Semitism and anti-Catholicism do so only to camouflage their own Communist aims.

One member of the committee subscribed to this view openly when he backed up his charge that the distinguished Nobel prize winner, Thomas Mann, is a Communist. Newspaper reporters, indignant at the charge, reminded the committee member that Thomas Mann is known and respected throughout the world for his service to the cause of democracy. But the committee member gave the answer of Hitler and of all the Dies committee witnesses. He said: "Thomas Mann is against Hitler, isn't he?" So are the overwhelming majority of the American people against Hitler. Does that make them Communists? Does that make them subject to investigation for un-Americanism?

The Dies committee's pro forma jibes against the openly Fascist German-American Bund may fool some people, but it doesn't fool the bund's leader Fritz Kuhn. Kuhn and the bund have gone on record requesting that the House appropriate more funds for the Dies committee. What are we to think of a committee to investigate un-American acivities which receives the endorsement of the very groups it was delegated to eradicate?

The committee has other friends and supporters besides the German-American Bund. Many of them were present at the banquet given on December 8 by the New York Economic Council to honor MARTIN DIES. They included representatives of the Hearst and Morgan interests, of the big utility trusts, of the Republican Party, and of the Tory Democrats—along with six representatives of the bund itself. And, for good measure, one Henry W. Fletcher was there, though perhaps he left at home the medal he received from Mussolini for services rendered to Italian fascism.

Why do agents of foreign dictatorships and American friends of fascism and nazi-ism join in paying tribute to MARTIN DIES and in trying to prolong the life of his committee? Because they know that the Dies committee directs its attack agains one "ism" and one "ism" only. That is the progressivism of the New Deal.

If you believe that progress is un-American, if you believe that the New Deal is un-American, then you belong with those who subscribe to the work of the Dies committee. But if you are one of those millions who support the foreign and domestic policies of the present administration in Washington, then you had better stop MARTIN DIES before he stops the march of progress.

You can take it from no less an authority than MARTIN DIES, himself, that this is true.

In every radio speech he makes—and he makes a great many—he blasts away at the "campaign of propaganda" which is going to get us into another world war. And by that campaign of propaganda he means nothing more or less than the foreign policy of the Roosevelt administration. Ask MARTIN DIES where he stands on the question of rearmament in the face of aggressions by Fascist nations abroad. Ask him where he stands on the question of a positive peace policy as outlined in the President's message to Congress. Ask him how he stands on the question of constructing a united democracy on firm foundations of social and economic security. Ask him, and in his answers you will find the answer to why aggressor nations abroad applaud his works.

You don't have to ask MARTIN DIES how he feels about the domestic program of the New Deal. There is plenty of evidence already to show why anti new dealers from both parties support the Dies committee. It served their purposes well in the November elections. It serves them well today and will continue to serve them on every issue coming before the Seventy-sixth Congress. Already, in the first few weeks of this session, the Dies committee has been used by those who want to cut the relief appropriation and throw 4,000,000 people out into the snow and cold of the next few months. You will hear about the Dies committee during debate on expanding the social-security program, on revoking the Wagner Act by amendment.

DIES is already echoing the cry of "dictatorship" which has been raised at every forward step taken by any administration in American history. DIES has only been shadow-boxing with foreign "isms." His real blows are reserved for an "ism" that is home grown and deeply rooted in the soil and the hearts of America. His real blows strike at the progressivism of the New Deal, and thereby at the welfare of the American people themselves.

And he says as much. In his radio speech of December 17, DIES said:

"It is futile and inconsistent for a man to oppose communism, nazi-ism, and fascism if at the same time he advocates paternalistic governments, which seeks to regiment the people under a system of planned economy."

And again:

"The activities of the Communists, the Nazis, and the Fascists are bad enough, but worse than these activities is the advocacy by many politicians in our country of the very principle upon which all of these totalitarian governments are based."

Unemployment is the most ominous question that has ever faced the industrial world. To solve this question of unemployment is the job of the New Deal.

We cannot solve that great problem in the presence of prejudices and dissension. It will require the clearest possible cooperative thought in view of all the facts involved.

The question of unemployment has awaited solution for many generations. Palliatives have been, and are now, plentiful, but actual solution has not even been attempted. For more than a century and a half vast numbers of men, women, and children have starved through recurrent depressions, suffering untold and untellable hardships, in the very presence of the ever-increasing fortunes which their labor had made.

Civilization has formulated extensive national policies to prevent the starvation that results from enforced idleness. But no attempt has ever been made to prevent enforced idleness itself. That is the task before us. We cannot shirk it without turning coward. We cannot desert it without turning traitor. Necessity demands and duty compels that we face courageously and solve intelligently the question of unemployment.

Any minor thing that tends to take our attention from the central question involved is the most subversive thing that we have to deal with at the present time, and whether or not it is literally true, it seems to me that Mr. DIES' whole activity has tended to discredit and discourage the various organizations that have built up and provided, or intended to provide, for the welfare of man.

The era of scarcity ended and the era of plenty began at the same time the Declaration of Independence was written. America, therefore, was born with the passing of necessary poverty. It came into existence as a government at the very time that labor-saving machinery was ushered upon the stage of mankind. It grew up in the midst of the hum of the wheels of industry. It has no binding tradition back of the age of iron and the age of steam. The American Revolution and the industrial revolution were born together—twins of the eighteenth century. One came to give and finally has given political equality. The other came to give and must give economic equality. One has made political democracy safe for the world. The other must and will give industrial democracy to that same world. Political democracy born of political revolution, industrial democracy born of industrial revolution—one was the answer to oppression and the other must become the answer to poverty. Neither can exist permanently without the other.

We cannot go back, for there is nothing to go back to except panic and poverty, unemployment and rags. We are going forward whether we want to or not. It is purely a question of how fast we are going to move and how little we are going to stumble on the way.

Men are marching toward the sunrise; if we be still, we can feel the earth tremble under their tread; if we listen, we can hear the trumpets call; if we look, we can see the banners flying; if we open our hearts to the music of the moving mass, we shall be conscious that we, too, are soldiers in that march, shouting, singing, keeping step with the throbbing drumbeats of humanity.

Aviation Day

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, January 28 (legislative day of Tuesday, January 17), 1939

ARTICLE FROM THE ST. PETERSBURG (FLA.) INDEPENDENT

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Inde-

pendent of St. Petersburg, Fla., of the issue of January 12, 1939, in regard to setting aside a day each year to be known as Aviation Day in honor of our air heroes and particularly Wilbur and Orville Wright.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Petersburg (Fla.) Independent of January 12, 1939]

AVIATION GROUP WILL URGE DAY OF OBSERVANCE—LOCAL MEN CONNECTED WITH MOVE TO SECURE BILL SETTING AVIATION DAY

The Aviation Defense Association will place a bill before Congress to create August 19 of each year Aviation Day, in honor of our air heroes and particularly Wilbur and Orville Wright, the "fathers of flight," it was announced today.

Among the honorary members of the national directors are Maj. Gens. R. L. Bullard and E. B. Winans, United States Army, retired; Bernarr Macfadden; Gov. F. P. Cone, Florida; Robert Kloeppel; Col. James A. Moss, United States Army, retired, the president general of the United States Flag Association; F. R. Francke, lieutenant commander, Naval Reserve; Col. L. M. Gable, Medical Reserve, United States Army; C. G. Taylor, president of the Taylor Aircraft Corporation; Harry Playford, director of Southern Air Lines; and Edward A. Spence, all on the national advisory committee for aeronautics, of the Aviation Defense Association.

It has been proposed that Col. J. E. Meyers, United States Army, retired, national secretary, prepare a national Aviation Day program, in cocperation with the civilian and Army and Navy and other service units of aviation, which will coordinate all the State associations in a celebration of the day.

The programs will include parades, airplane exhibits of school children, air circuses and races, model airplane contests, etc.

W. F. Kirchhaine, chairman of the St. Petersburg Jaycee aviation committee, sponsors of Aviation Day, has designated Robert Stewart to contact the State Jaycee clubs in connection with aviation. He will be assisted by R. E. Grabel, national organizer, who has charge of the organization work throughout the country.

The members of the national association are of the opinion that aviation is of great importance to our national defense and that superiority in the air is vital to our peace and safety.

Denison-Durant Dam on Red River

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Saturday, January 28 (legislative day of Tuesday, January 17), 1939

EDITORIAL FROM OKLAHOMA CITY TIMES

Mr. LEE. Mr. President, yesterday I obtained leave to have printed in the RECORD a portion of an editorial from the Oklahoma City Times regarding the sources of material of the Governor's speech concerning the construction of the Denison Dam. There is a supplemental and additional comment on the same subject by the same author. In justice to the author and to the newspaper, I feel that I should also ask permission to have the additional matter printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Oklahoma City Times of January 24, 1939]

THE TINY TIMES

Evidently I was wrong the other day when I said the basic material in Governor Phillips' argument against the Denison Dam came from O. G. & E.'s research department. Governor Phillips said I was wrong; that Bill Coe had worked it up. Mr. Davis, of the O. G. & E., said I was mistaken; that neither Coe nor anyone from Phillips' office had used their stuff, although they would have been glad to be of service. I must be getting old. In the middle of a sandwich I asked an O. G. & E. man about the background of Phillips' argument the night after the message was given the legislature. I understood him to say that they had turned their studies over to the Governor. Just goes to show, a fellow shouldn't depend too much on his ears when his mouth is full of hamburger.

Foreign Trade Policies and the Cotton Planter

EXTENSION OF REMARKS

OF

HON. THOMAS S. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

ADDRESS BY FRANCIS B. SAYRE, JANUARY 27, 1939

Mr. THOMAS S. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Francis B. Sayre, Assistant Secretary of State, at the annual banquet of the Agricultural Society of South Carolina, at Charleston, S. C., January 27, 1939:

It is indeed an honor to be invited to address a group so rich in history and achievement as the Agricultural Society of South Carolina. Organized over a century and a half ago by makers of American history, it has itself helped to make history. Its first President, Thomas Heyward, was a delegate to the Continental Congress, a signer of the Declaration of Independence, an officer during the Revolutionary War, and a circuit judge of South Carolina. Its first vice president, Thomas Pinckney, was Governor of South Carolina, United States Minister to Great Britain and to Spain, and a Member of the Federal Congress. Each owned extensive plantations and devoted much of his attention to agriculture.

The committee elected in the organization meeting was made up of the most prominent young progressives of their day—men who later threw themselves wholeheartedly into the building of the youthful nation and whose names became outstanding—William Drayton, associate justice of the State supreme court, judge of the admiralty court, and first judge of the United States district court in South Carolina; John Matthews, delegate to the Continental Congress and second State Governor of South Carolina; the famous John Rutledge, delegate to both the Continental Congress and the Federal Constitutional Convention, Governor of South Carolina, chief justice of South Carolina and later of the United States Supreme Court, who has been described as "the most gifted and devoted leader of the ruling group of eighteenth century South Carolina"; Charles Pinckney, officer in the Revolutionary War and aide to General Washington, also a delegate to the Federal Constitutional Convention, United States Minister to France, and Federalist candidate for President of the United States in 1804 and 1808; Ralph Izard, another delegate to the Continental Congress, United States Senator from South Carolina, a member of one of the State's oldest and most distinguished families; Edward Rutledge, signer of the Declaration of Independence, delegate to the Continental Congress and Governor of South Carolina; Thomas Bee, delegate to the Continental Congress and judge of the United States district court; Aaron Locock, member of the South Carolina Provincial Congress; and Isaac Harleston, officer during the Revolutionary War, also a member of the South Carolina Provincial Congress and senator in the South Carolina Legislature. Was ever there a more distinguished roster of South Carolina's bravest and her best?

A society of men such as these could not remain of merely local importance. Two years after it was founded we hear of it from the lips of Thomas Jefferson, then Minister to France. Jefferson, always scintillating and myriad-minded, discovered that the French preferred to import rice from Italy rather than from the United States, and while on a trip to Italy in the spring of 1787 he found that Italian rice was different from that grown in the United States. With characteristic energy he therefore decided to procure some of the Italian seed and send it to the United States. Where could he send it to better advantage than to the newly formed Agricultural Society of South Carolina?

Upon his return to France he wrote on May 4, 1787, from Marseilles to John Jay, then Secretary for Foreign Affairs:

"It is a difference in the species of grain, of which the government of Turin is so sensible, that, as I was informed, they prohibit the exportation of rough rice on pain of death. I have taken measures however for obtaining a quantity of it which I think will not fail & I bought on the spot a small parcel which I have with me. As further details on this subject to Congress would be misplaced, I propose on my return to Paris to communicate them & send the rice to the society at Charlestown for promoting agriculture, supposing that they will be best able to try the experiment of cultivating the rice of this quality."

When he reached Paris, Jefferson wrote on July 14, 1787, directly to Edward Rutledge, of the South Carolina Society:

"They informed me," runs his letter, "that its exportation in the husk was prohibited; so I could only bring off as much as my coat and surtout pockets would hold. I took measures with a muletier to run a couple of sacks across the Apennines to Genoa, but have not great dependence on its success. The little therefore which

I brought myself must be relied on for fear we should get no more and because also it is genuine from Vercelli where the best is made of all the Sardinian Lombardy, the whole of which is considered as producing a better rice than the Milanese. This is assigned as the reason of the strict prohibition."

On July 30, 1787, Jefferson wrote to William Drayton, another member of the South Carolina Society, sending him three packages of the precious Italian seed, one by way of London, a second "with this letter, and I shall send another parcel by some other conveyance, to prevent the danger of miscarriage. Any one of them arriving safe, may serve to put in seed, should the society think it an object."

What came of it I do not know. But the veil is lifted far enough to show the part which this society was already taking in the building of our country.

The South was then, as the South is now, of outstanding importance to our national prosperity. The founders of this society came clearly to realize, as is evident from their lives, that the problems of the South are the problems of our Nation. The problems of rice, of tobacco, and particularly of cotton, are not merely regional problems. They are national problems—of vital concern to industry, to agriculture, to labor, and to business generally, throughout the entire country.

The crux of the agricultural problem today is how to secure for our farmers a reasonable return for the surplus crops which cannot be sold within the United States. Less than half of the cotton which the South produces can be marketed within the United States. In 1929 we sold abroad more than half of our cotton crop, two-fifths of our leaf tobacco, and a third of our rice crop. Strong foreign markets are essential to the South. If our surplus cotton and tobacco and rice cannot be sold abroad, these surpluses are thrown back onto glutted home markets, where they force down farm prices and work widespread havoc. At the same time, if American industrial producers lose foreign markets, our city workers are stripped of the purchasing power necessary to buy the products of southern farms.

The problem of the agricultural South obviously cannot be solved by increased tariffs for staple agricultural commodities, because farmers must sell their staples in world markets. Increased tariffs are like a double-barreled gun aimed at farmers; they mean increased prices for many of the things which farmers have to buy, and they also mean reduced foreign and domestic purchasing power for the products which farmers have to sell.

What farmers must have are markets for their surplus products; they cannot rest content with any permanent program short of this.

There is no more practical way to increase both foreign and domestic markets than by reducing and eliminating the barriers and obstacles which today are hindering and diverting into uneconomic channels the flow of international trade. Once nations are free to buy and sell in the most advantageous markets, the wheels of industry and production, which have long stood idle, begin to turn again, each nation's economic organism takes on new life, and purchasing power with renewed economic activity will again be built up to a point where nations will be able to buy the American farm and industrial products which they want and need. This is the very heart of the American trade-agreements program. And surely for the agricultural South this is the way forward if it is to maintain its economic strength and health.

In three practical ways the trade-agreements program benefits the Southern farmer. In the first place it builds up and strengthens foreign markets for his surpluses, both by reducing or eliminating the trade barriers which bar access to those markets and by building up foreign purchasing power.

We have now concluded 20 trade agreements with 19 countries. Hundreds of concessions of value to American agriculture have been obtained. As measured by 1929 figures, nearly a third of our entire agricultural exports to those countries with which the first 18 trade agreements were signed received improved treatment of one kind or another. Approximately another third received guaranties that the existing duties would not be increased or the existing treatment be made more onerous. In the nineteenth agreement, that with the United Kingdom, concessions, including bindings, were obtained for about five-sixths of our total agricultural exports to the United Kingdom, the outstanding foreign market for American farm products. These concessions cover farm exports valued in 1936 at $226,000,000.

Cotton growers benefit in a less direct but equally substantial way. Most foreign nations need and want cotton and few trade barriers have been erected to exclude it. It is not trade barriers designed to bar its importation so much as the lack of foreign purchasing power which has caused export markets for American cotton to shrink.

The world could easily double its cotton consumption, for cotton supplies a fundamental human want. As is true of most commodities, cotton consumption does not remain static. If we can build up through increased trade foreign purchasing power and dollar exchange, America will be able to sell more cotton.

Furthermore, as everyone knows, the prosperity of the American cotton farmer is intimately connected with general world prosperity. If there is severe depression throughout the world, the slackening in the demand for raw cotton is quickly reflected in falling prices. That was the situation a few years ago when cotton fell to about 5 cents a pound. It has been estimated that a 10-point rise or fall in the average world index of industrial production normally tends to cause a rise or fall of about 2 cents a pound in the price of American cotton.

In the second place, the program is of very practical benefit to agriculture through building up increased domestic markets and increased domestic purchasing power. If we can sell abroad, for instance, more automobiles, automobile factory workers in the United States can and will buy more cotton goods and butter and meat than they otherwise could. Moreover, automobile factories will be buying iron and other raw materials from every section of the country; and this, in turn, will mean increased pay rolls and increased purchasing power in every place from which they buy. Workmen in these places will, in turn, buy goods coming from still other sections of the country. Each sale of surplus products abroad thus sets in motion an unending sequence of economic transactions within the country, the total effect of which is to increase purchasing power beyond the volume represented by the original sale, and increased purchasing power is what makes prosperity. Trade increases employment, creates profits, and raises the general level of well-being. Increased exports build up greatly increased domestic markets.

In the third place, the trade-agreements program offers to farmers a practical means for increasing what economists call their real income; that is, the amount of goods which their income will buy. The farmer's real income may be increased either through his receiving more dollars with which to buy the goods he wants or through a reduction in the cost of the goods he wants. In either way he gets more goods. Through reducing the costs of the things he needs by reducing the excessive and economically unjustifiable tariff rates of the Hawley-Smoot tariff in such a way as to avoid injury to domestic producers, the farmer's real income can be increased without injury to other groups, and this is being done with every new trade agreement that is made.

How deeply the farm groups were hurt, in the opinion of Secretary Wallace, by the Hawley-Smoot tariff is best described in his own words:

"The bill," he said, "actually proved to be the most outrageous instance of selling agriculture down the river to the traditional beneficiaries of tariff privilege. Once again, as in 1922, agriculture had been traded out of its shirt in a game of logrolling * * *. Monopolists and others already well fortified by tariff advantages established themselves even more impregnably within the citadel of protection."

By means of the trade-agreements program many of the excesses and unjustifiable extremes of the Hawley-Smoot Tariff Act, which have been working to the deep injury of our farm groups and, indeed, of the Nation as a whole, are gradually being smoothed away and adjusted to the benefit of all.

The importance to agriculture of all three of these practical benefits was emphasized afresh with the signing of the British and Canadian trade agreements on November 17, 1938.

Our commerce with the United Kingdom and its colonies and with Canada constitutes, roughly, about a third of our total foreign trade. The United Kingdom buys more goods from us than does any other country. American farmers have a particularly vital stake in English markets, for England needs cotton and must have more foodstuffs than she can herself produce. Approximately a third of our total agricultural exports are sold in the United Kingdom. Our sales of farm products to British buyers in 1929 amounted to some $445,000,000; in 1937 they were only $261,000,000. The potentialities of this rich and extensive market are obvious.

After the United Kingdom, Canada buys more goods from the United States than does any other country. It is much the largest source of our imports. The total trade between the United States and Canada is greater than between any other two countries in the world.

Taken together, the concessions embodied in the agreements with the United Kingdom and Canada cover more than 3,000 tariff items. Our total exports to and imports from the areas concerned amounted in 1937 to over $2,000,000,000. Of this total, nearly 70 percent, or approximately $1,400,000,000 worth of trade, is covered by the concessions given and received in the agreements. The British and Canadian trade agreements alone include concessions on American farm products affecting more than a quarter of a billion dollars worth of farm exports.

There has recently been a tendency in some quarters to look at foreign trade through very dark spectacles. Particularly after the signing of the Munich agreement last September some felt that we must accept as permanent the loss of foreign markets and the increasing regimentation of international trade.

Defeatism never accomplishes anything. It is the way to disaster. It is not the American way.

As a matter of fact, by far the greater part of world trade today is carried on by countries whose policies are not based on bilateralistic balancing and trade discrimination, but, rather on equality of treatment and unregimented trade.

Nations which are wise will adopt commercial policies which foster and promote international trade and thus further human welfare. Policies which hamper and restrict the flow of international trade are bound to work to the nation's own economic injury and in time to be themselves overthrown.

Here lies the elemental strength of the American trade-agreements program. Its two fundamental objectives are, first, to reduce and eliminate the barriers and impediments which are tending to strangle international trade; and second, to eliminate trade discriminations which today are tending to divert trade into uneconomic and less profitable channels and which are robbing international traders of the stability and certainty necessary to carry on their business.

Because of recent international developments we need not fold up our tents. If we are sufficiently resolute and intelligent to adhere to our liberal policies and to avoid being drawn into contrary practices for the sake of temporary or partisan gains, all the cards are on our side. We can win and hold strong foreign markets if only we keep true to our principles. The effective reply to the defeatist attitude regarding our foreign trade, which appeared in some quarters after the Munich settlement, is the Anglo-American trade agreement.

For many years unhappily the South has suffered under a system of mounting tariff barriers whereby southern cotton growers and southern farmers were forced to sell their goods in world markets while buying their necessities in a highly protected one. What the South needs is increased foreign markets and reduced tariffs. Upon these her entire economic existence depends. If there is one feature of present American policy which more than all others the South should aggressively fight to strengthen and safeguard, it is the trade-agreements program.

United States Favorable Trade Balance Shown by Official Figures for 1938 to be $1,133,567,000

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1939

Mr. COCHRAN. Mr. Speaker, from time to time we hear from our Republican friends concerning the reciprocal treaties or trade agreements. The policy of the Roosevelt administration, they charge, is detrimental to the interests of the American producer as well as to labor. Some of those on the Republican side would, if they could, go back to the old Smoot-Hawley law, which in my opinion brought about the depression.

Mr. Speaker, the best answer to the arguments of those who assail the reciprocal treaties are the figures furnished by the Department of Commerce, which show exports, including reexports, general imports, and balance in trade. The statistics are now available for the calendar year 1938, and, under leave to print, I include the figures in my remarks. They follow.

Merchandise trade, by months

EXPORTS, INCLUDING REEXPORTS, GENERAL IMPORTS, AND BALANCE OF TRADE

Exports and imports	December—		12 months ending December—		Decrease
	1937	1938	1937	1938	
	1,000 dollars	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*
Exports	323,403	268,756	3,349,167	3,094,095	255,072
Imports	208,833	171,474	3,083,668	1,960,528	1,123,140
Excess of exports	114,570	97,282	265,499	1,133,567	

Month or period	1933	1934	1935	1936	1937	1938
EXPORTS INCLUDING REEXPORTS	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*	*1,000 dollars*

December	133,518	132,258	186,968	245,161	208,833	171,474
12 months ending December	1,449,559	1,655,055	2,047,485	2,422,592	3,083,668	1,960,528

Balancing the books what do we find? I take the figures, official, from the Commerce Department. Our favorable trade balance for 1938 was the highest since 1921. In 1938 we received from foreign countries in dollars and cents $1,133,567,000 more for our merchandise than we paid foreign countries for theirs.

Of agricultural products exported only cotton showed a decrease, while all others increased. Look up the figures for dairy products, also meats and you find an increase in exports. The citrus fruit industry had a record year in exports.

Mr. Speaker, in this report you find the answer to the charge that reciprocal treaties are destroying our foreign trade.

Neutrality and Armament

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1939

Mr. HINSHAW. Mr. Speaker, as there is so much to do about the question of neutrality and armament, I feel that in order to make clearer the issues involved a statement may be helpful, even though relatively brief and very incomplete.

In dealing with questions of neutrality and armament we are in the domain of peace and war, and by the Constitution of the United States the power to declare war is lodged not in the President but in the Congress.

In the first place, it must be understood that under international law a neutral government is not permitted to perform any unneutral act whatsoever. A neutral government which during the course of any foreign conflict changes its attitude in any respect toward either or any belligerent thereby commits an unneutral act. By changing its attitude—for example, by embargoing the shipment of, say, oil or cotton, to either or both belligerents—such a change of attitude naturally hampers the operations of one belligerent more than the other and therefore would be considered an unneutral act by the belligerent aggrieved.

Consequently, should the President of the United States or the State Department make any declaration whatsoever toward changing existing embargoes placed under the Neutrality Act of 1935, as amended, or even make any statement such as the one recently made by our Secretary of State, urging those who deal in materials of war to refrain from shipment of airplanes to Japan, the executive department of the Government may be considered as having committed an unneutral act on behalf of the whole Government.

Such an unneutral act is a direct invitation to war, and under international law as it has existed for a score of centuries, the foreign nation aggrieved thereby has every right to so consider it.

To those who write to Congressmen urging for and against lifting the Spanish embargo, or to place restrictions upon the shipment of arms and the granting of credits to Japan, let me state that if the Congress or the President, under the authority granted him in the Neutrality Act, make any move whatsoever, as above described, they are committing an unneutral

act and thereby jeopardizing the position of neutrality of the United States of America.

It is therefore incumbent upon those people who make these demands that they first consider whether or not they wish the United States to commit such an unneutral act and whether or not they are willing to accept the potential consequences.

At this point may I pause to remark that the internationalists and pro-league of nationites, for their respective purposes, are evidently at the bottom of the present propaganda and agitation to knock the United States off its neutral base. These programs are indeed subtle, in that they strike a deep note of sympathy in the hearts of the American people for the victims of aggression. But let us not ourselves be unwittingly inveigled into war by our sympathy for the victims of international brigandry.

Let us remember that the events which led us into the World War have a striking resemblance to the present propaganda, and let us remember also that it is not our business to pull the chestnuts out of the fire for any other nation in the world.

Let me quote to you from the statement of a recognized authority on international law, made before the Senate Committee on Foreign Relations in 1936. The following statement refers to the World War:

> We became involved in war directly as the result of our undertaking to guarantee the safety of belligerent merchantmen and our taking the position that armed belligerent merchantmen were to be considered peaceful vessels.
> * * * I cannot forget the fact that the little kingdom of the Netherlands, small in territory and in population, but governed by a loyal queen, under the advice of patriotic and capable men, put armed merchantmen on the same footing and under the same restrictions as men-of-war, in accordance with the law that had immemorially prevailed * * *.

The matter referred to is the sinking, among others, of the British ship, the *Lusitania*, which as is well known was an armed merchantmen, having 6-inch guns fore and aft to repel submarines. This ship was sunk by a German submarine. The commander of the submarine regarded it as an armed merchantman under international law, and, therefore, a belligerent vessel—while our credulous Government, seemingly in a state of subservience to the British viewpoint, regarded it as a peaceful vessel and undertook to protest the loss of lives of American nationals and the loss of American cargo on that ship.

It was our protest that these merchantmen were peaceful vessels, even though armed to repel attack, and our adherence to the position that the attack of such foreign vessels when carrying our nationals or American cargo was an act of war against us by Germany, that led us directly into a declaration of war.

It is easily seen, therefore, that at this point to lift the Spanish embargo, thereby placing one side of the Spanish conflict in a superior position, would be considered by the other side and its allies, Germany, Italy, and Japan, as a direct violation of neutrality, which, in my belief, was probably violated when the embargo was first placed.

In reference to the Japanese invasion of China, while a state of war has not been declared, any action taken at this time to place an embargo upon the shipment of munitions, or to restrain credits, could be considered by the Japanese Government as an unneutral act, thereby placing the United States on the skids toward the bloody pit of war.

If the people of the United States wish to engage in a war with Japan, this is one of the best ways to start it; and those who would urge us to go to the aid of China thereby must consider well the consequences.

Let us not forget that, in spite of our sympathy for the victims of Japanese aggression, there are other nations and many internationalists who would like to see us take the brunt of war against Japan, for they would benefit thereby very greatly. I anticipate that we would end up holding the sack, as we have done before.

It is my present belief that the mounting hullabaloo for vastly increasing our national defense at this time and the sudden propaganda of sympathy for the Chinese people is a smoke screen behind which may be operating these internationalists and foreign interests, each with a different objective but with the same object, namely, involving us in a war with Japan.

Let us not forget that this aggression by Japan against China has been going on for quite a few years, but it is only recently that the hullabaloo has been raised. Let us remember also that religious and racial groups in other countries than Germany have been persecuted, and even massacred, but our Government did not protest. On the contrary, we have amicably recognized the Governments of Soviet Russia and Socialist Mexico. We have even congratulated them on occasion.

The internationalists, with headquarters in Geneva and Moscow, would have us "preserve democracy" and fight the opponents of their particular brand of collectivism. We got sucked into war with that slogan once before. The international commercial interests wish to preserve their position in China and drive the advancing Japanese commercial interests out. I do not at this point believe that either of these objectives is worth one drop of the blood of our American young manhood.

Therefore, in spite of my own great sympathy for the victims of aggression, until and unless the American people as a whole demonstrate a desire for war with Japan, as the Representative of the Eleventh Congressional District of California I shall hesitate before taking any action that might involve the United States in committing an unneutral act as above described.

In conclusion, let me say that recent Congresses and the executive department of our Government have apparently allowed us to slip into a most precarious position. Propagandists are endeavoring to grease the bloody skids. Let us pause and contemplate before we go any further.

The Farm Problem

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

ADDRESS OF FRANK KNOX AT PIERRE, S. DAK., JANUARY 12, 1939

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. Frank Knox, publisher of the Chicago Daily News, at Pierre, S. Dak., on Thursday, January 12, 1939:

As a result of the recent election the Republican Party must seriously address itself to the task of developing a positive, affirmative program. Such a program would not be given an official character until the Republican National Convention convenes in the summer of 1940, but it must be developed before that event through public discussion and debate. Under our system this is the only method by which a party program can be made to express the prevailing sentiment of the party membership. It is part of the function of those charged with party leadership to start public discussion in and out of Congress, out of which will come party policy. What I am about to say this evening is deliberately provocative. I am perfectly aware that some positions I will assume will be challenged. I am not only complacent over this prospect but I am affirmatively glad that it is so. Only through the free debate of free men can sound policy be established.

One of the acute economic problems which Republican leadership must face is the problem of prosperity on the farm. The need for facing this problem and trying to solve it is obvious. After 6 years of experimentation by the New Deal, the condition of the American farmer is worse, measured in terms of dollars and cents, than it was before these experiments were begun. If we are to be fair in the matter, we must include the last 2 years of the previous Republican administration, which also attempted its own experiments in the agricultural field. They were as unfortunate in their results as were the 6 years of New Deal experimentation.

The plain objective of all efforts to help the farmer is to bring parity in purchasing power to the farm dollar. Upon this, all are

agreed. There are two possible ways in which to attain this objective. One lies in increasing, by artificial means, the prices to be paid by the consuming public for farm products, and thus increase the farmer's purchasing power. This was attempted, under Republican auspices, through the operation of the Farm Board which bought and removed from the market a considerable proportion of the year's crop of wheat, trying to keep up the price paid the farmer for wheat actually sold. This is one form of price fixing by artificial means. It failed. And it failed at a cost to the United States Treasury of more than a half billion dollars.

Then the New Deal tried its hand at artificial price fixing. It was obvious that if any artificially fixed price was to be maintained for the benefit of the farmer a reduced output was imperative. This meant a surrender by the farmer of his control of his own farm.

The whole series, therefore, of attempted regimentation of agriculture was logical, if you start with the premise that artificial price fixing is a permanent cure for farm troubles. The results of these experiments have proved, however, that the New Deal program of artificially increased prices, buttressed by a regimented agriculture, was unsound. It failed because no economic ill was ever permanently cured by artificial interference with the operation of economic law. The law of supply and demand is as inescapable in the matter of farm prices as it is in every other portion of the entire economic world.

The failure of the whole New Deal plan to revive a sick agriculture by price fixing can be reduced to a simple dollars-and-cents basis. The total cash income to American farmers in the years 1927 and 1928 for all farm produce sold was, in round figures, $10,000,000,000. The total cash receipts, including all subsidies from the Federal Government, of the American farmer in 1937 and 1938 were seven and one-half billion dollars, in round figures. Therefore the New Deal experiment with price fixing as a means of restoring parity in purchasing power to the farmer left the American farmer two and one-half billion dollars worse off than he was before these trials were made. No successful attempt was ever made anywhere at any time by anybody to permanently fix prices. It can be done, possibly by a people who commit their destinies entirely to a socialized state, in which all property is owned by the government and everybody works for the government, but even this has never been proved. Russia is now engaged in just such an experiment, but the present state of the Russian farmer provides no incentive to the American farmer to adopt such a philosophy.

If parity in purchasing power of the farmer's dollar cannot be brought about by artificially increasing the purchasing power of his dollar—and the experience of the past 8 years abundantly proves that—then the only way left for attainment of our objective is to lower the cost of the things which the farmer must buy. If we cannot increase his income, can we increase his purchasing power by lowered prices of the things he must buy to satisfy his necessities and to provide him with the comforts of living?

This offers a fruitful field for study. Almost every article of necessity or comfort, for which the farmer's income is expended, is the product of domestic manufacturing. Are there any artificialities existing in the manner in which the prices are fixed for the things which the farmer must buy? Experience has proved, as I have pointed out, that artificial price fixing for the products of the farm does not constitute a permanent cure of the farmer's difficulties. If we are to be both logical and fair in our approach, we must likewise admit that artificial price fixing of the commodities which the farmer must buy is equally bad and equally unsound.

If we are realistic in our survey of the price range of the products which the farmer must buy, we must at once admit the presence of two artificial factors which help to determine the prices of manufactured commodities. One of these is to be found in the practice of secret price fixing which has been very widely practiced by numerous trade associations, especially since the experience of 1933 and 1934 with the N. R. A. We had, it is true, illegal and secret price fixing before the N. R. A. but never on such a scale as that which has persisted since the demise of the "blue eagle." The usefulness of the trade associations as a means of combating what was called destructive competition was never properly appreciated by businessmen until the N. R. A. opened up its possibilities to them. A Supreme Court decision terminated the open practice of price fixing, but it by no means terminated its secret practice. That continues, on an unbelievably broad scale, right up to the present moment.

Thus one of the artificial methods of maintaining a high price level for the commodities which the farmer must buy can only be destroyed by amendment of an intelligent sort of the law which governs and is designed to prevent conspiracies in restraint of trade and a thoroughgoing, impartial enforcement of the law after it has been amended. Therefore one of the subjects which the Republican Party, in my judgment, should thoroughly explore, and upon which it must take a firm and positive position, lies in the prevention of genuine competition through secret price fixing.

Along with a drastic revision of our antitrust laws and their rigorous enforcement there should, and must, go a campaign of education designed to lay bare the exact effect of a secret price-fixing policy on business itself. We as a people are determined to remain living under a private enterprise, a profit-and-loss system, of political economy. In such a system competition is of supreme importance. It is no exaggeration to say that the private enterprise system cannot continue if the element of competition is destroyed. Sooner or later the private enterprise system in which the principle of competition is atrophied destroys itself by its very excesses. To permit illegal secret price fixing to continue is to surely and certainly invite state socialism with government ownership, government operation, and government control of everybody and everything. Competition must be preserved or our whole system of private enterprise is out of the window and in the ash can.

The second of the two artificial expedients which raises the price of everything the farmer must buy, and consequently destroys all efforts at establishing parity in purchasing power of the farmer's dollar by lowering prices, is the permitting of excessively high tariffs. I am going to talk very frankly about the tariff because I believe it is one of the major subjects upon which the Republican Party must drastically change its traditional position.

Let us begin this discussion by pointing out that reducing excessive tariff rates does two things: First, it lowers the prices of the products and commodities which the farmer must buy; and second, it raises the price of the things the farmer has to sell by restoring the foreign market he formerly enjoyed. To sell American farm products abroad we must buy some of what our foreign customers have to sell. You cannot always sell and never buy in foreign trade.

Next, let us explode the theory that one of the ways to help the farmer is to raise the tariff on farm products. The major products of American agriculture are wheat, corn, cotton, tobacco, and lard. Practically all of these products are produced by American farmers in excess of our domestic needs. Whenever this is true, the price of that commodity is fixed by world market conditions and cannot be controlled, except artificially, in this country. To attempt to help the farmer by promising him higher and higher tariffs on his products is naught but a red herring drawn across the trail to divert him from attack on the excessively high tariff rates on domestic manufactures. It is time that the farmer recognizes this for what it is. It is nothing less than an effort to keep him satisfied to pay tariff-created, monopoly prices, for everything he buys, and to continue to sell what he does produce at world prices. The only time a tariff on domestic farm products can be of the slightest use to the American farmer is during a season of unusual drought, or crop shortage from some other causes, and then it is always at the expense of the American consumer.

If the proposal to achieve parity in purchasing power for the farmer's dollar is to be arrived at by lowering the prices of the things the farmer must buy, the idea of putting higher and higher tariffs on farm products must be abandoned. Plain logic can lead to no other conclusion.

Let us ask ourselves what are the factors that enter into the cost of production of manufactured commodities. First of all, there is the cost of capital. Then the cost of labor. Next, the cost of raw materials, and following after these: Skill in labor, efficiency of management, and the factor of easy and cheap transportation.

When the American Nation was young, it was almost exclusively an agricultural community. Almost all manufactured products came from abroad. In the effort to create a domestic industry, protection from outside competition was essential and imperative. Infant industry needed the chance to establish itself and the protective tariff was the answer. At that time we lacked in almost every one of the essentials I listed, which enter into manufacturing activities. We had meager capital. Labor was unskilled. Management undeveloped. Sources of raw material undisclosed, and transportation only of the crudest sort. Through the operation of the protective tariff, American industry flourished and grew to maturity. Not only are we now the greatest industrial Nation in the world, with an output greater than any other half dozen nations combined, but aided by a protective tariff, we have built up a standard of wage for the workers and a standard of living for those employed by industry greatly superior to that enjoyed by workers anywhere else.

Let us now recheck the reasons for an excessively high protective tariff now. We have more capital than any other industrial nation. Indeed, we have the greatest liquid reserve of capital assets right now in our entire national history. Interest rates here are lower than ever before, or than anywhere else. We no longer need protection against cheap foreign capital.

We have within our boundaries greater and better resources in raw materials than any other industrial nation and have developed the most efficient and economical ways of extracting this wealth from the ground. We no longer need excessively high tariffs because of the costs of raw materials.

The lack of skilled labor was one of the original reasons for high tariffs. Today, beyond comparison, we have the most skilled labor in the world, plus mass-production methods which have tremendously lowered unit costs.

Our businessmen have become skilled industrial managers. American management of industrial concerns is a model for the rest of the world.

As for transportation, we have an excess of facilities equipped with the most modern means of transportation. Supplementing our railroads we have the greatest system of highways. We have the system of the Great Lakes and many of our great rivers. We have access through our ports to two great oceans. We can no longer plead lack of transportation as an excuse for high tariffs.

This inventory leaves but one single factor—the factor of labor. Here we cannot compete because we do not chose to compete in labor cost. No one wants to reduce the American standard of wages to the meager levels of Europe or Asia. There remains, then, one reason for an American tariff and that is the difference in labor costs here at home and abroad. We no longer need aid because of lack of capital, raw materials, skill in labor technique of management, or facilities for transportation. If we are, then, sincerely intent on giving back to the farmer his just and equitable right to a dollar of equal purchasing power with that of the urban

dweller, we must forthwith abandon the present system of excessively high tariffs and go back to a moderate tariff on domestic manufactures only sufficient to protect American wage standards and nothing else.

I know that the enunciation of this proposal as a sound remedy for ailing American agriculture will bring down on my head an avalanche of criticism. I am utterly indifferent to that. If we are to cure the present farm problem permanently we have got to attempt that cure along thoroughly sound economic lines. The past 8 years have demonstrated beyond a shadow of doubt that the farm problem cannot be cured by artificially raising prices of farm products. Alternatively, if we are to provide parity in purchasing power for the farmer's dollar, it then must come through a reduced price for the things which the farmer must buy. We must, if we are logical, turn from an economy of scarcity such as that pursued by the New Deal to an economy of abundance, with the lowest possible price for domestic manufacturers that is consonant with reasonable profits and the maintenance of American wage standards. The farmer will unquestionably agree to a tariff high enough to protect the American workingman's wages. He knows his most important market for his produce is his domestic market, and his own interest demands that that domestic market shall continue to have a high purchasing power. Prosperity on the American farms can only be supported and maintained while there is and continues to be prosperity in American industry and good wages paid American workers.

Let me illustrate exactly what I mean by briefly outlining the history of one industry in this country—the automobile industry. It is one of the most highly competitive industries we have. It requires no high protective tariff either to develop it or maintain it. Its development has been characterized by brilliant management, and its success has been made possible by the skill of American labor. Operating without the benefit of high tariffs and under grilling competitive conditions, the cost of automobiles in the last 10 years has been almost cut in half, and the wages paid the American workingmen employed in the production of automobiles has constantly increased, until they constitute as a whole one of the best paid class of workers in the country.

Here we have exemplified perfectly the principle of low-cost production under competitive conditions which has spelled prosperity for the industry itself, high wages for the workers, and constantly lowered cost to the farmer and to the consumer. Incidentally, as illustrating its innate health, this highly competitive industry is one of the first to revive following the depths of the depression—indeed, it is at this moment leading American industry out of the slough of despond. No better example could be cited, of the soundness of a political philosophy based upon competition, reduced costs through improvements and refinements of manufacture, without any artificial aid of any sort from the Government.

The outcry for some form of farm subsidy had its origin in the recognition by the farmer, as a class, that he had to sell his product in a competitive market and had to spend his income in an artificially high-priced market for the commodities he used. He said, with righteous wrath, "If many of the prices of the things I must purchase are maintained by an indirect subsidy from the Government"—which is exactly what an excessively high tariff is—"then I, too, must have a subsidy from the Government." The farmer knows—none better—that American agriculture cannot be permanently supported by gratuities paid out of the Federal Treasury, but he has become tired of continuing to be the victim of an artificially fixed-price system. His demand for Government subsidy was granted. For 6 years he has been the beneficiary of subsidies. It has, in many instances, saved him from acute distress, but after 6 years of experience with it, he finds his total income, measured in dollars and cents, including the subsidies, is 25 percent less than it was 10 years ago. He knows now that Government subsidies and gratuities are not the answer. What he is going to demand, and in ever-increasing volume, is that the artificial subsidies of which he has been the victim in the past, should also be discontinued as unsound.

As Earl Smith, one of the great leaders of the farm industry in Illinois, has already said: "If American business and American labor will relinquish the use of artificial instrumentalities and permit the restoration of free competition, organized American agriculture will no longer request the support and cooperation of the Federal Government." I believe, in this statement, Mr. Smith represents the overwhelming sentiment of the American farmer.

Again, for the sake of clearness, let me repeat: It has been proved that neither a high tariff on farm products nor a subsidy nor any other form of gratuity from the Federal Government will cure a sick agriculture. It has also been proved that two things are responsible for the monopolistic prices charged for the commodities which the farmer must buy.

The first of these artificial means is found in secret price fixing in defiance of law, and the second in excessively high tariffs which give to domestic manufacture a practical monopoly of the American market. This monopolization of the domestic market is possible because under excessively high tariff rates competition from abroad, when prices get too high, is eliminated. It is these two injustices which must be corrected if we are to return to sound thinking in dealing with agriculture.

Because I have stressed these measures for bringing about parity in purchasing power for the farmer, I would not have you think that their adoption would constitute a complete cure. Of course, there is no one thing that will bring a cure. The whole question of farm credit touches farm prosperity intimately, but this problem holds within it no insurmountable difficulties.

The farmer has an even greater interest in the question of transportation. The price that the farmer receives for a bushel of wheat grown on a South Dakota farm is materially affected by the cost of transporting that bushel of wheat to the seaboard, and the whole question of transportation, which touches the prosperity not only of the farmer but of the cities as well, awaits statesmanlike solution. The farmer has a deep interest in that problem, and a part of his prosperity in the future will flow from sound treatment of this transportation problem.

A part of the farm problem will be solved by lowered taxes. In efficient and economical administration of government lies a large part of the cure of hard times. High taxes have always meant and always will mean hard times, and, correspondingly, low taxes have always helped and always will help all classes toward prosperity. The farmer's interest in the practice of rigid economy in Government—National, State, and local—is the same interest as that of the city dweller. The wild spending orgy of the past few years will take its ultimate toll from the farmer no less than the city dweller. The recent election disclosed an unmistakable trend away from radical thinking and radical measures and back to sound thinking and sane measures—measures that experience has taught in the past are right and just.

In this return to straight thinking, let us think straightly on the farm problem, because it lies at the very root of all national prosperity. It is for the express enunciation of what seems to me straight thinking that I have come to you tonight. I don't expect your complete agreement with what I have said. In much that I have proposed you may sharply disagree; but if I have made even a small fraction of my American fellow citizens begin to think realistically, the effort has been richly worth while.

Importation of United States Flags

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

RESOLUTION OF THE MONTANA LEGISLATURE

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Montana Legislature:

Senate Joint Memorial 1

Resolution memorializing the Congress of the United States for the passage of legislation prohibiting the importation of foreign-manufactured United States flags and other national insignia sufficiently to protect their manufacture in the United States

To the honorable Senate and House of Representatives of the United States in Congress assembled:

Whereas the United States flags and other national insignia are being manufactured and imported from foreign countries; and

Whereas this practice is detrimental to our manufacturers of these flags and national insignia and contrary to the theory of our national Americanism: Now, therefore, be it

Resolved by the Senate of the State of Montana (the house of representatives concurring), That we do hereby petition the Congress of the United States of America for the passage of legislation prohibiting the importation of foreign-manufactured United States flags and other national insignia; be it further

Resolved, That a copy of this memorial be transmitted by the secretary of State of Montana to the Senate and House of Representatives of the Congress of the United States and to the Senators and Representatives in Congress from the State of Montana, and that they and each of them be requested to use all honorable means within their power to bring about such legislation.

Sugar Production in Florida

EXTENSION OF REMARKS

OF

HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams in regard to sugar production in Florida:

BELLEGLADE, FLA., *January 22, 1939.*

Hon. PATRICK CANNON,
Washington, D. C.:

Low temperatures in this region have again ruined our vegetable crops. Sugarcane planting has not been affected. If we had had one-half of our land in sugarcane, we would be in much better financial shape today. Please change laws so that the small farmer can put at least one-half of our land in sugarcane and be self-supporting and self-respecting American citizens supplying the needs of fellow Americans.

Hon. PAT. CANNON,
Washington, D. C.:

Lake Okeechobee, Everglade section, is again suffering 90 percent loss through severe cold we had last Friday and Saturday, which makes it very hard on our farmers as fall crop brought no price; winter crop killed by frost. Won't you be good enough to do everything possible to help the United Sugar Corporation to increase their quota that would make possible for small farmers to divide their farming between sugarcane and vegetables that would give them chance to make a decent living, as sugarcane was not hurt at all during this severe cold? Kindly acknowledge this wire in behalf of the farmers and myself. With kindest regards.

H. GOLD, *Prince Theater*

Statement on Communism

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. BOREN. Mr. Speaker, communism has already become a serious problem in America. The Communist strategy is to "bore from within." Up to this time there has not been any noticeable Communist activities in the great State of Oklahoma. As a citizen of Oklahoma, believing strongly in the American system of government, I am determined to do what I can to prevent communism from gaining a foothold in my State.

Recently the Workers' Alliance of America has begun organizing efforts in the State. They now have organized one or two units in the Fourth Congressional District, which I represent.

The citizens of Oklahoma believe in Americanism and, I am certain, do not wish to aid or tolerate the development of any "ism" contrary to Americanism. The organizers of the Workers' Alliance have come to Oklahoma in the form of an opportunist movement, taking advantage of citizens in the district desperate in the conditions of unemployment. They justify the collection of their dues with false claims of their ability to influence legislation in the National Congress and to influence the employment of people on W. P. A., and so forth.

One of the first attempts to organize the Workers' Alliance in Oklahoma was at Claremore, where an organizer sent from some eastern State came to Claremore with Robert Wood, the head of the Communist Party in Oklahoma, and they together attempted to set up a unit of this Communist organization. This, of course, was a failure, because the presence of Robert Wood made the identity of the organization as a Communist group too evident. These organizers then went to Seminole County, which is my home, and have started organizations there.

I doubt if there are any Communists in the Fourth Congressional District, and those who have joined the Workers' Alliance have been misled by the false claims of this organization and, I am sure, do not know of the Communist background of the organization, and I feel that when those members learn of the ulterior motives of the program which they have been led to support that they will be the first to help put an end to these Communist activities in our State. We have a pioneer type of citizenship in Oklahoma, who are stalwart in their philosophy of democracy and who will not participate in subversive movements when the identity of such movements are made known to them.

Therefore, Mr. Speaker, I have written the following letter to the State director of the Works Progress Administration in Oklahoma and have written similar letters to the W. P. A. directors in my part of the State and to the National Director of the W. P. A.:

JANUARY 27, 1938.

Mr. RON STEPHENS,
Administrator, Works Progress Administration,
Oklahoma City, Okla.

DEAR MR. STEPHENS: It has come to my attention that many W. P. A. workers are being led into joining the Workers' Alliance, a communistic organization. I feel very strongly that no one should be continued in a supervisory capacity who is a member of this organization, since it is fundamentally dedicated to the program of destruction of the American system of government.

The Workers' Alliance is a communistic organization, and I respectfully request that no supervisor of W. P. A. who is a member of the Workers' Alliance be employed anywhere in the Fourth Congressional District of Oklahoma.

If there is any nonrelief employee in the Fourth District who is a member of the Workers' Alliance, I respectfully request his removal.

Sincerely yours,

LYLE H. BOREN.

I want to point out that in this letter I have made no reference to the relief client, but have made the request that no people be carried on the nonrelief pay roll who are participating in organizing the Communist movement. The action I have taken in writing this letter is in keeping with the spirit of the amendment which I presented to the deficiency appropriation bill for W. P. A., and which this House adopted, restricting expenditure of W. P. A. funds to American citizens, thus cutting off all W. P. A. rolls the Communists and Nazis, who are organizing for the destruction of the American Government while on the Federal pay roll.

I believe these foreigners ought to be cut off the W. P. A. throughout the Nation and in Oklahoma we do not want any foreigners coming into our State in an attempt to dictate our policies and develop organized support for their Communist movements.

I have also written to every member of the Workers Alliance in the Fourth District, who has written to me on their stationery and as a member of that organization, a letter in the spirit of the foregoing remarks, an example of such letter I also place in the RECORD at this point:

DEAR SIR: You have written to me as an official of the Workers Alliance and I deeply regret to see good people in Oklahoma being led by propaganda into joining this communistic organization. I realize that a great many good citizens who are not members of the Communist Party are led to join such organizations as the Workers Alliance without fully realizing the ulterior motives of the organizers and their connection with the Communist Party.

The founders and organizers of the Workers Alliance are Communists. Their purpose in extending the organization is to expand the reach of communism.

I am not a Communist. I believe in the American system of government. While I do not condemn the honest American who is misguided into joining the Workers Alliance, I do condemn the Workers Alliance. I am against every Communist organization. I hope and trust that the good citizens in the Fourth District of Oklahoma will not be led into promoting the Communist Party and that the Workers Alliance will soon cease to exist in the great State of Oklahoma.

Under separate cover I have sent you copy of the CONGRESSIONAL RECORD showing the record of the vote you referred to, but I send this to you as an individual and not as an official of the Workers Alliance.

Sincerely yours,

LYLE E. BOREN.

I also want to call attention to page 48 of the book called "The People's Front," which was written by Earl Browder, general secretary of the Communist Party of the United States, and a member of the presidium of the Third International of Moscow:

It was the Communists who raised the slogan of national unification, fought for it consistently, and finally brought about the merger of all into the Workers Alliance. * * *

The Workers' Alliance is not a legitimate labor organization and has been refused affiliation by both the American Federation of Labor and the C. I. O. It was organized by Herbert Benjamin, a leader in the Communist Party, and David Lasser, president of the so-called United Front.

W. P. A. Appropriation

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. O'CONNOR. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following memorial of the House of Representatives of Montana:

Memorial to the Congress of the United States of America protesting the reduction of the $875,000,000 asked by President Franklin D. Roosevelt for Works Progress Administration purposes to $725,000,000

To the honorable Senate and the House of Representatives of the United States in Congress assembled:

Whereas the House of Representatives of the United States has cut the appropriation for Works Progress Administration purposes to $725,000,000 from $875,000,000, the amount requested by President Franklin D. Roosevelt; and

Whereas such a reduction would cause great distress and serious conditions in Montana due to increased unemployment in private industry: Now, therefore, be it

Resolved that the Twenty-sixth Legislative Assembly of the State of Montana (the senate and house concurring), Does hereby protest the reduction of the appropriation for Works Progress Administration purposes and respectfully petition and request the Congress of the United States to restore to the sum of $875,000,000 the appropriation for said Works Progress Administration purposes as requested by President Franklin D. Roosevelt; and be it further

Resolved, That copies of this memorial be transmitted by the secretary of state of the State of Montana to the Honorable Franklin D. Roosevelt, President of the United States, the Honorable B. K. WHEELER and the Honorable JAMES E. MURRAY, United States Senators, and to the Honorable JAMES F. O'CONNOR and the Honorable J. THORKELSON, United States Representative of the State of Montana.

Transfer of Area Headquarters of Soil Conservation Service at Spartanburg, S. C.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. BRYSON. Mr. Speaker, the one thing which has impressed me most during my first days in the Congress is the vastness of this Federal Government of ours. From the discussions which have taken place on the floor I have caught a glimpse of the many and divers agencies of the Federal Government that the Congress has established and that the Congress sustains by the periodic appropriation from the Federal Treasury of moneys to meet their cost of operation.

I repeat that this multiplicity of governmental agencies has astounded me. While I do recognize the need for many of such agencies, and do not wish to depreciate the fact that in many instances they serve a definite and worthy purpose, I feel it appropriate and fitting to propound the question: Are the policies of these agencies getting beyond the control of Congress? This question suggests itself to me in view of an amazing spectacle recently called to my attention.

About 10 days ago there appeared in a North Carolina newspaper an announcement to the effect that area headquarters for the Soil Conservation Service located in Spartanburg, S. C., a city in my own congressional district, had been ordered by the Department of Agriculture to be transferred to Atlanta, Ga., which is about 200 miles west of Spartanburg. If an adequate explanation for this move had been offered by the Department of Agriculture, or if justification for their action were apparent, I would be out of order in directing the attention of the Congress to the staggering blow administered this city of my congressional district; but the fact of the matter is that the move smacks of the most arbitrary and dictatorial procedure I have ever witnessed.

Let me tell you gentlemen what has happened. Spartanburg is a city of some 30,000 inhabitants, geographically situated in the center of the great Piedmont area. And by virtue of its geographical situation and ability to accommodate the needs of the soil-conservation program it was originally designated as the first area headquarters of the Soil Conservation Service in the United States. For several years now the Soil Conservation Service has directed its operations for the southeastern section from Spartanburg.

But without the filing of a formal report, mind you; without the presentation of any facts or statistical data—with nothing more, if you will, than the tardy submission of a reluctantly rendered explanation carefully and cautiously woven into a mass of vague and indefinite generalities—it was ordered by officials in the Department of Agriculture that 250 members of the Soil Conservation Service in Spartanburg be transferred to Atlanta, Ga. And for what purpose were they to be transferred? We are told that these 250 employees were being transferred to Atlanta in order to bring them into closer contact with approximately 50 members of certain other agencies of the Department of Agriculture located in Atlanta.

Gentlemen, I submit that the act of transferring an organization of over 250 members to organizations totaling less than 100 members is nothing more, pure and simple, than a case of allowing the "tail to wag the dog." Should the wisdom of this "tail wag the dog" realinement be conceded? I think not. It remains for the Department of Agriculture to definitely point out where Atlanta is more suitable in this instance than Spartanburg. The relative suitability of the two cities should be determined on the basis of a comparative study of the geographical situation, housing facilities, transportation facilities, and other considerations incident to the operation of the several farm programs involved in this re-

grouping. But, I repeat, this move has been ordered and still the Department of Agriculture has offered no factual or statistical findings in the matter. They have simply arbitrarily stated to the Spantanburg office, "Get going." Pardon my phraseology, but the treatment accorded Spartanburg amounts to just that.

Neither should it be forgotten that in order to accommodate the personnel of the Soil Conservation Service the city of Spartanburg constructed a number of new homes and apartment houses, expanded business operations, and otherwise enlarged its facilities for supplying necessary goods and services. Here was the case of a small community striving to its utmost to offer ever possible cooperation with Federal Government in the establishment of headquarters for one of its agencies.

Try to visualize now what is going to happen to this fine city which made investments with the understanding that it was to be area headquarters for the Soil Conservation Service. Who is going to occupy those vacant homes, what patrons are going to fill those vacant shops, what returns are going to protect the investments of those civic-minded businessmen who built homes to care for the personnel of the Soil Conservation Service? What will there be to avert a financial calamity in this mistreated city?

This, gentlemen, is how far-reaching the action of a few officials in the agencies of our Federal Government can be. A small group of administrative officials can hand down a death sentence and then turn deaf ears to our pleas.

Is there anything democratic in this sort of procedure? Certainly not. My analysis is accurate; this move has not yet been justified or supported by facts. Should we witness such moves without raising a word of protest? Certainly not. My recommendation is timely and pertinent; we should penetrate to the depths of these matters and expose every example of undemocratic procedure. That is what I have done here today, called your attention to a glaring example of a piece of arbitrary and high-handed procedure. I thank you, Mr. Speaker and the Members of this House, for your kind indulgence.

The Task Ahead in National Flood Control

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

ADDRESS OF HON. WILLIAM M. WHITTINGTON, OF MISSISSIPPI, BEFORE THE OHIO VALLEY CONSERVATION AND FLOOD CONTROL CONGRESS, HUNTINGTON, W. VA.

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on Friday, January 27, 1939, at the meeting of the Ohio Valley Conservation and Flood Control Congress, Huntington, W. Va.:

Four successive floods in as many years crystalized public sentiment for national flood control. The Flood Control Act of June 28, 1938, commonly called the Whittington Act, is the most far-reaching and most comprehensive flood-control legislation ever passed by this or any other country.

NATIONAL FLOOD CONTROL

The act of June 22, 1936, known as the Copeland Act, was a step in the right direction; it was an excellent beginning, but it did not meet the general demand. It did establish a policy. Flood-control works, including levees and river walls for downstream protection and reservoirs for upstream control were placed under the Corps of Engineers of the United States Army. Water retardation, soil conservation, and reforestation were placed under the Department of Agriculture. Downstream works were supplemented by upstream improvements.

The act of August 28, 1937, primarily provided for emergency projects in the lower Ohio Valley, following the flood of that year. The act of 1938 reaffirms the national policy declared in the act of 1936. No new agencies have been established, but existing agencies, familiar with the problems involved, that have devoted years to studies and investigations, as well as to the construction of works, are utilized in the policy declared in the act of 1938, as they were in the act of 1936.

There is a definite plan for each of the great drainage basins of the country. The projects authorized will fit into that plan. The act contains only authorizations to initiate the plans by the construction of the works named. Funds cannot be diverted from one drainage basin to another; they must be spent where they are authorized or they cannot be spent at all.

Authorizations are made for local protective improvements, especially along the Ohio River and for reservoirs along the headwaters of the principal drainage basins of the country. It is contemplated that priority projects will have first consideration.

The Department of War and the Department of Agriculture have cooperated; their work has been coordinated; there has been no conflict.

Under the act of 1936 some 44 reservoirs were authorized. About six are under construction. It has been evident for some time that unless the Federal Government assumed the costs of construction of reservoirs, reservoirs along headwaters would not be constructed. Under the terms of the act of 1938 the local interests provide rights-of-way for levees and river walls, but the Federal Government pays the entire costs of reservoirs for flood control. Only the reservoirs, in the order of their priority, approved by the Chief of Engineers, will be constructed.

TITLE OF RESERVOIRS

There has been criticism of the provision in the act of 1938 for the costs of reservoirs at national expense and for the title to reservoirs in the Federal Government. It has been stated that the United States proposes to invade the States in order to provide for flood-control works. It has been urged that the power of condemnation conferred upon the Federal Government with respect to reservoirs be repealed.

A moment's reflection will show that the contention is unsound and without merit. Under the guise of so-called States' rights, the flood-control program in New England is being delayed.

There is nothing new or novel about the power of eminent domain in the Federal Government. Eminent domain and consent are incompatible. The power to exercise eminent domain conditioned upon consent of the local interests would be without effect. Condemnation implies that consent is unnecessary. All governments, as a part of their inherent sovereignty, exercise the right of eminent domain. The United States, the States, the counties, the municipalities, and other legal subdivisions have the power of eminent domain.

Under the Federal Constitution and under Federal statutes, lands and properties in the several States may be acquired by the Federal Government with the consent of the States. There is thus provision for purchase and for the exercise of jurisdiction by the Federal Government over the property purchased, but for more than 60 years there have been statutes that have authorized condemnation of property for public purposes without the consent of the States. The policy of the Federal Government is to cooperate with the States to obtain title by negotiation and by purchase, but the inherent power of condemnation is in the Government; it is necessary; there may be interests that are selfish—that demand more than just compensation for property required for public purposes. The United States has had the power to condemn for river and harbor improvements for 60 years; it has had the power to condemn for flood-control improvements since 1917. The consent of the States or local interests is not necessary.

Generally, Federal agencies for Federal purposes have been given the power of eminent domain without the consent of the States. Some 35 reservoirs are being constructed, and about 80 have already been constructed, for reclamation in the West under the power of eminent domain conferred upon the Federal Government in the Reclamation Act. The dams and reservoirs in the Tennessee Valley, the Boulder Dam, the Parker Dam, the Bonneville Dam, the Grand Coulee Dam, the Fort Peck Dam, and the navigation dams along the Ohio have all been constructed under the power of condemnation without the consent of the States in which the properties are located. The power has been conferred; the policy has been to negotiate. It is not the policy now of the Corps of Engineers to go into any State and build reservoirs unless the States desire the improvements for reservoirs; however, the power is imperative if the reservoir policy is to obtain in the United States. Human nature is very much the same. States will not willingly consent to the construction of reservoirs for the benefits of States farther down the river; neither will counties agree to the building of reservoirs if they are for the benefit of counties below. Protective works in one State for the benefit of other States would be hampered, if not destroyed, if there were no power of eminent domain in the Federal Government. The power of condemnation is essential to the national policy of flood control.

ERRORS

It is often loosely asserted that billions of dollars have been expended by the Federal Government in the construction of levees along the Mississippi River, and heretofore it has been proclaimed from the housetops that the levees have failed. The fact is that in all of the 150 years of its history the Federal Government has expended for flood-control works along the lower Mississippi River, including the expenditures under the act of 1928, approximately

$300,000,000. In addition it has expended substantially $100,000,000 to improve navigation.

During the same period the Federal Government has expended for navigation along the Ohio, the Allegheny, and the Monongahela Rivers substantially $240,000,000, while expenditures for navigation along the Cumberland, the Tennessee, the Muskingum, the Kentucky, and other tributaries of the Ohio River approximate $80,000,000. Along the Illinois, the upper Mississippi, and the Missouri Rivers the Federal Government has expended, including obligations incurred, approximately $200,000,000 to promote navigation. Personally, I favored all of these great internal improvements. The policy of our Government should be to give consideration to all sections of our country. Rivers and harbors along the Lakes, the Gulf, and the oceans have been wisely improved. Federal expenditures should be generally distributed.

The Ohio and Mississippi Rivers have been improved for navigation since 1824, but prior to 1917 flood control along the lower Mississippi River was incidental to navigation, and prior to 1937 the Federal Government had constructed substantially no flood-control works along the Ohio River.

NATIONAL PROBLEM

In 1917 and again in 1923 Congress authorized appropriations for flood control as well as navigation along the lower Mississippi River, but the flood of 1927, the greatest in modern times until then, resulted in the passage of the Flood Control Act of 1928, which declared that flood control along the lower Mississippi River was a national problem.

The 1935 floods in New England, New York, and Pennsylvania; the 1936 floods in the upper Ohio Valley and the 1937 floods in the lower Ohio Valley, the highest in the history of the valley; the 1937 flood in the lower Mississippi River from Cairo to the mouth of the Arkansas, the highest of record, and the Los Angeles floods of 1938 focused public attention upon flood control along the major rivers of the United States as a national problem.

DIFFICULTY

The act of 1938 was not passed without difficulty; in fact, it was passed over almost insurmountable obstacles. Powerful and influential statesmen with their widespread organizations opposed the act but the friends of flood control insisted that a sound policy be adopted and they demanded that all investigations, planning, and works be constructed by the Corps of Engineers of the United States Army; they maintained that there had been enough planning; they asserted that there had been enough study, that the time for action had arrived.

The bill finally passed the House with but four votes against it. It was the day that many of us had long sought and mourned because we had found it not. It represented the realization of the dreams and plans of years. The bill was originally and almost unanimously passed by the House substantially as it was drafted and reported by the chairman of the Committee on Flood Control. More universal support was accorded to the bill than ever accorded any previous flood-control bill.

The opposition in the Senate was determined; a filibuster was threatened. The friends of flood control rallied to the support of the bill, and the bill as finally passed in the Senate contained substantially the same authorizations as were in the bill when it passed the House.

The first section of the act of 1938 reaffirms the sound policy first proclaimed in the act of 1936, and emphasized in the emergency act of 1937. The plans will be made and the work will be done by the most capable flood-control engineers in the world—the Corps of Engineers of the United States Army

COOPERATION

The act of 1938, as well as the acts of 1936 and 1937, are the result of the cooperation of the friends of flood control in the principal drainage basins of the United States. As is the case with practically all legislation, compromises were made, but they were no compromises of principle. Those who demanded protection in their areas accorded comparable protection to those in other areas. We recognized that flood control hereafter must be national. All main drainage basins are entitled to protection. Without cooperation of the advocates of flood control in the Ohio Valley, as well as in the other principal valleys of the United States, the act of 1938 would have been impossible.

FLOODS

Floods are not new. They are the oldest and most powerful of natural forces. There is just as much rain, there is just as much stream flow, and there are just as many floods today as there were thousands of years ago.

Man has been harassed by floods in all ages. The story of the flood that overwhelmed the entire world is one of the oldest stories in the records of man. The most widely known story of hungry waters in all literature is Noah's flood. The flood legend goes back into the Indian lore of this country. Perhaps the earliest story of floods, according to the historian Bancroft, is told by the Papago Indians of Arizona. Montezuma was the hero of the legend. Many of the Indian legends parallel the story of Noah's ark.

There are records of historic floods in Europe and Asia in modern times. Holland in Europe and China in Asia have suffered devastating floods.

There were floods along the Ohio River when Columbus discovered America, when Yorktown fell, and there were great floods in 1936 and 1937.

There were great floods along the Mississippi River when De Soto was buried in its bosom in 1543. There have been great floods along all principal rivers of the country.

The first civilized man to observe the Mississippi River saw it at its worst. There was no civilization then; there were no farms to be devastated or cities to be destroyed. Hernando De Soto was thrilled at the beauty of the Father of Waters, but he was unafraid.

Floods are not new, but the losses multiply with succeeding years. The public now knows the loss of life and the staggering havoc wrought by recent floods. The story of death and destruction has appealed to Congress as it has appealed to the country.

DUST STORMS

Dust storms are not of recent origin. Geologists tell us that the soil of the Eastern Central States from a few inches to several feet in depth is simply the accumulation of the dust storms of the past.

But civilizations have perished because lands were abused. It is said that the Sahara Desert in the long ago was inhabited and cultivated, but the misuse and abuse of its lands converted that broad expanse into a desert of sand.

SOIL EROSION

Soil erosion has been going on for ages. The lower Mississippi Valley was formed by the erosion of the soil. The Gulf of Mexico in prehistoric times extended to the city of Cairo, Ill., at the mouth of the Ohio River. As the result of erosions, the lower Mississippi Valley was formed, and the mouths of the Mississippi River are still being extended out into the Gulf of Mexico at the rate of a mile in every 21 years.

However, our lands are being needlessly eroded, and our forests are being ruthlessly destroyed. The clearing of forests, digging of ditches, as well as the plowing of grasses and the cutting of trees, have contributed to increased flood heights. In the early days damages from floods were not so large as they are now. The ravages have increased because of the development along the rivers. The damages during the past 100 years will fade into insignificance when compared with the damages that will occur in the next 100 years in our valleys, with their increased population and industrial development, unless they are protected.

The Ohio Basin, from the earliest days of the Republic, was regarded as a great empire; its forests, its fertile fields, and its unlimited mineral resources afford opportunities for great development. The industries along the Ohio River and its tributaries surpass those of any other section in this or any other country. This development must not be retarded. Protection should and must be given to the valley.

The money spent for protection against the ravages of floods is relatively small. Larger funds have been spent for highways and railways. None of these improvements has resulted in as large revenue to the people of the United States and to the Federal Government as has accrued by reason of flood-control works.

NO SINGLE ANSWER

There is no single answer to the problem of flood control. Soil erosion should be prevented; soil conservation should be practiced; waters should be stored; forests should be preserved; grasses should be grown; cities should be planned, and electric power should be generated. All possible solutions must be explored and utilized. Levees and flood walls are essential; reservoirs are imperative; projects involve levees, channel improvements, and reservoirs. Such a project obtains in the Miami conservancy district in Ohio.

VISIONARY SCHEMES

Many visionary schemes for flood control have been proposed. They all have one thing in common—they show that the authors utterly fail to comprehend the real problem of flood control. They have, for instance, no conception of the problem along the Ohio and Mississippi Rivers. In 1937 at the crest of the great flood at Cairo, 1,900,000 cubic feet per second went by along the Ohio. During the 50 days the river was above flood stage there were 80,000,000 acre-feet of water in excess of the below flow flood of the river. This amount staggers the imagination. If poured into an inland depression with an average depth of 20 feet, it would make a pool two-thirds the area of Lake Erie. Boulder Dam would have been filled three times over, and there would have been an excess that would have covered the District of Columbia, with an area of 70 square miles, 156 feet deep.

FLOOD-CONTROL IMPROVEMENTS MOST SATISFACTORY PUBLIC WORKS

The leeves in the lower Mississippi Valley contain more than 600,000,000 cubic yards of earth; they are the greatest marks ever made on the face of the earth by man; they are longer and higher than the Great Wall of China; they contain twice the yardage of the Panama Canal.

I am an advocate of public improvements. I favor public works that are beneficial. We are still battling with the problem of unemployment. I believe that one of the best ways to solve the problem is to provide for sound and permanent public works. I know of no more satisfactory works than flood-control improvements. The public knows the enormous loss of life and property wrought by recent floods, and the country is sold on flood protection.

FLOOD-CONTROL ACTS PASSED UNDER THE ADMINISTRATION OF FRANKLIN D. ROOSEVELT

The first national flood-control act was passed under the administration of President Franklin D. Roosevelt. No President has been more sympathetic with better land uses and with improved land management. It would be most unfortunate if the gains of flood control during the present administration were sacrificed by any program that would hinder and delay, if not prevent, flood-control works.

THE CORPS OF ENGINEERS

The Corps of Engineers have been utilized by the President in relief and emergency projects. Their reports and their recommendations have been followed by the Mississippi Valley Committee and by the National Resources Committee in reports submitted by them. The difficulty with too much planning is that much of it is theory. The Corps of Engineers, however, are practical; they have had experience. I believe that flood-control work—river and harbor work—should remain under the supervision of the Corps of Engineers, and that the Corps of Engineers should remain under the direction of the War Department and the War Department alone, subject to the approval of the President of the United States.

I believe this statement to be self-evident. The people have thought the matter through. They have reached a conclusion. That conclusion has been embodied in the Flood Control Act of 1938, which provides that the costs of reservoirs for flood control shall be borne by the Federal Government and that the Army engineers shall do the work.

A POLICY AND A PROGRAM

The problem has been attacked on all fronts. Flood walls and river walls are authorized for priority works. Reservoirs on the headwaters are authorized to detain the waters at their source. Where power can be developed, provision is made for such power. The act of 1938 provides for a policy and a program.

THE IMMEDIATE TASK

But authorizations are not enough; they must be followed by appropriations. Formulation of plans must be followed by the execution of projects. It is more important than ever for the spokesmen for flood control in all parts of the country to be on guard. The work along rivers and harbors is never completed. Floods will continue to come and bars will continue to form. The interests of the principal drainage basins of the Nation must be kept constantly before Congress and the country. Flood-control authorizations are not self-executing. Money must be appropriated. The Chief of Engineers and the Corps of Engineers are entitled to the support and cooperation of the beneficiaries of the projects. There remains much work for organizations promoting flood control to do.

The projects have been adopted; they have been authorized. There must be no turning back. We have assembled here to discuss our problems in a spirit of helpfulness and cooperation. It is time for united effort. Appropriations for flood control on the Ohio and the other principal rivers of the United States are more imperative than ever before. Every effort should be exerted to secure the largest possible appropriations under the authorizations contained in the acts of 1936 and 1938. These acts contemplated 5- and 6-year programs. A minimum of $125,000,000 for flood control under the two acts of 1936 and the act of 1938 is necessary.

The policy of national flood control, as well as the policies of national forestry and conservation, have just been begun; they cannot be maintained, nor can they be advanced without successful leadership. The advocates of flood control will make a monumental mistake if they do not capitalize existing public sentiment in demanding adequate appropriations for the construction of authorized projects.

United effort is essential; cooperative organizations are helpful; but, after all, adequate appropriations are the responsibility of the Senators and Representatives from the States that are protected by flood-control works.

The immediate task ahead for the next fiscal year and for the years that immediately follow is the maximum authorized appropriation. The hour has struck for the building of flood-control works in all of the principal basins of our common country.

The Nation-Wide Forest Survey

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. RANDOLPH. Mr. Speaker, I have introduced today an amendment to section 9 of the act of May 22, 1928. This act authorizes a Nation-wide forest survey. Unlike the other sections of the act, section 9 continues after 1938 a restrictive financial limitation. The purpose of this amendment is to remove this restriction, place this section on the same basis as the other sections, and thereby make possible the efficient and expeditious completion of the forest survey.

Although this act was passed 10 years ago and work started soon thereafter, our total forest land is by no means covered by this inventory of timber resources. It is an enormous undertaking, because forests cover one-third of the continental United States. This forest survey, which studies all forest land, both public and private, is progressing too slowly because it is inadequately financed. The need for the information is urgent because it is basic to forest policies and programs—regionally and nationally.

TOO MUCH GUESSWORK

After more than 300 years of settlement this country is still forced to rely on estimates or guesses about a national resource which keeps numerous industries going and paying wages which support five to six million people. In addition, woodlands help support two and one-half million farm families.

Forest lands supply game with food and shelter and millions of people with opportunity for recreation. Forests conserve water and help prevent floods and erosion.

Forests are one of our most important renewable natural resources. They must be managed, not mined. This resource must be perpetuated and made secure for the people.

To set up policies and programs to do this requires authentic information, such as the Forest Survey is obtaining on the extent, location, and condition of forest land and the timber on it; the present and potential growth; the rate of depletion; the present and prospective requirements of the country for forest products.

I am told by the Forest Service that when the survey was begun it was estimated as a 12- to 15-year job, at a cost of 0.6 cent per acre. It is taking longer and costing a fraction more than 1 cent per acre largely because of meeting the heavy demand for its findings and the necessity of broadening the scope of the work to keep pace with national planning.

Only one-half the total forest area, mainly in the Northwest, Lake States, and South, has been covered by field work. The equally time-consuming and more difficult office analysis for this area is about one-half completed.

EMERGENCY FUNDS USED

Much of this progress was accomplished with emergency funds, no longer available and not again in prospect. The maximum annual appropriation of $250,000 per annum under the present act is only enough to analyze the information for the 280,000,000 acres studied, keep up with requests for information, and inventory five to ten million acres per year. The survey is just about stagnated in the middle of the job. Meantime, requests pour in from a host of Federal, State, and private agencies for results of the survey, even though incomplete and, of course, utterly lacking for one-half the forest area nationally, including West Virginia, the Northeast, central Rocky Mountain, and California regions. Moreover, the completion of the survey is essential to the execution of whatever program of forest conservation the Congress may formulate as a result of its own studies.

I want the forest survey to reach my State, West Virginia, this year or next and to sweep on and cover the rest of the Nation quickly. Under the limitations of the present act, this is impracticable; instead many years will elapse. But if this amendment is enacted, adequate appropriations would be possible so that the survey could be completed nationally in the next few years.

Relief

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

RADIO ADDRESS BY HON. JERRY VOORHIS, OF CALIFORNIA, JANUARY 26, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I wish to insert an address given by

Hon. JERRY VOORHIS, of California, over the Columbia Broadcasting System Thursday, January 26, 1939, at 5 p. m. Representative VOORHIS' topic was Relief.

Through the ages men have sought three things—peace, bread, and freedom of the spirit. Only democracy has ever or will ever be able to give them all three, which is the main reason democracy is worth preserving and making sacrifices for.

America's destiny in this hour of the world's history is to give a demonstration to the world of the fact that a great people can in time of difficulty be greater still and can make their democracy work even when the odds are against them.

Now, if tomorrow we were to start using our vision, understanding, and courage, and if, as is certainly possible, we thus brought about once again a full employment for our people, full consuming power and full use of our capacity to produce, no one would worry any longer about whether or not we were going to make a go of our democracy.

The greatest enemies of democracy in America today are unemployment and unnecessary poverty in a Nation where there might be enough for all. Remove these enemies, change these conditions, and those who advocate an un-American dictatorship instead of our constitutional democracy would have to hold their meetings in a telephone booth. Let unemployment go unheeded, let defenseless poverty continue, and you get, inevitably, a degree of growth of un-American movements at both extremes, and you are likely to get, instead of necessary careful, judicious, and effective investigation of such movements and their causes, the sort of irresponsible, politically motivated displays which the Dies committee has given us, and which I am afraid do more to stir up trouble than to allay it, for the reason that they are altogether likely to destroy the faith and confidence in one another, without which democracy is indeed in danger.

Our main job, then, must be to protect to the very limit of our ability the livelihood and opportunity to work of the poor people of this Nation.

I am perfectly frank to say that I think there are other and maybe better ways of doing this than by W. P. A. If I had my way, the first thing I would do would be to pass a bill setting up a monetary authority as an agent of Congress, to keep the volume of actively circulating money and demand bank deposits in line with our power to produce wealth. I would cease selling bonds for credit on bankers books and I would use directly the credit of this great Nation to furnish low-interest loans to farmers, small-business men, and those who would build homes. I would recognize the folly of our present method of letting private financial corporations create the money of America in the form of bank credit, and I would pay out in pensions to our older citizens, year by year, sufficient of our Nation's credit to maintain a stable buying power for our dollar, and to allow an expanding consuming power to support a continuously expanding production. These and other measures I would take if I could make up the mind of Congress.

But until these other measures are actually taken we must use the direct, immediate method of simply putting to work on useful public projects those whom industry at any time will not or cannot employ.

These are the reasons why I believe so strongly that attacks upon the providing of work for the unemployed and attempts to economize at the expense of their opportunity to work are in reality attacks upon the first line of defense of our democratic American life itself. These are the reasons why I believe those who vote to cut the current W. P. A. appropriation, and thus throw hundreds of thousands of people onto local relief rolls in the pious hope that business will put them back to work, have not only got the cart before the horse, are not only tragically penny-wise and pound-foolish, but are striking at the weakest point in the armor of America's democracy—namely at the poverty and helplessness of about a fifth of our Nation's people.

The difference between $875,000,000 for W. P. A. which the President suggested and $725,000,000 which the House finally passed may well be the difference between a continuance of our business recovery on the one hand and another recession such as we suffered in 1937 just after Congress got through economizing at the expense of the unemployed on the other. And I would point out that if we, by resolutely maintaining the buying power of the people, can achieve anything like a revival of full production in this country, it would take us just about 2 hours to produce goods and services valued at $150,000,000. I believe every policy we pursue should be one calculated to bring about full production and full consumption by the people of this country. Everything else is really secondary to that aim.

I am frank to say I do not believe a Government works program can bring about that result all by itself. But certainly recovery and full production cannot possibly be advanced by cutting off the buying power of a million families in a few short months, nor will such shortcomings as W. P. A. may have to be corrected in this manner.

In simple human terms let's see what these two proposals mean—the $875,000,000 suggested by the President and the $725,000,000 passed by the House.

The President's proposal itself is based on a reduction between now and July 1 in W. P. A. employment of 300,000, in addition to the reduction of 100,000 since December. Furthermore, even in December when W. P. A. was employing 3,100,000, it was only giving work to about one out of four of the unemployed.

Colonel Harrington, W. P. A. Administrator, told the Senate Appropriations Committee, and I quote him.

"I want to make it perfectly clear that this estimated increase of 1,500,000 workers in private industry will be drawn from the entire group of the 11,500,000 unemployed and that at best W. P. A. workers cannot expect to get more than their proportionate share of these jobs. In December the 3,100,000 persons working on W. P. A. jobs represented 27 percent of an estimated 11,500,000 unemployed at that time. If W. P. A. workers obtain 27 percent of the 1,500,000 jobs, this would mean a reduction of about 400,000 in W. P. A. employment between December 1938 and June 1939."

In other words, the $875,000,000 figure has been carefully arrived at and is itself based on the probably optimistic calculation that 1,500,000 new jobs will open up in private industry between now and July 1, and that W. P. A. workers will get their share of these jobs.

Now, how about $725,000,000? Here's what it means in one sentence. It means that between now and July 1 over 1,000,000 heads of families will have to be laid off from W. P. A. and denied the meager wages they now receive. And if, as has been suggested in the so-called freeze-in amendment, employment is kept at the 3,000,000 mark through the winter months, then in order to make the money last to July 1, no less than 1,625,000 workers must be laid off in the 3 months of April, May, and June. This is unthinkable to anyone with any humanity or compassion in his heart. And I hope sincerely that the United States Senate will at least restore the $875,000,000 and undo the injustice which the House has done so recently.

Not one bit of substantial factual evidence have I been able to discover in support of this proposed cut. Where, then, does the suggestion for it come? I am convinced that it has its roots in a desire on the part of certain forces to gain political advantage over the man who has suggested the $875,000,000. Not all who vote for the cut will have that motive—many will be totally sincere—but political roots of the thing are there just the same.

Strident criticism has been heaped upon the Government works program in recent weeks, some of it justified, most of it, from my observation, not justified. To understand that criticism it is important to remember that if the idea of Federal responsibility for putting the unemployed to work can be discredited, then perhaps the first effective step against the President's grip on American public opinion will have been taken. To further understand that criticism it is important to remember that where there has been politics in W. P. A., 90 percent of it was put there either by local political machines or because some of the very Congressmen and Senators who now so roundly denounce W. P. A. demanded that it be put there in order to help them win elections. Congress could and should have removed W. P. A. from political influences long ago.

But it will not be the politicians who will be punished if W. P. A. is cut at this time. It is the man who depends for support of his family on the $55 a month he receives from W. P. A.

Who is this man, this typical W. P. A. worker? I can only describe him as I have known him face to face in my very own district in California. He has come to my office over and over, not to ask direct relief, not to ask something for nothing, but because he wants more efficient work, because he wants a harder job; yes; because he wants better pay, and I think he should have it. This man has gray about his temples. He is about 48 or 50 years of age, and everyone knows how nearly impossible it is for a man of that age to get a job in private industry today. He simply cannot do it. This typical worker is a man with a family. He has three children, the oldest of whom is just getting through high school. He either has a mortgage on his home or he pays rent and has a hard time to meet his rent payments. He is not a Communist, or a Nazi, or a Fascist. He is just a plain, earnest, desperately hard-pressed American citizen.

There has been plenty of destructive criticism of the Government work program. I am going to offer here some constructive criticism. I think there has been too much of the relief idea and not enough of the work idea in W. P. A. I think the standard of wages and the standard of work required have both been low. And so I have introduced a bill similar to bills I have introduced in both the last two sessions of the Congress, which will not only correct these things but give us what we should have had 2 years ago, a permanent machinery for dealing in an orderly manner with this problem of public-works employment.

This bill will create a new division of public works in the Department of the Interior, which will supplant the W. P. A. and P. W. A. and provide for an impartial board of review on all proposed public-works projects.

The bill is an attempt to embody the proposals and conclusions presented to President Roosevelt by the National Resources Committee in its report on a planned public works program in December 1936.

Now that we have had the experience of the past 6 years it is time that we establish a permanent agency within a regular executive branch of the Government to be responsible for the promotion and development of worth-while and needed public works projects—the development of which will not only conserve our natural resources and improve our country but will also provide needed and useful employment for the qualified and deserving citizens of this Nation who are unable to find work in private industry and whose names are duly registered on the active files of the United States Employment Service.

Under this bill, not a relief agency, but the United States Employment Service will be responsible for the actual placement of qualified people on jobs in the new program and for their prompt transfer to private industry as opportunities arise.

The interests of labor are protected by maximum hour and minimum wage provisions. Annual earnings are protected by a pro-

vision that work shall be arranged so as to give an average employment of at least 36 hours per week on the program.

As I have said I do not believe public works can possibly constitute a full or final answer to America's economic problem, but the course of development of the Nation, the inevitable continuance of a certain amount of unemployment, and the great need for certain types of work that cannot be done by private industry, make such a program necessary.

Let us be fair, just, and honest. Let us realize that the cause of unemployment is not to be found in the personalities of the unemployed themselves, but in our failure thus far to adequately adjust our national economic life to the machine age. It is important as I see it, to improve on W. P. A.; but while we are doing so and until we have another answer to the problem, let us be sure that we do justice to every element of our population—especially those who need it most.

Importation of Farm Products

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1939

Mr. GEARHART. Mr. Speaker, just about a century ago, when the Congress was debating proposals for homestead laws, the fear was expressed that the opening of the Mississippi Valley to free settlement would bring disaster to the farmers of the older settled areas of the East as a consequence of the greatly increased production of competitive agricultural products which, it was believed, was certain to follow the adoption of such a legislative policy.

Fifty years after the passage of the Homestead Act of 1862, President Theodore Roosevelt evaluated the fruits of our national homestead experiment in urging upon the Congress the adoption of a national reclamation policy. He declared:

> The reclamation and settlement of the arid lands (of the West) will enrich every portion of the country just as the settlement of the Mississippi and Ohio Valleys brought prosperity to the Atlantic States.

He stressed his conviction that the products of the irrigated areas would be absorbed largely in the neighborhoods where they were produced, and that the concentration of population and the creation of wealth made possible by reason of the reclaiming of the West would greatly broaden the home markets and business opportunities of those whose enterprises and industrial plants were headquartered in the East.

THIRTY YEARS OF ACCOMPLISHMENT FULFILL PROPHECY

More than 30 years have elapsed since the first land was brought into cultivation under the Reclamation Act of 1902 and any fair appraisal of the results of the operations of the policy will demonstrate that the prophecy of Theodore Roosevelt has been fulfilled.

But a hasty examination of the facts discloses that the products of the reclamation areas have not contributed to the difficulties and vexations of the farmers of other sections of the country by enlarging substantially the quantity of those major corps in respect to which the United States in recent years has developed an increasingly embarrassing exportable surplus. On the other hand, reclamation has been a most important factor in the expansion and stabilization of the market in the West for the industrial and food products of the Midwest, the East, and the South.

THREADBARE ARGUMENTS REPEATED

Yet, at every session of the Congress, and it may be anticipated that the current session of the National Legislature will be no exception, the charge is bandied about that the Federal reclamation program has aggravated the distressing condition in which the American farmer finds himself. Notwithstanding the utter absurdity of these so-often exploded arguments, these decade-old questions are still heard: Why bring in new acres when burdensome surpluses are already vexing our farmers to the point of distraction? Why add to the producing lands of our country when we are already producing more than our people can absorb?

Of course, Mr. Speaker, the inference which these prophets of impending disaster urge upon our credulity is that reclamation has in some way contributed to the overproduction with which we have of late been heavily burdened. In the light of demonstrable facts, nothing could be further from the truth.

IMPORTS DISPLACE AMERICAN FARM PRODUCTS

An analysis of the data compiled by the Raw Materials National Council of Sioux City, Iowa—data which I now, in accordance with the permission of the membership of the House heretofore unanimously given, hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD as a part of my remarks of today—reveals that responsibility for the unfortunate situation in which the American farmer now finds himself rests not on the shoulders of the reclamationists but upon the shoulders of those who are charged with the duty of guarding our tariff walls.

But a hasty glance at the import figures for 1935, 1936, and 1937, as compiled by this most efficient business agency, lays bare these startling facts and irresistible conclusions:

First. In 1935 more than 73,000,000 acres of American farm land were displaced by importations of foreign-produced agricultural products. In 1936 the acreage displaced increased to 75,000,000 and by 1937 to more than 87,000,000 acres.

Second. The smallest acreage displacement in any one of the years which I have just mentioned is more than 20 times the area irrigated within Federal reclamation and Indian irrigated projects plus all of the acres provided with supplemental water by Federal irrigation works.

Third. The American value in United States dollars of the farm crops displaced by imported foreign-grown agricultural commodities ranged from $2,656,000,000 in 1935 to $3,410,000,000 in 1937.

Fourth. The cumulative value of all of the crops produced upon Federal reclamation irrigated lands since the inception of the reclamation program in 1902 is almost a billion dollars less than the American value of the highly competitive, foreign-grown, and imported agricultural commodities for the year of 1937 alone.

COMPARISONS ARE ILLUMINATIVE

For a detailed illustration let us examine the figures in respect to the importation of the particular crops in the production of which surpluses are customarily developed to the reoccurring embarrassment of the American farmer. These crops include corn, wheat, cotton, and tobacco. Since tobacco is not produced on irrigated lands only passing consideration need be given to that commodity as it cannot be said to figure in the old, familiar charges that have been so frequently hurled at reclamation.

COMPARE DISPLACEMENT WITH RECLAMATION PROJECT LAND

In 1935 the American acres which might have been planted to wheat, corn, and cotton but which were displaced by imports of the identical commodities totaled 10,368,280 acres. In 1936 the acre displacement increased to 12,652,600 acres, and in 1937 receded slightly to 11,094,000, still a colossal high.

As a contrast to these stupendous totals, it is interesting to compare the area on Federal reclamation projects which was actually devoted to these same commodities during the same years—379,208 acres in 1935, 408,351 acres in 1936, and 449,989 in 1937.

In the light of these figures it is not surprising that in a recent bulletin of the Agricultural Adjustment Administration of the Department of Agriculture entitled "The Facts on Irrigated Land," the author should feel constrained to point out how utterly "insignificant" from the competitive standpoint are the products of the Federal reclamation areas.

IMPORTS FAR EXCEED PROJECT PRODUCTION

As a further evidence of the competitive insignificance of the products of federally irrigated and reclaimed lands, it is further pointed out in the bulletin to which I have just referred that in 1936—

> The Federal enterprises' wheat crop represented less than seven-tenths of 1 percent; that of cotton 1⅓ percent; and that of corn considerably less than one-tenth of 1 percent of the United States production.

Further examination of the record discloses that the wheat produced on lands the cultivation of which Federal reclamation has made possible totaled 4,374,534 bushels in 1936.

During the same year 64,000,000 bushels of wheat were imported from abroad. For the 1935–37 period the importations of wheat averaged more than 10 times the production of the same commodity on reclamation projects.

In 1936 the importations of corn amounted to 31,471,000 bushels. The corn that was that year grown on federally irrigated reclamation lands totaled 1,730,000 bushels. To further emphasize these contrasting figures, permit me to point out that the corn imported that year was almost 20 times greater than that which was produced upon the reclamation project lands of the United States.

While the equivalent volume of cotton imports is not immediately available, the value in American dollars displaced by cotton importations averaged 27 times that of the staple produced on reclamation projects in the 3 years to which I have referred.

SURPLUS CROP AREA ON PROJECTS DECREASING

Careful study of trends in planting disclose a decided decrease in the average of Federal reclamation project lands planted to corn, wheat, and cotton during the last 10 years. In respect to corn, the records disclose that the average number of acres devoted to this crop during the years 1935–37 was 15 percent less than the average number of acres planted to corn during the comparable period in the previous decade.

Comparisons of the average acreage planted to cotton and wheat during this same period confirm this tendency.

Thus while there has been an increase in the total acreage irrigated under the Federal reclamation program, the area devoted to the major crops of which the United States has an exportable surplus has been decreasing. Farmers on project lands soon find it is too expensive to buy water and to irrigate land for the production of grains in large quantities and, observation reveals, they soon turn their attention to the production of the specialty crops to which their lands will lend themselves.

RECLAMATION PRODUCTS FED TO LIVESTOCK

Approximately 50 percent of the products of reclamation lands are fed to livestock within the project areas and the food crops are principally consumed locally or nearby. The specialty crops find their way eastward to supply the market demands of the eastern trade when the farmers of the nonirrigated areas, because of seasonal considerations, find themselves unable to supply the needs of the great consuming centers of the midwestern and Atlantic seaboard States.

The relatively small quantity of cotton produced in the southern tier of reclamation States is quite inadequate to meet the demands of the region where it is grown. Because of this deficiency, cotton, in manufactured form, must be supplied to the great Southwest from the textile plants of the South and East.

Instead of contributing to a surplus of corn, wheat, or cotton, the development of the West, which reclamation has energized and stabilized, has provided an extensive and ever-expanding market for these commodities as well as for their varied byproducts.

MARKET FOR CORN AND PORK PRODUCTS OF MIDWEST

A survey of the reports of the Department of Commerce and Department of Agriculture makes it clear that the 11 Mountain and Pacific States of the reclamation area do not produce corn, live hogs, and pork products sufficient for the requirements of their own increasing population. From these reports it has been conservatively estimated that the purchases of these commodities by the people of these 11 Western States for the years of 1926–36 annually averaged approximately $120,000,000, nearly all of which found its way into the pockets of the farmers of the Mississippi Valley or into the coffers of midwestern packing concerns and transcontinental transportationists.

The West is likewise an important buyer of hard wheat, flour, and processed cereals, which are produced principally in the Central and Northwestern States.

In the cities and towns and on the irrigated farms of the reclamation regions dwell some 900,000 persons whose purchasing power enlarges the western market for the varied manufactured products of the Midwest, the East, and the South. They broaden the home market for these American-made goods, just as Theodore Roosevelt predicted 38 years ago would be the result of a national reclamation program.

IMPORTS, DISPLACEMENT, FACTS, FIGURES

A careful study of the facts and figures presented in the statistical table of the Raw Materials National Council, to which I have already referred, will yield astonishing information, Mr. Speaker. When the colossal importation figures are considered in the light of displaced American acres, as well as the American value of the highly competitive agricultural commodities thus displaced, we are appalled by that which our lack of vigilance in the preservation of the American market for the American farmer has brought down upon us.

How much longer will we be content to permit the highly competitive, surplus-augmenting, foreign-grown agricultural products which are now being dumped on our American shores, imported from across the seas, to be used as an argument against the widespread American demand for new irrigated lands upon which our homeless American farm families may be settled and become self-sustaining?

A VEXING PROBLEM—DUST BOWL MIGRATION

Under Secretary of Agriculture M. L. Wilson, in a letter which bears the date of March 14, 1938, reported that of the 58,400 farm families which have migrated to the West from the Great Plains area in search of new homes only 3,000 have been able to find lands upon which they could settle. The remainder are still moving around seeking a haphazard day-to-day existence at such employment as chance affords. Many are on relief. All are suffering because of the want of wholesome food, sufficient clothing, adequate medical attention, or decent homes in which to live.

These people are not mendicants, beggars. They are not the authors of the unfortunate situation in which they now find themselves. They are the victims of a cruel prank of nature's god—dust.

Dust has driven them from the homes of their ancestors where pioneering forebears established themselves almost a century ago. Dust has made of them wanderers. But dust has not destroyed them. Cruel as fate has been to them, with a courage and resoluteness that brooks not thought of defeat, they trek westward just as their grandparents did, seeking, seeking, seeking—homes.

No, Mr. Speaker, these people are not beggars. They are not lazy vagabonds but proud Americans of the oldest American stock. They ask not for charity. They abhor the very thought of it. All they ask is opportunity. And that opportunity, Mr. Speaker, is within our giving or withholding.

The answer to this problem is to be found within the four corners of the reclamation law, the law that was written upon the statute books of the United States under the inspiration and leadership of President Theodore Roosevelt 35 years ago.

The reclamation law. Homes. The words are synonymous. Can any country better serve its people than to aid them in the finding and acquiring of homes? That this country can do—and should do—under the terms of the reclamation law. Remember, Mr. Speaker, all that the wandering homeless are asking is an opportunity. Can we afford to withhold it?

THE PROBLEM MUST BE FACED

Fifty-five thousand four hundred families without homes. No, not merely that number of families, Mr. Speaker, but 20,000 additional families, so Secretary Wilson advises us, must soon be leaving their Great Plains farms to wander in the West as have the others, seeking, seeking, ever seeking homes.

And at the present rate that Federal irrigated lands are being made available, only 13,000 families can be settled in the next 5 years. When the present reclamation program is completed only 30,000 additional families can be cared for, leaving 32,400 Great Plains families for whom no new lands can be made available.

Mr. Speaker, the work of reclamation in the arid and semiarid West must go on. Considerations of sound public policy suggest it. The welfare of the people requires it. The amelioration of human misery demands it. The very safety of our country compels it.

Foreign crops displace American farm products

[Cold figures on the effect imports of foreign agricultural and allied products have upon the American agricultural picture. The figures are for 1935, 1936, 1937, from a compilation by the Research Division of the Raw Materials National Council]

Commodity	Unit	1935				1936				1937			
		1935	Foreign values (dollars)	United States displacement (dollars)	United States acres to produce	1936	Foreign values (dollars)	United States displacement (dollars)	United States acres to produce	1937	Foreign values (dollars)	United States displacement (dollars)	United States acres to produce

[1] 1935 used as the average.

[2] Displacement of acreage by crude petroleum imports figured on the basis of power alcohol required to replace such imports.

NOTE.—When processed, transported, and sold in the retail market, the domestic raw materials that would be produced, if it were not for the products imported, would represent still greater value than the figure shown in the fourth columns above. Producing, processing, and transporting such goods made from domestic materials would provide jobs for every available worker in America.

lamation has in some way contributed to the overproduction | tion has made possible totaled 4,374,534 bushels in 1936.

Inaugural Address of Culbert L. Olson, Governor of California

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 20, 1939

ADDRESS DELIVERED BY GOV. CULBERT L. OLSON TO THE CALIFORNIA SENATE AND ASSEMBLY IN JOINT SESSION JANUARY 2, 1939

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I am honored to include the inaugural address of Hon. Culbert L. Olson, newly elected Governor of California.

Governor Olson is the first Democrat to be chosen chief executive of California in 44 years, and his election is the more significant in view of the fact that he campaigned on what was perhaps the most truly progressive platform presented to the people by any gubernatorial candidate in the election of November last. Governor Olson's remarks on his program for dealing with unemployment and for protecting the interest of the people in the natural resources of their State are, I think, particularly timely and challenging.

The address is as follows:

Members of the legislature and my fellow citizens of California, it is an honor to be chosen the people's representative in any position of public service. It is a trust, the violation of which through word or deed, according to my concept, is a form of treason. How deeply I sense the honor of being elected by the people of California as their chief executive can be known only to me. Mere words could not express it. Words would fail me if I tried to utter them on this solemn occasion of taking my oath of office.

I approach my responsibilities with humility. I intend that faithfulness to the trust imposed in me shall ever mark my administration. It is my sincere desire that the record of this administration's accomplishments, with due allowance for honest mistakes, will in time convince the people of the sense of duty that weighs upon my heart and conscience.

I wish to assure every citizen that I enter the high office of Governor of our great State free of all prejudices, even against those who most bitterly, and sometimes unfairly, opposed my election. I respect honest differences of philosophy and viewpoint on public policies. Marked differences in partisan opinion, for the most part, arise out of differences in understanding our common problems and the methods necessary to meet them through government. These are but the natural and healthy attributes of a functioning democracy.

Every person in California, regardless of party, color, creed, or station in life, must know that not only am I without prejudice but I regard it as my sacred duty under the oath I have taken today to protect every person's civil liberties and equality before the law with every power at my command. These are precious rights. The founders of our Republic and the preservers of the Union made supreme sacrifices for these rights. They are the very cornerstone of our democracy.

As we witness destruction of democracy elsewhere in the world, accompanied by denial of civil liberties and inhuman persecutions, under the rule of despots and dictators, so extreme as to shock the moral sense of mankind, it seems appropriate that we Californians, on this occasion, should announce to the world that despotism shall not take root in our State; that the preservation of our American civil liberties and democratic institutions shall be the first duty and firm determination of our Government.

America has built enormously productive facilities for manufacturing. Our scientists, engineers, and technicians have literally recreated the world in which we live. It is now well known that we have both the capacity and the ability to produce abundantly for all. But these advances, wonderful as they are, have brought along their own new and extremely difficult problems. We are a long, long way from the goal of social justice. We have yet failed to solve the question of distribution that attends our newly developed productive skills and capacities. This failure has plunged us into hard times and depression—the longest and most persistent in modern times.

But with all of our seeming failure; with all our difficulties and economic maladjustments; despite the puzzling paradox of unemployment and poverty in the midst of potential plenty, every right-thinking citizen, native or foreign born, regards his American citizenship as his most precious possession. He knows that it is a part of the sovereign power of the people to guide their own destinies.

Confronted by economic and social crisis, are we going to move forward toward the destiny of true democracy, or slide backward toward the abyss of regimented dictatorship?

In the final analysis, this depends upon the intelligence with which the people exercise their franchise, upon the wisdom and integrity of their leadership, and upon the courage with which we face our problems.

Until all the electorate shall have the benefit of a free education to aid them in the expression of their citizenship, it may be expected that in the future, as in the past, a large proportion may be confused and guided away from their purpose to go forward for their collective welfare by deliberately false or selfish propaganda, superficial considerations, or provincial circumstances. Such impediments may delay, but they must not be permitted to defeat the ultimate successful working of American democracy.

The seriousness of today's crisis in our economy brings home to the people in every walk of life the realization of their dependence upon each other and gives impetus to social progress. New social concepts are born through pain and distress brought upon the people by great industrial depressions such as we have been suffering. Every individual is forced to realize that he is a social being, not an independent self-sufficient entity.

This has given us a national administration with a social viewpoint, with a new deal program of government service to the immediate needs of a people left in despair by the total failure of the sterile policies of the old order that are wholly dependent for industrial activity upon the promotions, exploitations, and aggrandizement of large-scale private enterprise.

Independent businessmen who find themselves bankrupt after years of constructive effort begin to wonder whether the profit, or capitalistic system, is doomed to final and complete failure. But they look with distrust and misgiving upon any radical change to a new order in our industrial life. The American people are slow to make drastic changes. They feel their way, and they are feeling their way under President Roosevelt's progressive administration and courageous effort to reform our economic system, by providing measures for the protection of labor, direct aid to the farmer, to industry, to home owners, low-cost housing, social security, work relief, and other social welfare programs. Whether all such progressive activities are wholly or partially successful, either as temporary expedients or as permanent programs, they have saved and are saving the present economy from utter collapse. They point the way forward—toward the achievement of the aspiration of the people for an economy that will afford general employment, abundant production, equitable distribution, social security, and old-age retirement, which our country, with its ample resources, great facilities, and the genius of its people, is capable of providing.

Progress toward that goal is the purpose of all true liberals and of the liberal movement within the party to which I belong.

The results of recent elections in certain of our States are interpreted by a few as indicating a set-back to these liberal and progressive policies. By more impartial observers, they are attributed to local factors unrelated to any issue as between liberalism and reaction.

However those incidents may be interpreted, it is certain that the American people cannot go backward, if our democracy is to endure. They must go forward with further measures calculated to improve their general welfare and eliminate every form of special privilege or class control in our economic system.

The people of California emphatically declared in our recent election that this State shall go forward, not only in support of the New Deal measures of the National Government under President Roosevelt, but also with State measures having the same objectives.

The people approve the sound, sensible, and thoroughly progressive platform of principles and policies upon which my associates and I were elected. They have given a mandate to you and to me to translate those principles into law and sound government procedure as promptly and effectively as it is possible to do.

There should be little room for doubt in our minds as to the kind of government the people of California demand. The issues were clear and the decision rendered at the polls was so conclusive as to leave each of us no false or shadowy concept as to the road we are to follow. There is none among us who can doubt that the people have voted for a government that shall honestly place human values before material values; that they want a government that will do the human thing in a sound and workable way, unswerved by pressure from any self-seeking group or special interest.

With that mandate I approach my duties as chief executive, confidently relying upon your fullest cooperation. The people expect such cooperation from you and I shall rely upon your willingness to cooperate—your willing assistance in performing that mandate. I am certain that you, as well as I, deem it a solemn duty to respond to the will of the people. Good faith, unselfish, nonpartisan cooperation between the legislative and executive branches of our Government is expected of us. We must not fail in our duty.

All of us, of all parties—employers, employees, the professions, the unemployed, the youth, the aged, and the helpless—are primarily concerned in the achievement of a common goal, a higher and more equitable standard of living, a higher and more cultured standard of thinking, the replacement of prejudice with reason, the eradication of the causes for class consciousness and group antagonisms, and a citizenship motivated by a sense of social and civic responsibility.

The people of California want employment, a decent standard of living, education, opportunities for youth, social security, old-age retirement, protection against pauperism and starvation. Activities

in private industry and individual enterprise must be guided by these social objectives if our present economy is to survive.

Owners of capital and means of production and distribution must realize their responsibility to society—not to radically engage in human exploitation, but to conservatively engage in management for human advancement. They must be satisfied with stability and permanency of investments for strictly conservative and safe returns. Our policies in the field of industrial relations will be to aid in establishing this sound basis for industrial activity.

With assurance guaranteed by our constitution that no confiscatory purpose will be found in any of our acts as representatives of the people, who are sworn to uphold their constitution, honest business has nothing to fear from this administration. But any and all efforts, in the name of business, to defeat the general welfare, to obtain special or selfish privileges, will be vigorously opposed. Any effort to extend a corrupting tentacle into any department of our State government will be pilloried and those responsible for it will be found and punished to the full extent of the power given the executive branch.

This administration will function both on behalf of the economically submerged part of our population, whose poverty presents the greatest challenge to the success of democracy and the preservation of the present economy, and on behalf of California's industries, employers and employees, and all citizens dependent for their well-being upon the healthy normal growth of the economic life of California.

Let me assure all businessmen and business organizations that in their transactions with the State they need neither political pull nor political lobbyists in order to obtain a fair hearing and a fair and a square deal under the law. Legitimate business concerned only in honest, intelligent enactment, and honest and efficient administration of law, may only injure its own cause before the people and with this administration by employing professional political lobbyists to represent it in its dealings with the State.

We need—we must have—a larger production and use of consumer goods in California. Increased business and the steady employment of all our employable citizens upon a decent American standard of living is necessary to that accomplishment.

We must reduce the burden of taxes which private industry and those employed in it are now required to bear in order to support in pauperism those for whom employment cannot be found.

That part of the Federal Government's work-relief spending allotted to our State, generous though it is, finds employment for only about one-fifth of the unemployed employable residents of California, and the discontinuance of even this inadequate relief work is threatened.

New avenues of employment must be created by California's industries or by the State, or by both. To this end business, labor, and Government must cooperate with a new sense of their individual and collective responsibilities. We must work hand in hand for the general welfare.

We know, of course, that the problems and responsibilities of California industry in recent years have been multiplied in number and complexity as State and National incomes have decreased and general unemployment has been met only by doles, debt, and increased taxes.

Instead of idly theorizing on causes, we must face conditions and meet them with common sense and practical action. Unemployment and poverty is assuredly a condition which need not prevail in bountiful California.

I am not speaking of the unemployment of that negligible few who are drones in society, unwilling to work. Society owes them no obligation. We are concerned with honest American citizens, looking for a place in our economic structure, willing to work; unwilling to accept or unwillingly accepting charity from government or private sources; all eager for an opportunity to engage in useful service and to live a life which expresses a natural personal pride and a natural aspiration for self-support. If we were facing impossible physical conditions; if we were not blessed with ample natural resources and productive power, our problem would indeed be distressing. Poverty might then be unavoidable, even to the most industrious. But our unbounded natural resources, our great productive power—human and mechanical—challenge our intelligence to find the methods for general employment, for ample production and distribution of the things of life, for the needs and comforts of every deserving person, for educational advancement, and a cultural development to a higher, a more sensible, a more reasonable, a more enlightened and worth-while civilization.

It is of supreme importance that we take action—action on the part of the government in cooperation with private industry—to provide general employment, industrial activity, and increased production and consumption by our own population of the various and sufficient commodities which our rich natural resources, plant facilities, and manpower amply afford.

Your government's part in this action should supplement, stabilize, stimulate, and increase the growth of private industry rather than injure it. Honest cooperation is all that is needed for peaceful progress toward general prosperity.

A detailed study of the requirements of our various State agencies and institutions in preparation of the budget for the next biennium, soon to be presented to the legislature, shows that we have inherited from previous administrations a deficit which will amount to a total of about $45,000,000 by June 30, 1939, the end of the current biennium. California is and has been in the red during the past two administrations. I do not refer to this for the purpose of placing blame on those previous administrations for an unbalanced budget, but to call attention to the serious financial problem we are facing, as will be more fully explained when our essential budget requirements are presented to the legislature.

Our efforts have been and will be to eliminate all unnecessary costs, to abolish overlapping and duplicating agencies of government, and to practice every reasonable and practical economy without crippling or eliminating necessary State services.

With all possible economy a heavy tax burden during the next biennium cannot be avoided.

The distressing problem of mounting taxes is, of course, directly linked with the problem of unemployment and relief.

We face the continued necessity of meeting nearly $100,000,000 per biennium, to pay small cash doles to those now on State relief, without furnishing any relief to some 275,000 eligible applicants who, with their families, cannot now find a place on our relief rolls. Only a definite policy of tax relief through self-help employment can relieve the taxpayers of the State from this staggering and increasing burden.

In order that we may discontinue as soon as possible the maintenance of employable people in idleness, I submit to the intelligence of the legislators, to the intelligence of the taxpayers, to the intelligence of the industrialists and businessmen of the State, to the intelligence of the unemployed themselves, that we should substitute for the present policy of paying niggardly cash doles for unemployment relief, a new policy of placing the unemployed at productive work to support themselves.

In the field of private industry, the right of organized labor to honest collective bargaining must be protected; minimum wages must be established and vigorously enforced to maintain a decent American standard of living; vocational training must be extended, and the doors of employment and of opportunity for advancement, through useful and meritorious service, must be opened to the eager, splendid youth of our State. Youth's social-minded ideals, developed while in training for lifetime service, must not be shattered upon their entrance to adult life by a selfish, cold, unwelcome world.

California's elderly citizens have taken the lead in bringing the general public to the realization of the plight of those who, having served their best years in American industry, must be left to spend their declining days in poverty and misery, unless social-security programs provide for their retirement in health and comfort.

Such programs have been started, with provisions for partial aid to the support of those in need who have reached the age of 65 years. California has more than matched the small amount ($15 per month) provided for such eligibles by the Federal Government to make a total of $35 per month. This amount, however inadequate, is more liberal than that paid by any other State. A total of thirty-two and one-half million dollars per annum is now required of the State and the counties to meet this pension; yet the amount of the pension is too low and the age limit too high. For our State to meet the amount required to provide this inadequate pension for those of its citizens who find themselves in need of pensions at the age of 60 years would require approximately forty-eight and a quarter million dollars per annum.

Old-age pensions must be furnished by those who are producing and by the machinery of production.

Public support of the old or the young can only be furnished by taxation in one form or another.

When other States fail to provide aid for their aged equal to ours, it may naturally be expected that their citizens approaching the eligible age will seek residence here. This places a disproportionate share of the tax for this worthy social purpose upon our State. For the purpose of uniformity, it is necessary that old-age pensions in their entirety be financed by the Federal Government. We shall continue to urge an adequate Federal old-age security program.

Meantime we shall favor State aid for pensions to the aged to the limit that State finances will permit. That limit, however, because of the tax necessary for present unemployment relief, may for a time at least be very nearly reached. But as our tax burden is linked with unemployment, so is it linked with the need for old-age pensions. More liberal old-age pensions may be anticipated when the unemployed are placed at productive work for their own support and the heavy tax burden for unemployment relief is thus reduced.

That great and important part of our State's population—the farmers who are compelled to market their products at a price below the cost of production, have patiently carried on their struggle, but with just discontent over this unnecessary condition. In recent years the California farmer has bravely faced the impact of overwhelming economic forces. He has stood by while his export markets have rapidly dwindled. He has suffered the shock of innumerable technological developments, in both industry and agriculture. He has been affected by the same powerful and unrelenting swings in price and supply which have wrought havoc in the lives of our city people as well.

The courageous endeavors of the farmers of California in meeting their problems shall receive every deserving service within the power of this administration to render. Assistance on the part of the State shall be to develop markets and marketing methods which will bring the products of the soil to the consumer with the least possible toll to intermediary agencies; to protect the farmer's income against demoralizing competitive trade practices; to find an outlet for those surplus products of the farm for which a market has not heretofore been found.

If minimum prices for our farm and dairy products are safeguarded against selfish, unfair trade combines in the retail distributive field, and if the spread of profit between producer and consumer is placed on an equitable basis a greater consumer demand

is certain to result. Low-cost distribution, which means the elimination of excessive and exorbitant profits to the nonproducing element in our economic system, is a matter which demands a new spirit of cooperation and active governmental service. It shall be the business of this State administration to see to it that unjustified distributive profits shall not be exacted at the expense of either the producer or the consumer. In this we shall seek and expect the cooperation of those engaged in legitimate distributive services to insure a fair and reasonable return to all concerned.

We shall work hand in hand with the national administration in aiding our farmers in flood control; in the prevention of waste by erosion; in afforestation and reforestation; in rural resettlement; in providing decent, healthy living conditions for agricultural labor; in obtaining money and credit at minimum interest rates; and in securing water and power through Government owned and operated utilities at the lowest possible cost.

I have long been committed to the proposition that where a service is or becomes necessary to the daily life or existence of all the people and is in effect a monopoly it should be owned and operated by the people through their own government. In this field of public utilities I see no justification for pyramiding private corporations owning or controlling the natural resources of the State and exacting tolls and profit, often exorbitant, out of a business which should be no more than a nonprofit service to the general public for its health, comfort, and welfare. The people can and should use their democracy and their government for their own well-being. In accordance with this principle, this administration will in all possible directions further public ownership and operation of public utilities.

There is a marked analogy in the circumstances of the present change of administration in the government of California and that which occurred over 25 years ago.

In 1910 the entire State government was under the almost complete domination and control of the principal public utility of the State and its affiliated interests. The people then drove this control from power. Since then privately owned public-utility interests and powerful oil and gas producing and distributing interests have again moved in and have been exercising control of legislation and administration to such an extent that the natural resources of water, power, oil, and gas have been exploited primarily for the enrichment of such interests. These resources have not been protected and their exploitation has not been regulated in the interest of the people.

With the aid of a subsidized daily press, and cleverly designed and costly publicity methods, they have from time to time influenced the people to vote against their own interests, through false and misleading propaganda.

As recent as the last November election will be found an illustration of this misguidance of the people by such false propaganda, resulting in their voting against ratification of the Garrison revenue bond bill passed by the legislature in 1937, which would have enabled communities to finance the acquisition or building of their power plants or other public utilities by the issuance and sale of revenue bonds. A thoroughly organized campaign, financed from moneys received from the people for public-utility services, was carried on, which falsely told the voters that under this measure their homes and farms would be subjected to the lien of such revenue bonds. No agency of the common people was organized or had the necessary finances to meet this false propaganda. The past State administration failed to speak out in favor of the people's interests and against the perniciously false propaganda of the private-utility corporations. It remained to some of us in the legislature who supported this measure, and to a few other understanding citizens, to reach as many voters as we could with the truth.

Similar false propaganda defeated Senate bill 579, for the protection of the people's interests in tideland oil and gas deposits at Huntington Beach. With the misleading slogan of "Save the beaches," applied to a segment of the beach already ruined by oil wells, voters were misguided on that issue.

It shall be the policy of this administration to conserve and protect our great natural resources and control their exploitation in the common interest. The use of these resources and their products is essential to the lives of all of the people of the State, and must be obtained at the lowest possible cost to the people.

The construction of the great Shasta Dam of the Central Valleys project was instituted as a Federal Government project. The Federal Government looks to this State and to its subdivisions to be prepared to receive the benefits of this project, not only in the equitable distribution of its water, but in the utilization of its hydroelectric power, through public agencies. Unless public agencies are prepared with distributive facilities to receive such power upon the completion of this great project, a monopolistic Power Trust would be the only entity ready to contract with the Federal Government for the distribution of this power, with the result that the people of this and future generations would be forced to pay unnecessary and exorbitant tolls.

It shall be the purpose of this administration to promote the means for public ownership and operation of plants and distributive facilities for the distribution of this electric power to the people at cost.

During the next 12 months millions of men, women, and children will come as welcome visitors to our great Golden Gate International Exposition, which opens on Treasure Island in San Francisco Bay next month.

Symbolic as it is of the modern achievements of a progressive people, this Golden Gate International Exposition means for us something greater than a material display of the pride of human accomplishment. It is a fitting monument to the integrity and character of the people of this Commonwealth. And it must signalize for all of us the permanent virtues of a united faith in the future destiny of California.

Fervently do we hope that the spirit of true friendship so magnificently exemplified by this exposition of modern progress will engender in each of us, as public servants, a noble appreciation of the everlasting value of unselfish devotion to the cause of honest, liberal, constructive, humane government.

For the successful accomplishment of the task confronting us we shall call forth the best in each of us in a spirit of genuine devotion and supreme fidelity to the oath of office we take as we enter the service of our State.

Our hopes for progress are high; our desire for unity of action and accomplishment through a conscientious application of our respective talents and energies, is a grave concern of all alike. Surely, in each there is a full measure of loyalty and patriotism which will find expression during the months to come in advancing the welfare of the people of California.

Preelection battles are behind us. Let them remain behind us. Let us now approach our duties and our problems without bias or selfish purpose.

Memorable indeed should be this new year upon which we are embarking with courageous purpose to meet and solve our common problems.

With solemn recognition of my sacred duty to the people of California, I enter upon the Governorship deeply conscious of the great work which lies before us in the interests of social and economic progress through liberal government.

Protection for Domestic Producers of Oil-Bearing Materials

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

Mr. HOBBS. Mr. Speaker, on two previous occasions I have called attention to the heavy losses of farmer producers and of first processors of the vegetable and animal oils and fats in the United States because of the low prices which are caused by competition of cheap imported fats and oils. Facts which have been brought to my attention show that it is not only the imports of oils but the imports of the oil seeds themselves which increase this competition and this loss.

Not only are oil prices ruinously low but the prices of the oil meals, the byproducts of the oils, are so low that the oil producers are forced to reduce what they can pay to the farmers.

The importation of oil seeds in 1937 amounted to figures as astonishingly large as the imports of oils previously referred to. The total seed imports were about 1,135,000 tons, not including 73,000 tons of castor beans, whose product is used only for fertilizer purposes. The imports for all of 1938 are not reported yet, but will no doubt be equally large.

These oil seeds produce on an average at least 1,500 pounds of oil meal per ton of seed. This oil meal is used for feeding and in fertilizer in direct competition with cottonseed meal, soybean meal, linseed meal, tankage, and fish scrap, and meal produced in the United States; also with the high-protein feeds produced directly on American farms. They are literally dumped into this market where, generally speaking, they are not needed, and their quantity, approximately 1,700,000,000 pounds, is so great that they, like the oils in their own field, practically control the prices of the feed and fertilizer proteins in the domestic market.

If our domestic prices are to regain a level at which the producers of oil-bearing materials can make a profit, create employment, and buying power, they must be protected in some way from both foreign oils and foreign oil seeds. If the hundreds of business enterprises which produce these oils in the cotton-oil mills, the soybean-oil mills, the corn-oil mills, and the rendering and tallow plants and fish-oil factories all

over the United States are to remain in business, the prices of these products must be brought back to parity.

It has been brought to my attention that some people believe that should anything be done to limit or tax these imports it would hurt our foreign markets, especially for our cotton and our tobacco.

Everyone understands that people in one country cannot buy goods from another country unless in some way they are able to sell their own goods and secure the necessary money or exchange. This, however, does not need to be direct or bilateral trade. It may be what the experts call "triangular."

However, even as to direct or bilateral trade, very little harm can come to cotton, tobacco, or wheat exporters in the United States by limiting our purchases or by taxing our import trade in oils and oil-bearing materials.

Here is the reason:

These oils and oil materials are produced in areas and countries that already have, without including these products, an overwhelming balance of trade against the United States.

They sell, exclusive of fats, oils, and oil seeds, a far greater volume to the United States than we sell, or have any reasonable expectation of selling, to them.

We buy most largely from the Philippine Islands. The records show that in every year, with perhaps a single exception, since Manila was taken by Admiral Dewey, we have purchased so much more in dollar values from the exporters in the Philippines than we have exported to that country that if all coconut oil and copra is omitted the trade with us would still be a matter of great profit to the Filipinos.

Our next largest supplier is the Dutch East Indies, where we buy most of the palm oil. There the situation is almost the same. They sell very much more to the United States in dollar value than we sell to them. So also is the case with the countries in equatorial Africa, where we buy palm and palm-kernel oils. It is the same with the British colonies in the South Seas, where we secure copra, coconut oil, and various oil seeds.

Experts have made a careful study of this and are convinced that there is no material danger to our export trade in cotton, tobacco, or wheat, our great export crops, in proper and sound steps which this Government might take to limit our imports of fats, oils, and oil-bearing materials.

Over against any possible limitation of exports there is to be weighed the large increase in domestic purchasing ability if $75,000,000 more a year can be paid cotton farmers for cottonseed and a corresponding amount to swine growers and to soybean growers for their product.

The home market is the best market. We must not neglect any reasonable opportunity to bring equity, profits, and prosperity to our own producers. They will take care of the markets if they have the money with which to do it.

The Red River Dam

EXTENSION OF REMARKS
OF
HON. WILBURN CARTWRIGHT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1939

Mr. CARTWRIGHT. Mr. Speaker, there is lots of interest in the fight which the Governors of Vermont and Oklahoma are making against the Federal Government over construction of dams in their respective States. The joke of the year is that Vermont, one of the two States—Maine and Vermont—that went against the present administration in 1936, would make her fight on States' rights. Now comes Oklahoma in the name of States' rights, and so forth, condemning the action of the Federal Government in spending $54,000,000 to construct a dam on Red River between Durant, Okla., and Denison, Tex.

A very clever poem describing the situation in Oklahoma has been written and sent to me by one of my constituents who lives in the vicinity of the Red River Dam. I ask permission to have this poem printed in the RECORD.

As a matter of explanation, this poet refers to Gov. Leon C. (Red) Phillips as "Red" and to Hon. Don Welch, the speaker of the house, as "Don."

DURANT, OKLA., *January 24, 1939.*

Congressman WILBURN CARTWRIGHT,
Washington, D. C.

DEAR MR. CARTWRIGHT: This is the copy of a little poem I submitted to the Durant Daily Democrat as of this date:

ON THE DAMMING OF THE RED

Red and Don have gone stampedin'.
Folks are doin' lots of readin',
And the paper boys are earnin' extra dough.
Red's Phillipics, and Donald's capers,
Fill most all the daily papers;
Even then the things we read we do not know.

Progress has a way of makin'
Lots of first-class bellyachin'—
Folks are fearful of some big catastrophe!
But from what we have been hearin'
Of this dam, the ones now fearin'
Its results are Don and Red and O. G. E.

Red and Don have one big "reason"
(But it seems quite out of season)
Why this Rayburn-Cartwright dam should be no go,
And the "reason" they are urgin'
Is the danger of submergin'
Railroads that have been abandoned long ago.

It seems sort o' queer and funny
To refuse a lot o' money
For southeastern Oklahoma when it's broke.
But one reason Red is givin'
Is he hopes to make a livin'
Of his 20 acres—O Lawd, what a joke!

Uncle Sam, investing billions,
Gives us four and fifty millions
For a flood-control and cheaper-power lake.
But our Governor is refusin',
And the figures he is usin'
Seem to be of some big power company's make.

Build that dam! And let each county
Have its bonus and its bounty
For each parcel of the land the lake will touch.
Otherwise there is no tellin'
When we'll have a chance of sellin'
Any land—to anyone—for half as much.

Sincerely,

C. N. CLICK.

The Curse of Opium

EXTENSION OF REMARKS
OF
HON. WILLIAM I. SIROVICH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1939

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I include the following speech which I delivered in the House of Representatives on March 7, 1930, on the Curse of Opium:

The SPEAKER pro tempore. The gentleman from New York [Mr. SIROVICH], under the order heretofore made, is recognized for 60 minutes.

Mr. SIROVICH. Mr. Speaker, ladies and gentlemen of the House, here is a poppy. It is about the size of an egg. When you shake it you hear a noise due to the seeds contained in it. The poppy contains two kinds of seed, one black and the other white.

The color of the seeds gives the name to the poppy. It is either a black poppy or a white poppy. The white poppy is annual. It rises 2 or 3 feet in height and sometimes even to 5 or 6 feet in favorable situations. In India it blooms in the month of February. In Europe and the United States no earlier than June, July, or August.

When you cut your finger, blood exudes. Within 5 minutes it coagulates. When you cut into the unripe capsule of the poppy, just before it is a year old, it, too, bleeds. But its blood is represented by a white, milky exudation. This milky exudation takes 24 hours to coagulate. After that time this coagulated product is scraped off the capsule of the poppy, and it is called opium, from the Greek word "opion," which means juice. This is known as crude opium.

It is in the capsule that the juice most abounds and the virtues of the plant chiefly reside. The seeds contained within the poppy are destitute of narcotic properties. From ancient down to modern times they have been employed in the preparation of various dainties, such as bread, cakes, and rolls.

The seeds abound with a bland oil commercially called poppyseed oil, which may be extracted by expression. This oil resembles olive oil, for which it has been used as a substitute in every part of the civilized world.

At the present time the poppy is cultivated very extensively in India, China, Persia, Egypt, and in Asiatic Turkey for its opium and in certain portions of Europe chiefly for its seeds.

Here is the cacao leaf. It grows mainly in South America, principally in Peru, and in Java, owned by Holland.

In human society man reproduces himself. His progeny are remembered as his offspring. Some of his descendants become famous while others become infamous. So with opium. This famous drug has 18 descendants. In chemistry we call them derivatives or alkaloids. Who are some of these distinguished children that opium has given to the world? Its oldest son is called morphine. Next come codein, narcein, papaverine, and pantopon, used in childbirth as twilight sleep. The rest have been relegated to the background of obscurity.

In 1817 an eminent German chemist, Saturner, extracted morphine from opium and preached the modern doctrine that the narcotic powers of opium resided in morphine, and so named this drug after the famous god of sleep, Morpheus. The chief descendant of morphine as its derivative is heroin, the grandson of opium. The only son of cocoa is cocaine, medically known as its alkaloid.

From time immemorial, through ancient, medieval, and modern times, opium has been used for five purpcses: First, to relieve every form of pain that human flesh is heir to. Second, to induce sleep for insomnia caused by inconceivable mental, physical, and functional conditions. Third, to check metabolic disturbances caused by inflammation and irritation that can take place in any part of the human body. Fourth, to counteract excessive secretions in the various cells of the body that give rise to serious disturbances, such as diarrhea, pleurisy, and peritonitis. Fifth, for systematic purposes to build up the physical and mental constitution of exhausted and worn-out human bodies.

In all parts of the world opium has been habitually employed by many with a view to its exhilarating and anodyne influence. This is particularly the case among the Mohammedans, who find in this narcotic drug the most pleasant substitute for alcoholic drinks, which are interdicted by their religion. In India, Persia, China, and Turkey it is consumed in immense quantities, and many nations of the east smoke opium as those of the west smoke tobacco.

The use of opium as a medicine can be clearly traced back to Diagos, who was nearly contemporary with Hippocrates, the founder of ancient medicine.

What is the physiological action of opium and its derivatives upon the human body and the human mind? There are four varieties of symptoms: First, subjective; second, objective; third, mental; and fourth, moral.

The subjective symptoms are the symptoms that the patient feels and complains of most. What are they? Generally speaking, opium is a stimulant narcotic. Taken by a healthy person in moderate doses, it increases the force, fullness, and frequency of the pulse, augments the temperature of the skin, invigorates the muscular system, quickens the senses, animates the spirits, and gives new energy to the intellectual faculties.

This operation, while it is extended to all parts of the system, is directed with peculiar force to the brain, the functions of which it excites, and sometimes even goads on to intoxication and delirium.

In a short time this excitation subsides. A bodily calmness and a delightful placidity of mind succeed. The individual, insensible to painful impressions, forgetting all source of care and anxiety, submits himself to a current of undefined and unconnected but pleasing fancies and is conscious of no other feeling than that of a quiet and peculiar enjoyment.

At the end of half an hour or an hour from the administration of the narcotic all consciousness is lost in sleep. The soporific effect, after having continued for 8 or 10 hours, goes off and is often succeeded by more or less nausea, headaches, tremors, and other symptoms of diminished or irregular nervous action, which soon yield to the recuperative energies of the system, and unless the dose is frequently repeated and the powers of nature worn out by overexcitement no injurious consequences will ultimately result.

Such is the obvious operation of opium when moderately taken, as experienced by the patient.

What are the objective symptoms as observed by the outsider looking upon one who uses the drug? His physical condition is below par. His features are expressionless. They indicate a lack of mental activity. They have the hatchet face with sunken cheeks and lusterless eyes. The color of the skin varies from a waxen pallor to a bluish appearance. The fingernails become brittle and chip off. The teeth soften and suffer continuous destruction. The dentine crumbles away. Gradual loss of weight increases monthly. An actual repugnance for meat is ever present while the drug is being used. The addicts become excessive cigarette smokers.

Blood pressure is uniformly high in morphine addiction and is often below normal in heroin cases. Yawning every few seconds. Tremor is very excessive, and the expression haggard. Excessive muscular weakness, and finally utter collapse. The mortality among drug addicts is largely from those cases which often follow too rapid reduction or total deprivation. So much for the objective symptoms.

What are the mental symptoms? Persons who were, prior to the addiction of this habit, honorable and upright lose their fine sense of honor and degenerate into conscienceless prevaricators of the truth. In medicine we term them pathological liars. In the lexicon of the addict there is no such word as truth. He lies and lies in order to get possession of the drug. He will cry, plead, implore, beg, and beseech to obtain the drug.

Deception and distortion of the truth and facts go hand in hand with the drug addict. His daily life is a veritable hell on earth through fear that the source of supply may be cut off. Gradually the mind drags down, and the drug addict becomes a derelict and driftwood upon the ocean of life, deserted by his friends, scorned by his relatives, and outlawed by society. [Applause.]

What are the moral symptoms? He is unable to differentiate between right and wrong, but uniformly does the wrong thing at the right time. He does not sustain his former moral level, but becomes careless in language and behavior, neglectful of family life and of personal appearance, and finally loses all sense of dignity, and becomes a moral as well as a mental and physical degenerate.

Under these conditions, crimes of every conceivable nature are committed to obtain the drug. On this point the addict becomes imbued with the courage of desperation, whereas usually drug addicts are cowards.

Addicts are clannish to a degree. They become reformers, crusaders, and, just like the enthusiasts in religion, in politics, and in prohibition, they fanatically preach the gospel of their drugs, and so each addict surreptitiously carries propaganda to the people he comes in contact with in speaking of the wonders and the glories of what opium and its derivatives will do to the one who takes them.

Days and dates become confused and memory plays some pitiful tricks with these unfortunate men and women. To the female, in order to secure the drug, moral obligations are cast aside. Men and women alike are cowards and have no stamina or fortitude to come back. Such is the terrible tragedy of this drug when used for purposes never intended by nature. [Applause.]

The normal healthy person, having a sound mind in a healthy body, is uninfluenced by these drugs. Transient periods of physical imperfections are relieved and the drug is forgotten.

But what types of people use this drug? Personally I consider them psychopathic constitutional inferior types. Neurotics, dyspeptics, neurasthenics, high morons, low morons, hysterics; men and women who have been deprived by nature of certain inherent qualities that necessarily must go with the sound mind and the healthy body. These people bear the same relationship to normal human beings that the thorns and the thistles and the weeds bear to nature. They cannot stand pain or suffering. They are victims of hereditary, environmental, or acquired disorders that opiates only relieve. That is why they become slaves to these drugs.

These men and women should never be arrested and placed in prison. [Applause.] They are suffering from an infectious, contagious, and communicable disease that can infest all people who come into intimate contact with them. In our own country there are at least a million addicts who are using this drug to bolster their physical and mental shortcomings.

What is the treatment of drug addiction? For the last generation various drugs were used that were supposedly specific for the cure of this unfortunate malady. However, the most eminent authorities today in the Nation and in the world are agreed that there is no alternative treatment that will enable a drug addict to be cured. The most humane form of treatment is that of giving progressively diminishing doses of morphine. Two to three weeks should be allowed for this reduction treatment. The advantages of this method are the absence or great diminution of severe suffering and its safety as regards collapse and danger to life.

In my study of the treatment of drug addiction no substances have so far been found that may be called specific cures for drug addiction. The utilization of depressants on the brain and nervous system are ineffective and not practical as a substitute for opium derivatives and should be disregarded by everyone who treats drug addicts.

The most important consideration following elimination of the use of opium and its derivatives, cocaine and its alkaloids, is the rehabilitation treatment, which consists in putting the drug addict upon the farm close to nature, encouraged by sympathetic attendants, who will help him climb the ladder of life once again and return to society as a useful member; in other words, to end his being a continued expense and even a menace to society, and make him a self-supporting, productive citizen. To secure such a result it must be assured that the addict has learned a trade or line of work through which he may be self-supporting; that a position be found for him when he is prepared; that his progress for a number of years be supervised and checked up through some form of parole; and finally that he be brought to a state of mind whereby he becomes cooperative and honestly desires to be permanently free of his habit.

To help the treatment of drug addiction we must get Government cooperation, and through conventions the civilized nations of the world must get together and find a treatment that will permanently cure and eradicate the drug evil throughout the world. [Applause.]

If there ever was humane legislation that is necessary at the present time it is cooperation from every State of the Union, through its legislatures, that will help to rigidly enforce the evils of drug addiction. We have one enforcement agent for the narcotic law for every 600,000 citizens of the United States. We have 236 men who are asked to enforce the narcotic laws amongst 130,000,000 people in the United States. The total amount of money spent for

enforcement because of drug addiction in this Nation is the sum of $1,267,600.

How much better would it be to appropriate sufficient money for the Narcotic Division under the able and capable Commissioner Anslinger to give him and his experienced staff all the aid that is necessary to wipe out and abolish the professional narcotic racketeer and chronic opium smokers in order to emancipate our psychopathic constitutionally inferior citizens from the slavery of opium and to rigidly enforce and wipe out the morphine evil from our Nation. [Applause.]

Three tons of opium and its derivatives are necessary to look after the medical and the scientific requirements of the whole world. One ton of opium and its derivatives is all that is needed to look after all the people of North America and South America for medicinal and scientific purposes. And still almost 200 tons were smuggled into the United States during the last year, 85 percent of which comes through the harbor of the city of New York.

From that port it is distributed to the large dealers who sell and ship only to trusted dealers in other cities, who in turn distribute to the smaller peddlers.

In the United States there are only 4 factories manufacturing derivative narcotic drugs, while in 5 countries of Europe, such as England, France, Germany, Holland, and Switzerland, there are 50 factories that are turning out opium and its derivative drugs to dope and drug the innocent peoples of the world. An ounce of morphine sells in Europe for 50 cents. By the time it is smuggled into our country it sells for $150 an ounce. What tremendous profit is made by these unscrupulous vendors who live upon the shame, the degradation, and weaknesses of the men and women of our country. [Applause.]

Under the able supervision of former United States District Attorney Charles H. Tuttle and his chief assistants, George Mintzer and Mr. Blake, 98 percent of the cases tried of those who peddled and sold these drugs were convicted and sentenced to prison for long terms. On June 30, 1929, of some 10,000 Federal penitentiary prisoners, the number convicted under the Federal Drug Act was 2,731, the greatest number convicted of felony under one act of Congress.

The consumption per capita of opium and its derivatives is 2 grains in England, 3 in Germany, 8 in France, and 8 in the United States.

Switzerland, with a population of 4,000,000 people, manufactured 23 tons of morphine and heroin last year. It manufactured 2 pounds of heroin for its own people and manufactured 2 tons of heroin to be sent into France every year.

Why do people become drug addicts? To my mind, they become addicted to drugs because they cannot keep battling along in the struggle for existence in this cruel world of reality, so they run away and flee into a new world, called the imaginative world, there to live in peace, in harmony, and tranquillity, and realize every aim and sentiment and ambition that they know in this world.

In running away from the world of reality to the imaginative world they have to cross four bridges, which lead them from the world of struggle into the world of fancy. These four bridges are called the opium bridge, the cocaine bridge, the heroin bridge, and the morphine bridge.

When they have completed their existence in this transient world of fantasy they return unfortunately back across four different bridges: First, the bridge of sighs; second, the bridge of humiliation; third, the bridge of degradation; and fourth, the bridge of sorrow. Back to the world of reality where the struggle for a fresh dosage of opiates begins.

When the Koran forbade its followers all forms of alcoholic beverages and indulgences, the Mohammedans found in opium a welcome substitute. Today the same deadly substitution is taking place, not in Islam, not amongst the Mohammedans, but here in the United States of America, where many chronic inebriates have turned to the use of narcotics.

Of all the substitutes for strong drink, none so quickly and so thoroughly destroy the body, stupefy the mind, and stultify the moral nature as opium and its derivatives, which debauches and undermines the moral fiber and destroys the economic efficiency of its victims, until the addict becomes more a devil than a man.

Various reputable authorities of this subject throughout the country estimate its devotees from 1,000,000 to 2,000,000. The United States is using 35 times as much morphine as is required for the legitimate medical purposes. Most of these drugs come in through smuggling.

Immediately after prohibition went into effect 850,000 pounds of crude opium, enough to produce 35 tons of morphine, were imported into the United States. One ton is enough to supply the medicinal needs of North and South America.

The combined population of Germany, France, and Italy is 160,000,000. The United States has a population of 130,000,000. Yet we imported 10 times more crude opium than these three countries put together.

For over a century China, bound and helpless in the clutches of the opium habit, made spasmodic but futile attempts to break her chains and free her helpless people from an evil which destroyed their physical stamina, weakened their mental fiber, and ruined their economic efficiency. Edicts and severe penalties against the importation, sale, and use of opium seemed to have had little effect. The importation increased from 200 chests of opium in 1729 to 4,000 in 1790 and to 70,000 in 1858.

The opium came from India, and the increase in importation corresponds with the British occupation of India and the monopoly of the East India Co. The Emperor Young Chen, who ruled China between the years 1750 and 1780, placed an embargo upon the importation of the poppy from India because it was destroying the mental and physical fiber of the Chinese people, who were being exploited and commercialized by the British for the benefit of the East India Co. After his death, England compelled China to lift this embargo, so that from the year 1790 the importation of the poppy increased from 4,000 cases to almost 70,000 cases in 1839. As England would listen to no appeals or protests, the Emperor of China finally ordered some 20,000 chests stored on ships near Canton to be destroyed.

This was in 1839 and the cause of the first so-called opium war, which resulted in defeat and loss for China. England took the island of Hong Kong and $21,000,000 indemnity, of which $6,000,000 went to the British merchants as payment for the destroyed opium. In addition, five Chinese ports became treaty ports—open doors for trade in general and opium in particular. Fifteen years later came the second opium war waged by Great Britain, which opened up five more trade ports and exacted a second indemity of $3,000,000 from China.

These wars must be regarded as unjust and immoral because they originated in a desire to force upon a helpless people a traffic lucrative to Great Britain.

Mr. Speaker, ladies and gentlemen, listen to what that distinguished Premier of Great Britain said about the opium wars waged by England against innocent and defenseless China. Regarding this war, Gladstone said:

"A war more unjust in its origin, a war more calculated to cover Great Britain with permanent disgrace, I do not know and have not read of. The British flag is hoisted to protect an infamous traffic; and if it was never hoisted, except as it is now hoisted on the coast of China, we should recoil from its sight with horror."

Such were the sentiments of England's foremost Premier, Gladstone.

Thus, with the opium trade forced upon her, China, about 1860, decided to share in the profits which so evidently made opium a worth-while trade and began to grow the poppy herself. This was a turning point in the national life of China. She gave up the struggle to free her people from a degrading habit and relinquished whole Provinces to the growth of opium instead of wheat and other necessities of life.

In 1906, when 60,000,000 of the Chinese people had become drug addicts, the last great campaign against poppy growing and for the total eradication of the opium habit was begun, the cooperation of Great Britain was sought to restrict importation from India, as lacking this restriction nothing could be accomplished. A 10-year agreement was made in 1907 by which Great Britain promised to restrict the importation of Indian opium into China 10 percent for each year of the 10 years, provided China curtailed the growth of the poppy in the same ratio. The unexpected and almost incredible happened. China conducted the fight with vigor, offenders were very severely punished, and by 1917 China proved to the world that she was practically free from the native-grown drug. [Applause.]

There are few instances in history where such a sweeping reform was carried through so rapidly and so thoroughly. Foreign importation also virtually ceased. China, however, is not free from the opium curse, though the China market is closed to the drug, because China has no control over the territorial holdings of European powers. Opium may be bought freely in all foreign concessions. In Shanghai and Hong Kong, for instance, by crossing an imaginary line from the native to the foreign controlled city, the Chinese may buy as much opium as they wish.

The revenues to the British Government for 1 year were nearly $32,000,000 net from this "monopoly." Turkey and Persia, next to India, are the two greatest opium-producing countries in the world. Since the war both of these countries are to a great extent under British control, which gives England almost absolute control of the world's opium—owners of a true monopoly of opium.

As we study the statistics of these and other countries of the Far East and realize that the use of habit-forming drugs is constantly increasing, in most if not all cases protected and fostered by alien governments for treasury revenue, the menace of this monstrous evil not to the Far East alone but to the entire civilized world becomes a melancholy certainty.

Only two countries of the Far East are free from the government-encouraged traffic. One, Japan, the only oriental nation never dominated by a European power, has no opium shops and protects its people from the dangers of opium by strict laws. The other is our own subject colony of the Philippines, which is protected as carefully as United States law can do it. [Applause.] The fact seems to be that the British Government is responsible for the large quantities of opium flooding the world today. The cultivation of the poppy is fostered by the Government, manufactured into opium in the Government factory and into morphine by British firms in London and Edinburgh, and sent out into the world through trade channels, illegal and otherwise.

Attempts have been made from time to time to curb this growing evil. In 1909 President Roosevelt called an international opium commission, attended by the United States because of our interest in the Philippines, assembled at Shanghai. At that meeting, under the leadership of the delegates from this country, the question was studied for the first time in the history of the world from the viewpoint of every country represented and suggestions offered for its ultimate solution to emancipate the drug slaves of the world. [Applause.]

Following the close of the meeting the United States suggested that a conference be held at The Hague, composed of delegates having full official power to provide a way to end the habit-forming drug traffic. The first Hague conference met on December 1, 1911, called by that genial, lovable, and gracious former President, William Howard Taft. [Applause.]

After 3 months' discussion the conflicting interests of the nations assembled were brought into conformity and a convention was designed to wipe out the evil features of the drug traffic. This International Opium Convention, as it was called, was signed by the representatives of the 12 powers which had formulated it January 23, 1912, but was not to be ratified by the contracting parties until it had received the signatures of the other nations of the world.

In 1913 a second conference was called, at which 34 nations were represented, and all except Great Britain and Germany agreed to sign it at once. In June 1914 a third conference took place at The Hague, where the representatives of all the powers of the world except Turkey and Serbia solemnly agreed to put the International Opium Convention into effect December 31, 1914.

The convention laid down new principles of international commercial law for the stopping of any obnoxious commodity in international commerce. Each government, including our own, has remodeled its legislation somewhat to conform to the convention requirements. Dr. Hamilton Wright, in 1915, said that our Government had made most drastic changes. But still the production, sale, and use of the drugs goes merrily on and the world seems indifferent. We try to protect our own citizens, and yet allow enough morphine and opium to be shipped from Seattle in 5 months to give a dose to each of the 400,000,000 men, women, and children of China.

Japan protects its own people by careful laws, but allows smuggling, which debases and demoralizes millions of Chinese, to go on under governmental protection. Great Britain protects and fosters a traffic which sent in 1916 from English factories 16 tons of morphia to the helpless people of the Far East.

Now the evil is at our very door, nay, more, has entered our door, threatening the welfare of our young men and women by the thousands. The number of drug addicts in New York City alone has been estimated at from 10,000 to 100,000.

The Harrison Narcotic Act, a Federal law enforced by the Internal Revenue Department, has attempted to "regulate" this condition by providing that every pound of opium or its derivatives that comes into this country legitimately must be accounted for, and its distribution, both wholesale and retail, accurately recorded. Drug stores can sell narcotic drugs only on a physician's order or prescription; the prescriptions are kept on file and the amount sold must tally with the amount called for, as well as with the amount obtained from the wholesaler.

Prescriptions are written in triplicate—one for the physician himself, one for the druggist, and one for the health department. If he prescribes for a drug addict, his prescriptions must show a daily diminution of the dosage. These records are to be open for inspection at any time. Violations on the part of the physicians, or druggists, or wholesale houses, may be easily detected. At one time it was thought that physicians were often responsible for the drug habit, but this has not been proved. The total number of doctors, dentists, veterinary surgeons, and pharmacists who are registered to use opium and its derivatives amounted last year to 349,000. Of this number, only 149 were arrested and convicted for violation of the Harrison Narcotic Act, less than one one-hundredth of 1 percent. Today drug addiction is due mainly to two causes: One, overproduction; and the other, due to smuggling of narcotics, mainly manufactured in England, France, and Switzerland, and from there to all nations of the world.

Great Britain has established an opium monopoly, which encourages poppy growing even to the extent of lending money without interest to those who are willing to cultivate the plant, and then once a month sells it to the highest bidders, who find a market how and where they can, so that England today has unofficial agents throughout the world drugging poor and unsuspecting victims.

So I make the unqualified charge upon the floor of this House that England, one of the greatest civilized nations of the world, a nation for whose integrity, scholarship, and humanitarianism I entertain the highest possible esteem and regard, that this wonderful nation today has an almost exclusive monopoly in the growth of the poppy seed, which grows mainly in India, found in Persia, Asiatic Turkey, which England influences, and Egypt, which she controls. The growth and production of the poppy is absolutely in the hands of the British Government. Through these possessions under the direct ownership and supervision of Great Britain, the crude poppy is sent chiefly to pharmaceutical laboratories in England and Scotland, where most of the opium and its derivatives are sent to all parts of the world to drug innocent and unsuspecting citizens throughout the world.

To my mind one of the greatest authorities in the world on the subject of drug addiction and the narcotic evil, was our former distinguished chairman, now deceased, of the Committee on Foreign Affairs, Hon. Stephen G. Porter. [Applause.] A few years ago the American Medical Association, the County Medical Society, the American College of Surgeons, the Academy of Medicine, the Medical Alliance, and the Eastern Medical Society, that number in their membership almost 200,000 doctors of our Nation, were arrayed against the Porter bill. It was my good fortune to go into conference with Mr. Porter in conjunction with the representatives of the American Medical Association and other medical societies. Through his genial and sympathetic cooperation, we managed to iron out the misunderstanding of his bill in relation to the doctors of our country. The bill as amended met with the cordial approval of the leading medical societies of our Nation and was passed unanimously. I want to pay the tribute of my respect by placing the wreath of my affection about his head and the tribute of my love and regard at his feet, and say no finer man ever graced the Halls of Congress than the distinguished gentleman who had the honor to be the chairman of the great Committee on Foreign Affairs of the House of Representatives. [Applause.]

As the chairman of the Foreign Affairs Committee, Mr. Porter served our Nation loyally, faithfully, conscientiously, and intelligently. As the representative of our Government at the Geneva conference he, to my mind, symbolized the ideal representative amongst all the nations of the world when he fought heroically and courageously once and for all to blot out and eradicate the great evil of drug addiction.

First and foremost, Mr. Porter urged the absolute necessity of limiting the production of the poppy in all poppy-growing countries of Asia. Second, he fought a valient battle and courageously represented the best traditions of our country when he contended that next to limitation of the growth of the poppy is to limit the manufacture of opium and its derivatives and the cocoa and its alkaloids, only to meet the medical and scientific demands of the world. [Applause.]

When some of the foreign nations, like England, France, and Switzerland, refused to meet him honorably on the plane of justice, like Pinckney, who said to the Algerian pirates, "Millions for defense, but not one cent for tribute," he carried the banner of the Government and the Congress of the United States high and aloft and retired as representative of our Government from that conference rather than compromise a principle that would emancipate the slaves of drugs and bring peace and contentment to the homes of millions. [Applause.] There again our Nation and history will applaud his conduct. One day a grateful people will erect a monument to commemorate his devoted service to his fellow man in leading the moral forces of the world against the curse of opium.

You cannot compromise a principle. You cannot have one law of opium for the nations of the east and another law of opium for the nations of the west. Drug addiction is universal. It is everywhere. That is why we demand an international convention to be called, preferably by President Roosevelt, in the city of Washington in 1940, and invite all the representatives of the world to be present and under the fearless, able, and courageous leadership of Congress [applause] representing the ideals and traditions of our people, and the honest people of the world who want to be cured of this terrible tragedy.

We can then focus the public opinion and the attention of the world upon England, France, and Switzerland, the nations that are manufacturing and elaborating and developing more morphine than has ever been made in the history of the world, and that is drugging innocent people who are being offered upon the shrine of Mammon and the altar of opium and its derivatives. [Applause.]

Mr. Speaker, ladies and gentlemen of the House, the time for commercializing the lifeblood and flesh of human beings should be relegated to the age of barbarism. [Applause.] In this twentieth century of civilization, when disarmament conferences ought to be held to benefit mankind, the time has come when the United States, as the greatest civilized nation of the world, should call a halt to a monopoly which one nation enjoys in poppy growing while two other nations are drugging the world for monetary gains. [Applause.]

In the name of humanity, in the name of decency and righteousness, let us say to any nations of the world who exploit the weaknesses of human beings through drug addiction that just as we sank battleships to make the world safe from war, so the time has come when we must destroy at least three-fourths of all the pharmaceutical drug houses operated throughout the five nations that manufacture opium and its derivatives and only allow to remain half a dozen of these institutions, owned, operated, and controlled internationally, where every nation is allotted a laboratory, to see that only that amount of opium and its derivatives are manufactured that are necessary to look after the medical and scientific needs of the civilized world. [Applause.]

That is why I am pleading for an international board composed of representatives of all manufacturing nations to rigidly control, under governmental supervision, the production and manufacture of opium and its derivatives. [Applause.] The control should be so careful and exact that every particle of the drug could be traced back by steps to the state-controlled factory. No laboratories should be allowed to any country whose antinarcotic laws do not guarantee the proper use of the drug. The magnificent and fertile lands of India, Persia, Asiatic Turkey, and Egypt should grow and flourish with wheat and other natural productions of nature to feed the emaciated, hungry, starving millions of unfortunate citizens of the poppy-crazed people of the east. [Applause.] As their drugged minds will clear up and the organs of their bodies vibrate with renewed human energy and enthusiasm, their economic development will be enhanced, and, having a healthy mind in a sound body, will bring national prosperity to lands that were formerly filled with penury, hunger, and want. [Applause.]

Let the United States lead in the vanguard of those who are willing to give of their today that others may have their tomorrow. Let our country that has always stood for idealism and for progress continue to battle against the drug capitalists who have made the world unsafe for humanity to live in. Then when we have accomplished our purpose, and have wheatfields growing upon the trail of

the poppy, and have freed the world from pharmaceutical laboratories that would destroy the moral, mental, and physical fabric of unfortunate men and women, the curse of the east will have been removed and the menace of the civilization and progress of the west will no longer exist. Then only will we be enabled to fulfill the great immortal golden sentiment of the Saviour, "Do not do unto others that which you do not want others to do unto you." And the great commandment to "love thy neighbor as thyself" will be a reality instead of a dream and an abstraction. [Applause.]

Mr. Speaker, ladies, and gentlemen, I have brought here before you a collection or an exhibition of opium and its derivatives to show you what is going on in this the twentieth century of so-called civilization.

Here [indicating] is a Holy Bible placed in a hotel by the Gideons. When it was opened it contained in its center morphine and cocaine outfits and the hypodermic needles.

Here [indicating] are more books. This one is called "The Outlook." I hope that after my speech the future outlook will be better than the past has been. Here are morphine, cocaine, opium, and heroin contained in its center, where pages have been removed and cut out.

Here, ladies and gentlemen, is a box of candy containing opium, morphine, cocaine, and heroin and coated with chocolate. Here are caramels containing opium, morphine, cocaine, and heroin, colored with chocolate and other dyes. Here is soap and in the center of it is opium, morphine, cocaine, and heroin. Nobody in the world would suspect it.

Here is a piece of paper that has been "doped" with morphine. It was sent to a prisoner in one of our prisons. It is a piece of paper with a letter written on it and before it was sent to the prisoner it was put into a glass of water that had been saturated with morphine. In medicine when you take morphine and put it in water where it can no longer dissolve we call that a saturated solution. This paper was dipped in this solution for 1 day and then allowed to dry. A message was written on it to the convict. Daily he would dissolve pieces of this paper in water, which would supply him with morphine. In medicine this solution contains the largest percentage of morphine. It is called "Magendies solution."

Here is the case of a woman who is supposed to have sent the picture of her son to her friend in prison. Here is the beautiful picture, but in the back of it, ladies and gentlemen, there is enough morphine and cocaine to keep him going for at least 3 months.

Here are shoes where the heel is filled with opium, morphine, cocaine, and heroin. Look at these magazines and other papers of every conceivable nature filled with opiates. Here are trousers sent to a prison and on the buttons there is opium and morphine which can be taken off and smoked.

Behold these dresses and other wearing apparel that are loaded with opiates and its derivatives that are smuggled into our country. These various things contain thousands of dollars' worth of opium, and when you put this on [indicating] and put your coat over it how can you detect it?

Here is morphine concealed in the panels of a wall and here is a scale hidden in the panels which measures it at the same time. The most difficult thing in the world is to detect smuggled opium and its derivatives.

Yet the per capita utilization of drugs in the United States is no greater than that of Europe. They have as many addicts in England as we have in the United States, but we have the finest laws upon the statute books of our country, better than those of any civilized nation of the world. [Applause.]

Here are so-called cigarettes, but when you open them they are nothing but opium and morphine. Here are the various smoking preparations. This, Mr. Speaker, ladies, and gentlemen, represents the smoking opium. Whenever you smoke the opium the smoke that goes through here [indicating], just like the dirt that may collect inside a chimney, contains from 9 to 11 percent morphine. So this is scraped off and this [indicating] is the product. It is called yen shee, the byproduct of smoking opium, taken from the inside of the smoking opium pipe, containing 10 or 11 percent of morphine.

To show you what you can do with rehabilitation if you are kind and generous to these men we have in the penitentiary, here is a piece of work [indicating] that was done by one of the drug addicts who was put in prison.

It is not right for any nation of the earth to put a drug addict in prison. A man or woman who suffers from drug addiction suffers from a disease. The moment you take this drug addict and put him in a prison you are contaminating him with criminal influence and criminal tendency. The drug addict by nature is a coward and the only thing that stimulates his mentality is heroin or morphine, which encourages him to go out and under its influence to commit any crime in the world.

It is not the underworld alone that utilizes opium and its derivatives. It is found in the upper strata just the same as it is found in the lower strata, and so, when we are legislating and calling an international convention to do justice and righteousness to those who have fallen by the wayside as unfortunate victims of life, we are trying to do something that will better the civilization of our day.

And so, Mr. Speaker, ladies and gentlemen of the House, without any further ado I will be glad to answer any questions any gentleman desires to ask. [Applause.]

Mr. WILLIAMSON. A little while ago the gentleman alluded to these factories that produced these drugs. Is it possible to manufacture opium by an ordinary individual, or does it have to go through a certain process?

Mr. SIROVICH. If the gentleman had been present when I began he would have his answer. I explained everything from the beginning.

Mr. WILLIAMSON. I was not present.

Mr. SIROVICH. For the gentleman's benefit I will say that here is a poppy as it grows. If you break the poppy it has seeds in it, white and black. If it has white seeds it is the white poppy, and if it has black seeds it is the black poppy. They have no narcotic properties whatever. They are only used for cakes, pies, bread, and so forth; but if you cut into the capsule, like when you cut your finger, it exudes a coagulated material, a milk-white substance, which takes 24 hours to coagulate. That is crude opium. The crude opium is sent to the factories, and these factories cost anywhere from $1,000,000 to $10,000,000 to construct, and they turn the crude opium into morphine and its derivatives.

Mr. WILLIAMSON. Then it could not be prepared by any ordinary individual?

Mr. SIROVICH. No; it is not like alcohol that can be manufactured in a cheap still, but it takes a factory costing from one to ten million dollars to manufacture crude opium into morphine or heroin. That is why it would be best to internationalize the drug factories of the world in order to produce what is necessary for scientific and medicinal purposes.

Mr. EDWARDS. Will the gentleman yield?

Mr. SIROVICH. Certainly.

Mr. EDWARDS. We are very much interested in the gentleman's able address and hope it will do much good. What does the gentleman propose to cure or prevent new addicts?

Mr. SIROVICH. I will tell you what to do. If the West wants a good education on the drug traffic, let it go to Japan and see what Japan is doing. Japan owns Korea and Manchuria, and they have a population of 14,000,000. When Japan took possession they found 5,000 drug addicts. What did Japan do? It took over the poppies and its derivatives, and if you were a drug addict you had to register under the Japanese Government. Then they gave you the necessary opium and morphine cheaper than you could get it when it was smuggled in, and so it killed the smugglers. They do not allow any new addicts to be formed, and they reckon that in 10 to 30 years, when the present drug addicts will have died, there will be no more as far as Japan is concerned.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. LAGUARDIA. In reply to the gentleman from Georgia, I want to say that we have authorized the construction of two narcotic farm hospitals, where addicts will be treated as such.

Mr. EDWARDS. They will not go into operation until 1932.

Mr. LAGUARDIA. And in the meantime they are sent to Atlanta.

Mr. SIROVICH. And in that way they are making them worse.

Mr. PORTER rose.

Mr. SIROVICH. If there is any man in the world that I would like to yield to, it is the gentleman from Pennsylvania. We ought to give him a demonstration because the gentleman has done more to exterminate drug addiction for the benefit of humanity and for our citizens than any man in the Nation. [Applause, Members rising.]

Mr. PORTER. Mr. Speaker, I am, indeed, grateful to the gentleman from New York for his heartening words of commendation. I rose to inform the House that 2 years ago we passed the narcotic-farm bill. It authorized the construction and maintenance of narcotic farms, taking the Federal wards from the Federal institutions and placing them in institutions where they could receive scientific treatment. The drug addicts are not as a rule criminals, but usually the victims of misfortune.

My purpose in rising is this: It must be remembered that we are pioneers in this field. There is no institution like it in the world. We have had to move cautiously, but I am happy to state that we are making rapid progress. I am hopeful that one of the institutions will be completed within the next 2 years, and I know that it will be a happy day for this House and a happy day for all of us when we can take the 2,000 unfortunate addicts who are now in our penitentiaries and transfer them to institutions where they will receive proper care. There is no distinction between a drug addict and a lunatic or an idiot or a weak-minded person. They should all be confined for their own protection and also for the protection of society; if it is possible to cure them, so much the better. Whether there is a cure for drug addiction no one knows. The truth of the matter is that we have never really tried to find one; but when these narcotic farms are in operation we can give the matter a very thorough test.

Mr. SCHAFER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. SCHAFER of Wisconsin. Does the gentleman find that the use of drugs has increased in leaps and bounds under prohibition?

Mr. SIROVICH. The gentleman from Wisconsin wants to know if drug addiction has increased since prohibition went into effect. Many of these drug addicts were accustomed to using the stimulation that came from alcohol. Alcohol stimulation would transform these unfortunate people from the world of reality into the world of dreams. Since they have been deprived of alcohol, and being afraid that the industrial alcohol, which contains poisons, is likely to poison them, they have gone away from alcohol and have utilized drugs in many instances to accomplish the same purpose.

Mr. ABERNETHY. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. ABERNETHY. I am very much interested in the statement of the gentleman that the medical profession is coming to an agreement with Mr. PORTER on his bill. There has been some opposition from various sources, I understand.

Mr. SIROVICH. I would like to correct that for the benefit of the House. I received protests from the American College of Surgeons, from the American Medical Association, from the Academy of Medicine, from the County Medical Society, and other medical societies stating their opposition to certain features of Mr. PORTER's bill, but how can anyone oppose the gentleman from Pennsylvania [Mr. PORTER], when he is always willing to sit down as a gentleman should and iron out the wrinkles? We got together yesterday and we stand united for the Porter bill. [Applause.]

Mr. UNDERHILL. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. UNDERHILL. In addition to taking over the various factories in other countries by international agreement, does the gentleman's resolution provide some measure for the prevention of the establishment of new factories?

Mr. SIROVICH. Yes; it provides for that, too; and it further provides that after the international tribunal shall meet and each nation shall put together the amount of money necessary to purchase all of these pharmaceutical factories manufacturing dope, that they shall then determine the medical and scientific needs of the world in respect to these narcotics, and then tear down every pharmaceutical laboratory throughout the world and leave only behind enough to look after the medicinal and scientific needs of the world, providing it leaves one in each country to look after their people in time of peace or in time of war.

Mr. QUIN. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. QUIN. I understand that there is no cure for these drug addicts?

Mr. SIROVICH. I did not say that. I said most of them cannot be cured. They are cured for a period of 3 months or a year or 2 years, but there is always a relapse. There are periods of exacerbation and intermission, and while they make new resolutions and new promises, yet as the years go on and months go by these peculiar psychopathic constitutionally inferior types find themselves under an impelling influence which compels them to go back, just as the alcohol addict goes back to a spree.

Mr. QUIN. But there is a temporary cure?

Mr. SIROVICH. There is.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. PERKINS. Can the gentleman inform the House as to the relationship between the increase of these drug addicts in England, France, and Switzerland, as compared with the United States?

Mr. SIROVICH. As I stated before, I think we have as many addicts in our country as England has. I think France, although it has a smaller population, has more addicts, and Italy, by the way, has more addicts than the United States. However, while many Members of the House talk against the dictatorial powers of Mussolini, the House should be informed that it was Mussolini's representative, I think his name was Cavatzani, who was the one man next to Mr. Porter who had the courage to stand up in that League of Nations' conference and tell England and France and Switzerland that they were drugging the people of the world, and that Italy is ready to support and cooperate with the United States and the other 47 nations of the civilized world to forever abolish the drug slave from the arena of modern society and civilization. [Applause.]

The SPEAKER pro tempore. The time of the gentleman from New York has expired.

Government Spending

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

RADIO ADDRESS BY HON. MARRINER S. ECCLES, CHAIRMAN OF THE BOARD OF GOVERNORS, FEDERAL RESERVE SYSTEM

Mr. MARCANTONIO. Mr. Speaker, under the leave to extend my remarks in the RECORD I include a radio address by Marriner S. Eccles under the auspices of the National Radio Forum conducted by the Washington Evening Star, broadcast over the National Broadcasting Co. network Monday, January 23, 1939, as follows:

A week ago tonight Senator BYRD, of Virginia, spoke over this station on Government spending. I am grateful to the National Radio Forum, conducted under the auspices of the Washington Evening Star, for this opportunity to speak to you on the same general subject.

What I say represents my own viewpoint as it is now and as it has been consistently for more than 8 years. I do not speak for the Board of Governors or for the Federal Reserve System. I speak merely as one who has had more than 20 years of practical experience in banking as well as in various business and agricultural enterprises, and who happens to occupy a public office concerned with banking, fiscal, and monetary problems. These are economic problems, and I have always approached them from an economic rather than from a political standpoint. In fact, I cannot approach these questions from any other standpoint, for I have never taken an active part in politics and I have never sought a public office.

The greatest of all domestic problems before this country today is to find steady jobs in private enterprise for all of our unemployed who are able and willing to work.

The fundamental issue between Senator BYRD and myself is whether the Government can and should contribute to bringing about an increase in private employment by borrowing idle money, and lending and spending it, at a time like the present, when there are millions of people who cannot find jobs in private industry, when there is an abundance of natural resources, unused productive facilities of all kinds, and billions of savings and of bank credit waiting to be used.

In the limited time at my disposal tonight I cannot deal with all of the misconceptions of my position under which Senator BYRD evidently labored in his recent statements on this subject. This I expect to do by letter at an early date. The issue between the Senator and myself is not personal, and I ascribe to him, as he does to me, the fullest degree of sincerity.

At the outset I want to clear away some of the more glaring misconceptions of my views. I do not believe in Government spending at any time for spending's sake. I do believe in Government deficit spending in depression periods as a supplement and stimulant to private spending, using only the manpower, materials, and money that otherwise would be idle, and using them only in a way that avoids competition with private enterprise. I believe that inefficiency and waste should be eliminated. Government should get the maximum of value for the money it spends, recognizing the size and inherent difficulties of the unemployment and relief problem—the objective always being a maximum of private employment. I abhor politics and favoritism in any phase of government expenditures. I am as anxious as anyone to see the Federal Budget balanced. In my judgment, this cannot be accomplished until the national income is higher than it will be this year. I do not believe it can be done at this time, either by reducing Government expenditures or by increasing Federal taxes, particularly those that bear most heavily upon consumption. I believe that the only way the Budget can be brought into balance is through increased Federal revenue from an increased national income.

I am just as much against inflation as I am against deflation. However, we do not want to stay in a perpetual deflation because of fear of inflation. Inflation can and should be prevented, and this can be done by giving adequate powers to the Treasury and the Federal Reserve System. I do not see how it would be possible to have a dangerous general inflation so long as we have a large amount of idle men and unused resources. Long before inflation could develop, we would have a volume of business activity that would increase the national income to a point where the Budget could easily be balanced. I do not believe, and I have never said, that the Federal debt should continue to grow indefinitely and no part of it ever paid. I do believe that it cannot safely be reduced except when national income is high and when private debt is expanding. Reduction of Government debt at such a time would tend to counteract any trend toward inflation that might develop, just as expansion of the Government debt during depression tends to offset deflationary developments.

I realize that Government spending is not a cure-all or a remedy for all of our problems or for special conditions that may be retarding private employment and investment. Everything should be done to bring about a prompt solution of these problems. In the meantime, I can see no practical alternative except to sustain purchasing power through public employment until private employment substantially increases.

The viewpoint which I have outlined relative to the need for Government spending is strongly opposed by Senator BYRD, by most of the press, and by many of the bankers and large business interests of the country today. Most of them still demand, as they did at the bottom of the depression in 1932, that Government expenditures be cut and that the Federal Budget be brought into balance in order to reestablish confidence. Only in this way, they believe, will jobs be provided in private enterprise.

I quite understand why so many of our bankers and businessmen have this viewpoint, for I did also until about 1929. I knew from experience that private investment had led the way out of past depressions without Government spending.

In the face of fundamental changes that have come over our economy—changes that I think many of our businessmen and bankers either have not fully perceived or fully appraised—I can no longer bring myself to believe that the Nation can risk stopping its support to the unemployed in the hope or expectation that upon doing so private enterprise will move forward on any scale sufficient to give them jobs.

To discuss these fundamental changes adequately would take more time than I have on the air. I can only remind you that we are no longer a nation with rapidly expanding markets at home and abroad, as we were through most of our history. We are no longer pushing our frontiers westward and opening up vast new territories to settlement. We no longer have great incoming tides of immigration. The day has passed when millions can follow

Horace Greeley's advice and go West when they fail to find employment or opportunity in the populous eastern centers. The era of railroad expansion has come to an end.

We no longer have expanding foreign markets. We are now a creditor and not a debtor nation, as we were before the war. We are no longer willing to lend billions of dollars abroad, as we did in the twenties, to enable foreigners to absorb American products.

The rapid growth of the automobile and related industries, which were important factors in the expansion of the twenties, has been greatly slowed down. There are not immediately visible vast markets awaiting production by existing industry. Nor does new invention and new industry, which I should especially like to see encouraged and stimulated, hold out prospects for enough investment and employment to absorb great numbers of the unemployed at this time.

If I felt that the Government was risking a dangerous inflation, or that it could not afford the expenditures, because of the size of the national debt, I would not advocate a continuance of the present stimulus—on the basis of a deficit. I do not share these fears. I do not agree with those who believe, as Senator BYRD does, that the Government is like an individual in its fiscal affairs and, therefore, should not spend more than its income, but should always balance its Budget and keep out of debt.

I do not scorn the old precepts of thrift and frugality, as the Senator has said. One of the most familiar of these time-honored sayings is: "Neither a borrower nor a lender be." Admirable as these maxims are for the individual, they cannot be applied realistically to business or to the Nation. If there were no borrowing or lending in the business world, there would be no business except by the primitive methods of barter. Borrowing and lending means creating debt. We have never had a period of prosperity without an expansion of debt. Conversely, we have never had a period of deflation without a contraction of debt.

I would like to see more equities and fewer debt forms in our economy, but it operates now very largely by the process of debts being created and extinguished. To recognize that debt expands with prosperity, which we all favor, does not mean that one is in favor of debt, but only that under our system we cannot have the prosperity which we all want without the debts which we all dislike.

It is beyond dispute, I think, that as debt contracts or expands, business activity rises and falls and that national income increases or decreases in relatively greater volume. Thus, from 1929 to 1933, total debts, both public and private, contracted by 14 percent. Yet at the same time national income fell by more than 50 percent. As a result, the private debt structure, even though contracted, was so large in relation to the diminished national income that debts became insupportable. Hence, our entire financial structure collapsed and general economic paralysis resulted.

Had the Government been like an individual, nothing could have been done to help the situation. We ultimately found that only the Government, under such conditions as existed, was able by its lending and spending to stop the tide of deflation and bring about the upturn that we have since had, though it is still far short of the goal of full recovery. However, acting on the advice of the business and financial leaders of the country, the Government did attempt to act like an individual from 1930 until the end of 1933 on the theory that the Government could not afford to do otherwise, and that in order to maintain confidence and keep money sound, it must balance the Budget. Most of you haven't forgotten the results.

Of course, the Government could not balance its Budget because the incomes and profits of the taxpayers continued to fall or to disappear. Therefore the Government's revenue fell faster than it was possible to reduce expenses. Consequently, it had a total deficit of more than $7,000,000,000 for the calendar years of 1931, 1932, and 1933, while it was pursuing the policy advocated by those who believe as Senator BYRD does. And, mind you, all this happened during the period when everything was being done that business leaders thought would encourage business, even to the extent of setting up the R. F. C. to provide money to support the private financial structure. At the same time, the same business and financial leaders, some of whom were the beneficiaries of Government lending, contended that the Government's credit was such that it could not afford to come to the financial assistance of millions of unemployed through creation of beneficial public work in the absence of private work.

The deficits incurred in 1931, 1932, and 1933 cannot be considered as being of what Senator BYRD chooses to call the "pump priming" variety, because they resulted largely from decreased Federal revenues rather than from increased Government expenditures. During this period we had no increase in the national income. In fact, during this period the sum of the annual losses in the national income, compared with the 1929 level, amounted to $120,000,000,000. This staggering loss, to which Senator BYRD makes no reference, resulted from our failure to utilize our idle human and material resources. This is the kind of waste that the Nation can ill afford. We had no increase in the national income until a comprehensive lending and spending program was launched, beginning in 1934, giving aid to farmers and home owners and creating jobs through relief and public works.

Let us now consider the years 1934 to 1937, inclusive. In this period the Government made cash loans and expenditures, including the soldiers' bonus, of $11,000,000,000 more than it collected, including pay-roll taxes. This largely resulted from a deliberate policy of stimulating recovery in private activity. During this period the national income rose from approximately $40,000,000,000 in 1933 to about $70,000,000,000 in 1937. The combined increases in the national income for these 4 years as compared with 1933 aggregated $70,000,000,000, or more than six times the Government's cash deficit of $11,000,000,000 for the same period.

And then what happened? During the year 1937 the Government contributed about $3,000,000,000 less to the buying power of the public than it did in the year 1936, so that its cash receipts were only about $400,000,000 less than it spent. This too rapid withdrawal of the Government's stimulus was accompanied by other important factors, including sharply increased construction costs, large-scale speculative inventory buying, a too rapid expansion of short-term installment credit, serious conflicts between capital and labor, and a widening spread between agricultural and industrial prices. The result was another period of rapid deflation in the fall of 1937, which continued until the present spending program of the Government was begun last summer. The national income has been rising steadily ever since that time.

In the light of this record of the last 9 years—a record which Senator BYRD denounces as one of "fiscal insanity"—does it seem reasonable to believe that, as the Senator said in his letter to me—and I quote:

"For every dollar the Government borrows and spends in pump priming, private enterprise is deterred from spending two?"

If Senator BYRD really believes this he should be exerting all of his influence in fighting for an immediate, instead of a gradual, balancing of the Budget in order to reduce Government expenditures by at least $3,000,000,000. Such a reduction, according to his unequivocal statement, would bring about an expansion in spending by private enterprise of $6,000,000,000 a year. I am convinced that the exact opposite is true. Accordingly, I believe that the country can well afford to have the Government continue its stimulus to consumption and thus to business at this juncture.

We might have had about the same results with less Government spending had some of it been directed into other channels or had it been better timed, or if private activity had not felt that there were deterrents due to Government policy; but of one thing I am certain—whatever the deterrents have been, Government spending has not been one of them.

As to the burden of the Government debt on our children and our children's children, which also disturbs the Senator, if they reduce the national debt it will probably be because their national income justifies the reduction, and it will be no more of a burden on them than was the reduction of nine billions of the war debt during the 1920's. In fact, we could have paid off much more of the war debt if we had not had three major income-tax reductions, which helped to encourage stock-market speculation and the making of uncollectable foreign loans.

Why not worry also about the burden of all of the private debts on our children and their children, because these debts will also be passed along to future generations who will have to pay the cost of servicing or paying these debts just as in the case of the Government debt. We should know that all debts, both public and private, are passed along from one generation to the next, just as all assets, both public and private, are handed down from one generation to the next. It may be that Senator BYRD would be less worried if there were no debts, but in that case there would be no banks, insurance companies, or other financial institutions.

The Senator has warned you that the total debt of all public bodies in the United States now amounts to $430 for every man, woman, and child; that it is a mortgage on you and your property; and that your children and grandchildren will have to pay off this mortgage. But he failed to tell you who owns the mortgage. You of course know that it is owned by all of the people and amounts to an average of exactly $430 owed to every man, woman, and child. In other words, all of the people are borrowing through their public bodies from all of the people.

The whole problem of internal debt, public and private, must be considered in relationship to the total real wealth of the Nation. Our total debts are great or small, depending upon total national income. The British public debt a century ago was equal to $4,000,000,000. At the present time it is $40,000,000,000, or 10 times greater. Their debt has grown, but the income of the British people has grown much faster than the debt. While doubtless it would be better for them if they had less public debt, it cannot be said that the debt has either bankrupted or impoverished the British nation, because their standard of living has increased during this entire period.

Now, make no mistake, I am not advocating ever-increasing debt, but I am merely pointing out that we should see the problem of debt in its true perspective. I do not think that alarmist talk about it is calculated to help recovery or to induce private capital to go to work.

As to the argument that the British achieved recovery by balancing their budget, it would be well for those who cite this to remember that while our national income was falling 50 percent, their Government never permitted theirs to fall more than 10 percent, and that British rates of taxation, if applied to the United States, would very likely balance our Budget. Their balanced budget is not due to the fact that they spend proportionately less than we do but because their income and inheritance taxes are relatively much higher.

Individuals and corporations may become bankrupt, but no nation, having the human and material resources of the United States, need impoverish itself by borrowing from itself. The only way that we can impoverish ourselves is by failing to utilize our idle man power, resources, productive facilities, and money in the production of real wealth.

I have been talking so far about the economic aspects of the problem of Government fiscal policy. In conclusion, I would like to say a word about the human or fundamental aspect of this problem.

We did not hesitate to have the Government borrow billions of dollars to protect this country against a foreign enemy during the World War. In one year alone we created a deficit of $13,000,000,000, as much as the entire cash deficit of the Government during the past 5 years. We are again proposing to spend billions for preparedness. Yet at the same time, many are quibbling about $150,000,000 necessary to help protect our human resources.

The same Government credit that can be used to protect human lives in time of war against the encroachment of a foreign enemy can also be used in times of peace to protect these human lives against demoralization and despair. There is no more limitation upon a government's ability to fight a depression than there is to fight a war. Both depend upon our human and material resources, brains, and courage—and upon nothing else.

The danger for the future of democracy comes from within as well as from without. The leadership of this country, both in Government and in business, must realize that if the American liberal tradition is to be preserved, then, for the millions of our citizens, the right to work must also be preserved.

The Power Trust Versus the T. V. A.—A New Declaration of Independence

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1939

OPINION OF JUSTICE ROBERTS, OF THE SUPREME COURT OF THE UNITED STATES

Mr. RANKIN. Mr. Speaker, on yesterday the Supreme Court of the United States gave the American people a new Declaration of Independence when it dismissed the suit of the Power Trust against the Tennessee Valley Authority and denied to that gigantic monopoly the right to exercise the functions of a supergovernment.

For years the utilities, through their unholy combinations of wealth and power, have arrogated to themselves the right to levy overcharges without restraint—exacting tribute from everyone who turns an electric switch—in that respect exercising the taxing power that rightfully belongs only to a government or a State, levying taxes in the form of overcharges that invariably amount to more than 100 percent of the value of the electricity consumed.

This great monopoly sprawls like a huge octopus over the United States, reaching its tentacles into every home, every factory, and every business establishment, sucking the economic lifeblood from the consumers of electric lights and power. It has been ruthless, insatiable, and implacable. It has influenced Governors, corrupted legislators, subsidized the press, and intimidated courts. It has overrun and disregarded the rights of the States in its mad scramble for wealth and power, then turned like a whining supplicant and pleaded States' rights as a defense against the righteous attempts of the Federal Government to protect the consumers of electric lights and power from its ruthless depredations.

During the last 5 years millions of dollars have been wasted by this outfit in its attempts to destroy the T. V. A. and to prevent the use of its yardstick for the proper measurement of electric light and power rates. The consumers of electric energy in this country were being held in financial bondage. They were paying an annual overcharge for electric light and power of from $1,000,000,000 to $1,500,000,000 a year.

This gigantic octopus is today sapping from the American people in overcharges for electric energy more than a billion dollars a year. Of course they were willing to spend millions of dollars to prevent the Supreme Court of the United States from driving them from their assumed position of power as a supergovernment that exercises such powers of taxation.

For the last few weeks this outfit has been defying the Government of the United States and trying to make cats'-paws of the Governors of Vermont and Oklahoma, by using them to try to prevent this administration from putting into effect the salutary provisions of the Flood Control Act of 1938, for fear that it would bring a measure of justice to the electric consumers in the various States and free them from the bondage in which they are now held.

This ruthless monopoly is not only exacting this enormous tribute, but it is preventing the use of those electrical appliances that lighten the burdens of farm life, lift from the shoulders of the housewife the load of drudgery under which she has struggled through the centuries, and make farm life, as well as town and city life, more pleasant, and more attractive.

As I said in my statement before the T. V. A. Investigating Committee, which appeared in the CONGRESSIONAL RECORD of January 12, the Tennessee Valley Authority is the most profitable investment the American people have made since the Louisiana Purchase. The very force of its yardstick has compelled a reduction in light and power rates to the ultimate consumers throughout this country that amounts to $556,000,000 a year, and if justice is done to everyone who turns an electric switch, there will be an additional reduction of more than $1,000,000,000 a year.

These reductions alone would pay off the national debt in 20 years, to say nothing of the great blessings that would come to the people of the country in the increased used of electricity and the employment of additional electrical appliances.

So I say, Mr. Speaker, that the decision of the Supreme Court on yesterday, speaking through Justice Roberts, gave to us a new Declaration of Independence. It inspires us with renewed hope that we may now move forward into a new day when every human being in America will enjoy the blessings of cheap electricity, that we may look forward to an electrified America.

Under permission granted me, I here insert the opinion of Justice Roberts in this epoch-making case of the Power Trust against the T. V. A., which is politely referred to as the Tennessee Electric Power Co. et al. against the Tennessee Valley Authority et al.

The matter referred to follows:

Supreme Court of the United States. No. 27. October term, 1938.

The Tennessee Electric Power Co. et al., appellants, *v.* Tennessee Valley Authority et al. On appeal from the United States District Court for the Eastern District of Tennessee

[January 30, 1939]

Mr. Justice Roberts delivered the opinion of the Court.

The Tennessee Valley Authority Act[1] erects a corporation, an instrumentality of the United States, to develop by a series of dams on the Tennessee River and its tributaries a system of navigation and flood control and to sell the power created by the dams. Eighteen corporations which generate and distribute electricity in Tennessee, Kentucky, Mississippi, Alabama, Georgia, West Virginia, Virginia, North Carolina, and South Carolina, and one which transmits electricity in Tennessee and Alabama, filed a bill in equity, in the chancery court of Knox County, Tenn., against the Authority and its three executive officers and directors. The prayers were that the defendants be restrained from generating electricity out of water power created, or to be created, pursuant to the act and the Authority's plan of construction and operation; from transmitting, distributing, supplying, or selling electricity so generated, or to be generated, in competition with any of the complainants; from constructing or financing the construction of steam or hydroelectric generating stations, transmission lines, or means of distribution which will duplicate or compete with any of their services; from regulating their retail rates through any contract, scheme, or device; and from substituting Federal regulation for State regulation of local rates for electric service, more especially by incorporating in contracts for the sale of electricity terms fixing retail rates. The defendants removed the cause to the United States District Court for Eastern Tennessee and there answered the bill. As required by the act of August 24, 1937,[2] a court of three judges was convened which, after a trial, dismissed the bill.[3]

[1] Act of May 18, 1933, 48 Stat. 58, as amended by act of Aug. 31, 1935, 49 Stat. 1075; 16 U. S. C., sec. 831, et seq.

[2] 50 Stat. 751, 752, 28 U. S. C., sec. 380a.

[3] 21 F. Supp. 947.

Fourteen of the complainants are here as appellants.[4] They contend that water power cannot constitutionally be created in conformity to the terms of the Tennessee Valley Authority Act, and the United States will, therefore, acquire no title to it, because it will not be produced as an incident of the exercise of the Federal power to improve navigation and control floods in the navigable waters of the Nation. They affirm that the statutory plan is a plain attempt, in the guise of exerting granted powers, to exercise a power not granted to the United States, namely, the generation and sale of electric energy; that the execution of the plan contravenes the fifth, ninth, and tenth amendments of the Constitution, since the sale of electricity on the scale proposed will deprive the appellants of their property without due process of law, will result in Federal regulation of the internal affairs of the States, and will deprive the people of the States of their guaranteed liberty to earn a livelihood and to acquire and use property subject only to State regulation. The appellees contest these contentions. For reasons about to be stated we do not consider or decide the issues thus mooted.

The Authority's acts, which the appellants claim give rise to a cause of action, comprise (1) the sale of electric energy at wholesale to municipalities empowered by State law to maintain and operate their own distribution systems; (2) the sale of such energy at wholesale to membership corporations organized under State law to purchase and distribute electricity to their members without profit; (3) the sale of firm and secondary power at wholesale to industrial plants.

The appellants are incorporated for the purpose and with the authority to conduct business as public utilities. Several do so only within the States of their incorporation; those chartered elsewhere have qualified as foreign corporations under the laws of the States in which they manufacture, transmit, or distribute electricity. Most of them have local franchises, licenses, or easements granted by municipalities or governmental subdivisions, but it is admitted that none of these franchises confers an exclusive privilege.

While the Authority has not built or authorized any transmission line, has not sold or authorized the sale of electricity, or contracted for, or authorized any contract for, the sale of electricity by others, in territory served by nine of the appellants, it has done some or all of these things in areas served or susceptible of service by five of the companies; and it plans to enter in the same way the territory of other appellants. It is clear, therefore, that its acts have resulted and will result in the establishment of municipal and cooperative distribution systems competing with those of some or all the appellants in territory which they now serve, or reasonably expect to serve by extension of their existing systems, and in direct competition with the appellants' enterprises through the sale of power to industries in areas now served by them or which they can serve by expansion of their facilities. The appellants assert that this competition will inflict substantial damage upon them. The appellees admit that such damage will result, but contend that it is not the basis of a cause of action since it is damnum absque injuria—a damage not consequent upon the violation of any right recognized by law.

The appellants invoke the doctrine that one threatened with direct and special injury by the act of an agent of the Government which, but for statutory authority for its performance, would be a violation of his legal rights, may challenge the validity of the statute in a suit against the agent.[5] The principle is without application unless the right invaded is a legal right, one of property, one arising out of contract, one protected against tortious invasion, or one founded on a statute which confers a privilege.[6]

The appellants urge that the Tennessee Valley Authority, by competing with them in the sale of electric energy, is destroying their property and rights without warrant, since the claimed authorization of its transactions is an unconstitutional statute. The pith of the complaint is the Authority's competition. But the appellants realize that competition between natural persons is lawful. They seek to stigmatize the Authority's present and proposed competition as "illegal" by reliance on their franchises which they say are property protected from injury or destruction by competition. They classify the franchises in question as of two sorts—those involved in the State's grant of incorporation or of domestication and those arising from the grant by the State or its subdivisions of the privilege to use and occupy public property and public places for the service of the public.

The charters of the companies which operate in the States of their incorporation give them legal existence and power to function as public utilities. The like existence and powers of those chartered in other States have been recognized by the laws of the States in which they do business permitting the domestication of foreign corporations. The appellants say that the franchise to be a public utility corporation and to function as such, with incidental powers, is a species of property which is directly taken or injured by the Authority's competition. They further urge that, though nonexclusive, the local franchises or easements, which grant them the privilege to serve within given municipal subdivisions, and to occupy streets and public places, are also property which the Authority is destroying by its competition. Since what is being done is justified by reference to the Tennessee Valley Authority Act, they say they have standing to challenge its constitutionality.

The vice of the position is that neither their charters nor their local franchises involve the grant of a monopoly or render competition illegal. The franchise to exist as a corporation, and to function as a public utility, in the absence of a specific charter contract on the subject, creates no right to be free of competition,[7] and affords the corporation no legal cause of complaint by reason of the State's subsequently authorizing another to enter and operate in the same field.[8] The local franchises, while having elements of property, confer no contractual or property right to be free of competition either from individuals, other public utility corporations, or the State or municipality granting the franchise.[9] The grantor may preclude itself by contract from initiating or permitting such competition,[10] but no such contractual obligation is here asserted.

The appellants further argue that even if invasion of their franchise rights does not give them standing, they may, by suit, challenge the constitutionality of the statutory grant of power the exercise of which results in competition. This is but to say that if the commodity used by a competitor was not lawfully obtained by it the corporation with which it competes may render it liable in damages or enjoin it from further competition because of the illegal derivation of that which it sells. If the thesis were sound, appellants could enjoin a competing corporation or agency on the ground that its injurious competition is ultra vires, that there is a defect in the grant of powers to it, or that the means of competition were acquired by some violation of the Constitution. The contention is foreclosed by prior decisions that the damage consequent on competition, otherwise lawful, is in such circumstances damnum absque injuria, and will not support a cause of action or a right to sue.[11]

Certain provisions of State statutes regulating public utilities are claimed to confer on the appellants the right to be free of competition. Each of the States in which any of them operates, save Mississippi,[12] has established a commission to supervise and regulate public utilities. While the statutes[13] differ in their provisions, all but that of Virginia require a public utility to obtain a certificate of convenience and necessity as a condition of doing business. The appellants commenced business in the various States prior to the adoption of the requirement of such certificates and, so far as appears, they have none covering their entire operations. They have, however, obtained certificates for extensions made since the passage of the statutes; and they claim that, in any event, these laws afford them protection from the Authority's competition since any utility now seeking to serve in their territory must obtain a certificate, and hence they have standing to maintain this suit against the Authority which has none. The position cannot be maintained. Whether competition between utilities shall be prohibited, regulated, or forbidden is a matter of State policy. That policy is subject to alteration at the will of the legislature.[14] The declaration of a specific policy creates no vested right to its maintenance in utilities then engaged in the business or thereafter embarking in it.

Moreover, the States in which the Authority is now functioning have declared their policy in respect of its activities. Alabama has enacted that Federal agencies, instrumentalities, or corporations shall not be under the jurisdiction of its public service commission;[15] that municipalities and improvement authorities may own and operate electric generating and distributing systems and

[15] Alabama Acts, regular session, 1935, No. 1.

may contract with a Federal agency such as the Authority for the purchase of energy, and stipulate as to the use of the energy, including rates of resale; [16] that nonprofit membership corporations may be formed for the distribution among their members of electricity with like power to contract with the Authority for the required energy.[17] Tennessee has amended section 5448 of its code, which defines public utilities, so as to exclude Federal corporations such as the Authority from the jurisdiction of the State utilities commission,[18] has authorized municipalities to own and operate electric generating transmission and distribution systems and to contract for power with the Authority on terms deemed appropriate, including the fixing of resale prices; [19] has authorized the formation of nonprofit membership electric corporations with like powers to contract.[20] Kentucky has authorized municipalities to establish and maintain light, heat, and power plants; [21] and has provided for the organization of nonprofit cooperative electric corporations which may contract with the Authority for purchase of energy and stipulate as to resale prices.[22] Mississippi, which has no State law for regulation of utilities, has empowered municipal and county governments to establish and maintain electric distribution systems which may buy power from the Authority and contract as to resale prices; [23] has created a rural electrical authority and authorized the formation of power districts and nonprofit competitives, all competent to purchase energy from the Authority and distribute it and to contract with the Authority as to resale rates to consumers.[24] The Authority's action in these States is consonant with State law, but, as has been shown, if the fact were otherwise, the appellants would have no standing to restrain its continuance.

As the Authority has not acted in any way in North Carolina, South Carolina, Virginia, or West Virginia, the appellants' contention that its proposed entry into some or all of them confers a right to sue for an injunction against injury thereby threatened has even less support.[25]

The appellants may not raise any question of discrimination forbidden by the fourteenth amendment involved in State exemption of the Authority from commission regulation. For this reason *Frost* v. *The Corporation Commission* (278 U. S. 515), on which they rely, is inapplicable. Manifestly there can be no challenge of the validity of State action in this suit.

A distinct ground upon which standing to maintain the suit is said to rest is that the acts of the Authority cannot be upheld without permitting Federal regulation of purely local matters reserved to the States or the people by the tenth amendment and sanctioning destruction of the liberty said to be guaranteed by the ninth amendment to the people of the States to acquire property and employ it in a lawful business. The proposition can mean only that since the Authority sells electricity at rates lower than those heretofore maintained by the appellants such sale is an indirect regulation of appellants' rates. But the competition of a privately owned company authorized by the State to enter the territory served by one of the appellants would, in the same sense, constitute a regulation of rates. The contention amounts to saying that competition by an individual or a State corporation is not regulation but competition by a Federal agency is. In contracting with municipalities and nonprofit corporations the Authority has stipulated respecting the price at which the energy supplied shall be resold by its vendees. That is said to be a regulation of the appellants' business. But it is nothing more than an incident of competition; it is but a method of seeking and assuring a market for the power which the Authority has for sale, and a lawful means to that end.[26] The sale of Government property in competition with others is not a violation of the tenth amendment. As we have seen there is no objection to the Authority's operations by the States, and, if this were not so, the appellants, absent the States or their officers, have no standing in this suit to raise any question under the amendment.[27] These considerations also answer the argument that the appellants have a cause of action for alleged infractions of the ninth amendment.

Finally, it is asserted that the right to maintain this suit is sustained by certain allegations of concerted action by the officials of the Authority and the Public Works Administrator. The bill alleges that having adopted an unlawful plan, the defendants have cooperated, and threaten to continue to cooperate in its execution, with Harold L. Ickes, as Administrator of the Federal Administration of Public Works, in a systematic campaign to coerce and intimidate the complainants into selling their existing systems in municipalities or territory in which the Authority desires to seize the market for electricity; that in order to make this coercion effective, Ickes has, in cooperation with, or on request of, the Authority, announced loans and grants of Federal funds to municipalities; that the Authority and Ickes have cooperated, and continue to do so, to force municipalities to purchase the Authority's power under threats that, unless they do, proposed loans and grants for municipal systems will not be made. The bill states that though Ickes "confederated and acted with the defendants in some of its illegal acts and is, therefore, a proper party, he is not a necessary party and is not joined as a defendant because he is beyond the jurisdiction of the court." There is a prayer that the defendants be restrained from confederating and acting in concert with Ickes for the described ends.

The district court finds that the Authority has not indulged in coercion, duress, fraud, or misrepresentation in procuring contracts with municipalities, cooperatives, or other purchasers of power; has not acted with any malicious or malevolent motive; and has not conspired with municipalities or other purchasers of power. The record justifies these findings. It is claimed, however, that they are inconclusive, since the court erroneously excluded much proffered evidence tending to sustain the charge. An examination of the record discloses that certain of the evidence offered was properly excluded, and that in other instances the rejection of that offered constituted, at most, harmless error.

Error is assigned to the trial court's refusal to permit the taking of the deposition of the Public Works Administrator. In view of the prior opportunity which the claimants had to take this deposition, the lateness of the application, and other factors, permission to take the deposition was a matter within the court's discretion and it does not appear that the discretion was abused.

The remaining assignments of error directed to the exclusion of evidence of cooperation between the two Federal agencies go to the rejection of evidence consisting largely of correspondence between them and press releases or announcements by officers of one or the other. The record contains all but a few of these rejected documents, those omitted apparently not being thought of importance. Scrutiny of them compels the conclusion that if the rejected evidence had been admitted, the trial court's holding that a conspiracy had not been proved should not be overruled.

The only findings on this subject requested by the appellants were to the effect that the Public Works Administration has cooperated with and assisted the Tennessee Valley Authority in the furtherance of the latter's power program and that the former has made contracts and allotments for loans and grants to 23 municipalities in the States of Alabama, Mississippi, and Tennessee, amounting to about $14,000,000, for the purpose of constructing municipal systems to distribute the Authority's power in competition with the appellants; that the applications for loan and grant in some instances specify that the municipal system will duplicate a privately owned system; in others that a large business will be done by the municipal plants because of the low promotional rates of the Authority; that some of the applications state they were filed to take advantage of the low rates offered by the Authority and that with few exceptions they state that the electricity to be distributed in the city will be purchased from the Authority. A further requested finding is that the applications of certain Alabama cities recite that they have secured written contracts from practically all consumers; that these contracts refer to lower rates to be secured, provided the rates charged by the city shall be thus prescribed by the Authority for resale at retail. The Court refused to make the requested findings and error is assigned to this refusal. It is apparent that if the Court had made the findings no conclusion of confederation or conspiracy, with malicious intent to harm the appellants or to destroy their business, would thereby have been required.

Cooperation by two Federal officials, one acting under a statute whereby funds are provided for the erection of municipal plants and the other under a statute authorizing the production of electricity and its sale to such plants, in competition with the appellants, does not spell conspiracy to injure their business. As the court below held, such cooperation does not involve unlawful concert, plan, or design, or cooperation to commit an unlawful act or to commit acts otherwise lawful with the intent to violate a statute.

In no aspect of the case have the appellants standing to maintain the suit and the bill was properly dismissed.

The decree is affirmed.

The National Defense

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1939

RADIO ADDRESS BY HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA, JANUARY 30, 1939

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. JAMES E. VAN ZANDT, of Pennsylvania, delivered over the radio on January 30, 1939:

Good evening, ladies and gentlemen, no true patriot opposes an adequate national defense at any time and certainly not at this time when the Old World is moving swiftly toward a major war. Partisanship on the question of national defense is even more reprehensible than pacifism.

Unless our national defense is equal to any test, it is a fraud on the taxpayers and a delusion of false security, and we might as well disband the Army and scuttle the Navy as worse than a useless expense. There may be honest differences of opinion on what constitutes an adequate national defense, but the question never should become a political football.

Since taking a modest part in the World War, I have made hundreds of speeches in favor of the national defense. The question of "how big is adequate," I always left to the experts to answer. I am willing to abide by their judgment now. But the national-defense question no longer is as simple as that.

The President, in his recent message to Congress, raised questions that go far beyond the adequacy of armaments with which to defend our shores from invasion, to protect our possessions overseas, to command respect for our flag on the seven seas, and to insure the safety of our nationals in foreign lands.

The President broadened the scope of our interests we must defend so as to include not only the Western Hemisphere, but the abstract ideals of religion, democracy, and international good faith among nations. Nor did he confine the defense of those ideals to the United States or even to the Western Hemisphere.

There can be no question about our determination to defend our shores from invasion, to protect our possessions, continental and insular. Surely, if we do that successfully we shall save our own religion, our own democracy, and our own good faith in international affairs. But national defense does not by any stretch of the imagination, contemplate the defense of religion, democracy, and international good faith the world over.

There can be no question about our determination to keep the Western Hemisphere free from European or Asiatic invasion or political domination. So we may well put our national defense on a basis of hemisphere defense. But how much further must we go? How much further does the President intend to go? That's what I want to know. That's what Congress ought to know. That's what the people are entitled to know.

Let's examine world affairs to ascertain, if we may, from whence comes this threat to our security or the security of any nation in this hemisphere, which the President professes to see. Let's find out why we should spend upward of $2,000,000,000 in the next fiscal year on our national defense. And let's remember that every cent of that huge sum must be raised by deficit financing.

Germany and Italy, of course, are the bad boys of Europe. They constitute the phantom menace which was born at Munich. But surely, neither we nor any nation in this hemisphere need fear an attack from Germany or Italy, or the two combined, in the near future. Hitler is committed to the east, Mussolini to the Mediterranean. Neither of these dictators has any gold, any credit, any navies capable of waging an overseas war. Japan is too much engaged in trying to swallow the Chinese dragon to bother about attacking any nation on this side of the Pacific. Stalin is busy watching Germany on one side and Japan on the other.

It is conceivable that any one of these powers, or a combination of the dictator nations, might become a real menace when they have completed the bloody jobs that now absorb all their time and money. Certainly wisdom dictates adequate preparedness for such an eventuality. But why has this phantom menace been thrust upon us so suddenly?

In view of the numerous gestures of friendship toward us being made by England and France at this time, no one supposes the threat comes from the only two great democracies in Europe. The leaders in England and France are making every effort to snuggle up to us. England and France are sorely beset by the dictators. There is no question about their desire to again use our men, money, and munitions if they are forced to fight Germany or Italy, or both. Otherwise, why is the British King and Queen paying a visit to the President and Mrs. Roosevelt in the spring? Suggestions have appeared from London that the royal couple will invite the President to pay a return call. It is further suggested that while in London the President might well cross the channel and visit France.

Thus, when you add up the international situation today, there is no possible enemy for the United States to fight in the near future unless we leave home to do it. There is no nation on earth which might invade our shores today. The only way we are likely to become involved in war is to get in somebody else's war. We can only get in somebody else's war through diplomatic blundering.

Therefore, I may well echo the cry, "Whom are we going to fight?" And, what is more important, I should like to ask, "Are we arming to fight some other nation's battle?" That's what we all want to know. That's what Congress ought to know. That's what the people are entitled to know.

Can it be that almost without knowing it we are drifting into war? Is it possible that England and France are trying to maneuver us into the same position in which we found ourselves in 1917, when we sent 2,000,000 boys to Europe to make the world safe for democracy?

A little more than 2 years ago the President declared a strict neutrality and noninvolvement policy was the best means of preserving our peace. He warned us to watch the day-to-day decisions which lead to war. This is what he said:

"At this late date, with the wisdom which is so easy after the event, we find it possible to trace the tragic series of small decisions which led Europe into the Great War in 1914 and eventually engulfed us and other nations. We can keep out of war if those who watch and decide make certain that the small decisions of each day do not lead toward war and if, at the same time, they possess the courage to say 'No' to those who selfishly or unwisely would let us go to war."

That was sound advice then and it is even sounder today. The President might profit by rereading his own speech.

We already have had several recent incidents which do not make for good will, to say the least. In disregard of the explicit terms of the neutrality act, which the President recently questioned as a measure of justice, he already has invoked against Japan his doctrine of quarantining aggressor nations. Is there any reason to believe he would not extend that policy to Germany and Italy if either one or both launched an undeclared war? The administration is not only helping France to secure military planes in this country, but there is a great furore over the French military mission learning some of our military secrets. Then there is the row with Japan over the fortification of Guam, which our naval experts insist is necessary as a defense measure. Will the day-to-day decisions, such as these, eventually lead us to war?

But whatever this new menace may be, whatever threats there may be to our religion, our democracy, and international good faith, or those of our neighbors in this hemisphere, the President has advised us there is no occasion for hysteria. In that event, there is no occasion for undue haste. Meanwhile, we not only should take steps to meet this menace if and when it appears but we should establish a progressive policy of national defense which will insure the security of this Nation so long as it has defenders.

What I am proposing is simply this: In view of the President's solemn warning, we should do a thorough job of surveying our national defense resources before Congress takes any action. We should develop a long-range policy that has sufficient flexibility to meet any changes that developments might require. In doing that, I have suggested the establishment of a joint congressional committee, composed of members of all committees which have any legislative responsibility in the matter. And inasmuch as national defense and foreign policy go hand in hand, and the President has set a precedent by bringing two of our leading ambassadors into the picture, I suggest that all available material bearing on the subject of the national defense should be laid before Congress.

Nor should we stop there. Inasmuch as our foreign policy seems to be the crux of our defense policy, I have suggested that Congress might save time by asking the man who makes it—the President of the United States. It is suggested that the President could insure easy sailing for his defense program by inviting the members of subcommittees of the House and Senate Foreign Affairs Committees down to the White House and disclosing his foreign policy which demands added armaments. Once this menace is revealed, Congress will vote any funds necessary for defense.

It may be true that even experts can't make an exact blue print for national defense. It may be even more difficult to define our foreign policy in a changing world. What might seem safe and sound today might be insecure and dangerous tomorrow. But Congress and the country certainly are entitled to a clarification of the situation before action is taken on the present defense program.

America still is carrying the greatest share of the financial burden of the World War. It will not be wiped out for many generations. Our Budget has been in the red for 10 years and our national debt is mounting to almost $40,000,000,000. The whole world is bankrupt as it totters under the unreasonable burden of armaments. I would be dishonest if I did not oppose with all my strength the expenditure of every penny over and above the amount required for adequate national security. By thoroughly revamping our national-defense policy now we can have maximum security at a minimum cost.

But let's guard against diplomatic blundering. Let's guard against the little day-to-day decisions that eventually lead to war. We do not want to pull the chestnuts out of the fire again for England or France or any other nation. Let's keep out of this

European mess. Let's concentrate on the solution of our own problems. Let's open up this whole question of the national defense and its related foreign policy. Let's get the answers. That's what I want to know. That's what Congress ought to know. That's what the American people are entitled to know.

A Government by Law—Not by Men

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1939

ADDRESS BY HON. CLARE E. HOFFMAN, OF MICHIGAN, JANUARY 20, 1939

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herein a talk given by me on Friday, January 20, 1939, before the District National Defense Committee of the Daughters of the American Revolution at the Mayflower Hotel in Washington:

Books and tradition inform us, if the viewpoint in certain present high official circles be accepted, that your forefathers were guilty of most atrocious conduct; were little better than savages.

Judged by the standard now used by the administration, not only were the founders of this republic cruel, uncharitable, and bloodthirsty, but they had an utterly wrong conception of the principles which should guide a people.

Those of whom you are so proud, whose memory you love to honor, solemnly declared it to be self-evident that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness.

They further held that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed and, if my history is read aright, they believe that law enacted by the people's representatives, as interpreted by the courts, was the supreme authority; that no man, however wise, charitable, or religious should either suspend or abrogate the law of the land; that all should yield obedience to it.

A king whose history, they declared, indicated the establishment of an absolute tyranny over the colonies; who had denied his assent to laws most wholesome and necessary for the public good; who had forbidden his governors to pass laws of immediate and pressing importance, or who had, when such laws were passed, suspended their operation; who had denied to the representatives of the people their right to legislate; who had obstructed the administration of justice; who had made judges dependent upon his will; who had created a multitude of new offices; who had in many cases deprived the citizen of the benefit of trial by jury; who had excited domestic insurrections among them—they firmly resolved should rule them no longer.

"Appealing to the Supreme Judge of the world for the rectitude of" their intentions, they did, in the name and by the authority of the good people of the colonies, solemnly publish and declare that these united colonies are, and of a right ought to be, free and independent States.

Through 8 long years, through summer's withering heat and winter's deadening cold, ragged, without shelter, hungry, barefooted, feet sometimes frozen and bleeding, they marched, suffering, many to their graves, in order that they and those who came after might live in a land where every man, were he so minded, were he industrious, thrifty, and ambitious, might be free from poverty, from oppression; be governed by law rather than by the will of an individual.

For 8 long years they endured hardships of which we now have but the slightest conception. Bodily pain and mental distress were with them almost continuously. They bled and they shed blood. They were maimed and they maimed. Many were killed and they killed and they won through to victory, establishing here a government which is the crowning glory of the world's civilization.

Victorious, they declared:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

Measured and weighed by the yardstick and the scales used in selecting the head of the Department of Justice, your forefathers are found wanting in the Christianlike spirit which should govern our relations with our fellow men, for they shed the blood of those who had denied them equality before the law, who sought to deprive them of their property, of their liberty.

During the past 2 years, for the first time in the history of our country, mob violence, riots, armed insurrection, and open defiance of the law by large groups have been officially condoned, permitted to pass without challenge, by high officials in State and Nation.

A few of the outstanding and undisputed facts which point unmistakably to the ascendancy of a group whose acts tend to destroy our liberty, to deprive us of our freedom, it may be well to consider and, having considered, determine upon a course of action which will defeat their purpose.

If this Nation is to endure, the truth must be known, disloyalty to our Constitution must be exposed, and those who would substitute their will for the principles which govern us be made known.

In all this land of ours there is no organization more earnestly desirous, no better equipped, to aid in the preservation of the Union than the Daughters of the American Revolution.

Events which are of historical importance do not just happen. And behind this sudden, open, widespread defiance of law and order there is a cause, which is neither obscure nor concealed.

It was the Communist candidate for President, Earl Browder, who boldly announced:

"We industrial unionists are going to take over the factories some day."

On the 30th day of December 1936, flying the flag of a labor movement, the Communists made good their threat by seizing the factories of General Motors in Flint, Mich.

That this seizure was not a bona fide labor strike is made evident when we recall that not even 10 percent of the workers wanted to strike and that, during the early days of that strike, Governor Murphy, of Michigan, who was in a position to know, made the statement that:

"There is a general picture of high wages, good conditions, security, and recognition which is one of the best in the country.

"Wages here are highest of any place in the country or the world."

Nor are we lacking in evidence that it was the Communists who instigated, carried on, and made effective this insurrection. A weekly magazine with a national circulation quoted Governor Murphy as saying that President Roosevelt told him that "If communism breaks in America, it will be in the Detroit area, where it will first manifest itself."

We have the same Governor of Michigan, while these strikes were in progress, saying, "Communism is not coming. It is here."

We hear him, after the strikes were over, declaring:

"Communists deliberately created disorders in the Lansing labor holiday, the Consumers Power Co. strike, and in some phases of the sit-downs."

Over and beyond and above this, we know that active in the negotiations, in the incitements to violence by the use of a sound truck, in the direction of the activities of those occupying the factories were the Reuther boys, Bob Travis, and a host of other well-known Communists, who are always present when there is violence and bloodshed. The leaders were Communists. The methods used were those followed by the Communists.

The incitement of these unlawful activities, the violence, the defiance of law, the bloodshed can be rightfully charged to the Communists, but upon the doorstep of this administration rests the responsibility for their continuance. About that there is no mistake.

Not only did the newspapers of that day carry accurate information as to what was happening, but Governor Murphy has told us that the President was aware of the situation. Of the President he said:

"He is watching Michigan every hour in connection with the strike situation.

"He often calls morning, noon, and night to express his interest and great concern and to give his advice."

After the agreement entered into between the C. I. O. and General Motors on the 11th day of February 1937, the President warmly congratulated the Governor upon his handling of the negotiations.

Again, when the Dies committee so faithfully and so accurately exposed the communistic activities of those who brought about this terrible situation in Michigan the President of the United States criticized that committee and again lauded Murphy for his conduct.

A most amazing thing has happened in this Capital of the Nation within the week. We have seen a man who had taken an oath to support the Constitution of the United States, the constitution of his State, and faithfully to execute its laws, and who had failed to protect the citizens of his State in their constitutional rights hailed as a great humanitarian and rewarded by being made a member of the President's official family.

The Senate of the United States has confirmed that appointment.

Again it may be well that we weigh what happened as would our forefathers; as do the people who live upon and wrest their living from the land; who value liberty more highly than they do official commendation; who are convinced that this old Constitution of ours, while it may have originated in the "horse and buggy" days, is still the safest conveyance toward our journey's end.

It is quite apparent that during the sit-down strikes Michigan's Governor, the President of the United States, and more recently, the Senate, viewed the whole controversy as one existing between the C. I. O. and General Motors. No assumption could be more unsound.

The true issue was not whether there should be sole recognition of the C. I. O. as a collective-bargaining agent, whether John L. Lewis or General Motors should rule. The controversy affected every citizen. It was a question of whether law and order should prevail; whether there should be a government under the law or whether the will of an individual should be supreme.

It is of comparatively little importance that these strikes were settled, if they were settled, to the satisfaction of the C. I. O. and General Motors.

As Senator BAILEY so well put it the other day in the Senate, the issue was one of law enforcement. The question which confronted Governor Murphy, which confronted the President of the United States, was whether or no, in the State of Michigan at that time, the mob should rule. The Governor and the President decided that it should, and, apparently as a reward for his assistance to Lewis, for Murphy has never demonstrated any outstanding legal ability, he was appointed head of the Department of Justice.

Lest we forget, as apparently the Senate of the United States forgot the other day, what happened, let a brief statement be made.

On the 30th of December 1936 there came into the State of Michigan from beyond her borders men armed with deadly weapons, who made no pretense to legal authority; who by force and violence seized and held possession of, until the 11th day of February following, great factories employing thousands of men.

These armed invaders imprisoned within the factories workers and citizens of the State of Michigan. They drove other workers from their usual places of employment and by force prevented their return to that toil which supplied their wives and their children with the necessities of life.

They deprived individuals of their property without due process of law. They deprived workingmen of their liberty without the shadow of a legal excuse. Many of the men who did these things were not even employed in the motor industry in Michigan. Not 10 percent of those who labored in the factories in the motor industry in Flint wanted to go on strike, wanted the factories closed.

It is admitted that these armed invaders blockaded the streets of Flint; that they held up traffic on Federal highways; that they compelled travelers to stop and disclose the nature of their business and the place of their destination.

The Governor of Michigan, appearing before a Senate committee the other day, did not deny that these acts were committed. He admitted that they were illegal. He admitted that he did not enforce the law, that he did not protect the citizens in their property rights, in their personal rights. He admitted that citizens—not one or two, but thousands—were deprived, not for a day but for more than a month, of their personal liberty, of their right to earn a livelihood.

His excuse for his failure to faithfully execute the laws—and he did fail and about that there is no dispute—is that he desired to preserve law and order, that he wanted to prevent bloodshed.

Assuming that he did desire to prevent bloodshed, his statement that he sought to preserve law and order is the rankest hypocrisy.

Is law and order preserved and maintained when armed men without authority can seize and hold private property? Is law and order maintained when men by the hundreds—yes, by the thouands—are, by armed men, driven from the places where they lawfully have a right to be? Did the Governor maintain law and order when he permitted these men day after day, from the 30th day of December down to and including the 10th day of February—a period of 39 days—to by force hold possession of this private property, keep some men who were in the factories in those factories, and keep others, who had a right to be in and at work, on the outside?

What would the Governor say had men gone to his office in the State capitol at Lansing, thrown him out, or taken possession when he was out, and denied him permission to enter when he sought to return? Would he have said that law and order was being maintained?

These invaders seized these factories and, when the police force of Flint, when the citizens, indignant and outraged to such an extent that they, like your Revolutionary forefathers, prepared to arm themselves and expel the intruder, the Governor called in the National Guard, he says now, to prevent bloodshed, to maintain order. But note—with the invader secure in his fortified factory.

We are now told by the Governor—and this for the first time—that on the 8th day of February he wrote a letter addressed to John L. Lewis and to Homer Martin, telling them in substance that the strikes were illegal and that the law must be obeyed, the orders of the court upheld.

He tells us now that the letter was never sent to Martin, but he says that he read it to John L. Lewis on the morning of the 9th, and thereafter the invaders moved out.

The truth of the matter is—and about this there is no dispute—that throughout this controversy General Motors stood ready to negotiate with the leaders of the strike, and the leaders on the ground in this movement—that is to say, the Reuther boys, Bob Travis, and Frankensteen, were well-known Communists—as soon as those who were holding the plants moved out.

The truth of the matter is that the Governor called out the National Guard of the State of Michigan, 4,000 strong, and he used the State police to prevent the law-enforcing officers of Flint and the citizens of that community from expelling those who had invaded their factories and their city.

The Governor used the armed force of the State not to defend and to protect the honest citizens who wanted to work but to protect and defend the violators of the law.

There is no question but that, in this controversy, the forces of Lewis and his communistic allies moved out of the factories in Flint, not because the Governor told them the strike was illegal, not because they were advised by him that the orders of the court would be enforced, but they moved out because citizens were being sworn in as reserve officers, and the Governor knew—he came to realize—that, notwithstanding his threat to use the National Guard and the State police to preserve law and order, as he put it—which, being interpreted, means to prevent any attempt to remove by force those who were occupying the factories—the citizens of Flint were firm in their determination that they would submit no longer to the foreign invader.

The strikers knew on the 30th day of December, and so did the Governor, that the sit-down strike was illegal. The strikers knew, and so did the Governor, on the first day, the second, the third, the fourth, the fifth, the sixth, and so on, down through every day in January, that the sit-down strike was illegal, and that they were violating the laws of the State of Michigan—that they were depriving men and women of their property and of their personal liberty.

In all that long period of stress and of tumult not once, so far as the public press discloses, did the Governor of Michigan ever say publicly, through the press or otherwise, to the leaders of the strike or to the strikers that they must evacuate the plants at Flint.

Now, almost 2 years after the end of that particular strike, he comes forward and poses as one who upheld and enforced the law.

He delayed, he temporized, until the spirit of the revolutionary fathers, living in the hearts and souls of the law-abiding citizens of Flint, let it be known that no longer would they submit to the foreign invader. Then, yielding to the inevitable, he tells us he wrote a letter which he never sent, which he never made public.

The Governor's failure to declare in the beginning that law and order would prevail in Michigan, that the rights of the citizen would be protected; the silence of the President of the United States, whose duty it was to speak, as did Grover Cleveland in another day and age, in behalf of law and order, gave encouragement to the lawless throughout the land and a wave of sit-down strikes swept from one end of the country to the other.

The Governor of Michigan and the President of the United States, by approval of the Governor's conduct, did not prevent bloodshed. It might well be said that their temporizing, their encouragement, brought about bloodshed.

The sit-down strikers walked out of the Flint factories on the 12th day of February 1937. They had demonstrated their ability to hold possession of factories, to deprive citizens of their liberty.

Their acts of lawlessness, of violence, and of bloodshed had been condoned by a Governor of a great State and by the President of the United States. Encouraged, they tried the same tactics in the State of Illinois, and on the 30th day of May 1937 another group led by Communists marched on the plants of the Republic Steel Co. Ten men were killed and many others injured.

From coast to coast this wave of rebellion, this civil strife, swept our land. Workers were kidnaped; factories were seized and held to ransom; United States highways were blocked; interstate commerce was prevented; airplanes carrying food to besieged workers were shot down; mobs led by Communists defied local, State, and the National Government; they were the first to successfully twist the beard and slap the face of Uncle Sam by interferring with United States mail.

The C. I. O. and the Communists knew their friends.

William Weinstone, secretary of the Michigan district of the Communist Party, it was who said:

"Of first-rate importance among the reasons for the victory must be considered the attitude of the Government. By 'the Government' I mean in this case the attitude of the Governor of the State of Michigan and of President Roosevelt."

Oh, it is a sorry story; it is a disgraceful tale.

If the Governor of a State can suspend the operation of the law for a week, for a month, then logically he can suspend it indefinitely.

On the question of law enforcement, whether a mob shall rule or whether its right to defy the law shall be challenged, even though there be bloodshed, there can be but one answer.

Your forefathers wrote the correct answer by their 8 long years of struggle, and we, if we would preserve our Union, must follow their decision.

Federal Tax on Retail Stores

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1939

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS, JANUARY 24, 1939

Mr. PATMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me over the radio on January 24, 1939:

Good evening, ladies and gentlemen, tonight I invite your attention to a matter of Federal legislation of interest to each of you. I wish to discuss briefly the major points of the Federal chain-store tax bill which is House bill No. 1. During the last congressional session this exact bill was known as House bill No. 9464.

Later on in this talk I shall explain the objects and purposes of this bill.

RADIO AND NEWSPAPERS

Thomas Jefferson once said: "If the people get the truth, the country is safe." But there are only two ways of getting the truth to the greatest number of people at the same time. These are the newspaper and the radio. In theory, at least, all newspaper columns and radio channels should be open to full discussions of major questions.

In this connection I wish to pay tribute to the radio companies for their fairness in granting time on the air to speakers on both sides of many problems and major questions. And I wish to thank the Columbia Broadcasting System for affording me this opportunity to address you, American citizens, on this important bill.

THIS NOT ONLY MAJOR PROBLEM

I do not concede that the Federal chain-store tax bill is the only major problem before Congress today. But it dovetails into other major problems, on which I am working, and it has a great bearing on them. I refer to adequate security for the aged, parity income for farmers, discriminatory freight rates, a fair monetary system, uncontrolled and uninfluenced by those who are selfishly interested.

REPRESENTATIVES CARRY OUT THE WILL OF PEOPLE

The American people are honest, fair, and intelligent. If they have the benefit of correct information on both sides of a public question, the majority of them will agree on what should be done, and by direct communication compel their lawmaking representatives to carry out their will.

Public sentiment controls this country to such an extent that I do not know of a Member of Congress who is not eager to carry out the wishes of a majority of his constituents.

For it is on Capitol Hill that the battle begins. The proponents of each side of a major problem try to convince individual Members of Congress that that side is right and that all the people approve that side. Scores of sponsoring methods are employed. Many of them are tricky, deceitful, and fraudulent. And in this case, opponents of the Federal chain-store tax bill have swamped Members of Congress with letters and telegrams against the bill.

MODERN LOBBY

Do any of you recall the power lobby? Well, the power lobby was amateurish compared to this modern, streamlined, absentee-ownership lobby. It is backed by tens of millions of dollars. It is spending huge sums of money each month in the effort to influence Members of Congress.

Money can hire brains and this lobby, having plenty of money, has obtained the best brains and the services of the most influential people money can buy. Today Washington is flooded with all kinds of "legislative consultants" * * * and others, who claim to know how to get things printed in the newspapers and how, through artful methods, to influence the Members of Congress. These lobbyists profess vast personal influence and I might add that with my introduction of the Federal chain-store tax bill, many lobbyist-slaves of the money masters have enjoyed steady employment.

Here is another illustration of chain-store pressure methods:

Away from Wahington, and throughout the interior of our land, the interstate chains have compelled store managers to deliver sets of eight form letters to customers. They try to persuade customers, through the use of incorrect data, to write letters to Congressmen, urging them to oppose the Federal chain-store tax bill.

These letters are written on stationery supplied gratis by the interstate chains. When written they are turned in, unsealed, to local chain-store offices. After examination by chain officials, the letters are sealed, stamped, and mailed to Washington.

I admit that this is attention-getting propaganda. But I believe that the average Member of Congress gives more serious consideration to one uninspired letter from a good mother or father, with the vision to see local opportunities and local privileges slipping away from their children and into the hands of a few rich money masters of Wall Street, than he gives to a hundred chain inspired letters.

PEOPLE SHOULD LET THEIR WISHES BE KNOWN

The people of this country who believe in a competitive system, equality of opportunity, the preservation of local communities, and who are opposed to concentration of wealth—these are the people who should let their wishes be known to their Congressmen. Otherwise these chain inspired letters and similar chain propaganda will have much weight.

It is my contention that when the people get the truth about the Federal chain-store tax bill and express themselves to their Congressmen the bill will pass Congress by an overwhelming majority and will be signed by the President of the United States.

More than 100 Members of Congress in the House of Representatives have already informed constituents that they will vote for this bill.

OBJECT OF H. R. 1

The object of H. R. 1 is to restrict interstate chain stores to the boundaries of one State, or to a smaller area than some of them now cover.

The question is asked: "If that is the object, why not leave out the tax provision and offer a bill that says an interstate chain cannot operate in more than one State?"

My answer is that such a proposal, if enacted, would probably be held unconstitutional. Whereas, if we use the taxing power of Congress to reach the same objective, there will be no doubt of the constitutionality of the law, when enacted.

Why did Congress place a 10-percent tax on State bank currency after the War between the States? Was it for the purpose of raising revenue? No. It was to save our currency system, although many State banks suffered from it.

Why did Congress place a tax on the ownership and transfer of machine guns? Was it in order to raise revenue? Not at all. It was for a better law enforcement against criminals. Congress did not have the power to require registration of such guns or their transfer, but it did have the power to place a tax on such ownership or transfer, and if the tax is not paid, a criminal law is automatically violated.

Thus, it is not at all unusual for Congress to use its taxing power in passing a constitutional law to carry out a worthy objective.

RESTRICT CHAINS TO SMALLER AREA

Briefly, H. R. 1 proposes the levy of a Federal tax on interstate retail chain stores, according to the number of stores owned by one company. The first nine stores will be tax exempt. On a large number of stores in one State the tax will be very small. But after 2 years the tax will make it unprofitable for one concern to operate a large number of stores in more than one State. Local chains will not be seriously affected.

It is now unlawful for a bank to own a branch in another State. It should also be unlawful for chain-store systems to overflow from one State into another.

Local people cannot always operate a railroad, a telephone company, an investment firm, a manufacturing plant, or even a wholesale house. But, if permitted, they can and will operate a local bank and local retail stores.

WILL NOT DESTROY ONE CHAIN COMPANY

Enactment of the Federal chain-store tax bill will not destroy one chain company, but it will crack down and curb the greed of 15 or 20 interstate, absentee-owned chain concerns. Today there are about 1,500 chain-store companies in the United States. The average chain has 35 stores. Such a chain will pay so small a sum under this law that the owners will have no cause to complain.

OPPOSITION COMING FROM THE 1 PERCENT OF CHAIN COMPANIES

Opposition to this bill is coming from the 1 percent of chain-store companies that are seeking complete control of our national retail distribution. They seek the help of the other 99 percent, but will destroy these if the law is not passed.

Consumers, workers, and farmers will be helped by the passage of this bill. But there are two groups of people who claim the bill will react harmfully—those who hog the Nation's most valuable privileges and those who are honest but have not thought this thing through.

I strongly urge our impartial citizens to give this question thorough consideration, because I warn them that it affects their economic welfare. The question of saving a few cents now, even if true, fades into insignificance when compared with the economic disadvantages of unemployment. Monopoly, concentration of money and credit, and the destruction of local communities.

You fathers and your sons can be local businessmen if local business can survive. You can never be chain-store magnates or make more than clerical wages working for absentee-owned chains.

When the interstate chain stores began business they claimed that wholesalers would be eliminated.

NO DISTRIBUTIVE EXPENSE SAVED BY LARGE CHAINS

They predicted more money to producers and savings to consumers by taking several hundred thousand traveling men off the road. It was a beautiful theory, but it failed. The big chains organized their own wholesale houses, thus failing to cut out the wholesale item. And they caused enough traveling men to lose their jobs as to seriously affect employment because many of these were forced on relief rolls.

Doubtless they claim this caused a saving in dollars and cents. But if so, where did the savings go? The producer did not get any. The consumer has not paid less because the spread between producer and consumer is greater under interstate chain domination than under the old competitive system.

Government figures prove this statement and your own experience will tell you so. Ask your wife about this.

So the move that threw thousands of people into unemployment also poured millions of dollars into the pockets of heartless Wall Streeters and gave added millions to a few ambitious but charming American girls who took the money to foreign lands for their count husbands and no-account husbands to spend abroad.

EFFECT OF OWNERSHIP BY FEW LARGE CHAINS

It is admitted that if interstate chains get control of retail distribution they will destroy local merchants, including the smaller chains. They will destroy local print shops, local insurance agencies, local newspapers, and smaller manufacturers.

When that day arrives—and it will come if something is not done to prevent it—what chance will our fine young men and women of the future have to engage in business? What will it do to your own son or daughter? What effect will it have on the good men and women who are over 45 or 50 years of age and cannot obtain employment in private industry?

MONOPOLY

We must crush monopoly or monopoly will crush us. Why, one company today alone does 10 percent of the total food business in the retail field!

If 10 Wall Street concerns were doing the same volume of retail food business as this one concern, all the retail food business in America would be done by these 10 concerns.

Do not be misled by the claims of money masters that there is no danger of monopoly. They want you to remain indifferent. They are trying to put you to sleep. But they will find that is not so easy to do.

You cannot overlook this startling fact that 24 banks (13 of which are in New York City) own one-third of the banking resources of the Nation. In other words, one-third of the banking resources of the 16,000 banks throughout the United States is owned by these 24 banks—the directors of which are also directors of large business concerns of the Nation.

FEW MEN, CONTROLLING FEW BANKS, CONTROL CORPORATE WEALTH OF NATION

In this way the few men who control a few banks also control the corporate wealth and much individual wealth of the country. There are direct interlocking relationships between these few Wall Street banks and the concerns that are now getting stranglehold control of our national retail distribution.

The people should free themselves now from the clutches of such concentrated greed. They should recover their valuable privileges and opportunities. They should preserve their local communities and thereby encourage the sound growth of the home, church, and school—three great institutions upon which all civilization is built.

Thank you for the courtesy of your attention.

Cost-of-Production Bill for Farmers

EXTENSION OF REMARKS

OF

HON. SAM C. MASSINGALE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1939

Mr. MASSINGALE. Mr. Speaker and Members of the House, herewith is presented a concurrent resolution adopted by both houses of the State Legislature of Oklahoma, memorializing Congress to pass what is known as the cost-of-production bill for farmers. I have introduced in this session H. R. 2371, which it is believed meets the demand of the Oklahoma Legislature in this particular respect. Not only have I introduced the bill but about a dozen other Members of the House have introduced an identical bill. In the United States Senate 18 Senators have joined in an identical bill.

H. R. 2371 is the bill agreed upon by a number of Members of the House and Senate to try to meet the demands of the farming population of the country for a change in farm legislation. Briefly, the only part of the bill that will cause the expenditure of any money is that part which carries forward the commodity loan feature, soil-conservation benefit payments, and crop insurance. This and the similar bills introduced at this session repeal all provisions for crop control. It obviates the necessity and expense of an army of Federal employees in an effort to regulate the management of farms. It has no provision for the curtailment or the reduction or destruction of farm products and will be found to be, I believe, practically in agreement with the wishes of the farmers of the United States.

Under this bill the Secretary is obliged to ascertain and determine for each year the average cost of producing farm products which enter into interstate commerce to the extent of $10,000,000 per year. He takes into account the 5-year average production and average yield to make this determination, and the same formula is applied to the farmer and his business in making this estimate as is applied by business and industry in making their estimates and fixing their cost charges. It provides for the payment to the farmer of the cost of production price for the farm commodities covered, for the estimated domestic consumption of such commodities, and for the handling of the surplus farm products without any expense to the Government of the United States—the farmer to receive for whatever surplus percentage he may have, the world price, less the cost of handling such surplus in the markets of the world. It provides for an orderly method of getting rid of these surpluses without dumping them on the market, and it protects the American farmer against competing farm commodities that are raised abroad and shipped into this country by authorizing an increase in tariff rates on such commodities.

If this bill is enacted into law there will be no more plowing up, plowing under, or destruction of farm products. It gives to the farmer the equivalent of a tariff just as the manufacturer has enjoyed for 150 years. Its only purpose is to be fair to the American farmer and enable him to deal with Americans on an American basis for his farm products. If it is fair for the manufacturer to be guaranteed an American market for his products domestically consumed, it is also fair to the farmer to have the same privilege. It will enable the farmer to live on the farm and have some security. There is little security on the farm now. As a rule, the farmers are not able to make a living. The present farm law, it is believed, is more largely responsible for the economic condition of the farmer than any other legislation. The present law makes it possible to herd the small farmer into groups of peons and shuffle them off to the W. P. A. if they can get on there, to work for a mere pittance and to give them the belief that the farm is an unworthy place for a man of any ambition to live, and at the same time, the present law acts to subsidize and further enrich large farmers and corporations.

The concurrent resolution above referred to is as follows:

Whereas the price of cotton is below the cost of production; and

Whereas wheat and corn and other grain crops are an absolute necessity for food and feed in times of peace and in times of war, and the price of the same is below the cost of production; and

Whereas the price of meats, foods, and feeds produced by the farmer is unreasonably low; and

Whereas the farmers who produce the same are compelled to do so at a loss instead of a profit; and

Whereas such prices prevailing tend to demoralize the farmers and business and render it impossible for the sections of the country depending upon agriculture for its prosperity, to progress; and

Whereas the United States is essentially an agricultural nation; and

Whereas the present plight of agriculture is a terrible handicap to our democratic institutions and a hindrance to our educational system and an invitation leading toward dictatorship which this country does not embrace: Now, therefore, be it

Resolved by the House of Representatives of the State of Oklahoma in the seventeenth legislature assembled (the senate concurring therein), That the Congress of the United States be, and the same is hereby memorialized to enact speedily the resolution known as the Domestic Allotment Act, guaranteeing to farmers and producers the cost of production for all that portion of their crops and products consumed in the United States of America; be it further

Resolved, That copy of this resolution be, by the chief clerk of the house of representatives, mailed to each member of the Oklahoma delegation in Congress.

The A. A. A. Wheat Program

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26 (legislative day of Tuesday, January 17), 1939

ADDRESS BY MILBURN L. WILSON AT THE JACKSON DAY DINNER, GREAT FALLS, MONT., JANUARY 7, 1939

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address by Under Secretary of Agriculture Milburn L. Wilson, delivered at the Jackson Day dinner, Great Falls, Mont., January 7, 1939. This address is an exceptionally clear exposition of the operations of the A. A. A. wheat program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Great Falls Tribune, January 6, 1939]

WHEAT PROGRAM HAS BEEN ACCEPTED, SAYS WILSON—SEEDING OF WINTER CROP WAY UNDER LAST YEAR—UNDER SECRETARY OF AGRICULTURE, SPEAKING AT JACKSON DAY BANQUET HERE, ASSERTS FARMERS TAKE REALISTIC ATTITUDE TO WORLD SITUATION

The text of the address made at the Jackson Day dinner here Saturday night by Under Secretary of Agriculture Milburn L. Wilson, and attended by Democratic Party leaders from all over Montana, follows:

"We are met here tonight to reexamine the spirit and help unify the purpose of the Democratic Party in Montana and in the Nation. In Washington, D. C., and in each of the other 47 States other groups of party workers have met. Along with us, they have listened to the Jackson Day address of the President of the United States and the national leader of our party, Franklin D. Roosevelt. Through him we have rededicated ourselves to the task of helping maintain an America that lives by the ideals of the great Democrat of the earlier West, Andrew Jackson.

"PROUD TO MEET IN FELLOWSHIP

"Like other members of the party who have been honored and trusted by appointment to public office I am proud to meet in fellowship with the wheelhorses of the party in my home State. You are the people who work day in and day out to keep up the party organization. You make personal sacrifices for the cause. Before and since the day of Andrew Jackson, the party workers in the towns, the counties, and the States have made it possible for the principles that the party puts forward to become effective in governmental action. Your party leaders and your fellow citizens owe you thanks for doing what is often a thankless task though it is a task essential to the maintenance of the American way of life. Only so long as we have political parties contending freely for public acceptance of their programs will we have a democracy; to have political parties we must have political party workers.

"This fact was well understood by Andrew Jackson. Through many stages of party and public responsibility he rose to the highest office of the land. Jackson was left entirely on his own resources as a boy, educated himself, struck out for the West, was merchant, tailor, dealer in land, farmer, attorney general for his district, and served in the Tennessee Constitutional Convention. In all these things Jackson has counterparts among the Montana men whom I came to know and to respect 30 years ago when I first came to the State. These were the men who had come in here after the gold rush, developed the business and agriculture, helped organize the labor of the Territory, served in the Montana Constitutional Convention.

"Jackson, the first westerner, like the later westerners, was a man who got things done. He never hesitated in making decisions or accepting responsibility. His biographers pepper their pages with instances of his hair-trigger action. For example: Jackson was holding court when a heavily armed, drunken badman started a row and defied the sheriff to arrest him. 'This court is adjourned for 10 minutes,' said Judge Jackson, drawing a pistol. Well, within the 10 minutes the court was reconvened, and the order in the room was perfect.

"MODERN ANDREW JACKSON

"For energy and decisiveness, for comprehension of the needs of the common man, for the will and the ability to lead public action that will meet these needs, Franklin D. Roosevelt has been rightly called the twentieth-century Jackson. He has championed the cause of the men and women who have their own way to make. The farm families, the working families, the families of the men who operate the small business establishments have had his first concern. Under his leadership there has been steady, unremitting effort to put into effect national policies that will assure some security to the men and women who work with hand and brain and to their children.

"It is hardly necessary at this occasion to review the accomplishments of this administration, or to comment at length upon the problems resting before the present session of Congress. I regard the message of the President to the Congress on the state of the Union delivered on Wednesday of this week as one of the most outstanding and one of the most typical of the Roosevelt state papers. All of you read the message. Many of you heard it on the radio. You will recall he started out by saying, 'Storms from abroad directly challenge three institutions indispensable to America now as always. First is religion. It is the source of the other two—democracy and international good faith.' He contrasted with great clarity the authoritarian systems of government with the democratic systems of government and said that in this turbulent world trouble may lie ahead.

"He stated that he would send to the Congress in the near future a special message making recommendations for certain essentials for defense in this new world situation. 'A strong and united nation,' said the President, 'may be destroyed if it is unprepared against sudden attack,' and, further, with great wisdom did he say, 'Our Nation's program of social and economic reform is therefore a part of defense as basic as armaments themselves.' He pointed out that 'the first duty of all statesmanship today is to bring capital and manpower together, such that we can use our men and natural resources to make ours a Nation with an $80,000,000,000 income, rather than a Nation with a $60,000,000,000 income, as it is today.' He pointed out a number of specific ways that the new tools which this democratic administration has developed in the last 6 years must be sharpened, such as the 'perfecting of our farm program to protect farmers' income and consumers' purchasing power from alternate risks of crop gluts and crop shortages—standards of honesty in our financial markets, broader coverage of social security, coordination in the railroad and transportation field, new techniques to develop wider markets for electric power, improving the tax relationships, the perfecting of labor organization and a universal ungrudging attitude of employers toward the labor movement, until there is a minimum of interruption of production and unemployment because of disputes, and acceptance by labor of the truth that the welfare of labor depends upon increased balanced output of goods.' He pointed out our continual responsibility to the unemployed until an $80,000,000,000 national income can absorb them in private employment. We, as Democrats, are gratified at the well nigh universally favorable comments upon this message by all groups within the Democratic Party and by those liberal Republicans who do not put party above national welfare and national progress.

"WORKING FOR FARMERS

"I have been most closely associated with the efforts of this administration on behalf of the farm people, and I can assure you that these efforts have been rtrong and continuous.

"Stop for a moment and recall the condition of Montana agriculture 6 years ago tonight. The producers of the export crops were economically paralyzed by the crippling blows struck at world trade by Republican administrations in the 1920's. In the early 1920's, when the farm depression started, agriculture had called for help. The Republican Party's only answer was to increase tariffs and shut out imports of foreign goods which might have been used to buy our wheat and other farm products.

"Again, after the crash of 1929, when farmers were in desperate need of assistance, the Republican administration tried to fool the farmer with the hollow slogan, 'The American market for the American farmer.' They raised tariffs again and shut out still more of the goods which foreign nations might have exchanged for farm products. In both instances they took the occasion of a tariff revision ostensibly in the interests of the farmers to boost duties on industrial products. They destroyed more of the foreign market for farm products and, at the same time, increased the cost of articles which farmers buy. By 1932 the value of agricultural exports had fallen to the lowest level in 42 years. Some of this loss has been regained. The value of farm exports for the last fiscal year, ending June 30, 1938, had increased $300,000,000, or 50 percent, over the 1932–33 season. In the meantime farm income doubled over 1932.

"MONTANA WHEAT AND PROSPERITY

"Let's be more specific and talk about wheat. When you consider Montana prosperity, you have to think of wheat along with livestock, diversified crops, and the products of the mines and forests. Directly or indirectly, the welfare of wheat producers affects the welfare of all Montanans.

"Montana wheat farmers aren't as well off as they should be. Conditions have been hard. But where would Montana farmers be without the A. A. A. programs and where would Montana towns be?

"Remember that the wheat program begun by farmers and the A. A. A. in 1933 got a violent set-back in 1936 and that only now are wheat farmers once more able to have a real wheat plan.

"The present situation of wheat farmers has been gathering ever since 1936 when the 6-to-3 decision of the Supreme Court deprived wheat producers of effective means of working together—the means they had in the first A. A. A. program. The first A. A. A. wheat plan looks simple now, but in 1933 it seemed a complex pioneering effort. It was a lifesaver for the farmers and for the people who depend upon farmers for a living.

"The year 1933 was significant to wheat growers for another reason. In 1933 the United States also pioneered in the international wheat agreement. While this international agreement did not produce all the results hoped for then, the effort is being revived this year with prospects for some ultimate accomplishment. I shall have a little more to say about that later on.

"Republican enemies of the farm program often give much of the credit for reduction of the wheat surpluses to the weather and not to the A. A. A. and fail to point out the crop-insurance value that the A. A. A. payments had during the first drought years. We all know the payments were lifesavers. Where would Montana farmers and small towns have been in 1934 without the A. A. A. program?

"ACT NOT IN EFFECT IN 1938

"The 1936 Supreme Court decision left wheat farmers open to all the dangers of unlimited wheat production. In 1936 it seemed certain that the wheat surplus would recur with good weather and that prices would fall. These things have come to pass. They came to pass in 1938, not on account of any failure of the new farm act but because the new Farm Act of 1938—which I am glad to say was supported in Congress by the votes of all Members of the Montana delegation—had not had a chance to be effective for wheat. Let me repeat this point: The present farm program was not in effect for wheat in 1938. Most of the 1938 crop was in the ground long before the act was passed. For a demonstration of how the new act is taking hold for wheat, look at the seedings of winter wheat for harvest in 1939. Already winter-wheat farmers have reduced their seedings from a year ago by more than 10,000,000 acres. This is a sharper reduction than has ever been made by winter-wheat farmers in any single year previously. It indicates that wheat farmers, when they have the facts and when there is available an effective program, will cooperate in that program. The

winter-wheat farmers have shown what they can do. Now it is up to the spring-wheat farmers.

"The 10,000,000-acre cut in winter wheat indicates that the American wheat farmer is taking a realistic attitude toward the world situation as it is.

"In 1936 Secretary Wallace sent Chester Davis to Europe to find out what the United States could do about the problem of increased tariffs, quotas, and all the various restrictions on our export agricultural surplus trade which have characterized the extreme nationalism of the post-war years. Mr. Davis called on ministers of trade and agriculture in the principal importing countries of Europe to see just what chance there was for American farmers, including wheat farmers, to regain at least part of the markets they had lost. Chester Davis came back to the United States in the spring of 1936 with a pessimistic report. He found little to justify hope by American farmers that they could regain and hold their former export markets. The fears of Chester Davis in 1936 have been confirmed by subsequent experience. It is true that a year ago the United States exported 100,000,000 bushels of wheat because of a very favorable combination of circumstances, but this year we are having to take extraordinary measures to hold our share of the world wheat business.

"Last summer Secretary Wallace asked me to see again a number of the people visited by Mr. Davis in 1936. I came back to the United States and was forced to make about the same report that Chester Davis made in 1936. In every country in Europe where there is a square foot of land suitable for wheat you will find wheat growing upon it or farmers trying to grow wheat.

"GREATEST WHEAT CROP

"This past summer when I was abroad I attended an unofficial meeting of the international wheat committee. The committee met before the 1938 wheat harvest, which turned out to be the greatest in the world's history.

"Even then, however, the international committee saw trouble ahead for wheat farmers. Their thought seemed to be that there had to be international cooperation before there could be sound improvement of the world wheat situation, and they doubted that this international cooperation could come about right away. I came back to the United States and told Secretary Wallace that as far as I could find out every major wheat exporting country but ours was prepared to take governmental action to obtain a larger share of the world wheat market than they could expect without government action. That is why the United States today has had to take governmental measures to hold its fair share of the world wheat market. Secretary Wallace is hopeful—and I share his hope—that this 'fight-it-out period' is only temporary and that it is preliminary to an international ever-normal granary for wheat.

"SIGNIFICANT FACTS

"But whether temporary or not, the implication is the same. That implication is that the days of unlimited wheat production and unlimited wheat export from the United States are gone, and that wheat farmers must work out for themselves some program that they can live with and prosper under year after year. These are simple facts facing wheat farmers. They are facts of utmost significance to Montana. It is not a question of whether we like it or not, but what we are going to do about it. I believe the winter-wheat farmers have taken these hard facts into consideration in planting 10,000,000 less acres than they planted last year.

"The wheat farmers of the United States don't believe in scarcity. They believe in plenty. They believe with Secretary Wallace and Chester Davis that we should have an abundant ever-normal granary for wheat. But when the granary is full and running over, there is little use in production that cannot be moved into consumption. I don't see any alternative to some form of surplus control on the part of American wheat farmers, and I don't believe that the American wheat farmer sees any alternative either.

"The new A. A. A. wheat program is just about the best deal the American farmer has had in a good many years. You can look the world over and you won't find any country offering its wheat farmers as good a deal as the American wheat farmer is getting in the A. A. A. program.

"First of all, this program faces the situation we have in the world today. I have told you about the export situation. The market just isn't in sight there. I have told you about the ever-normal granary. This program is reasonable. It is realistic.

"The program conserves the soil. It recognizes that our soil is our heritage and that we must conserve it.

"This program, with crop insurance, guarantees a farmer some crop to sell every year, regadless of loss from weather.

"This program means some income to producers regardless of crop losses. With wheat to sell, and with conservation and parity payments, the Montana farmer can look forward this year to between 75 and 85 cents a bushel as a minimum on his production on his allotted acres. He can count on payments of around 27 cents a bushel on his normal yield even if his crop is a total failure.

"CONCRETE EXAMPLE

"Let us look at what this means in concrete terms for the farmers of Montana. Take, as an example, a farmer with an acreage allotment for 1938 of 100 acres and a normal yield of 10 bushels an acre or a total of 1,000 bushels. What does the 1939 A. A. A. program mean to this farmer?

"First of all, he can insure himself against crop failure through Federal crop insurance. He can be sure of having 750 bushels of wheat to sell next fall, no matter what happens to his crop after he seeds.

"Not only is he sure of at least three-fourths of his average production in actual wheat, but he is guaranteed, as a cooperator, substantial cash payments on his normal production for his cooperation in seeding within his acreage allotment. On that 1,000 bushels normal yield he will earn payments of $270.

"Suppose that the pressure of world surplus is still bearing down on wheat farmers next fall. He can borrow between 50 and 55 cents a bushel, and he still holds title to his wheat. On a thousand bushels this would be a cash return of between $500 and $550. With his payments, this totals about $800. He gets this for his cooperation in putting about 25 surplus acres to soil-conserving uses.

"In other words, this cooperating Montana farmer can be sure of at least 80 cents a bushel. He is apt to get more.

"Compare this with the fellow who stays out of the program and plants more than his allotment.

"He takes a chance on crop failure without insurance.

"He misses out on that $270 in payments, and he takes his chance of getting an income based on a price of 50 cents a bushel or less. Suppose he plants 25 more acres. At a price of 50 cents he would have $125 more as compared with around $300 for the man in the program.

"The main thing that wheat farmers are interested in is a guarantee of fair returns. The present act employs several measures to defend the returns of wheat farmers. As I have shown, these include production adjustment, the wheat loan, crop insurance, and the opportunity to use marketing quotas in certain circumstances, if two-thirds of the wheat farmers approve.

"This is a program that American farmers can build upon and use year after year. It lacks one important element. That is the element of a sure and simple method of financing. A tariff-equivalent tax something like the old processing tax has been advocated by this administration as a source of revenue for the program. With such a source of funds, farmers will be assured a decent income, regardless of wheat price.

"If funds from this or some other source were available year after year for parity payments, wheat growers would not be as dependent as they are now on the 60-cent wheat loan. With a wheat loan above the market, exports are likely to be restricted unless the loan is offset by an export subsidy. A system of supplementing growers' income with payments financed out of special taxes is almost certain to be more satisfactory in the long run than a system of pegging prices through loans that are above the market.

"Since 1933, $42,000,000 has been paid to Montana agriculture producers through the Federal agricultural program.

"'FARMERS' TARIFF'

"It used to be said that the old processing tax was the 'farmers' tariff.' Farmers were aware that when they were growing more wheat than could be consumed in this country, the 42-cent tariff on wheat was of no use whatever to them. The same is true today. What the wheat producers need is the kind of tariff protection that really protects, and the processing tax will do it.

"This program which I have just outlined to you gives a basis for the Montana wheat grower this year to look forward to a minimum of 75 or 80 cents a bushel on his allotted acreage, is positively making the tariff effective, and on the domestically consumed portion of the crop it is dollars-and-cents equality for agriculture. Yet this is the program which in the campaign last fall was vigorously attacked by the Republicans right and left and by others who were either ignorant or grossly misinformed as to the details of the program. As a matter of fact, among us Democrats, I may say that this program has the endorsement of the major farm organizations made up as they are of working farmers, regardless of parties or politics. This program has largely been worked out in a democratic way by the farm organizations, and it has been implemented and put into action by a great Secretary of Agriculture, by a friendly Democratic Congress, and by a President who has had a deeper, more fundamental interest in agriculture than any President since Abraham Lincoln. This program, bearing the endorsement of the farm organizations, was developed largely by the farmers themselves and, implemented by our party, is the program which was condemned in the campaign last fall as regimentation, as Government dictatorship, as 'selling the farmers down the river,' as betraying the American farmer, and so forth. It was called all sorts of names. Most of the charges that were made against it were positively dishonest and not within the rules of fair political combat. Since a great many farmers in the Corn Belt and in the Wheat Belt have been traditionally Republican since the Civil War, the Republican strategy has been to criticize, to make misstatements, to play on old prejudices, and to divide the farmers into warring factions among themselves, and to faintly suggest the possibilities of such unworkable procedures as a price-fixing and the two-price system. I believe that the kind of strategy which won the Republicans some Members of Congress in this recent election will react upon them. The facts are the Republicans have never had a farm program. They were responsible for the veto of the McNary-Haugen bill when it would have worked, and they have not now nor did they in the recent campaign propose any definite, concrete farm proposal. Mark my word—they are not going to offer any proposal in this coming session of Congress nor in the next session of Congress. They can't, because of the great conflict of interest between the eastern high-tariff monopolistic Republicans and the western Republicans of the type of William Allen White, of Kansas.

"TRADE AGREEMENTS

"I have dwelt at length upon the A. A. A. wheat program as an example of the New Deal's interest in agriculture.

"Another specific phase of what is being done by the Federal Government for agriculture is the trade-agreements program. In that connection, I want to mention especially the trade agreement with Great Britain, and to point out that in this agreement the previous 6-cent preference which Canadian and other Empire-grown wheat received on British markets has been removed. This is potentially of large benefit to United States wheat producers because it means that when conditions are normal the wheat of the United States can compete on the same basis as that from the Dominion and does not have to compete against the 6-cent preferential.

"So we have in the wheat program of this administration the basis for enabling the farm families of Montana in the areas that are fitted for wheat production to stay there and farm. That is the objective of all of the new farm programs which have been sponsored by the farm people, furthered by President Roosevelt and Henry Wallace, and enacted by the Democratic majority in Congress. These programs look to a stable agriculture in all parts of the country. I need not remind you of the financial help that has been given to bring this about. The aid given in financing and refinancing mortgages and annual production credit and cooperative credit by the Farm Credit Administration has enabled many a Montana farm family to stay on the land, supporting itself, and buying in the stores of Montana merchants. Many other families who had exhausted all the usual sources of credit based upon security have been financed through periods of distress that were no fault of their own and saved as self-sufficing citizens of Montana by the rehabilitation loans of the Farm Security Administration.

"REHABILITATION LOAN

"To bring the importance of these things home to those of you who don't live on the land, let me give you the history of a family in one of our Montana counties. The family, consisting of man and wife in early middle age and three children, was about to lose its farm in 1934, and all machinery and livestock through foreclosure of mortgages or forfeiture under sales contracts. The members of that family were about to be sent out from the farm the man's father had homesteaded—and sent out stripped even of the capital goods to make a new start. They were about to disappear from the market as customers for anything but the necessities of life bought from a relief allowance.

"They made application to the Farm Security Administration for assistance. They got it. The county farm debt adjustment committee brought the man and his creditors together and adjusted his debts until they were at the point where he could carry and pay them. Then the Farm Security supervisors sat down with the man and his wife and worked out a farm-and-home plan. The plan required more livestock and machinery. To carry it through and to pay off the adjusted debts, a loan was made. So this man was financed through his difficulties, and there the family has stayed, producing and trading in the community. Since July 1935, 5,900 farm rehabilitation loans amounting to $5,700,000 have been made in Montana.

"CONSERVE AND USE WATER

"Financing is not the only problem of agricultural stability and security. In our part of the continent agriculture and all the rest of our economy depend upon the conservation and wise use of water. As in the other phases of agricultural development, this administration has given special attention to the water problems of Montana. The resources, small and large, are being developed in a rational way through a variety of Federal programs. Along with water development has gone grass development. With the help of Federal programs of the Roosevelt administration, the people of Montana have made a great deal of progress in consolidating their agricultural resources together, into a foundation for a stable agriculture which means a stable general economy for the State.

"We realize, of course, that in the areas irrigated by the waters impounded by extensive structures and thus with a high capital charge against the land we must have a crop of high value in order to meet the charges. Thus, sugar beets have played and will continue to play an important part in the agriculture of Montana. But our agricultural stability must be worked out in ways consistent with maintaining stability in the agriculture of other parts of the Nation. The sugar problem centers about two facts—on the continent we don't produce as much sugar as we consume; and our island territories and possessions and the rich island of Cuba just offshore supply part of our sugar requirements. You in this audience who are familiar with the sugar industry will remember that world forces in 1934 drove the price to a point that caused universal distress in the industry. The result was the Sugar Act of 1934—an act sought by farmers. Under it and its successor, the Sugar Act of 1937, the sugar producers have had advantages that compare favorably with those enjoyed by any other group of producers affected by the farm programs. They have run their acreage to the maximum allowed under the act of 1937. Now comes dissatisfaction among those who would like to put new acreage into sugar. It is impossible under the present act. The term of the act expires in 1940 and a new act will then be considered. There will be a conflict among the interests of our island dependencies and territories, the interests of the cane and beet growers, the refiners and the processors, and the interests of the hog, wheat, and rice producers in the United States who are able to sell more of their products to Cuba as this country buys more of Cuba's sugar. As Montanans, we hope, and I hope, that in the revision of the terms of the act that is to take place there will be room for expansion of the Montana sugar-beet industry. As Americans, we want to see justice done as nearly as may be to all the interests involved.

"That is the aim of our party throughout the range of action taken in behalf of social betterment during the crowded 6 years of the Roosevelt administration. We have seen established a system of social security with insurance against the hazards of unemployment and old age. The latter problem, one of the most pressing before our society today, has been intensified by the fact that many who in late middle age lost all their resources in the Hoover depression now face want in their old age after a lifetime of toil and thrift. The Democratic Party is committed to develop the system of social security to the maximum extent possible in order to help citizens cope with this distressing problem.

"COLLECTIVE BARGAINING

"We have seen established the principle of collective bargaining between employees and employers. The leaders of Montana labor whom I see here in this audience can speak eloquently of what a boon this has been to the progress of the labor movement.

"In short, we have seen on many fronts action to improve and stabilize the condition of labor, of industry, and of agriculture. The way is being cleared for cooperation among the people in all three great divisions of our economy. Montana Democrats have played a leading part in the State and Federal governmental work of these stirring years. In our statehouse carrying on the affairs of a commonwealth effectively and efficiently we are proud to have a Democratic Governor. Our solidly Democratic delegation in the first three Congresses of the Roosevelt administration has on the whole been steadfastly for the program of the great liberal movement that was fathered by the Democratic Party of the 1930's under the leadership of President Roosevelt.

"To the executive branch of the Federal Government, the Montana democracy has contributed the services of one of the most acute minds and effective administrative talents that has served agriculture. From 1924 on, Chester Davis was in the thick of the fight for justice to agriculture. In the early days of the A. A. A. he bore an incredibly heavy load, starting the commodity programs, carrying them through the drouth years, directing the way to the conservation programs after the 1936 Supreme Court decision. Along with Secretary Wallace, Chester Davis will live in history as leader among the small group of determined men whose thought forged out the farm program and whose management made it work. In his present work, as a member of the Board of Governors of the Federal Reserve System, the influence of Chester Davis is essentially the democratic influence of a man whose interest primarily is in the farmer and the small home owners who make up the bulk of our citizens both in Montana and in the Nation as a whole.

"INSPIRED BY WALSH

"Also in the executive branch is a Montanan who has brought good common sense to bear upon one of the important problems of Government today—selecting and training Government employees. As chairman of the Civil Service Commission, Harry Mitchell has performed services that will have lasting effect.

"These men and this group of Democratic leaders assembled here have been inspired in their public work by the example and the memory of our own great champion of democracy—Senator T. J. Walsh. Now that we can look back upon his career from the vantage point of the years, we see the judgment forming that he was one of the great men of the United States for a span of more than 3 decades—from 1912 to his untimely death in 1933. I have been told by men who were in the inner councils of the Wilson administration that Woodrow Wilson held Senator Walsh's abilities and integrity in the very highest esteem.

"Walsh's liberalism was strictly in the Jacksonian tradition. It sprang from the experience of facing handicaps in youth, overcoming them by sheer ability and tenacity, and rising to the top in his profession. Through this experience he acquired an insight into a sympathy with the problems of the individual that shaped his liberal individual and political philosophy. He left a tradition and an influence that will not be forgotten in Montana.

"I hope that soon, as the people of Montana realize the national significance of Senator Walsh's career and personality, this living generation will perpetuate his memory. I venture to say it will not be long before we will be entering our subscriptions to a fund for a statue of Senator Walsh or some other appropriate memorial.

"TWO-PARTY SYSTEM

"Democracy in this country must be carried on by the two-party system. There must be vigorous combats between the two parties. There must be definite programs offered by the two parties. Now, the Republican Party, as we all know, grew step by step in the last 50 years into a party of special privilege and developed a conservative let-alone point of view. Many great changes during this period were taking place within our country and within the world. Machines were substituting for man labor. The free land was disappearing. The power of wealth was concentrating in New York City. The Republican leaders seemed to be either unconscious of the effect of these changes on the great mass of farmers, of working people, and of ordinary citizens. On the other hand, the revolt of Theodore Roosevelt in 1912 showed that a liberal element within that party was dissatisfied with this backward-looking national leadership. Woodrow Wilson gave a great impetus to the true Jeffersonian principles of democracy and drew the allegiance of the growing independent vote in this country, but the great rebirth of democracy, in my judgment, came about with the election in 1932 and the leadership of Franklin D. Roosevelt. These great

changes are bringing about a rebirth of democracy within the United States. The battle is on—and I believe a finer and more democratic civilization lies ahead, but it is to be gained only at the price of struggle and political warfare. The strategy of our opposition is to divide and to stir up strife and to offer no program. If we are to reach the goals outlined by Woodrow Wilson, we must remember that a house divided against itself cannot stand—we must have unity within our ranks, we must formulate our program through the democratic processes, and we must not allow personalities to disrupt or divide us.

"Harmony and unity are needed in our national life as well as in the States in these days of troubled world conditions. The rise of dictatorships has presented a threat to democracy that no nation respecting personal liberty can ignore. The effort to extend the influence of dictatorships to this hemisphere cannot be disregarded. In these difficult times we can be thankful for the firm hand and the sane foreign policy of President Roosevelt. The strongest voice in the world today for the maintenance of popular government and democratic institutions is the voice of Franklin D. Roosevelt. On this Jackson Day we may well be grateful that under his leadership we have kept the flag of the United States honored and respected in a world torn by strife and discord. We may well be grateful that under his leadership we have contributed to world peace, saved democracy here in America."

The Hitler Speech

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

ARTICLE BY DOROTHY THOMPSON

Mr. McKELLAR. Mr. President, I read Herr Hitler's address in a newspaper. I have before me an article written by Miss Dorothy Thompson, as it appears in this morning's Washington Post, entitled "The Hitler Speech." I think Miss Thompson's analysis of Herr Hitler's speech is one of the finest analyses I have ever read. I believe Senators will want to have Miss Thompson's article where they can readily refer to it. Therefore, I ask unanimous consent that Miss Thompson's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of February 1, 1939]

ON THE RECORD

(By Dorothy Thompson)

THE HITLER SPEECH

Whenever Hitler moderates his voice and delivers a speech in a tone to which civilized ears are accustomed, the world breathes a sigh of relief and is inclined to praise him.

Thus Mr. Chamberlain finds that the Monday speech was not one calculated to throw the world into war, and Senator KEY PITTMAN suggests that if Hitler's future actions are as tolerant as his Reichstag speech there will be no fear of any immediate war.

As a matter of fact, Hitler never delivered a more ominous speech or one more cunningly calculated to befuddle his opponents and create dissension in democracies.

The speech boils down to a declaration of intention to reapportion the distribution of the world's weath among nations. He declared his complete solidarity with Italy, and, in effect, handed Mussolini a blank check.

He announced a more intensive trade and propaganda war on the democracies.

He appealed to the masses of the world to unite in a common front against their universal enemy, the Jews, whom he managed at one and the same time to associate with international finance, capitalism, and with bolshevism.

And his argument was that any attempt to halt the inevitable expansion of Germany, Italy, and Japan, which he clearly associated ideologically with fascism and national socialism, might precipitate a war, and that in that case the defenders would be the aggressors and bear the burden of the war guilt!

Hitler's intention is to put anybody who opposes the extension of fascism and the aggrandizement of the Fascist nations in the position of being a warmongerer. He, therefore, plays upon the overwhelming desire for peace of civilized people and exploits one of the noblest yearnings of mankind for the uses of a completely militarized social order.

Hitler's whole program follows a pattern. He is now pursuing on a world scale exactly the political technique with which he conquered Germany.

Recognizing that there is an aggressive instinct in man, he seeks to deflect that instinct in a direction where it will do him no possible harm.

Just as inside Germany he managed to persuade the German people that the source of all their troubles was the 1 percent of the Jewish population, so he seeks to convince Great Britain, for instance, or France, that they are not endangered by 10,000 German airplanes, by the 19 airports, and the 5 submarine bases that the Germans have built in Nationalist Spain, but that their real enemies are within their own gates and are Jewish.

He deflects attention from himself, from Mussolini, and from the great aggressive military machine of Japan, to the 15,000,000 people of many nationalities scattered throughout the earth, picturing them as part of some gigantic plot whose aim is world bolshevism.

And with this technique he hopes to create civil strife in the democracies, to confuse issues, to awaken distrust, and thus to weaken the nations at whose expense he intends to profit.

The mind of Adolf Hitler is a peculiar thing. It would be psychologically interesting to know whether he really believes what he says and is himself a victim of huge obsessions, or whether the fantastic distortions of history and of facts which he voices are coldly and cunningly devised for a precise effect. His speech on Monday contained some patent, but mostly irrelevant, truths and some gigantic lies.

This column certainly would not quarrel with his ironic description of the Versailles policy toward Germany—with the idiocy of fighting a war for trade and then exacting huge reparations which could only be paid by an artificial acceleration of German exports. But the Versailles policy is all water under bridges and has no pertinence to the present state of affairs. When Hitler comes to more recent history his descriptions are breath taking in their monstrous misrepresentation.

One need only take his description of the conquest of Austria, which he presents as an act of self-determination. He describes Chancellor Schuschnigg's plebescite as the "destruction of the legal basis of the national right of self-determination" of Austrian Germans.

He makes no reference to his own plebiscite, conducted in Austria under an army of occupation, by which he destroyed the legal existence of Austria.

Defending the right of self-determination, he makes no reference to the million Czechs who have been forced under German rule in the last few months by a military coup d'etat.

His description of German trade policies, as compared with those of states "with an international capitalistic outlook," is way afoul of the facts. He accuses these capitalistic states of juggling their currencies, making no reference to the fact that there are at present at least 11 different forms of reichsmark with 11 different values, all of them arbitrarily fixed.

All through the speech there is evidence of the paranoiac persecution mania under which Hitler, as the apotheosis of Germany, continually suffers. Whatever ills Germany endures are exclusively the fault of the rest of the world.

No act of consideration or kindness or even of reason has ever been shown for Germany since 1914.

He refers to the German children who died of hunger and undernourishment at the close of the war. He makes no reference to the fact that American Quakers, and others, using the voluntary gifts of hundreds of thousands of humanitarian Americans, fed a million German children in the very period to which he refers.

He scoffs at the democracies' solicitude for persecuted Jews, deriding us for not immediately moving to our own shores several hundred thousand German-speaking German citizens.

He makes no mention of the fact that Mr. George Rublee is in Berlin at this moment trying to negotiate some way in which the people of the democracies at considerable cost to themselves can save these human lives.

Nor does he mention the fact that the same American Quakers who once fed German children are feeding destitute Jewish German citizens inside Germany at this moment.

While claiming that he does not want to intervene in any way in American affairs, he suggests that it is our business radically to reform our immigration laws in order to relieve him of a self-made problem, and if we do not do so, we are inhumanitarian.

He denounces bolshevism. But—and this is very significant—he does not say a word about Russia. One can only gather from his speech that the Bolshevik countries today are the democracies and that communism and democracy are one and the same thing.

At the same time he attacks bourgeois society, and his speech presages the establishment of complete military communism in Germany. He announces that trade, industry, and finance will be even more closely concentrated than they are at present under the German state, and that the Reichsbank is to be transformed into a purely German bank of issue.

"If need be we will place all the production resources of our new national Socialist community at the disposal of its leaders" can only mean the complete socialization of all the means of production.

His statements regarding the treatment of religion are not true. His categorical remark that "national socialism has neither interfered with the doctrinal teaching nor with the creed of any

denomination" is not in agreement with the expressed convictions of the Pope nor with the confessional synod of the Evangelical Church, nor with a most remarkable document issued by the chaplains of the German Army some months ago.

There is a very serious doctrinal conflict between national socialism and Christianity on the racial question, on marriage, and on the teaching of youth.

Again he completely distorts the reasons for the S. A. purge of 1934.

He asserts that Captain Roehm and other Nazi Party leaders were shot because they were found guilty of pederasty and sexual offenses against children. Captain Roehm was a notorious pederast. He was a notorious pederast when Mr. Hitler made him head of the S. A. and the organizer of German youth.

If Hitler did not know that, then he was the most unknowledgeable person in Germany.

Roehm was shot for political reasons. And it is for political and religious reasons that out of 18,000 Protestant pastors 1,300 have been under prison or police arrest since 1934, and that more than 8,000 Catholic religious leaders have been smeared with charges of immorality, although even in Nazi courts only 49 have ever been convicted.

It is not true that Germany refrains from any intervention in American affairs.

German agents have organized groups in the United States and the Nazi Party is sending masses of anti-Semitic propaganda into this country aimed at stirring up internal dissension.

Nazi Germany maintains offices for the purpose of persuading German-Americans that their first loyalty is to Germany and not to this country.

The answer to Hitler's charges of gigantic Jewish propaganda is in the morning papers. The New York Times devotes two full pages to the official German translation of the text of Hitler's speech. The Herald Tribune devotes an entire page to it. One of the two great radio networks of this country carried Hitler's speech in its entirety. Do the German newspapers carry uncensored texts of President Roosevelt's speeches? Do the German radio stations transmit them to the German people, uncensored, over the air?

They do not.

It is noteworthy that the speech makes no reference whatsoever to the recently concluded nonaggression agreement with the French, while giving free hand to Mussolini.

One can only conclude that if Mussolini moves against Tunisia Hitler will give him aid, either by harassing Britain or, in the manner of Italian and German intervention in Spain, will agree to nonintervention while sending arms and technical assistants to Mussolini.

Beware of the Greeks bearing gifts. Beware of Adolf Hitler preaching peace.

Marketing of Agricultural Commodities

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

LETTER FROM OSCAR B. HORSFORD, OF WOLF POINT, MONT.

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mr. Oscar B. Horsford, a dirt farmer of Montana, who discusses the farm problem.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WOLF POINT, MONT., *January 25, 1939.*

Senator ELLISON D. SMITH,
Chairman, Agriculture Committee of the Senate,
Washington, D. C.

DEAR SENATOR: I have read and tried to analyze the cost-of-production bill, known as S. 570. I am very much opposed to certain things in the bill. Under the provisions of this bill I would be compelled to dispose of a certain percent of my crop at the world's price less all handling charges, transportation, etc., provided there was a surplus. And it seems very likely that we will continue to have a surplus problem to deal with. The thing that I want to get over to your committee is this: Give me a marketing quota and let me receive the cost-of-production or parity fair exchange value, or whatever one wishes to call it for that percent of my average total production. That part that is surplus I would like to keep on my farm, in the case of wheat, for the lean years that are sure to come. I would like to have the opportunity to fill my grain bins up in the good-crop years; then when drought, storms, hoppers and other insects come I would have my carry-over or surplus to sell here in our home market at a fair-exchange price.

I am not at all interested in raising farm crops and having them dumped in foreign markets below cost of production. I am strongly opposed to any policy of that kind. That kind of policy does not tie in with the Agricultural Soil Conservation Act. Unless we can get the fair-exchange value for our products in the foreign markets we would be wise to conserve our soil, save the wear and tear on our machinery, labor, etc., raise that amount that can be consumed here in our home markets, keep the surplus on our farms for the lean years.

I certainly would like to plead with you and your committee to change the bill so that we would not be compelled to deliver the surplus, as we would have to under the provisions of Senate bill 570. Beginning on page 4, line 22, and ending on page 5, line 6, is the stinger in this bill. If you will analyze this, you will see that I would receive on delivery cost of production only on such percentage of each delivery of such agricultural products as is estimated for domestic consumption. I certainly would like to have the privilege of keeping the percentage of surplus on my farm. I certainly do not want to deplete my soil, wear out my machinery, and labor to raise produce for foreign markets below cost. It looks like we should be more intelligent than to do a thing that looks so foolish.

I am not so keen about this acreage control but I do think that so far as wheat is concerned that if we had marketing bushelage quotas and then established the cost of production or fair exchange value, parity price, for that amount consumed in our domestic markets it would be a far better program than anything we have had yet.

I have farmed here in Montana for 30 years. I know that we have certain hazards here in the Northwest that other areas are not subjected to. We must build up our reserves in the good years. The wise farmer or rancher builds up his feed reserves in favorable years. We must do that in the case of wheat. Here in Montana we raise the high protein type of wheat. Over a period of years there has never been a surplus of this type of wheat. It will mean only one thing if we are not allowed to hold this wheat when there is a surplus. That is, when those lean years come then the farmer has nothing to sell and then he becomes the object of relief, seed loans, doles, etc. We are all sick and tired of such. We would like to be able to pay our debts and live like real American citizens are entitled to live.

The two-price system is all wrong unless the minimum price of either is the fair exchange value. It just doesn't fit in with our soil-conserving program.

I take this means of conveying to the Agricultural Committee of the Senate my views, and I know that I am speaking the sentiments of a large majority of farmers in Montana. Thanking you, I am

Yours truly,

OSCAR B. HORSFORD.

Silver Purchases

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by myself on the subject of the silver-purchase program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FURTHER EVIDENCE OF PUBLIC DESIRE FOR REPEAL OF THE SILVER PROGRAM

On January 19 and 23 the daily CONGRESSIONAL RECORD carried numerous excerpts from letters which, unsolicited, have been written in support of Senate Joint Resolution No. 1, to investigate the silver program, and the Townsend bill (S. 785) to repeal the Silver Purchase Act and cease acquisition of silver.

Numerous additional letters from many parts of the country have since been received including support for the Townsend bill from the western silver-producing district and from Democratic circles.

Herewith are given some brief excerpts from some of the additional letters.

From a resident of a silver-producing State, Superior, Ariz.:

"This whole 'gold-silver folly' of Government has lost Arizona money * * *. Silver blew up in smoke in a world panic in 1936 after our fool Treasury had bought over $650,000,000 of foreign silver and the foreign world had mobilized 4,000,000,000 ounces—about $2,500,000,000 worth to swamp them with * * *.

"Mr. TOWNSEND's bill to wind up this colossal folly should pass."

From another letter from the same correspondent:

"We are here a silver-mining district in part but we approve your silver bill."

From a Tampa, Fla., lawyer:

"I cut this out of the [New York] Sun. It is a daisy."

The clipping referred to is an editorial published on January 19, 1939, reading as follows:

"In a resolution bristling with 52 whereases, Senator TOWNSEND, of Delaware, calls for the appointment of a special joint committee to investigate the silver problem. In one whereas or another the Senator exposes nearly every folly of the silver crowd, but it is the twenty-second which will wound the most deeply. The twenty-second whereas reads:

" 'Whereas the Department of Labor statistics show that the normal importance of silver compares with that of grape jelly, lemons, wire nails, packers' prime tallow, or anhydrous ammonia.'

"If comparisons were ever odious, these must be odius to advocates of such a folly as the Silver Purchase Act. Their only effective retort would be to introduce a bill providing that Uncle Sam should buy at a fixed price every jar of grape jelly put up in the United States. That would establish their disinterestedness."

From a New York Democrat:

"Nonpolitical voters who can see straight fervently wish you success on your silver bill. I voted for Roosevelt twice and still think the Silver Purchase Act a disgustingly stupid way of wasting money with no net good."

From a Chicago printer and lithographer:

"I have read with great interest your reply to inquiries concerning the silver-purchase repeal. I think your position is 100 percent correct in every particular, and I want to congratulate you upon its definiteness."

From a letter from San Antonio, Tex.:

"Senate Joint Resolution No. 1 heads the list numerically and is in every way as important as its position indicates. Evidence of my humble approval consists of letters to my State's Senators and to Senators WAGNER and GLASS, all of which are intended to endorse your proposal."

From a Glens Falls, N. Y., insurance company official:

"I hope that this resolution may be passed and that we may cease the unwarranted purchase of foreign silver. I don't believe that the present act is a proper one and feel that a very careful study should be made of the situation, which can be done by this joint committee."

From an Ansonia, Conn., resident:

"I wish to register my opposition to the continuance of the Silver Purchase Act, even if it is continued for the purchase of domestic silver only. It is perfect nonsense, and the sooner it is stopped the better.

"This is my opinion, although I am interested in copper and silver mining stocks, foreign and domestic."

From a Massachusetts mining engineer:

"As a mining engineer I am more or less familiar with the economics of silver and have been very much shocked at Mr. Roosevelt's entire silver policy over the last several years. I believe that this whole matter should be investigated according to Senator TOWNSEND's proposal, and hope that it will be possible for you to provide for a thorough and nonpartisan investigation of this whole subject, which is nothing less, in my opinion, than a national disgrace.

"Now that Mexico has stolen our oil wells and threatened our mines and other industries, it is particularly nauseating that we should continue to purchase Mexican silver. It can only be regarded as a direct encouragement of communistic activities of Mexico by Mr. Roosevelt."

From a resident of Clearwater Beach, Fla.:

"I should like to express my hearty approval of your vitally important Senate Joint Resolution No. 1, re silver, etc. It is a constructive measure that would undoubtedly receive universal support, aside from the small minority interested in silver, if the public once understood the situation. I earnestly hope your resolution will be adopted."

From a Chicago steel company:

"We are decidedly of the opinion that this silver program is not at all for the best interests of the country and ought to be substantially changed, and we hope you will lend your influence to this end."

From an Upper Montclair, N. J., resident:

"I wish to heartily endorse Senate Joint Resolution No. 1, providing for a committee from the Senate and House to investigate the silver program.

"Of all the idiotic wastes of American taxpayers' hard-earned dollars, the present silver-purchase program undoubtedly stands at the top. It certainly deserves top rating amongst the present so-called economic and political panaceas, as over 80 percent of the silver is purchased from abroad, and the amount purchased in this country can only possibly benefit a handful of individuals.

"Congress and the country should certainly have the facts which such an investigation could produce, so that intelligent consideration can be given to the much-needed questions of revising or abandoning our present silver-purchase policy."

From a Boston, Mass., physician:

"For a long time I have been horrified at the expenditure of the Government for the purchase of silver. It looks on the outside worse than the Teapot Dome. I am very glad, therefore, to hear that you have proposed a resolution providing for a joint committee to 'investigate the silver program, and for other purposes,' and that your resolution provides for the suspension of all purchases of foreign silver pending the submission of recommendations by the joint committee. I have written to my Senators asking them to use their influence in favor of your resolution."

From a Cleveland, Ohio, economist:

"The enclosed are copies of letters sent to Senators WAGNER and GLASS in support of your resolution to investigate the silver program.

"You are doing an important public service in promoting this study of a dangerous situation. Thoughtful citizens will be grateful."

From a Yale University economics professor:

"While economists differ with respect to many phases of our monetary problem, I do not know of a single one who agrees that our recent silver policy is sound and in the public interest."

From a Rochester, N. Y., professor:

"The early cessation of the silver purchases is highly desirable, and I hope that this resolution and legislation providing for the repeal of the Silver Purchase Act of 1934 will receive favorable action by the Senate Banking and Currency Committee."

From a New York businessman:

"I notice that you advocate the stopping of the Government's policy of buying foreign silver, so as to stop sending good money or good merchandise abroad for the benefit of foreign nations and to the detriment of American citizens.

"I fully agree with you; ever since that crazy silver buying program was started I have said that it was just one more evidence of the complete ignorance of the administration concerning international monetary affairs and their effect on commodity values such as cotton, and wheat, and similar products with an international market, and prices fixed by an international market, allowing, of course, for artificial restrictions affecting supply and demand."

From an eminent Chicago economist:

"As a student of money and banking, I wish to congratulate you on the resolution with regard to silver purchases which you have introduced in the Senate on January 4, 1939. The foolishness and futility of our silver policy since 1933 are well pointed out in your resolution; they call for complete and immediate repeal of the Silver Purchase Act."

From a letter from Niagara Falls, N. Y.:

"It appears absolutely sound to me to provide Congress with the facts that should be in its possession if it is to give intelligent consideration to the question of continuing, revising, or abandoning our present silver policy. This policy appears to be economically unsound and has been repeatedly condemned by impartial economists, and I, therefore, wish to commend the passage of the resolution."

From a Chicago businessman:

"This letter is to inform you that I am aware of your resolution which provides for a joint committee of 10 members, 5 from the Senate and 5 from the House, to investigate the silver program, and for other purposes.

"As I am very much in favor of the enactment of this resolution and the action which it will make possible, I have addressed letters to the Senators from Illinois, as well as to Senator WAGNER and Senator CARTER GLASS.

"You have support of thinking citizens everywhere in this intelligent action."

From a letter from Bryn Mawr, Pa.:

"I urge upon you the importance of adopting Joint Resolution No. 1, introduced by you, 'to investigate the silver program, and for other purposes,' and to suspend all purchases of foreign silver until the joint committee reports. It is a public scandal the way the resources of this country have been wasted in purchase of millions of dollars' worth of silver to the disadvantage of this country and also of other countries."

From a Bethlehem, Pa., oil products company:

"I am intensely opposed, and always have been, to the present silver program of the present administration. In fact, I do not believe that 10 percent of the people of the United States outside of those directly benefiting are in favor of this program, excluding unreasoning partisans, pro and con.

"I hope common sense will pervade the Members of Congress and that they will repeal this most unfortunate law."

From a Philadelphia manufacturer of floor coverings:

"We greatly appreciate the initiative and leadership which you are giving to this most important move."

From a well-known mining engineer:

"I appreciate very much your sending me a copy of your joint resolution on the silver situation, and I sincerely hope that it will be adopted and that your investigation may soon get under way.

"The preamble to your resolution is very comprehensive and everything in it is sound and factual and shows how utterly indefensible is our whole silver policy, and I sincerely trust that you may be successful in having it corrected."

From a Detroit lawyer:

"I am enclosing a copy of a letter that I have written to Senators CARTER GLASS, ROBERT F. WAGNER, PRENTISS M. BROWN, and ARTHUR H. VANDENBERG urging them to support Senate Joint Resolution No. 1 introduced by you.

"I have always been at a complete loss to understand why the United States Government should pay artificially high prices for silver domestically produced, to say nothing of foreign silver. There must be many who share my opinions and certainly the least that could be done would be to have an impartial investigation and report on the entire matter."

From a Dubuque, Iowa, insurance company:

"We are informed that Senate Joint Resolution No. 1 has been introduced for the purpose of appointing a joint committee to investigate the silver-purchase program.

"We believe that our Government should not be dissipating its credit for the purpose of maintaining a world-wide silver market, and therefore should enact legislation to bring that policy to an end. Naturally the first step is to have the matter investigated by our Congressmen, and we trust that you will further that purpose by appropriate legislation."

From a letter from New Haven, Conn.:

"It is very gratifying that a proposal has been made to investigate the silver question, and I hope you will pass your resolution to a successful conclusion.

"My hearty congratulations."

From a Chattanooga, Tenn., university professor:

"I want to congratulate you upon your introduction of a resolution to investigate the silver policy of the Government, which I think is a matter of the utmost importance, and I am sending you copies of letters which I have written to Hon. ROBERT F. WAGNER and Hon. CARTER GLASS."

From a Montclair, N. J., resident:

"Permit me to urge your support of all legislation proposed in the present Congress for curbing the purchase of silver by the United States Treasury.

"It seems to me the entire silver-purchase program which has been in effect under the Roosevelt administration is primarily a subsidy to the silver-mining interests, completely unjustified, and a very burdensome load on our national finances.

"I hope you agree with this point of view and that you will exert yourself in every way possible accordingly."

A Dallas, Tex., broker states that the silver policy is not a party question. His letter reads:

"May I congratulate you on having brought before the Senate your joint resolution providing for the appointment of a joint committee to investigate the whole silver program of the Government and for suspension of purchases of foreign silver until such committee has reported on the matter?

"In my judgment, the silver-purchase policy of the Government for some years has been mad if not vicious, and I hope sincerely that your joint resolution will be adopted.

"As I see it, the silver policy is not a party question, and an impartial study of it should be supported regardless of one's party affiliation."

One of my constituents writes:

"I congratulate you on the introduction of the bill curbing further silver purchases by the Government."

From Florida comes the following support:

"Please find enclosed copies of letters I am sending under current date to Senators WAGNER and GLASS urging their support of your resolution to investigate the silver policies of the Government.

"I would respectfully urge upon you the necessity of supporting your resolution with all the determination and cooperation you can command, feeling assured that you will have in this the unanimous support of all who have given the subject any thought."

From Rye, N. Y., a plea to stop the silver waste:

"This is to express my appreciation of the action you have taken in introducing a bill to revoke the President's authority to revalue silver and to continue purchases of that metal.

"For years I have felt that the Silver Purchase Act was wrong. It did not accomplish the result which it was said was the purpose of the bill. Furthermore, and especially what I object to, is the perfectly foolish idea of the Government buying silver that it did not want at a higher price than the market largely for the benefit of certain States which are producing silver.

"I hope you will be successful in having the bill passed to stop this waste of the taxpayer's money."

From California a letter reading:

"In view of the fallacies and dangers of our present silver manipulations, may I ask that you give your support to Senate Resolution No. 1."

From Ottawa, Ill., an interesting communication in which the writer calculates that our silver stock, loaded in 10-ton trucks, would stretch 161.8 miles.

"I am gratified to note you have introduced in the Senate a bill to stop the purchase of silver by the Federal Treasury. Such a course will constitute a major operation, but it is essential to the well-being of the Nation. These silver purchases are a dangerous brain tumor which must be removed sooner or later. When the Treasury stops buying silver it will be worth no more than tin, but the longer we continue the present policy the greater will be the disaster when it comes.

"Silver is no longer sought after by the rich and well-to-do as tableware and cutlery. It has been almost entirely displaced for these purposes by porcelain, glass, stainless steel, and other metals and alloys. About the only special use we now have for silver is to make nitrate of silver for use in photography and the making of films. Silver is largely a byproduct of other mining operations, and we can produce enough for current needs in this way without subsidizing its production.

"I suppose the figure you give as to the amount of silver the Government now has on its hands is based on the troy ounce, which is about one-tenth heavier than the avoirdupois ounce. After reducing the 2,524,000,000 ounces to tons avoirdupois, loading it onto trucks, 10 tons to a truck, and stringing it along on the hard road 100 feet apart, it would reach a distance of 161.8 miles. Some silver, is it not?

"Perhaps the present administration might make use of some of this silver in the construction of its 'low cost' houses. Such houses would be fire and lightning proof, and, if made heavy enough, would be as near cyclone, earthquake, and bomb proof as we could expect to have."

Neutrality

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

RADIO ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, DECEMBER 22, 1938

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me on the occasion of the inauguration of the New England Town Meeting of the Air Forum, December 22, 1938, on the subject of Neutrality.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the few moments allotted me I can do no more than set forth a few basic principles touching upon the able discussion you have heard this evening concerning the subject of American neutrality.

First, I do not believe that we should undertake to intervene in political disputes raging in other parts of the world. There is no duty, moral or legal, which imposes upon our Nation responsibility for policing international areas or gratuitously attempting to settle international disputes. The American people have learned from bitter experience, both in actual warfare abroad and from the heroic efforts our Nation has made from time to time since the World War to preserve peace, that we can expect nothing but loss of life, money, and prestige from interfering with the situation developing out of the rivalries and animosities which continually plague the nations of Europe and now extend to the Orient. In my opinion, our national welfare demands and our people insist that in international relations we follow the wise Washingtonian admonition to avoid entangling associations abroad—in brief, to mind our own business.

Secondly, our neutrality must be wholehearted, clearly expressed, and emphatic. I mean by this that we should serve notice by law on foreigners and citizens alike that we in America consider the preservation of peace paramount to the economic interests of "follow the flag" diplomats representing American corporate business engaged in exploiting resources or markets in foreign countries.

Thirdly, our neutrality laws should permit of no discretion in the Executive or any other official to commit this Nation to any policy or course of action favorable or unfavorable to any belligerent. Neither should a sound neutrality law enable the Executive to refuse to recognize the existence of an actual state of war between nations. Such a law should specify in detail and with exactitude the precise duty of this Government in time of war to remain strictly neutral and declare illegal the absurd distinctions between de jure and de facto warfare which have crept into some recent interpretations of international law. Neutrality must be mandatory and not permissive.

Fourthly, Congress should enact a provision suspending all trade and commerce with belligerents at the inception and during the continuance of hostilities. Some who have "cash and carry" commerce with belligerents enabling any nation at war to purchase, pay for, and carry away at their own risk munitions, materials, and supplies may deem this rule harsh in operation and harmful to American business. But such a provision would not only serve to shorten the duration of war but would prevent the development of enmity and bad feelings that inevitably arise out of the permissive policy. Supplying munitions and implements of war to one of the belligerents and refusing them to another because of the impossibility of delivery resulting from effective blockade led directly to our involvement in the World War. Profits from trade with warring nations cannot justify the ever-present danger they entail of involvement in war. Our primary concern at all times must be the lives and welfare of our youth. The prevention by every human means of any repetition of the sorrows and sacrifices of war transcends questions of dollars and profits for munition makers and war profiteers.

Fifthly, in view of the disturbed conditions, wars, threatened wars, and dissensions among nations which exist today and which may very conceivably break out tomorrow into another international slaughter, it is my studied conviction that we should accompany this policy of strict neutrality with an equally decisive

program of self-defense. Such a program should not be beyond our needs, not tied to any "pump priming" relief proposals, neither hysterical nor exaggerated. It should be broad, comprehensive, and sweeping, sufficient to meet any and all contingencies likely to arise from the threatening international scene.

Side by side with strict and unwavering neutrality our safety demands that we should provide what I believe to be a powerful insurance against war, namely, an adequate national defense, a strong and efficient Navy, a sizable Army, and a modernized air force, coordinate with plans for the effective mobilization of our industrial capacities for wartime production at short notice. Ample reserve forces of trained, skilled men for military service also should be ready and prepared whenever occasion arises. These measures of neutrality and self-defense that I have briefly outlined will command the respect of the world and the confidence of our own people. Therein lie the best chances for realizing our cherished hopes for peace.

(During the question period following the broadcast of formal speeches, Senator WALSH answered the following questions:)

Q. If you refuse aid to Loyalist Spain and China, would you have refused Polish and French aid to the American revolutionists?—A. We welcomed the assistance of the French and the Poles in our fight for freedom 150 years ago, and have been ever grateful for their aid. They responded to the dictates of their sympathy without jeopardizing their own national safety. But under present-day world conditions, if we follow the dictates of sympathy and lend aid, we risk taking our own country into war. I am opposed to so doing under any circumstances.

Q. Do you favor the recent $25,000,000 loan to China?—A. I am not in favor of any loans or financial commitments to any belligerent, de jure or de facto. Such loans did much to involve us in the World War. Our course in the present conflict by Japan upon China should be the enforcement of our present Neutrality Act and the suspension of trade with both sides.

Q. Would not trade boycotts of belligerents by all nations be helpful?—A. If all nations would boycott contraband goods, of course, there could be no war of any impressive duration. We should set that example and boycott the imperialistic nations of Europe and the Orient who are waging war. However, that is a different proposition from an economic boycott by concerted action and international agreement.

Q. Does not our foreign trade indicate the material importance to us in these days of depression of preserving peace throughout the world?—A. Meddling with the affairs of belligerent foreign nations to preserve trade is an untenable policy. All the trade in the world is not worth our people suffering a repetition of the horrors and human losses of the World War.

Q. In your speech, Senator WALSH, do you not completely ignore our world trade and the obligation reposing in us to preserve justice throughout the world?—A. This contention, I must frankly say, to be nothing more nor less than calling for a program of international meddling. If we are to enter into every dispute to enforce our ideas of justice, I can conceive of no surer way to involve us in hatreds and animosities of Europe—continual wrangles and conflicts abroad that will disturb domestic tranquillity and prevent solution of urgent problems at home. There is no obligation upon us to preserve justice throughout the world.

Q. Will not our involvement in the next war arise from the unwarranted murder of American citizens legally carrying on business in foreign countries?—A. I do not believe so. The American people feel that our citizens should keep out of the theaters of war or suffer the consequences. We certainly owe no duty to citizens who plunge knowingly into the very center of hostilities, and most emphatically we will not go to war as reprisal for injury or death befalling them because they have deliberately placed themselves in jeopardy. American citizens abroad on business are not exempted from the reasonable requirements of due care which are normally imposed upon them when they are at home.

Q. Do you favor repeal of the trade embargo enacted by Congress against the Spanish Loyalists?—A. I do not. To advocate repeal of an embargo intended to keep us from entanglement in the Spanish war, with its ramifications interwoven with European rivalry and diplomatic intrigue, is inconsistent with the very policy of strict neutrality for which I am contending.

Q. Will not the balancing of forces in the world today between the democratc countries and the totalitarian states, especially in regard to their impingement on the Spanish war, be bound to involve us in war?—A. If war comes to the Western Hemisphere, it will be a war waged on us, not one we will precipitate. Let us be prepared with adequate national defenses if it comes. Meanwhile, neither fascism, communism, the Berlin-Rome axis, the Munich Pact, nor any other European question should lead us into any alliance with any other nation or group of nations. We permitted economic interests, foreign propaganda, and asserted ideals, which we now know, on the part of some of our allies, to have been insincere, to lead us into one great war. Our most urgent cause today is the cause of the American people—to protect our shores, our democratic form of government, and the domestic welfare of our citizens.

Q. Will not victory for the Insurgents in Spain be less favorable to our interests than victory for the Loyalists?—A. Our course with reference to Spain should not be dictated by consideration upon which side our own interest may be said to lie. The point of the matter is we must not take sides, directly or indirectly, in foreign wars, civil or international. Of course, this attitude does not bar us from declaring our revulsion and protest against barbarous persecution of races and religion and the horrors and brutalities which have accompanied the waging of the Spanish civil war.

National Grange

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

LEGISLATIVE PROGRAM OF THE NATIONAL GRANGE

Mr. CAPPER. Mr. President, I desire to call attention to the legislative program of the National Grange approved at the seventy-second annual convention of the organization, at Portland, Oreg., November 16–24, 1938.

The Grange is one of our great national farm organizations. It has performed valuable services to agriculture and to the Nation. The Grange legislative program is the thoughtful expression of hundreds of thousands of the farmers of the United States. This program is entitled to the earnest consideration of the Congress.

I desire particularly to call attention to the Grange position that whatever control of production and marketing there is should be voluntarily exercised by farmers themselves. I also call attention to the Grange's contention that the national farm program should be built upon and around the family-sized farm, with the objective of bringing to agriculture its fair share of the national income. The Grange holds that the Senate should regain and retain the power to pass on reciprocal-trade agreements before they become effective.

I will not attempt to cover the program, which speaks for itself, but I earnestly urge Senators to study it carefully. I ask unanimous consent that the National Grange legislative program be printed in the Appendix to the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

1. LONG-TIME FARM POLICY

In the building of a long-time farm program, we must not lose sight of the fundamental American principles of self-help, equality of opportunity, and independence of thought and action. Agriculture asks for fair treatment rather than special privilege. It seeks economic justice rather than subsidy. The Grange declares for a program in legislation and administration that will establish and maintain prices for agricultural products that will provide for reasonable profits, as determined by farm costs.

We favor adherence to the following principles:

(a) Proper steps should be taken to increase the farmer's share of the national income, giving agriculture equality with other groups.

(b) The program should be built on a basis of voluntary cooperation rather than a Government strait jacket. It should provide for continuing farmer control. The Grange is vigorously opposed to the regimentation of American agriculture.

(c) Our goal should be the preservation and prosperity of the family-sized farm. Corporation farming should not be encouraged by the Government.

(d) We urge continued support of farmer-owned and farmer-controlled marketing associations.

(e) We favor a sound long-time policy of land utilization, providing for the retirement of submarginal land, reforestation, and the protection of water and wildlife resources, together with soil conservation and the prevention of erosion.

(f) The program must be sufficiently flexible to protect the interests of all sections and give proper assistance to producers of surplus and export crops.

(g) In no case should competitive imports be permitted to deprive our farmers of the home market.

(h) We favor the continuance of the Commodity Credit Corporation and of the Federal Surplus Commodities Corporation.

(i) We approve of the steps being taken for the erection of regional research laboratories in the effort to find new uses for farm products, and we advocate adequate appropriations in this connection.

(j) Crop insurance should be continued and expanded as experience warrants.

(k) The Government should pursue a policy calculated to restore employment in private industry, thereby increasing the purchasing power of the consumer and improving farm prices. As a step in this direction, we favor such amendments to the National Labor Relations Act as may be needed to make it fair and workable.

2. RECIPROCAL-TRADE AGREEMENTS

On the whole the reciprocal agreements negotiated by the Government have not resulted in any increase of farm exports but have added to the volume of agricultural imports. If the Reciprocal Tariff Act is to remain in force, trade agreements should be ratified by the United States Senate before becoming effective and should not contain the unconditional most-favored-nation clause, under which policy we gain concessions from one nation while making concessions to all other nations producing and exporting any given commodity.

3. TARIFF POLICY

The long-established tariff policy of the National Grange may be summarized as follows:

(a) So long as the American protective policy is maintained we favor such rates on imports as will assure the domestic market to the American farmer to the extent that he is able to supply it.

(b) Since it is well understood that producers of surplus crops receive no direct tariff benefits, equality and justice demand that import duties on commodities which the farmers must buy should be fixed at fair and reasonable levels.

(c) As a measure of equality under our tariff system, we advocate that all revenues accruing from duties on agricultural imports be set aside to promote the exportation, removal, or diversion of farm surpluses.

(d) We affirm that it is contrary to sound public policy to impose tariffs for the protection of such resources as cannot be renewed when they are once exhausted.

(e) In no case should tariff rates be granted that breed monopoly, enriching the few at the expense of the many, and which encourage inefficiency rather than efficiency in American industry.

(f) We reaffirm the established policy of the Grange in demanding "tariff for all or tariff for none."

4. CONTROL OF MONOPOLY

It is manifest that the blessings of political liberty cannot be fully enjoyed under a system which permits monopolies and monopolistic practices to rob the people of the fruits of their toil. We approve of the hearings and investigations now being made by the Temporary National Economic Committee and trust that its findings may serve as the basis for legislation that will be fair to agriculture, industry, and business.

5. FORESTRY AND CONSERVATION

We recommend that adoption of a comprehensive Federal program relating to forestry and conservation, and embracing:

(a) Encouragement and assistance to private owners in the extension of farm forestry and in the adoption of practices for sustained timber production.

(b) Giving more adequate protection from fire to both public and private forest and range lands, with greater emphasis on the control of insect pests, diseases, and the prevention of floods and erosion.

(c) Providing for more adequate development and maintenance of national forest recreational facilities and wildlife resources.

(d) Providing for public acquisition of forests and other lands not suitable for private ownership, with adequate reimbursement to counties in lieu of taxes during a readjustment of the tax program.

6. RURAL CREDITS

We favor legislation placing the supervision of the Farm Credit Administration under a bipartisan board, with terms so staggered as to assure a continuity of policy and to avoid the possibility of using this agency to promote partisan ends.

Since many of the earlier borrowers of the Federal land banks secured their loans at a time when interest rates were much higher than at present, and since the bonds issued by the banks in this connection have been refunded at lower interest rates, we favor correspondingly lower rates for this class of borrowers as soon as conditions warrant.

Farm interest rates should be maintained at the lowest possible level consistent with a sound loaning policy.

The power of the Federal Farm Mortgage Corporation to make loans, which expires on February 1, 1940, should be extended for a period of 5 years.

7. TAXATION

It cannot be too strongly emphasized that enormous bond issues and the consequent increase in the national debt, which has attained menacing proportions, mean the same thing as deferred taxation. There must be a limit to "investing" borrowed money that future generations will have to repay. The Federal Budget should be balanced at the earliest practicable date, primarily by reducing expenditures. As a first step, Congress should refuse to make any further lump-sum appropriations to be expended at the discretion of the Executive.

We oppose a general sales tax, because it is a tax upon the necessities of the people and ignores the principle of ability to pay.

We favor an amendment to the Constitution forbidding the issuance of tax-exempt bonds.

State and local officeholders and Federal judges should be made subject to the Federal income tax.

The back-breaking taxes now levied by the Federal Government constitute a growing threat to the sovereignty of the States, drying up the sources of revenue upon which they must depend to finance their activities.

8. POLITICS IN RELIEF

Congress should devise its own formula for the distribution of relief, and all necessary precautions should be taken to divorce the administration of these funds from politics.

9. FARM TENANCY

The Grange favors continued efforts for the development of a sound program for the relief of farm tenancy. In attacking this problem, proper emphasis should be placed upon correction of conditions which annually cause many thousands of home owners to slip into the tenant class.

10. MONETARY STABILIZATION

The Grange stands for an honest dollar; a dollar that will be fair to debtor and creditor alike. Congress should give a mandate to the Board of Governors of the Federal Reserve System to manage the currency in such a way as to restore the average price level obtaining between 1921 and 1929, and then stabilize the purchasing power of the dollar at that point.

Congress should also exercise its constitutional right to coin money and regulate the value thereof.

11. CENTRALIZATION OF GOVERNMENT

The Grange reaffirms its stand against overcentralization of government, which violates the wholesome American principle of home rule in local affairs. It is fatal to the cause of good government, besides adding enormously to the tax burden, to destroy the local sense of responsibility which causes the average citizen to scrutinize public expenditures.

We are opposed to any constitutional changes that would abridge the rights of the States to control their own affairs within proper limits, or that would impair the legitimate rights of the people in matters relating to local self-government.

12. THE FEDERAL CONSTITUTION

The Grange believes that the best brand of liberalism in existence is that which is contained in the Constitution of the United States, with its Bill of Rights. The experience of 150 years proves the excellence and soundness of our fundamental law. We are firmly convinced that the checks and balances contained in the Constitution as between the legislative, executive, and judicial departments must be maintained. The right of the Supreme Court to pass upon the constitutionality of acts of Congress must be preserved. The right of free speech, free press, and of public assemblage must be kept inviolate.

13. RAILROADS

We favor continued private ownership and operation of the railroads, and we advocate the taking of proper steps by Congress for the rehabilitation of the roads.

We do not favor the imposition of uniform regulations on all modes of transportation. Such a move would be illogical and not in harmony with the spirit of progress.

We are opposed to the repeal of the long-and-short-haul clause of the Transportation Act, which provides that the railroads shall not charge more for a shorter haul than for a longer one over the same line and in the same direction.

14. MOTOR TRANSPORTATION

We approve of the appropriations made by the Federal Government for highway construction and advocate a larger proportion of such funds for the improvement of farm-to-market roads.

The interest and safety of the public require enforcement of proper restrictions regarding the size, weight, and speed of all motor vehicles moving over the public highways. Such regulations should be uniform as between the several States, and there should be reciprocity between the States, based upon such uniformity.

The power to regulate is a police power lodged with the States. As a basis for regulation we commend to all the States adoption of the Uniform Code for the Regulation of Traffic, approved by the American Association of State Highway Officials and the United States Bureau of Public Roads.

Every special tax collected for highway improvement should be conserved for that purpose alone. No diversion of such funds should be allowed.

No taxation or regulation of motor vehicles should be permitted which has for its purpose any increase in cost or restriction of use in order to equalize competition between motor transportation and other forms of transportation.

More than one-fourth of the motortrucks of the country are found on our farms. We want no unnecessary interference with nor regulation of privately owned and operated motortrucks.

We favor the completion of the international highway connecting the United States proper with Alaska.

15. INLAND WATERWAYS

Since the Federal Government, over a period of many years, has expended large sums of money for the development and improvement of our inland waterways, the Grange is opposed to the adoption of any policy which would destroy the value of this wise investment. Our water-borne commerce should not be hindered or restricted by unnecessary regulation and interference on the part of the Government, since no question of monopoly is involved.

We favor ratification of the treaty calling for the completion of the St. Lawrence Seaway, and the development of hydroelectric power contemplated in this project.

We likewise favor the construction of the Umatilla project for the benefit of the people of the Pacific Northwest.

16. RURAL ELECTRIFICATION

We heartily approve of the efforts of the Government to promote the cause of rural electrification through the agency of the R. E. A., which we consider one of the soundest steps taken by the Government in recent years to improve the condition of country life.

In the making of loans the present policy of giving preference to public power districts and nonprofit cooperative associations should be continued. We endorse the policy of the R. E. A. in placing the responsibility for the construction and operation of projects on the cooperatives themselves.

17. AGRICULTURAL EDUCATION

We approve of proper appropriations for the endowment of land-grant colleges and for the further development of extension work in agriculture and in home economics, together with adequate funds for the support of State experiment stations. We likewise approve of the expanded program for vocational education and for boys' and girls' club work.

We believe that extension workers should be paid entirely from public funds, leaving them free to serve the people without favoritism or discrimination. In no case should any farm organization be allowed to graft itself upon the Extension Service nor dominate it to serve its own ends.

18. WAGE-HOUR LAW

Since the Administrator of the wage-hour law has ruled that the exemption granted to agriculture in areas of production shall be limited to plants employing not more than seven men, largely nullifying the intent of Congress, we advocate clarifying amendments to the act so as to make it workable and giving farmers the protection to which they are entitled.

19. RECLAMATION

We strongly protest against bringing any more land under cultivation by irrigation and reclamation at Government expense, so long as the surplus problem presents one of the chief difficulties with which agriculture is confronted.

20. GOVERNMENTAL REORGANIZATION

We favor the reorganization of the various agencies of the Federal Government in the interest of simplicity, efficiency, and economy. But we are not in accord with many of the details of the plan contained in the report of the Brownlow Committee, which would place in the hands of the Executive vital functions of Government that should be kept in the control of Congress.

In any regrouping that may be made, agencies dealing with land use, soil conservation, growing of foliage, wildlife, and timber crops should remain in the Department of Agriculture.

21. HONEST MERCHANDIZING

We favor legislation for truth in fabrics, both for the benefit of agriculture and the protection of the consumer. Labeling of shoes to indicate the material used in their manufacture should likewise be required.

22. ARGENTINE SANITARY PACT

Since American agriculture in the past has suffered heavy losses from the foot-and-mouth disease, brought in from other countries, we are opposed to the ratification of the pending convention or treaty with the Argentine. Approval of this pact would open our markets to imports of animal products from zones or areas in the Argentine that are supposed to be free from the foot-and-mouth disease, although it is prevalent in other parts of the country.

23. IMITATION DAIRY PRODUCTS

It is of vital interest to the dairy industry as well as the consuming public that all legislation for the control and regulation of manufacturers of and dealers in imitation dairy products should remain in full force and effect.

We approve of the action of Congress in placing an excise tax on certain oils imported from abroad and used in this country in the making of butter substitutes and for many industrial purposes. We advocate the extension of this tax to all imported oils that come into competition with the products of the American farm.

24. IMPORTED STARCHES

Since nearly half a billion pounds of Asiatic starches, produced by coolie labor, entered this country duty-free during a single recent year, we favor adequate excise taxes on such products, which compete with domestically produced starch made from corn, potatoes, and rice.

25. PACKERS AND STOCKYARDS ACT

We advocate the amendment of the Packers and Stockyards Act to provide for the more effective regulation by the Department of Agriculture of the marketing of livestock. Direct buying by the packers, merely in an effort to evade the law and depress prices, should not be tolerated. Packers should likewise be prevented from engaging in large-scale feeding projects, either directly or through financial interest.

26. PREDATORY ANIMALS

We favor legislation providing for joint appropriations by the Federal Government, together with States and counties, for the eradication of predatory animals in sections where such animals are a serious menace to agriculture.

We also advocate more vigorous measures for control and the eradication of insect pests.

27. STOLEN LIVESTOCK

The Grange favors the early enactment of legislation making it a Federal offense to transport in interstate commerce livestock and poultry known to have been stolen.

28. COMBATING LIQUOR TRAFFIC

We recommend that Granges throughout the land join with other organizations in a campaign of education, calling attention to the evil effects of strong drink and emphasizing the truth that decency and sobriety are virtues that bring their own reward. The sale of fortified wine, which is a deadly intoxicant, should not be permitted.

29. LOTTERIES AND GAMBLING

We ask for the strict enforcement of the law against lotteries, whether foreign or domestic, and oppose gambling in all its forms.

30. PRICE MAINTENANCE

The Grange urges the prompt repeal of the Federal statute to legalize resale price maintenance contracts.

31. REGISTRATION OF ALIENS

Since there are about 7,000,000 aliens in the United States who have manifested no intention of becoming naturalized, and since it is estimated that not less than 500,000 of these came to our shores illegally, with many burdening the relief rolls, the Grange advocates legislation calling for the registration of all immigrants, with the payment of a proper fee. Those who refuse to become naturalized within a reasonable length of time, together with those who have entered the country illegally, should be deported.

32. UN-AMERICAN ACTIVITIES

We favor the continuance of the congressional committee investigating un-American activities, with an adequate appropriation to defray its expenses.

33. STATEHOOD FOR HAWAII

The Grange reaffirms its opposition to the proposal for granting statehood to the Territory of Hawaii.

34. TRADING IN FUTURES

The Grange is opposed to gambling in the necessities of life and advocates the vigorous enforcement of the Commodity Exchange Act of 1936.

35. WOOL TRADE INVESTIGATION

We favor the continuance of the Senate special committee investigating practices and conditions in connection with the wool trade.

36. NOXIOUS WEED CONTROL

We favor cooperation between the States and the Federal Government in a vigorous campaign for the control and eradication of noxious weeds.

37. WORLD PEACE

We earnestly advocate that the Government of the United States exert every effort to promote peace and good will among nations. While favoring adequate national defense, we believe in a sound neutrality policy that will save America from becoming entangled in foreign wars of greed, hatred, and aggression, and which are no direct concern to us.

We reaffirm our position in favor of taking the profits out of war. In the event of future armed conflict, wealth as well as manpower should be conscripted.

The manufacture of armaments and munitions for national defense should be taken over by the Government in time of war.

Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

EDITORIAL FROM INDIANAPOLIS TIMES OF JANUARY 25, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Times of January 25, 1939, entitled "A Real Wage-Hour Case."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis Times of January 25, 1939]

A REAL WAGE-HOUR CASE

The largest pecan-shelling company in the country said it couldn't afford to pay its shellers the minimum wage of 25 cents an hour. It asked permission to hire 2,500 to 3,000 "learners" over a 3-month period at 15 cents an hour.

An examiner of the Labor Department's Wage-Hour Division conducted an investigation and hearing. He found: (1) That, far from being impoverished, this company cleared $500,000 profit in a recent 2-year period; (2) that its shellers, working on a contract piece-rate basis, had been earning from $2.50 to $3.50 per week, "under shocking living and working conditions," and had been required to depend upon public and private charity "to bridge the gap between their slender earnings and starvation"; (3) that the "learners" it intended to employ at the cut rate were these same experienced workers, and, though machinery was to be installed, the sheller's work would be essentially the same; and (4) that an experienced hand sheller can attain maximum efficiency in a mechanized plant in a week or less.

So the examiner recommended, in vigorous language, that the company be denied permission to pay less than the 25-cents-per-hour minimum.

In this case we see the wage-hour law accomplishing in a real way the real purpose for which it was enacted. The exploited Mexican men, women, and children who shell pecans in San Antonio are, because of the workings of this law, to be given an opportunity to earn a wage that will meet at least their minimum requirements of living.

Freedom of the Press

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

RADIO ADDRESS BY HON. HAROLD L. ICKES, JANUARY 12, 1939

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting herewith a copy of an address delivered by Hon. Harold L. Ickes, Secretary of the Interior, in his discussion of Voluntary Servitude on the Town Hall of the Air program over the network of the National Broadcasting Co., from New York City, January 12, 1939, as follows:

Have we a free press in the United States? It is as free as it wishes to be. So far as Government control is concerned, the American press is free. No Federal law, no State law, interferes with it. As a matter of fact, the American Government annually pays an enormous subsidy to the press in the form of less-than-cost postage rates. This subsidy in 1936 amounted to some $90,000,000.

Yet while the American press is free so far as the Government is concerned, it is nevertheless far from free. In 1924 William Randolph Hearst admitted that the influence of the press was declining "because so many newspapers are owned or influenced by reactionary interests and predatory corporations, and are used selfishly, to promote the welfare of those reactionary interests, rather than the welfare of the public."

And the late Arthur Brisbane said: "Newspaper success today means great wealth, and the rich man * * * 99 times out of 100, lets his money think for him. There are men owning newspapers in this country who could not be bribed by any amount of money outside of their own pockets. But the money in their pockets edits their editorial columns every day."

There are several great newspapers in the United States for which I have a profound admiration, but even they are not wholly free. Their vast financial investment, running high into the millions, binds them closely to the business world from which they draw their sustenance. Freedom is impossible, even for a publisher with a sense of civic responsibility or an editor with noble ideals, when the counting office holds the whip hand.

The nearest approach to a free press in the United States will be found in the small-town newspaper which does not owe money at the bank. The freest editor I know is William Allen White, of the Emporia (Kans.) Gazette. If he were speaking with me tonight, it would not be a debate, because both of us would be on the same side. William Allen White knows that the press is not free. He has said so.

I am glad that I am to discuss this question with Mr. Frank E. Gannett, owner of a chain of 19 newspapers and 3 radio stations. At first I was sorry that Col. Robert R. McCormick, of the Chicago Tribune, had, characteristically, refused to share the platform with me. It is understandable why the Morning Colonel of Chicago should be reluctant to defend his publication against the frequently made charge that it is the lowest form of newspaper life.

Mr. Gannett ranks above the average among American publishers. Therefore, if it can be shown that freedom of the press does not exist for the Gannett newspapers, any conclusions drawn from that fact may fairly be applied to the American press generally.

What are the chief accusations which the American people make against the American press?

First, that it has financial affiliations, or is subject to financial pressures, which limit its freedom. Metropolitan newspapers in particular are part of the financial oligarchy that is trying to rule America.

Second, that it is subject to the influence of advertisers, causing omission, distortion, or improper slanting of news, and affecting its editorial opinions.

Third, that it is unfair to certain groups of citizens, especially workingmen, whose interests conflict with those of the newspaper or its financial backers or its advertisers.

In the few minutes at my disposal I cannot begin to cover the subject, even in relation to the Gannett newspapers. On another occasion I hope that I will have sufficient time to present the great mass of material that I have.

First, let us consider secret financial entanglements and outside controls. The Federal Trade Commission has reported the amazing story of a propaganda fund, amounting to $25,000,000 a year, by means of which the power interests had filled the newspapers of the country with articles and editorials hostile to Government ownership of public utilities and opposing public development of water power. Incidentally, the man who was in charge of the distribution of this propaganda money was Merlin H. Aylesworth, now the publisher of the New York World-Telegram.

The Federal Trade Commission also disclosed that the power companies were buying concealed financial control of newspapers all over the country, or were making secret loans large enough to bring the publisher under the thumb of the powerful utility interests.

I shall cite one item. In April 1929 the Federal Trade Commission found that the International Paper & Power Co., a half-billion-dollar corporation which derives from 65 to 75 percent of its revenues from the sale of power, owned all of the preferred stock and 30 percent of the common stock of the Knickerbocker Press and the Albany Evening News, as well as a sizable share of the Ithaca (N. Y.) Journal-News. These papers were, and still are, Gannett properties. Following this disclosure, Mr. Gannett hastened to refinance.

I ask you, during the time that this Paper & Power Co. had a very large interest in the Gannett newspapers, was Mr. Gannett free? Was he free to discuss any question affecting the wood-pulp or the water-power industry on its merits? Did he tell his readers, when he wrote editorials against Government ownership of power, that he was in hock to the power interests? If Mr. Gannett had not regarded this as a questionable connection, why was he in such a hurry to refinance after the Government disclosure?

It may be claimed that Mr. Gannett simply has a peculiar modesty about disclosing his financial backers. The same trait was to show itself later when he was asked to tell who were showering money upon his National Committee to Uphold Constitutional Government.

Now for the second item in the indictment brought by the people against the American press, that it is subject to the influence of advertisers, or rather of advertising, since this influence is usually impersonal.

This is a fact so well known that it hardly needs discussion. If you should go to a working newspaperman and say to him, "Newspapers are not influenced by advertising, are they?" he would be likely to reply, "Where have you been since you learned to read?"

I wish that I had time to place before you even a small fraction of the evidence that exists of the control of the press—not by the direct demands of advertisers—but the indirect control that does not have to be put in words. I ask each person listening to me: Did you ever read a story in a newspaper about an elevator accident in a department store that was written and displayed on the basis of its news value? Of course not, and you have never read anything in a newspaper about the low wages of retail clerks, except in 10-cent stores which do not advertise.

The suppression and distortion of news for fear of losing advertising is one of the gravest crimes against our democracy.

It is not easy to put your finger upon violation of the principles of a free press by the methods commonly employed—suppression and distortion of news, playing it down, burying it back of the want ads, or use of misleading headlines. Occasionally, however, outside control comes out into the open. This happened in the unscrupulous campaign of the patent-medicine interests and the manufacturers of poisonous cosmetics to prevent the passage of the amended Pure Food and Drug Act. When this bill was introduced in Congress in 1933, the advertising agencies of the country sent out orders to newspaper publishers to get busy and kill the proposed legislation. And the newspapers vied with each other to see which could show the most devotion to the makers of impure drugs and poisonous cosmetics.

I wonder if Mr. Gannett will tell you of the part he played at that time? Early in the campaign he published a full-page announcement that his newspapers had placed a speaker against the bill on the program of the New York State Federation of Women's Clubs. Why did he do this? It was good business. Never fear, that full-page statement undoubtedly was mailed to every big advertising agency and every big cosmetic and drug advertiser in the country. And Mr. Gannett, I repeat, ranks above the average among American publishers.

Now for the third charge against the American press—that it abuses its freedom by discriminating against groups of citizens not powerful enough to defend their rights. A few days ago I received a letter from a resident of Rochester, N. Y. It told how, during a bakery strike in 1937, the Gannett papers refused to state the case of the striking bakers. Finally the union decided to run a paid ad.

This was flatly refused by the Gannett management. Yet just before this, during the auto workers' strike in Detroit, both Gannett papers in Rochester ran full-page ads giving the General Motors' version of that strike.

This is how the American press uses the freedom which is guaranteed to it by the Constitution, and which the taxpayers subsidize to the tune of $90,000,000 a year. General Motors may state its case. Union bakers may not. But if you should ask the publishers of American newspapers whether distortion or suppression occurs, or whether headlines reflect bias, with honorable exceptions, they would answer, "Oh, no; no, indeed."

On the subject of the rejection of advertising by newspapers, I should like to mention the case of George Seldes' recent book, Lords of the Press, a well-documented indictment of certain newspaper publishers and their practices, a book, by the way, that all should read. The New York Herald Tribune refused an advertisement of this book and most other newspapers refused to review it. Another indictment of our plutocracy met with a similar fate. I quote from a letter from William A. Greene, of the New York Herald Tribune, to William Gowen, of the Hudson Advertising Co., of New York City. Mr. Greene said: "The censorship department of the Herald Tribune has decided that they will take no more advertising copy on the book America's 60 Families."

Gannett himself criticized President Roosevelt for his assertion: "I have always been firmly persuaded that our newspapers cannot be edited in the interests of the general public from the counting room." Yet in the same statement in which he criticized the President, Gannett admitted that—I quote—"a generation ago, when newspapers were weak financially and living from hand to mouth, all sorts of subsidies were accepted to keep the paper going." This is a significant admission. I wonder whether Mr. Gannett can distinguish between an outright subsidy and domination by advertisers?

Recently Mr. Gannett sent a questionnaire to the editors of all daily newspapers in the United States asking them 11 questions about freedom of the press. The answers were intended to confound me tonight. I thank Mr. Gannett for his happy thought. Some of the editors sent their replies to me instead of to Mr. Gannett, incidentally asking me to keep their names secret, so great is their fear of the big interests whom Mr. Gannett is known to represent.

From lack of time, I am going to read to you how only one of these editors answered Mr. Gannett's questionnaire, so that you may draw a distinction between an honest and civic-spirited journalist and the timeservers. I have no doubt that Mr. Gannett will announce the pious, self-serving replies that he must have received from other members of his packed jury.

Question 1. Do you feel that news handling on your paper is influenced by business office ideas?

Answer. "Positively yes. Otherwise we would go out of business."

Question 2. Is the editorial policy of your paper dictated by business considerations?

Answer. "Certainly."

Question 5. Does your paper attempt to handle political news thoroughly and regardless of your editorial policy?

Answer. "No. We dare not."

Question 6. Are headlines slanted toward editorial policy of your paper?

Answer. "Yes; where business interests are involved."

Question 7. Do you think newspapers are better or worse than when you first began newspaper work?

Answer. "They are worse journalistically."

Question 8. Do advertisers influence your editorial policy or news policy?

Answer. "In almost all instances."

Question 9. Do you suppress news of any kind because of outside pressure?

Answer. "Frequently we are forced to suppress editorials and news."

Question 10. With your experience do you feel that our newspapers' first considerations are to the public welfare?

Answer. "No; their first consideration is income."

Question 11. Do you think we have a free press in America?

Answer. "Collectively, no. A few papers are free, especially if free of debt. Metropolitan newspapers serve their financial masters."

Let me call attention to a remarkable fact about Mr. Gannett's questionnaire. In all his 11 questions there was not one on whether freedom of the press had been denied or restricted by the Government. You would naturally suppose that to be the matter of interest, especially if you recall how the American Newspaper Publishers Association raved about freedom of the press when the Government undertook to stop the exploitation of child labor and to protect the right of reporters to bargain collectively for a civilized standard of wages and hours. Yet Mr. Gannett asked not one question about the attitude of government toward freedom of the press. Why? Is it because he knows, as Mr. Chester H. Rowell, one of the outstanding editors of America, has expressed it, that "if there is any danger to the freedom of the American press, that danger is internal."

Against repeated and continuous violation of the freedom of the press by the publishers the Government can do nothing. The Supreme Court has upheld the right of newspaper editorial workers to organize for collective bargaining, but do the newspapers tell the American people how they are defying that Supreme Court decision today? Did you read recently in the newspapers how employees of William Randolph Hearst broke the heads of reporters and editors in the greatest newspaper strike that ever occurred in the city of Chicago? There isn't one person in a hundred in the United States who even knows that such a strike is going on.

I do wish to emphasize that it is not my intention to bring an indictment against the press as a whole, but I charge, and the record will bear me out, that while as to Government regulation and control the press of America is free, it is not, because of its own financial and economic tie-ups, what it should be—a free servant of a free democracy.

The lack of a free press in America is the most serious threat confronting our democratic government and our social order. It appears to be up to the publishers, through Mr. Gannett, to tell us how to free our press from the shackles that they and the financial power of private interests have put upon it.

A Permanent P. W. A.

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

Mr. RANDOLPH. Mr. Speaker, in the first Public Works Act is found the phrase "the construction of projects to serve the interests of the general public," and in practically all of the P. W. A. acts occurs the phrase, "to increase employment by providing for useful public-works projects."

This has been the story of the Public Works Administration for the past 6 years. It has fostered and helped finance the greatest construction program in history, adding $2,500,000,000 to the visible wealth of the Nation. It has been responsible for the emloyment of hundreds of thousands of men at construction sites. It has originated huge orders for materials, creating employment for additional hundreds of thousands of men in the heavy-goods industries. The spending of their pay rolls has aided the consumers' goods industries.

P. W. A. DOING GOOD

I am of the firm belief that any agency that contributes such widespread benefit to the Nation, as has P. W. A., should be made a permanent part of the Federal Government. That such a place in our Federal structure should be made for a permanent P. W. A. is recognized on all sides. I quote part of an editorial which appeared in the Washington Sunday Star of January 1, 1939:

It was with evident satisfaction and justifiable pride that Administrator Ickes reported to President Roosevelt that the latest public works program, involving expenditure of more than one billion and a half dollars, has been completely transformed into contracts within the dead line which was passed last night. The consummation of such a task in 6 months is an administrative achievement that would have been regarded as almost impossible a few years ago. It is proof that Mr. Ickes has built up an organization that has treated Government spending as an exact science, and to the taxpayer this is important, because it means increased efficiency and reduced waste.

Completion of the 1938 phase of P. W. A. activities naturally revives speculation as to the future of this outstanding New Deal recovery agency. Already there has been agitation in some congressional quarters for a permanent P. W. A., and it has been rumored that Mr. Roosevelt is inclined to support such a proposal. The movement for continuing the Public Works Administration as an integral part of the Federal machine contrasts sharply with the rising demand for reform if not abolishment of the radically different spending agency, the Works Progress Administration.

Public works projects * * * have long been recognized as legitimate governmental measures in times of economic depression. Having had them before this administration, it is logical to believe the country will find them useful in the future. Since emergency public works have become so firmly established in the Federal realm, it might not be a bad idea to keep permanently in the departmental set-up the nucleus, at least, of such an experienced, smoothly functioning organization as Administrator Ickes had developed after many difficulties. Its talents could be used to good advantage in several fields when times are prosperous, and, like the military services, it would be prepared to swing into action at a moment's notice when emergencies arise. The proposal surely merits serious consideration.

COOPERATES WITH CITIES

The Public Works Administration is known, by its projects, in 3,069 out of the 3,071 counties in the country. It has

made itself felt in nearly every phase of our national economic life. By encouraging towns, cities, counties, and States to make long-desired local improvements with the aid of P. W. A. loans and grants, the educational, health, sanitation, social, and transportation improvements have been stepped up 10 years. For example—the total capital outlay for schools in 1926 was $400,000,000. In 1932 it had dropped to $200,000,000 and had further decreased in 1933 to $100,000,000. From 1934 through 1938, P. W. A. school construction alone amounted to $1,130,000,000, or an average of $225,000,000 per year, and the communities have borne the major share of the construction of over 7,000 school and college buildings as well as additions and improvements. But there is yet much to be done in bringing the housing standards for the Nation's school population to a proper degree of efficiency.

Almost equally important has been P. W. A.'s share of water-works construction during the past 5 years. It has been estimated that about one-fifth of the population living in 2,086 communities, large and small from coast to coast, will enjoy the benefits of $261,500,000 worth of new or improved water systems made possible through P. W. A. Approximately 70 percent of the water system projects have been completed and are in operation and the balance, including the 1938 allotments will be substantially completed within the next 12 months. Although several are in large metropolitan centers with costs running into millions, P. W. A. estimates that the average cost of the 2,086 projects is $125,356 and the population of the average community served is under 10,000.

I could go on indefinitely pointing out the merits of the Public Works Administration through its aid to sewer systems and sewage disposal plants; hospital and institutional construction; flood-control and harbor-improvement work; highway and bridge building; the erection of civic improvement including city halls and courthouses, community buildings, and recreational centers. This is all so evident. The Public Works Administration has demonstrated, beyond all question of a doubt, its efficiency. Its record in putting into operation the huge 1938 program from the receipt of over 12,000 applications to the getting under construction, in a period less than 6 months, over 8,000 Federal and non-Federal projects is nothing short of a miracle. And its effects were demonstrated in the upward swing of the employment curve and in the production of steel, cement, brick and tile, plumbing, lumber, fabricated steel and iron products, paints, electrical machinery, tools, trucks, furniture, paving materials, petroleum products, and hundreds of other items making up the business backbone of the Nation. All of this has been done with a streamlined, closely knit organization.

CONGRESS SEES NEED

The desirability of establishing a permanent policy for public works and a permanent bureau or department of government to carry out this policy has been recognized in the Congress. The Senate recently received the report of the Special Committee to Investigate Unemployment and Relief, headed by Senator BYRNES. This report had, as a fundamental thesis, the necessity of establishing a permanent program of public works for the Federal Government. The committee pointed out after thorough study of the situation that there should be no competition within the Government regarding works programs, but that a well-defined policy covering the type of work done by P. W. A. should be adopted. This committee recognized the value of permanent public works.

The Senate recently took another step in this direction when it adopted the Mead resolution calling upon P. W. A. to report on the number of applications it has pending before it. Study of these applications will show that the country wants public works in quantity and that such a continued program could best be administered by a permanent organization.

BALANCE SHEET SHOWN

P. W. A. should, I repeat, be retained and made a part of the permanent machine of Government. As further evidence of the broad scope of the P. W. A. program, I submit P. W. A.'s "balance sheet" for the 5 years ending December 31, 1938. It follows:

What P. W. A. has done—as of Dec. 31, 1938

[NIRA, ERA'35, ERA'35 supplemental, FDA'36, PWAE'37, and PWAA'38 programs (exclusive of Federal Housing projects)]

P. W. A. has allotted funds for public works in 3,069 of the Nation's 3,071 counties for:	
15,925 Federal projects under NIRA costing	$1,567,014,445
1,887 Federal projects under PWAA'38 costing	199,999,207
3,735 non-Federal projects under NIRA costing	1,310,741,058
3,804 non-Federal projects under ERA'35 and supplemental costing	792,878,629
1,768 non-Federal projects under FDA'36 costing	393,486,801
1,191 non-Federal projects under PWAE'37 costing	261,127,197
6,211 non-Federal projects under PWAA'38 costing	1,426,768,351
34,521 projects costing	5,952,015,688
Projects completed or under construction:	
25,840 projects completed costing	3,464,515,332
8,365 projects under construction costing	2,420,289,058

Contracts have been awarded[1] on cost:

	Percent of total	
Federal projects under NIRA	99.9	1,565,014,445
Federal projects under PWAA'38	98.3	196,699,207
Non-Federal projects under NIRA	99.8	1,308,081,858
Non-Federal projects under ERA'35 and supplemental	99.9	792,358,629
Non-Federal projects under FDA'36	99.9	393,323,165
Non-Federal projects under PWAE'37	99.8	260,539,697
Non-Federal projects under PWAA'38	98.7	1,407,619,668
Total	99.5	5,923,636,669

There has been spent on P. W. A. projects:	
For wages	1,250,022,062
For materials	2,304,207,335
Other expenditures	612,510,811
Total	4,166,740,208

Man-hours of employment provided by expenditures:

	Total man-hours provided to date
1. At site of construction	1,675,944,308
2. Production of raw materials, transportation, and fabrication (ratio of hours of employment shown in item 2 to those shown in item 1 is 2½ to 1 as established by studies by the Bureau of Labor Statistics, Department of Labor)	4,189,860,770
3. Supplying demands for consumers' goods and services	3,351,888,618
Total	9,217,693,694

[1] Includes force account.

Production of Fats and Oils in the United States

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

Mr. HOBBS. Mr. Speaker, please allow me to revert to the discussion of factors which retard and depress the production of essential fats and oils in the United States. On three previous occasions I have shown how the farmers producing cottonseed have been denied a fair price for their product by reason of imports of very cheap oils, fats, and oil seeds. The loss so caused has contributed greatly to the economic depression still afflicting the 13 southern cotton-growing States.

Now, I wish to present the facts which prove that another great farm product—the soybean—has been similarly affected by the same causes. Millions of farmers, north, south, east, and west, who could engage in soybean production

have been unwilling to do so because profit has been impossible in this unfairly competitive market. The very same influences which have kept the prices of cottonseed too low have operated to keep the prices of soybeans at similar levels. This has prevented what at one time seemed to be a strong and substantial future for the soybean industry in the United States.

The soybean is a comparative newcomer in American agriculture. It is a crop which holds out great promise both agriculturally and industrially. Its range of cultivation is such that agronomists say that it can be successfully grown in large areas of cotton States, as a crop to replace cotton, and also in most of the cooler regions of the North, from the Atlantic to the Pacific. Brought to us from China, it has been hailed here, as it is known to be in that older country, as one of the most valuable agricultural products known to man.

But the experts' report on soybeans in the United States shows that it has had a difficult experience in our agriculture. Only since 1930 has its production passed the 10,000,000-bushel mark, and only in the past 4 years has this advanced to the 20,000,000-bushel mark, although commercial cropping dates back to World War days. Of this production approximately nine to fourteen million bushels are used on farms for seed or feed, so as an oil producer—as a supplement to bring up our national production for oil and fat sufficiency—soybeans have very evidently been suffering from some substantial handicap or difficulty.

That difficulty lies entirely in the unfair competition against soybean oil by foreign oils and fats. When this competition is removed—as I believe it should be—there is every reason for belief that this crop will come forward and increase in volume of production until it can give farmers a profitable crop for millions of acres of land now unprofitably used.

The oil from soybeans is the most nearly universal oil of any vegetable production. For that reason it is subject to the greatest volume and variety of competition.

The publications of the Census Bureau show that of 194,000,000 pounds of domestic soybean oil produced in 1937, there was used in various products the total of 178,500,000 pounds, divided between compounds, vegetable shortening, oleomargarine, salad dressings, soap, and paint. Not less than 10,000,000 pounds was used in any one use, and as much as 90,000,000 pounds was used in lard compounds and shortenings, and 31,000,000 pounds in oleomargarine. In other words, although soya oil can be used as a drying oil for paints and varnishes, it is capable of use in the very best of edible products, and at the same time millions of pounds are used in soap manufacture and miscellaneous other industrial uses. For this reason every kind of imported oil competes with soybean oil. It is subjected to the heaviest competition of any domestic oil.

This competition starts in with palm oil, now selling at our coast down to 2.75 cents a pound, and runs through the whole gamut of cheap coconut oil, cheap palm kernel oil, babassu oil from Brazil found on the free list, Japanese fish oil, and many other minor oils all of which are being offered in our markets at prices so low as to cause domestic fisheries and all other competitors grave losses. All these products beat down the prices of domestic oil, particularly of soybean oil.

The oppressive character of this competition is clearly shown by its effect on soybean production, and on the manufacture of soybean oil and the prices of this oil in the United States in the past 6 or 8 years. Real growth in bean and oil production was first in evidence in 1931, caused by the good prices in 1929 and 1930. Cheap prices of imports in 1932 and 1933 forced domestic prices down until 1934. Production of soybean oil declined until the end of 1933.

In 1934 temporary help was secured by the imposition of the import excise taxes on numerous oils. Production and prices of soya oil advanced through 1935–36 season. New and much more severe foreign competition then began, and the production and prices of soyas dropped severely for the 1936–37 season.

The 1937–38 season was neither large nor satisfactory, although final figures are not available. Losses have been large, though not as great as in the cottonseed industry. However, without the help of proper control of all competing imports, the situation today and for the future in the soybean industry is far from bright.

Farmers of North and South, plagued by surplus crops, are looking for a substitute to occupy their fields and make them some small profit. Here is the greatest possible substitute, soybeans, whose oil can be used by American industry to the amount of a billion pounds a year. Yet the farmers and the processors are unable to move successfully in this direction because of 2.75 palm-oil imports, and babassu oil at 5½ cents a pound and other cheap imports. Soybean oil today is selling below 5 cents a pound and this is one reason for the low price of cottonseed oil. All this is due to the cheap imports, neither needed nor used, which continue to reach this market in quantities averaging thousands of tons a day.

The Life and Character of Robert Edward Lee

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

ADDRESS BY MRS. L. M. BASHINSKY, JANUARY 19, 1939

Mr. GRANT of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address on the life and character of Robert Edward Lee delivered by Mrs. L. M. Bashinsky, past president general of the United Daughters of the Confederacy, at the State Teachers College in Troy, Ala., on January 19, 1939:

In a retrospective study of mankind we will find that there have been many men who thought themselves great; not an inconsiderable number whom others thought great; but few, indeed, who were really and truly great.

It is a false standard of greatness to measure it solely by successful achievement. What we deem great achievements are not infrequently the mere result of fortuitous circumstances unattended by any of the higher and nobler elements of personal effort and self-sacrifice. True greatness never depends upon circumstances or environment; never waits upon opportunity; never becomes a suppliant at the feet of Fortune.

Greatness is the very essence of immortality, and will reflect itself through shadow as well as through sunshine, through adversity and prosperity, through failure as well as success. In truth, 1 great character is worth more to the world than 10,000 great achievements. Its reach is from horizon to horizon; its power and influence sweep away the sordid aims of life, lift us above a selfish world, and fill our hearts with the music and harmony of the spheres. We are assembled today to pay tribute to such a character—Robert Edward Lee.

On January 19, 1807, 132 years ago, a great soul beamed like a morning star upon a troubled and troubious world. During this century of lofty endeavor, marvelous progress, and prodigal achievement, no greater single moral force has arisen to inspire the lives of men than the life and character of Robert Edward Lee.

Today the hearts of thousands throughout the American Republic are lifted in a sacrament of remembrance as they bring their tributes of gratitude to the memory of Robert E. Lee—soldier, statesman, scholar, saint—symbol of all that gave sweetness and strength to the civilization of the Old South. A deathless spirit, hovering over this Republic—at once a benediction and a battle cry, calling the descendants of the great past to the building of a greater future.

It is not alone a regional reverence that bows before the shrine of General Lee's spirit today. Neither his beloved Virginia nor the South to which he gave the full measure of a magnificent consecration can monopolize his memory. He belongs to the Nation.

General Lee was the offspring of patriots. The blood of his heart and the spirit of his life was that of a patriot. His ancestors, both paternal and maternal, were thoroughly imbued with the spirit and genius of our institutions and were largely instrumental in freeing this people from British despotism and forming this Government into "a perfect Union of the States." He was the son of "Light Horse Harry" Lee and a nephew, on his mother's side, of Richard Henry Lee, who introduced into the Continental Congress that resolution which started liberty's torch to burning and led finally to

the Declaration of Independence. He married the great granddaughter of Martha Washington. Thus by birth he was a child of the Republic and the heir of civil liberty. His love for the Union was cemented by marriage and all the influences and environments of his life, but strengthened the chords which drew his heart and mind away from thoughts and acts of oppression and bound him more closely to the ideal dream of this ideal Republic, the absolute independence of the Government, the sovereign rights of the States, and the personal liberty of the people.

He was born at a period when the Republic in its infancy was struggling to maintain its life and integrity and to obtain the mastery over all forms of governmental usurpation and political vassalage. His early life was spent near the eastern shores of Virginia amid scenes of political turmoil and warlike activity. The martial spirit of those days quickened his interest and determined the course of his future life. As a result we find him at the age of 18 a student at the Military Academy at West Point equipping himself for the stupendous life work which awaited him. He graduated second in a class of 47 after pursuing his 4 years' course without a demerit or a single lapse in duty.

Full panoplied as a soldier and man, he now entered upon a career that was to crown his life with glory and bring immortality to his name. After a few years' faithful labor in the engineering department of the Army he was, for the first time, confronted with the actual realities of warfare upon the outbreak of the Mexican War, and his name was for the first time conspicuously written in history at the siege of Vera Cruz. His bravery and masterly conception and execution of military science was so pronounced during the campaigns of this war, that his commander, General Scott, declared him to be "the greatest military genius in America." He was wounded upon the field of Chapultepec but the flow of his blood seemed only to strengthen his dauntless spirit and unyielding purpose and he stood by his commander and valiantly did his duty until he fell exhausted from the loss of blood.

After the close of the Mexican War, he served as superintendent of the National Military Academy, West Point, for 3 years, 1852–55, one of the coveted posts of the Army. It was a notable appointment, at a younger age than most men receive it, opening to him the broad road to advancement. His diffidence and modesty in accepting this position is extremely characteristic. "I learn with much regret that the Secretary of War has assigned me to that duty, because I fear I cannot realize his expectations in the management of an institution requiring more skill and more experience than I command." Under his direction the discipline of the Academy was made more efficient, a spacious riding hall constructed. He had a kind of passion for building, improving, and strengthening. Colonel Chesney, after a week spent at West Point, stated that the efficiency of the courses of study and discipline were never more remarkable than during the 3 years of Lee's administration as superintendent. This period is also to be remembered for a portrait of Lee by R. S. Weil, professor of drawing and painting.

Next, we see him in his saddle in the far West, where for 4 years he carried on an active and dangerous warfare with the hostile Indians.

Unwittingly, and acting in line of duty, Colonel Lee struck the blow which probably hastened the sounding of the tocsin of war in 1861 when in 1859 he was detailed to command the body of militia which routed John Brown from his stronghold at Harpers Ferry.

This briefly portrays the most important incidents in the life and career of General Lee prior to the act of secession. I have outlined them for two purposes:

First, to show that birth, education, marriage, personal interest and inclination, official and military affiliation, and promise all bound him closely to the Union and lured him away from the southern side of the controversy; and then to show in all of its fullness the marvelous character and transcendent qualities of the man, when he relinquished fortune, spurned fame, sacrificed all, and immolated himself for a principle. The position of commanding general of the Union Army was proffered to him, and every inducement and allurement that could be extended a selfish and ambitious man was offered him by the North, but he cast his destinies with the South. The South's cause needs no stronger justification than the mere fact that Robert E. Lee led her forces and went down in physical defeat only to rise as the hero of an immortal moral victory and become the uncrowned king of free men. This decision of Lee, made under the circumstances it was, is to my mind one of the sublimest acts ever recorded of man.

The life and character of Robert E. Lee stand out against the world like some great mountain promontory. No shifting thought or varying sentiment can obscure its grandeur; no cloud of adverse criticism can dim its luster. No honorable man has ever criticized the conduct of General Lee or impugned his motives; no intelligent man will ever deny to him a place high up among the foremost in the temple of fame. His rank as a soldier is fixed and secure, and he cannot be dislodged from the highest pinnacle of martial fame by any warrior of any time.

Lord Wolsely, the great English general, pronounced him "the greatest of American generals." Theodore Roosevelt declared him to be "the greatest captain the English-speaking people had produced." General Scott declared him to be "the greatest military genius in America," and the statements of Generals Pillow and Shields gave confirmation to these expressions. We believe it could be said, without violating truth, the greatest of all generals. "He was a Caesar without his ambition; a Frederick without his tyranny; a Napoleon without his selfishness; a Washington without his reward." He was as obedient to authority as a servant and as royal in authority as a king. He possessed in a rare degree that combination of qualities which alone makes great leadership—the detachment of the judge and the attachment or devotion of the crusader.

Unlike so many who have been accorded fame, it was no single act of his that marked him for preeminence, but his worth was reflected in every impulse of his heart and every act of his life, all covering and crystallizing with confluent splendor to shine in one lustrous whole. In the firmament of life, he moved in an orbit all his own, the course of which has never been paralleled. His life was an epic; his memory an inspiration; his name immortal.

Any contemplation of his life and character must, of necessity, be dual, because the elements of the soldier are so interwoven and blended with the qualities of the man that we cannot separate the soldier from the man, nor the man from the soldier. Assuming command of soldiers undisciplined and untutored in the tactics of war, he soon converted disorganized efforts into concerted purpose and brought stability of system out of chaotic confusion. He infused into the hearts of his soldiers the same indomitable spirit and patriotic enthusiasm that dominated his life and purposes. He inspired confidence, impelled respect, and was the object of a soldierly devotion, the like of which was never seen before. What was there in the heart of this man that so drew to him the hearts of all other men? It was character. Character formed, character lived, character impressed, character transfigured in beauty, and transcendent in power. No man has ever lived whose life and conduct so deeply moved the hearts of his people. His name, inscribed upon the tablet of fame and brightly shining above the immortals, stands as the incarnation of right against might; stands as the dauntless and undaunted champion of the oppressed against the oppressor.

His masterful comprehension of the motives which actuated men made him the peerless leader he was. Then, too, he possessed almost to the degree of intuition that rare quality of making the right decision at the right time. This quality was manifested at Appomattox, when Lee forever sheathed his sword, and confided the cause so dear to his heart and the hearts of his people to a higher power and holier arbitrament than the sword. Knowing that he could resist longer, yet knowing too that longer resistance would be but to sacrifice the lives of those he loved, he chose at that unhappy but propitious moment, to yield to the overwhelming physical force, end the harrowing conflict, and stop the dreadful carnage of battle. Lee at Appomattox was a more inspiring picture than master hand has ever placed upon painter's canvas; his conduct a more heroic poem than was ever penned in song. The great storm of martial fury had at last shattered his ideals. The hopes and aspirations of his life had been swept away. A less courageous spirit would have sunk overcome with despair. Yet, steadfast and true, he emerged from it all with the light of heaven in his eyes, and a halo of glory about his head, and without bitterness and without rancor, he turned his thoughts and bent his energies to the rehabilitation of the South, the promotion of the welfare of his people, and the education of the youth of his country. In all history there is not a more sublime picture than that of Lee and his followers reorganizing their shattered ranks in the Valley of Defeat, and with faces turned toward another goal, marching forward to grander victories in peace than arms could ever hold. He felt that he had led his people to defeat in war, and if possible, he must lead them to victory in peace.

He was always in the prow of the boat with the spray of the future dashing against his face. When the conflict was ended, none was more careful to avoid doing anything that would tend to keep alive the memory of that tragic dissension; none more eager to do everything possible to clear away the debris of war. With the old order shattered and the new order waiting to be fashioned, none pleaded more earnestly than he that passion be allayed, that prejudice be dissipated, and reason restored that the Nation might focus its energies on the problems of the future. An Englishman of noble birth offered him a home with a splendid estate in England, a home fitting to his birth and station in life, but he declined the generous offer saying, "I am deeply grateful, but I cannot desert my native State in her hour of adversity, I must abide her misfortunes and share her fate."

He was great even in little things. He ennobled the trivial duties of life, and gave a charm to commonplace realities. What were the distinctive features of his greatness? There were two: His love of God and his love of man. He was a religious mind and a Christian heart, and no greatness can equal that which is inspired of Christ and reflected from the cross. But what more than all things else distinguished the nature of the man? Was it the strength of his military genius? Was it the equipoise of his strong mentality? I do not believe it was either of these. Great as they were, the quality which shone supreme in the man and marked him for preeminence, was the strength of his great soul, as expressed in his genuine humility, his fidelity to duty, his paramount sense of right, his utter abhorrence of all forms of injustice and oppression. Correct himself in thought and act, in his presence vice recoiled, evil withered, and virtue and truth bloomed radiant and fair. The purity of his life and the magnanimity of his character gave effulgence to his martial deeds and public service and made his,

"One of the few, the immortal names,
That were not born to die."

Today the soldier, the statesman, the scholar, the man beyond compare, is but a memory, but his knightly figure sits enthroned, and holds its everlasting sway within the hearts of all who love the great, the good, the noble, and the sublime.

May the contemplation of his character be ever an inspiration to us. May we emulate his virtues, try to grow into the likeness of his character, take him as our ideal, remembering that ideals to men are like stars to the sailor. We may never reach them, but if setting our eyes steadfastly upon them and following where they lead, we will be carried into the haven of our loftiest conceptions. We could commend to you and to all others, this, the greatest lesson of his life, that greatness is only goodness, and to be truly great, one must needs be truly good.

It is a beautiful part of nature that the sunshine of today is not limited in its beneficent effects to the day itself. For all time to come, the world will be better because the sun shone today. So a good life is never lost, but in its results, is eternal. Being dead, Lee yet speaks. Judging from his life and example, what would be his message to us today? Listen and heed. Let your ideals be fixed upon the glory and righteousness of your country; let its institutions be reverenced and cherished; be unwavering in your allegiance to its flag and eager to protect it from enemies from within and enemies from without. This do, not only in remembrance of your fathers whose courage was manifest alike in peace and in war, but as a pledge of your loyalty and devotion to the Stars and Stripes, and to our great Republic.

Title to Submerged Shore Property

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

LETTER FROM THE COMMISSIONER OF PARKS OF THE CITY OF NEW YORK

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to incorporate in my remarks a letter which I have received from the commissioner of parks of the city of New York, Robert Moses, setting forth his views in opposition to Senate Joint Resolution 24, introduced by Senator NYE. The letter is as follows:

THE CITY OF NEW YORK, DEPARTMENT OF PARKS,
New York City, January 31, 1939.

Hon. MATTHEW J. MERRITT,
House of Representatives Office Building, Washington, D. C.

DEAR SIR: My attention has been called to S. J. Res. 24, introduced by Senator NYE, and which was referred to the Committee on Public Lands and Surveys.

This resolution recites:

"Whereas all such submerged lands below said low-water mark and within such 3-mile limit lying along the coast of the United States are asserted to be the property of the United States."

I am informed by distinguished counsel that there is no basis for such assertion of title or property right in the United States, especially with respect to any lands under water along the coast of New York State, and that the courts would not uphold such an assertion.

The trouble is that if such an assertion is made by the Federal Government, it throws a cloud on the titles of the State, its municipalities, and its citizens. Any businessman will agree that no private citizen would spend money to improve shore property for business or other purposes, and no lending institution would advance money for such improvements if the Federal Government claimed ownership of such lands. The mere threat of pending litigation would be enough to paralyze prospective improvements on lands adjoining or near the tidal waters of the State. It might take years before a final decision is arrived at which would clean up this question and, in the meantime, irreparable damage would be done.

The city of New York, under grants from the State, has tremendous investments in dock properties and in parks and playgrounds, which depend for their usefulness on the ownership by the city of the lands under water. Under my jurisdiction, much-needed improvements are being made every day on such lands. Our program for use of these properties for recreational purposes is seriously jeopardized by this extraordinary assertion by the Government that it, instead of the city, is the owner of the adjacent lands under water.

The State also has acquired large tracts of land adjoining tidal waters for the Long Island State Park Commission, of which I am the president, and has transferred jurisdiction of the lands under water adjoining such upland to the said commission to be improved for recreational purposes. While the more enlightened people must know that this claim of the Government can never be upheld, the mischief that is caused by such a claim by encouraging the opponents of this progressive program is incalculable.

I understand that last year there was a like resolution introduced which, because of opposition, was finally whittled down to apply only to oil deposits in lands under water in California. This really does not help us because if the Government can claim oil deposits, it can claim any other deposits, and its claim must stand or fall on the ownership of the land itself, and if this is good in one State, it is good in all States.

I trust that you will do all in your power to prevent this vicious claim from being indorsed by Congress.

Very truly yours,

ROBERT MOSES, *Commissioner.*

William McKinley

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

ADDRESS BY HON. HARRY N. ROUTZOHN, OF OHIO, JANUARY 30, 1939

Mr. ROUTZOHN. Mr. Speaker, under unanimous consent granted me to extend my own remarks in the RECORD, I include an address I delivered at the McKinley Day banquet held at Dayton, Ohio, on Monday evening of this week, January 30, as follows:

In the 150 years of its history the people of our Nation have experienced three major crises. Out of the travail of the first there came forth a Lincoln. The second produced a McKinley.

Within a fortnight a grateful people will mark the date of Lincoln's birth, and the thoughtful will ponder well his precepts and example. It is eminently fitting that we tonight mark the birthday of McKinley and endeavor to glean from his life that which may enlighten and guide us through the present crisis.

William McKinley, the boy who was born 96 years ago yesterday in the little town of Niles, in eastern Ohio, and who was to become the twentieth President of the United States, was of wholesome, sturdy, middle-class working folks. There was Scotch, Irish, and English blood in his veins and the brawn of generations of hard work in his muscles. His people had been engaged in the business of getting iron ore out of the ground and extracting from it that metal which serves the sturdiest purposes of all the materials that come from the earth.

The house in which he was born was part residence and part store, for his people were neither rich nor poor. They were of that predominant middle class that has always been the backbone of the Nation. He was the seventh of nine children in the family. In the village of Niles he got plenty of that contact with his fellow beings that brings understanding of human beings and their problems and fitted him to be a great President for a great and prosperous people.

William McKinley went to the public schools of the village of Niles and to a Methodist-Presbyterian seminary in the village of Poland, to which the family later moved. During his eighteenth year he taught a country school for $25 a month, itself a classroom in democracy, and walked 5 miles morning and night that he might do so, working in his spare time at the village store. School teaching is admittedly an effective training in leadership. Much walking in the open is good for the health. Young McKinley had grown lusty and handsome. And the geniality and grace of the man had already asserted itself.

Then came the Civil War. The young school teacher immediately volunteered, entered the Army as a private. Four years he spent in the Army, participating in many active campaigns and desperate battles, and emerging at 22 as a major. What a build-up he was getting for the big things ahead! His commanding officer, Rutherford B. Hayes, who preceded McKinley to the Presidency, said of him: "The night was never too dark; the weather was never too cold; there was no sleet, or storm, or hail, or snow, or rain that was in the way of his prompt and efficient performance of every duty."

The young soldier studied law, practiced law, battled his way, step by step, through the mazes of politics that led to Congress, the Governorship of Ohio, the Presidency.

As a Congressman he was one of those men who conscientiously attend to all the duties which devolve upon them. He never neglected committee meetings or House sessions. He was known as a working Member among his colleagues in Washington, and among his people at home as a Representative who looked with scrupulous care after the varied wants of his constituents.

As Governor of the great State of Ohio he gave an administration unsurpassed for efficiency and integrity in office, thereby proving in advance his fitness to become the Chief Executive of the Nation.

As President he led the people out of the abyss of depression into the glorious sunshine of an unexampled prosperity and established the United States of America as a world power, foremost among the nations of earth.

It was in McKinley's first term that a very illustrative incident took place that stands out as marking an era in the development of the Nation. The Congress gave a demonstration in money spending that shocked the Nation. Congresses, please remember, are elected for 2 years. This Congress, in a 2-year period, made unprecedented appropriations. During the 2 years of its life it did a thing that has never been done before. It appropriated a billion dollars. It was proclaimed abroad as the billion-dollar Congress. It was the first billion-dollar Congress the Nation had ever known. The Nation was shocked at the profligacy of it. It clamored long and loud in denunciation. James B. Reed, of Maine, then Speaker of the House of Representatives, answered the clamor with an epithet, a single sentence, that went far toward quieting the criticism. Reed's answer was, "This is a billion-dollar country." It was a billion-dollar country, not in deficits but in yearly acquisition of wealth.

That was 40 years ago. The population of the Nation was a little more than half what it is now. It was prosperous and happy and well governed. It was spending $500,000,000 a year, $7 per person, which it regarded as far too much.

Now four decades have passed. A new spirit is abroad in the land. A new type of leader is in the White House. We are spending $10,000,000,000 a year, 20 times as much as we did in McKinley's time. We are spending each year $77 for each man, woman, and child. That is just 11 times as much per capita as we were spending in McKinley's time.

Perhaps the fact that, at the earlier date, we had as President of the United States a man of the people who had fought his way up through the tedious business of earning his way and at the latter date the same post is occupied by a pampered son of wealth with an irresponsible mania for pouring money into every rat hole that presents itself has something to do with the difference in the rate of spending.

The first inaugural address of President McKinley, read today, sounds as though it had been written to meet the situation that now exists. He says:

"The responsibilities of the high trust to which I have been called are augmented by the prevailing business conditions, entailing idleness upon willing labor and loss to useful enterprise. The country is suffering from industrial disturbances from which speedy relief must be had * * *. Economy is demanded in every branch of the Government at all times, but especially in periods like the present depression in business and distress among the people."

The idea of spending the Nation out of a slump had then not been born.

"The severest economy must be observed in public expenditures and extravagance stopped wherever it is found and prevented wherever in the future it may be developed. * * * The Government should not be permitted to run behind or increase its debts in times like the present. * * * A surplus in the Treasury created by loans is not a permanent or safe reliance." This is still President McKinley speaking in 1897. "The best way for a government to maintain its credit is to pay as it goes."

These, however, were the horse and buggy days. They were the days when it was considered moral to be a prosperous businessman. They were the days when the farmer was a free man and got along quite well, thank you, without surrendering his freedom of action to the dictates of brain-trusters who sought to make him dance like a mere marionette on the end of a string manipulated from Washington.

It is interesting to glance at the problems that were worrying President McKinley when he sent his message to Congress at the close of the year 1897. We had outstanding at that time an interest-bearing debt of $847,000,000, compared with the $40,000,000,000 of today, and he was worried about it. Hawaii was wanting to join the Union. The Five Civilized Tribes of Indian Territory were clamoring for self-government. There was yellow fever in several southern cities and we should make an effort to prevent its further invasion of the United States and to find out what caused it. A "noble treasure house of knowledge," a congressional library, had been proposed. Trouble with Spain over Cuba was in the offing.

In 1898 a war was fought, Cuba, Puerto Rico, the Philippines, Hawaii, came under the American wing, 30 forest reservations were created. The continuance of the gold standard—another "horse and buggy" idea—kept worrying the President. At all costs it must be maintained, he said.

The last year of President McKinley's life was one of great and abounding prosperity in the United States, one of fulfillment, of satisfaction. It abounded in the sort of things he liked, for his idea of the position of the Presidency was one of administration, one of keeping the ship of state on an even course, of allowing a great Nation to ripen as might a field of wheat and come into the abundance of its harvest. For him there was none of that seething for intellectual adventure, for novelty, for change, for experimentation. His ears were not open to that world of dilettanti who have panaceas to present. That a nation of people should become guinea pigs upon which vague and half-baked ideas might be tried out on the mere chance that some of them might work was for him an idea too fantastic for serious consideration. That the proven policies of a century and a quarter that had made the Nation great should be abandoned, not at the demand of the majority of people but upon the whim of an individual, to him would have been no less than madness.

McKinley would have measured a debt of $40,000,000,000 instead of facing with indifference its ever-increasing accumulation. He would have done the sort of thing we may do today—lay that sum alongside the value of a group of the States of the Union to see how big it is. He would have gone to Government figures for the basis of a comparison as we may go. The Government's statistical abstract today says that the total value of Texas, if we should start at the Rio Grande, is $9,400,000,000. We might sacrifice that toward payment of the debt. Then we might throw in Oklahoma which is worth $3,600,000,000. That makes $13,000,000,000. Arkansas and Louisiana together are worth $5,000,000,000; Mississippi and Alabama another $5,000,000,000. That makes $23,000,000,000. Tennessee, Georgia, North Carolina and South Carolina are worth an additional $15,000,000,000. That brings the figure up to $38,000,000,000. Now throw in Florida, which completes the sweep of everything below the Kentucky line between Mexico and Virginia, one-third of the United States, which is required to make up the value of the debt we have piled up. And the prospect ahead is for massing an added debt of $5,000,000,000 a year. Virginia will go into the hopper next year and West Virginia the next, and so on.

The valuation of the State of Ohio is given at $13,500,000,000. In the 8 years of his administration, President Roosevelt will have created as his own deficit an amount more than twice the value of the entire State of Ohio. What would McKinley have thought of this madness?

When President McKinley made the last speech of his life at the Pan American Exposition at Buffalo, on the very eve of being shot by a radical of the type seeking today to remold our governmental machinery, he demonstrated the soundness of his philosophy, the sanity of the views that had pulled him out of a depression instead of bringing on a relapse, and made such a success of his administration. Much of his speech is strangely appropriate to the situation that exists in the United States today.

"Expositions," he said, "are the timekeepers of progress. They record the world's advancement. Business life, whether among ourselves or other people, is ever a sharp struggle for success. It will be none the less so in the future. Without competition we would be clinging to the clumsy and antiquated processes of farming and manufacture and the methods of business of long ago and the twentieth century would be no further advanced than the eighteenth.

"My fellow citizens, trade statistics indicate that this country is in a state of unexampled prosperity. The figures are almost appalling. They show that we are utilizing our fields and forests and mines and that we are furnishing profitable employment to millions of workingmen throughout the United States, bringing comfort and happiness to their homes and making it possible to lay by savings for old age and disability. That all the people are participating in this great prosperity is seen in every American community and shown by the enormous and unprecedented deposits in savings banks."

This was the final report to his people of the martyred President whose life we here commemorate. It was a final and vivid flash at the results of the sort of government the Nation was receiving in what have been so contemptuously termed "horse-and-buggy days."

Suppose that by some miracle President McKinley were to be returned to the White House today in the capacity of Chief Executive and were compelled to make a report on conditions as he found them. How strikingly different that report would be from the one I have just read to you. In all truth and candor, he would be compelled to say something like the following:

"My fellow citizens, the latest authentic statistics show definitely that never before in history were conditions generally as bad in the United States as they are today. Not only have we a debt of almost $40,000,000,000, which eventually must be met, but we are planning new expenditures, which of necessity must come in the main from industry, that will make the tax burden heavier than ever.

"This is a rich country, and if the state of the public mind were normal, I might paint for you an optimistic picture of the future. Unfortunately, in recent years this country has been controlled by a school of thought that has preached that prosperity lies in piling up debts endlessly, in beating business to its knees at every opportunity, in discouraging friendly relations between employers and employees, in leading the people to believe that the taxpaying public can go on indefinitely assuming an overwhelming burden of debt. The result is that businessmen of the country from the largest industrial leaders to the owners of the smallest stores who must be depended upon to produce the larger portion of the taxes are discouraged and disheartened.

"Only a complete right about face in Government policies will prevent utter ruin. If we Government officials will give evidence of a desire to return to sanity and solvency, then capital will take courage and eventually we may get back on our feet."

In William McKinley's day, reciprocal-trade treaties were known as "free trade" and "tariff for revenue only"—the names of that monster which has never failed to impoverish the Nation and its people. He advocated reciprocity—practiced it, but not to the detriment of the American manufacturer, laborer, businessman, or farmer. Others might change, others might doubt, others might modify their views, but he stood firm for a protective tariff.

I need but quote his words to prove the fallacy of all arguments made today in favor of Uncle Sam playing Santa Claus to the rest of the world at the expense and to the detriment of his own kith and kin. "We demand," he said, "That the imposition of duties on foreign imports shall be made, not 'for revenue only,' but that

in raising the requisite revenues for the Government, such duties shall be levied as to afford security to our diversified industries, and protection to the rights and wages of the laborer; to the end that active and intelligent labor, as well as capital, shall have its just reward, and the laboring man his full share in the national prosperity. Against the so-called economic system of the Democratic Party, which would degrade our labor to the foreign standard, we enter our earnest protest."

Again he said: "What is a lower tariff for?" Well might we ask today, what are the effects of reciprocal-trade treaties? "It is to make it easier for foreign goods to get in the United States, to increase competition from abroad. You cannot buy your goods and make them at home as well. No good farmer thinks of having his neighbor's sons to do his work when he has a half dozen boys at home idle. I do not believe in buying any kind of goods abroad that we can make here when we have a million of unemployed men at home." Continuing, McKinley said: "My competition says protection is a 'foul blot on the fair escutcheon of our country.' If it is, then George Washington, Thomas Jefferson, Alexander Hamilton, and Andrew Jackson put that 'foul blot' upon the fair page of American history; the men who made this Government put this first 'foul blot' upon the statute books of the United States. What has it done? For 32 years we have collected our revenue from this source, and with this revenue have subdued the most gigantic rebellion recorded in human annals. We have paid a greater public debt than was ever paid in the same period by any government in the world. With this revenue we paid more liberal pensions than in any other country. And that is not all. During those 32 years we raised this country from the lowest to the highest ranks in agriculture, and in mining, and in manufactures, of all nations in this wide, wide world."

The other day I stood in a room of the Capitol known as the "President's Room"; so-called because it is there the President repairs when he visits the Congress. The furniture in that room is priceless—an offer of $100,000 was refused for the table alone—not for its intrinsic value but because it was the furniture of Abraham Lincoln. There is one thing else in that room—the bust of William McKinley. No other statue adorns that room. On the walls are painted the portraits of the first cabinet; Thomas Jefferson, Secretary of State; Alexander Hamilton, Secretary of the Treasury; E. Randolph, Attorney General; S. Osgood, Postmaster General; and Henry Knox, Secretary of War. The furniture and the statue memorialize Lincoln and McKinley. To lead us out of the present crisis, may God grant that the next President is one imbued with the spirit and wisdom and courage of those two great statesmen, Abraham Lincoln and William McKinley.

Decisions of the National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

LETTER OF HON. HERMAN P. EBERHARTER, OF PENNSYLVANIA, TO DONALD WAKEFIELD SMITH, AND HIS REPLY

Mr. EBERHARTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter to Donald Wakefield Smith, member of the National Labor Relations Board, and his reply:

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 28, 1939.

Mr. DONALD WAKEFIELD SMITH,
Member, National Labor Relations Board,
Washington, D. C.

MY DEAR MR. SMITH: The controversy which has arisen over your reappointment by the President to the National Labor Relations Board has engaged my interest, and I have been endeavoring to obtain as accurate information as is available.

For some time commentators have stated that your decisions have shown favor to the position of the C. I. O. in cases where that organization was making contentions as to the proposed bargaining unit in opposition to those presented simultaneously by the A. F. of L. I must confess these comments have seemed to me to be couched in general terms, rather vague, and without confirming data.

In an article in the February issue of Fortune magazine by the president of the American Federation of Labor reference is made to the decision of the Board in the Allis-Chalmers case, and then appears the following statement:

"Since the Allis-Chalmers case Board Member Edwin Smith has won over Board Member Donald Wakefield Smith to his point of view. The two Smiths constitute a majority of the Board. In many cases the Board has committed itself almost unreservedly to a policy of promoting industrial unionism at the expense of existing craft unions."

I am interested in knowing whether the above quotation is an accurate statement of fact. The record of your concurrences and dissents on Board decisions is a public one. Without in any sense wishing to challenge your judgment in arriving at these decisions, I think it a matter of importance to the public that your record in this respect be made known.

Will you be good enough to have compiled for me a record of your concurrences and dissents on all cases decided by the Board in which you took part since the Allis-Chalmers case; and also, if you feel that you can do so with propriety, comment particularly on the decisions to which Mr. Green had reference in his Fortune magazine article.

I hope you will not feel I am asking too much of you, as I can assure you that this request is made in order that I may satisfy my own mind on the subject.

With kind regards, I am

Sincerely yours.

HERMAN P. EBERHARTER.

NATIONAL LABOR RELATIONS BOARD,
Washington, D. C., January 31, 1939.

Hon. HERMAN P. EBERHARTER,
House of Representatives, Washington, D. C.

MY DEAR MR. EBERHARTER: Reference is made to your communication of January 28 wherein you requested that I supply you with a statement regarding my record of concurrences and dissents in Board decisions since the Allis-Chalmers case.

At the outset, for the purposes of sensible discussion, I think it ought to be made clear that the Allis-Chalmers case marks no breaking point in my approach to the problem of an appropriate unit, and that what I have decided before is perfectly consistent with what I have decided since that case, as will be pointed out later. It is apparent from your inquiry that you also desire that I briefly discuss my decisions regarding other cases which have been made the subject of some criticism. Although I do not believe that one serving in a quasi-judicial capacity should ordinarily explain his decisions, nevertheless, I agree with you that it is a matter of importance to the public that my record in this respect be made known.

In dealing with the subject of labor relations and the enforcement of the provisions of the National Labor Relations Act, the Board has been faced with a very complex and highly controversial issue. However, the Board has believed that Congress intended that the act should function realistically rather than as a mere declaration of policy. The Board would be violating a public trust if it did not strictly enforce the act and endeavor to effectuate the policies therein set forth. The criticism directed against the Board is primarily the result of factional differences within the ranks of labor, which differences were not apparent, nor were they even contemplated, at the time the law was enacted. Because of the express mandate of the statute and the very nature of the problems with which the Board has had to deal, it was inevitable that the Board could not satisfy all parties concerned with its decisions and activities. The public, upon whose behalf the act is administered, has the right to be vitally concerned with the record of those who administer it. There has been some criticism of my record, which criticism, I am convinced, cannot be supported by the actual facts. My record is a public one and can, indeed, be affirmatively shown.

I have conscientiously endeavored to administer the law as enacted by the Congress with an impartial attitude, and have always borne in mind the maintenance of the objectives and fundamental purposes of the act, which protects the right of employees to freely organize and to bargain collectively through representatives of their own choosing. Aside from the question of whether an individual or group of individuals should have only a political conception of the duties of a quasi-judicial officer of a Government agency, the best test to be applied is an impartial examination of the record. I stand on my record as a member of the Board during the past 2½ years. Such record will conclusively establish that the criticism to which you have referred is wholly unjustified and unsupported. Let us look at the record.

The major part of the criticism has been directed toward my treatment of the question of the appropriate units. Briefly, the problem is this: Two rival unions may claim a majority of, and exclusive bargaining rights for, employees in a particular plant. Under the National Labor Relations Act it is the Board's duty to resolve these conflicting claims by investigating and holding a hearing so that it may determine which of the unions does have the majority. The claims of the unions, however, may conflict on the question of which employees ought to be counted in the determination of whether a majority exists.

Thus, union X may assert that all employees in a plant should be counted, and that it has a majority of them, and so should be exclusive agent for all. On the other hand, union Y may contend that only a certain group of employees should be counted, perhaps the machinists, or the firemen, or the pattern makers, and that it represents a majority of this smaller group and should be its exclusive agent. Union Y may claim to have members in only the smaller group while union X may claim to have a majority of both groups combined.

It is the determination of which employees are to be counted that constitutes the problem of the appropriate unit. Unrest and dissatisfaction may exist in the plant until the issue is resolved.

Neither the employer nor the rival unions themselves can determine the issue. That it must be determined by some third party was recognized by the president of the American Federation of Labor when he stated in support of the passage of the National Labor Relations Act (hearings before Senate Subcommittee on Education and Labor, p. 119, 1935):

"The attempt to bargain with a number of groups not only destroys stability but it makes possible the control of the employer over the organization of his employees. * * * If the employees and the employer are not able to agree as to what constitutes the bargaining unit, I believe that the National Labor Relations Board should decide what the bargaining unit shall be."

And that no rigid rule can be created to fit all situations involving this complex issue was also recognized at the same hearings (p. 203) by another representative of the American Federation of Labor, when he contended that there must be inserted in the act the provision that the Board decide what unit was appropriate for purposes of collective bargaining "in each case."

In 1935, before any factional differences in the labor movement had occurred, the Board set certain benchmarks to determine whether a craft unit or an industrial unit was appropriate. It heard evidence to discover whether the workers themselves wished the craft unit, whether their special skill, or pay, or location in the plant set them apart, whether the workers as a group had a history of negotiation undertaken as a unit.

Despite labor's factional differences the Board continued to use the same benchmarks for determining whether a group of employees had craft identity. But occasionally the evidence presented no clear picture on whether a craft or an industrial unit was appropriate. In such a situation the Board adopted a method of determination known as the Globe Doctrine.

The Globe doctrine was first applied in August 1937 in the Globe Machine & Stamping Co. case (3 N. L. R. B. 294). That case involved an automobile-parts factory which employed about 650 workers. The C. I. O., who filed the petition, contended that all the employees constitued a single unit. The American Federation of Labor claimed that those employees engaged in polishing constituted one separate unit; those engaged in punch pressing, another separate unit; and the remaining production employees, a third unit. There was evidence that some degree of skill was necessary both for polishing and punch pressing. Evidence on the wishes of the men involved was contradictory. Likewise, the heat of simultaneous organizing campaigns had left uncertain the claim of each union that the alleged appropriate units had a past history of bargaining. Thus, the evidence showed that either the separate craft units or the single industrial unit was feasible. Accordingly, the Board held:

"In such a case, where the considerations are so evenly balanced, the determining factor is the desire of the men themselves."

The Board ordered three separate elections: One among the production employees, one among the polishers, and one among the punch pressers. If a majority of each of the latter groups voted to be included in the single industrial unit, the Board stated in advance it would make its decision on the basis of that choice. If, however, a majority in each of the craft groups voted against the industrial unit, the Board would fix the craft unit as appropriate.

This doctrine applies a method of local option which, leaving the choice of the appropriate unit to the workers themselves, has been followed in every case similar to the Globe case.

In November 1937, however, in the Allis-Chalmers case (4 N. L. R. B. 159), Board Member Edwin S. Smith first dissented to the application of the Globe doctrine on the theory that the industrial unit was the more appropriate for purposes of collective bargaining. This dissenting view of Mr. Edwin S. Smith did not prevail. The Globe doctrine, permitting the employees of the smaller group to determine for themselves to which unit they wish to belong, was held applicable by the opinion of the majority composed of Chairman J. Warren Madden and myself.

Since the Globe decision itself, the Globe doctrine has been held by the Board to be applicable in many cases in which the A. F. of L. claim for a craft unit was opposed by the C. I. O. claim for an industrial unit. In some of these, no special election was necessary and the A. F. of L. craft union was forthwith given exclusive bargaining rights, since the employees in the craft had already evinced a clear desire for a separate craft unit. In other cases, no separate election was held because the employees had already shown their desire to be included in the industrial unit. In every case where the evidence showed that craft lines were at all apparent, the desires of the men in the craft were held by the Board to be determinative.

Since the Allis-Chalmers case, Board Member Edwin S. Smith has dissented 11 times to the application of the Globe doctrine. In every one of these 11 cases, Chairman Madden and I together formed the majority applying the doctrine. In not one single case did I dissent against the application of that doctrine or against the finding of a craft unit as appropriate. In every case in which the Board rejected a claim for a craft unit, it did so unanimously. Although I have always determined every case upon my own judgment as to the proper finding which should be made consistent with the record, the contention that Mr. Edwin S. Smith and I formed a new majority of the Board at any time following the Allis-Chalmers case is not supported by a single decision on the question concerning the appropriate unit.

Some comment has been made concerning my position in two decisions involving the appropriate unit. In the Serrick case (8 N. L. R. B. No. 66), the primary issue was whether the employer had committed unfair labor practices, the effect of which was to discourage membership in the C. I. O. and encourage membership in the A. F. of L. The Board was unanimous in holding that the employer had so violated the act. The C. I. O., at whose expense the unfair labor practices had been committed, claimed an industrial unit to be appropriate, the A. F. of L. claimed a craft unit. The unanimous opinion found that the C. I. O. union and the A. F. of L. union admitted to membership and endeavored to organize all of the workers, except those in one craft, which were not in issue, and then such opinion stated:

"While ordinarily we have regarded as controlling the free choice of a majority of the employees in a well-defined craft as to the form of organization they desire, in the present case, the respondent's conduct in influencing such choice precludes the application of this doctrine in the determination of the appropriate unit or units."

Chairman Madden concurred in the decision and in all of the opinion except as to the language used in two sentences contained therein, stating that such language was not necessary for the decision of the case and holding that no opinion should, therefore, be expressed. In any event, Chairman Madden agreed that the Globe doctrine was inapplicable. It is as to the inclusion of this language in the decision that some criticism has been directed against me. However, this was a unique case and the only one of its kind with which the Board has ever been confronted. Comment has been made that the language used in the two sentences mentioned should be considered as a criterion that I have departed from the principle of applying the Globe doctrine in the determination of the appropriate unit question in subsequent cases. I again refer you to the record which conclusively establishes that since the Serrick case the Globe doctrine has been applied in seven cases, in every one of which Chairman Madden and I have concurred. Mr. Edwin S. Smith dissented in four of these cases.

The second decision was the recently issued supplemental decision in the Finch case (10 N. L. R. B., No. 78). In the original case (7 N. L. R. B. 1), the C. I. O. requested an industrial unit and the A. F. of L. contended that two crafts, one composed of firemen, one of five carpenters, should be separate appropriate units. The Chairman joined me in holding the Globe doctrine was applicable in determining the desires of the employees in the two crafts. Mr. Edwin S. Smith dissented. At the time of the election, however, only one carpenter was employed. That carpenter voted for the craft union. In the supplemental decision the American Federation of Labor union was declared to be the exclusive agent for the firemen and the application of the Globe doctrine to the case was reaffirmed. I held, however, in accordance with our prior decisions, that the act did not contemplate collective bargaining for a single individual. I said:

"The principle of collective bargaining presupposes that there is more than one person eligible to bargain and the act does not empower the Board to certify where one employee is involved."

From this the Chairman dissented, holding that although the act did not contemplate collective bargaining for a single individual, nevertheless, a single member of a craft had the right to indicate whether he desired to be a part of an industrial unit. My holding was in no way a recession from the democratic doctrine of the Globe case.

It is to be noted that both the Serrick and the Finch cases were confined to unique situations. It will be further noted that I have on no occasion ever dissented from the application of the Globe doctrine and that I have consistently followed the principle that the wishes of the men on the form by which they are to bargain collectively are of paramount importance. In so doing I believe that I have followed the intent of Congress as expressed by a statement made by the President of the American Federation of Labor when urging passage of the act (hearings before House Subcommittee on Labor, 74th Cong., 1935, p. 199):

"All we have ever asked is that the workers be accorded the opportunity to determine that question (collective bargaining agency) for themselves. If they want to select the American Federation of Labor union, they have a perfect right to do so, but if they want to select another union, an independent union, they shall have the right to do that. We have no quarrel with them if they make that decision. But why not accord them the right to determine the question for themselves?"

Some comment has been made regarding the unanimous decision of the Board in the case involving the Pacific Coast Longshoremen (7 N. L. R. B. 1002). This case in no way involved the craft unit question but concerned only the extent of an industrial unit. It was determined, for the most part, by the substantial history of collective bargaining on the same basis when the Longshoremen of the Pacific coast were represented by the International Longshoremen Association, affiliated with the American Federation of Labor.

Finally, there is a fourth case, the only case of any kind in which I have dissented. That dissent appears in the Simplex Wire & Cable Co. order (7 N. L. R. B. 568). Prior to that decision, an "independent" union had been found by the Board to have been company-dominated on charges filed by the American Federation of Labor. Thereafter, a petition was filed by the A. F. of L., and an election was held. The election resulted in a defeat for the A. F. of L., the only union on the ballot. The A. F. of L. protested the election, alleging that the employer, through the former officers of the company union had campaigned against the American Federation of Labor, had intimidated the employees to vote against the A. F. of L., and requested that the election be set aside. Although no hearing was held, a majority of the Board decided that the evidence of company favoritism was insufficient. I dissented, arguing that the evidence was sufficient to warrant a hearing to determine whether or not there had been any direct or indirect employer interference.

In my entire record that is my only dissenting opinion. Certainly this lone dissent could not be considered prejudicial to the A. F. of L.

Aside from this case, my holdings have been the holdings of the Board, and I do not believe that the Board's record in any way gives weight to the criticism that it has favored either the craft or the industrial form of organization, but rather it has preserved the intent of Congress to determine the appropriateness of the bargaining unit with reference to all the circumstances, especially including the democratic choice of the employees, who are those most directly affected. Furthermore, it might here be added that it has been the practice of the Board in instances where there are two contesting labor organizations to provide a space on the ballot to permit the workers to vote whether they do not desire to be represented by either of the contesting organizations; and, of course, if the "neither" vote is in the majority, no union is certified as the collective-bargaining agent.

Contrary to the popular belief, the issue between the A. F. of L. and the C. I. O. is not a clearly drawn one between craft and industrial unionism. A review of the cases shows that either through its petitions or through its contentions after intervention the American Federation of Labor has requested or agreed to industrial units in approximately twice as many cases as it has requested or agreed to craft units. In several cases in which there was a conflict between the A. F. of L. and the C. I. O. the issue was not craft versus industrial units but simply the scope of the industrial unit. In not a few instances the A. F. of L. requested a more inclusive industrial unit than the C. I. O. In some cases A. F. of L. unions, which have traditionally contended for craft units, requested that highly skilled groups be included in the industrial unit, although the C. I. O. was opposed. In one case an A. F. of L. affiliate followed its customary claim by requesting an employer unit, while its rival demanded a craft unit. The A. F. of L. affiliate in that case rested its claim "upon the contention that the industrial form of organization affords all employees greater economic strength and better protection than separate craft organizations."

An overall tabulation will demonstrate that the Board has by no means favored one organization over another on the question of the appropriate unit. From the beginning of the Board's work, to the present, there have been a total of 171 cases in which both the A. F. of L. and the C. I. O. have participated and in which there has been a question concerning the appropriate unit.

In a total of 24 of these 171 cases, both organizations agreed on the general outline of the unit, whether craft or industrial, and disagreed only concerning the inclusion or exclusion of minor groups or a few particular individuals. In 79 of these 171 cases, there has been complete agreement between the rival organizations on the question of what constituted the appropriate unit.

In only 68 cases was there a disagreement between the two unions which went to the essence of the question concerning the appropriate unit. Of these 68 cases, in which there was substantial disagreement, the Board adopted the contentions of the A. F. of L. in 32 cases. It adopted the contentions of the C. I. O. in 28 cases. It adopted in part, and rejected in part, the contentions of both unions in seven cases. In the final case, no decision was necessary.

As I have already pointed out, not all of these cases in which there was substantial disagreement involved the question of the craft versus industrial unit. In only 13 cases were the A. F. of L. requests that the craft unit be held applicable wholly rejected by the Board. In four other cases, some craft units requested were found appropriate, while some were not. In many of these cases in which the craft request was rejected, the employees in the claimed craft unit indicated no desire to be in a separate unit and were not members of the A. F. of L. Thus, in one of these cases, the A. F. of L. claimed that five warehousemen constituted a craft unit separate from the other employees in the plant. Yet every one of these five men were members of the C. I. O. In another case, two truck drivers were claimed by the A. F. of L. to constitute a separate craft unit, although one of the two was a member of the C. I. O., and although the A. F. of L. itself had executed a plant-wide contract with the company, which included these two truck drivers. In still another case of this group, although three A. F. of L. unions claimed as appropriate three separate craft units, those unions did not appear at the hearing, nor did the record show that the A. F. of L. had any members in the alleged craft.

These three cases are not extreme examples of those comparatively few in which the Board has rejected A. F. of L. requests for craft units. This group of cases rejecting the craft unit do not, I am certain, indicate a hostility to craft unionism, but rather a respect for the desires of the employees themselves and for a common-sense application of the statute with regard to the determination of the unit question.

Those impartial commentators who have studied the Board's decisions fully support what I believe to be the inescapable conclusion that there has been no hostility to craft units. In summarizing the treatment of labor law by the various law reviews in the country, the International Juridical Association Bulletin (vol. VII, No. 6, at p. 69) said:

"There is complete agreement that the American Federation of Labor is definitely not being discriminated against by the Board in the selection of bargaining units."

An author in the Cornell Law Quarterly (vol. 23, p. 412) stated that by the Board's decisions—

"The craft method is assured of more than a fair deal. * * * If the craft union is active enough to retain the loyalty of its members, it is given the assurance of continued existence under the act."

Finally critics accuse the Board of bias against one organization and in favor of another because the contracts of one of the organizations have been occasionally set aside.

Before the National Electric Products case (3 N. L. R. B. 475), the first in which an A. F. of L. contract was set aside, the Board had invalidated contracts in three cases on the ground that the contracting union had been illegally favored and assisted by the employer and that the execution of the contract itself was an unfair labor practice. Each one of these three cases was instituted by charges filed by the A. F. of L. Since the National Electric Products case 15 illegal contracts were set aside on charges filed by the American Federation of Labor.

The Board could not in good conscience, or good sense, adopt a different rule when it was faced with illegal contracts which happened to be executed by an employer and a nationally affiliated local. In every one of these cases, the Board decision invalidating the contract was unanimous. These decisions are believed to be consistent with the intent of Congress in view of the proviso of section 8 (3) of the act, which declares that a closed-shop contract is valid only if the contracting union has not been assisted by any action defined in the act as an unfair labor practice and only if such union represents a majority of the employees in the appropriate collective-bargaining unit covered by the contract when made. The evidence in these cases showed that the employer had favored the contracting union through unfair labor practices or that the contracting union did not represent a majority of the employees within the appropriate unit covered by the agreement when made.

Every one of the cases in which the A. F. of L. and the C. I. O. were concerned, with one exception, involved a closed-shop contract. For the Board to have shut its eyes to the facts shown by the record and to have permitted these contracts to remain in effect would have been to do violence to the express mandate of the act. To have done so would have been to disregard the intent of those who drew the act, intent expressed by the president of the American Federation of Labor at the hearings before the House Committee on Labor in March 1935, page 198:

"Employers must keep hands off, completely, so far as labor organizations are concerned. * * * I hold that the employers of labor have no right, morally or legally, to interfere in any way with the exercise of the right of the workers to join a union of their own choosing."

And further expressed at the hearings in 1934 by Dr. Paul Brissenden, eminent economist of Columbia University, who stated (p. 216):

"Genuine collective bargaining between an employer and a self-chosen representative of his employees * * * may be frustrated by the employer's negotiation of a smart bargain with a local of a national trade-union, as well as by a similar sort of bargain with a company union. * * * The tendency of employers to enter into collective bargaining agreements with company unions * * * or company dominated local of a national union, even those affiliated with the American Federation of Labor, in order to avoid dealing with the self-chosen representatives of their own employees, should be forestalled."

In this connection it is interesting to note that in two cases the A. F. of L. itself stipulated and agreed that its contracts could be set aside by the Board after charges had been filed by the C. I. O. Further, in one case the Board invalidated a contract with the C. I. O. on charges filed by the A. F. of L. (Mine "B" Coal Co., 8 N. L. R. B. No. 142); and a complaint based upon A. F. of L. charges was recently served in which the issue is the legality of a closed-shop contract with the C. I. O. which the A. F. of L. alleges to have been company-favored. Thus it is clear that both the A. F. of L. and the C. I. O. have sought the protection and the remedies which the act affords and which the Board has developed in the decisions which I have mentioned. Where an illegal contract is entered into, the Board has no alternative other than to restore the status quo by obliterating that contract. That not only the employer, who was guilty of the illegality, but the other contracting party, the union, must lose the benefits of the contract is unavoidable. But though the employer must indefinitely cease and desist, the union has always been left free to rid itself of the perhaps unasked-for and unwanted assistance of the employer and thereafter by establishing a majority without the interference of the employer bargain for the employees.

I believe that much has been said concerning these issues that arises from emotion or from failure to examine the record. Mr. Herbert Harris, an eminent members of the facult of Yale University, has recently written a book entitled "American Labor." He has studied the record of the Board, and he has concluded (p. 396):

"The Board has disposed of some 16,770 cases (affecting an estimated 3,981,052 employees) with an even-tempered honesty and reasonableness that recommend themselves to its detractors and render it one of the most valuable public agencies in American society."

And in April 1938 a noted lawyer, one with perhaps more experience in arguing before the Board than any other, stated to a congressional committee (hearing on H. R. 9745, p. 93):

"We are not asking for a change of personnel. We think that they are pretty fine gentlemen and perfectly honest, and trying to do a good job, and having a difficult job to perform which has been made more difficult by rival jurisdictions. * * * This is not an attack upon the Board's personnel or their honesty or their faithfulness. They have a hard job. If I were on that Board I would probably function the same way they do."

The gentleman who so testified was Joseph A. Padway, general counsel of the American Federation of Labor.

I rest firm in the conviction that all those who fairly and impartially examine the Board's record, and my record, will find therein an irrefutable answer to the charges that have been made.

Very sincerely,

DONALD WAKEFIELD SMITH.

Development of the Clarks Fork of the Columbia River

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

Mr. WHITE of Idaho. Mr. Speaker, I read with great interest the speech given by the Honorable JOSEPH J. MANSFIELD, and thinking that I may have been too casual in my reading, I have also studied Judge MANSFIELD'S speech most carefully. It is an excellent presentation, and I realize, of course, that in the limited time allowed it was impossible for him to cover in detail, or even touch upon, all the great stream systems of our country which need attention. Inasmuch as the one to which I refer in particular now, however, involves a basin of more than 25,000 square miles, I believe it essential to set forth before this group the importance of developing the great Clark Fork Basin, in the Pacific Northwest.

The river in question empties into the Columbia near the Canadian border in the State of Washington, where it is known as the Pend Oreille, and extending upstream for several hundred miles. It embraces that area in the panhandle of Idaho that is drained by the Priest River and Lake Pend Oreille, crossing into Montana. It includes the drainage basins of such rivers as the Bitter Root, Flathead, and Blackfoot. While the navigation on this river system may not be great, as compared with navigation on our rivers in the Middle West, it has been, and is, an important factor in the movement of our great Northwestern product—timber. Great rafts of fine timber such as is found nowhere more abundantly than in the Pacific Northwest, are constantly moved from forest to mill by means of these streams.

There are other factors, however, affecting the development of our water resources, where the present situation is not satisfactory, and I intend to touch on several of these points. The first is on the question of power. Nothing has brought the question of a prospective power shortage in this country to the attention of the people so greatly as the study made in consideration of our requirements for national defense. Apparently our people do not realize the fact that there was an acute power shortage during the last great emergency in 1918, nor do they realize that industry, if restored to its normal rate of production, would undoubtedly absorb, or very nearly so, all the power than can be produced in our Nation today. Any sudden improvement in our economic position will undoubtedly result in the growth of new industries and the production of new goods that will overwhelm us with their power requirements. If we add to these considerations the fact that an additional 50 percent might be, and probably would be, required in case of a national emergency, we arrive at a point where it is self-evident that an immediate increase in available power should be sought. The development of this power cannot be solved overnight. The construction of large dams, together with the design and construction of the machinery needed to develop power, or even the construction of plants other than hydroelectric, require a matter of years.

In the consideration of the Clark Fork Basin development, it should immediately occur to anyone familiar with that territory that therein lies one of the greatest potential power developments in the United States today. Within the area there are only seven water-power plants today with a capacity of 360 kilowatts or greater. If we realize that above Flathead Lake alone there are 13 sites with a total head of more than 1,000 feet available, we must recognize what tremendous potential power lies dormant. On the Flathead River and its tributaries there are in excess of 30 possible sites, and there are in addition at least 5 excellent sites below Flathead Lake.

One of these on the Clark Fork River at Cabinet Gorge and the other site on the Pend O'Reille River at Z Canyon which would permit a very considerable power development an installed capacity of 130,000 kilowatts being considered for Cabinet Gorge alone. The Z Canyon site is capable of producing in excess of 250,000 kilowatts. Not only will this power find a use in connection with industries in the Northwest, but increased mining activities in that section will require considerable amounts. In addtion to power, the question of irrigation is becoming increasingly important, due to the great influx of population from the Dust Bowl area. Irrigation pumping permitted by the use of power developed at these sites could immediately be utilized in connection with the Rathdrum Prairie irrigation project, which will improve some 40,000 acres immediately northwest of Coeur d'Alene, Idaho.

In discussing these various factors in the development of our water resources it is not possible to divorce any one of the factors from all of the others considered, and, conversely, it is necessary in getting a complete picture to consider all factors and not exclude any one; therefore, the beneficial effects of such development as I have referred to must also be extended into the flood-control field. The availability, in the reservoirs created behind the various power dams referred to, of considerable areas for the storage of floodwaters, and also the fact that a more or less constant regulated flow in the various tributaries can be maintained due to such storage are very important factors in considering the improvement of this basin.

The major part of the Clark Fork Basin lies in western Montana, and that part of the basin is known to students of geology as Lake Missoula. During the glacial period a block or barrier of some type was formed in the mountains on the Idaho-Montana border, resulting in the submergence of the entire upper part of the basin of probably some 20,000 square miles under a head of water approximately 1,000 feet deep. The result has been the formation of bottom lands that, under proper treatment, would be extremely productive. The area as a whole might be termed semiarid, the rainfall, except in the mountainous parts, seldom exceeding 30 inches per year. With the construction of the dams referred to and the very important one in western Montana known as the Hungry Horse Dam, improved regulation on the various tributaries can be established to a point where adequate water will be available for irrigation during the dry periods of the year and at the same time the effects of destructive floods will be eliminated during the period of the year when there is heavy rainfall.

The Army engineers have already submitted a preliminary report, as requested by Congress, setting forth in some detail all of these major factors and their interrelation to each other. Considering the time and funds available, this report stands as evidence of their sound judgment, and in order to bring realization of the development of this territory into being, it is hoped that the comprehensive survey already authorized may be prosecuted with such reasonable funds as may be necessary with a view to reporting to the Congress at an early date the exact work to be undertaken.

In these days of uncertainty, it is comforting that in the development of one of our great resources—water—a body as soundly organized and functioning as smoothly as the Army engineers can be depended upon. I am sure Judge MANSFIELD, in his statement concerning the development of our harbors and our rivers for navigation and other purposes, has sensed the opinion of this entire body, and I appreciate the opportunity that has been afforded me, not only to endorse his opinion, but also to stress the importance of the Clark Fork Basin development.

Dedication of New Federal Building at Towson, Md.

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

ADDRESSES BY HON. T. SCOTT OFFUTT, LOUIS A. SIMON, ERNEST GREEN, AND SMITH W. PURDUM

Mr. COLE of Maryland. Mr. Speaker, on October 28, 1938, a new Federal building, housing the Post Office, War and Agricultural Departments activities, was dedicated in Towson, Baltimore County, Md. The architectural and engineering accomplishments displayed in this building present such a compliment to our Government officials responsible therefor that I have asked to incorporate in the RECORD the addresses delivered at the dedicatory exercises which describe the history associated with this post office and description of the architecture displayed in the new building.

Aside from the brief statements which Senator RADCLIFFE and I made at the dedicatory exercises, I insert herein, under previous unanimous consent granted by the House, the remarks of the Honorable T. Scott Offutt, chief judge of the third judicial circuit of Maryland, who presided at the exercises; Mr. Louis A. Simon, Supervising Architect of the Procurement Division of the Treasury Department; address by Postmaster Ernest Green, of Baltimore, Md.; and address by the Honorable Smith W. Purdum, Fourth Assistant Postmaster General, as follows:

ADDRESS BY HON. T. SCOTT OFFUTT, CHIEF JUDGE OF THE THIRD JUDICIAL CIRCUIT OF MARYLAND, AT THE DEDICATION OF THE NEW FEDERAL BUILDING, TOWSON, MD., OCTOBER 28, 1938

As part of a general program, the Federal Government has adopted the policy of owning its post-office buildings. In pursuance of that policy and also to aid the general purpose of Congress and the Executive to promote recovery by stimulating building activity, each congressional district has so far as possible been allotted one new post-office building a year. In selecting cities and towns for these improvements receipts of the office is an important factor.

Heretofore the post office in Towson has been tossed from pillar to post, first in one place and then in another, inadequately housed, inconveniently located, and cramped for space. In recent years the population of the town has increased rapidly, the congestion of traffic on its business streets, including that part of Chesapeake Avenue on which the post office was last located, has made the use of those streets by pedestrians extremely hazardous, and the need for a more commodious and safer plant had become imperative.

Recognizing the urgence of these needs, the Honorable WILLIAM P. COLE, representing this congressional district in the Federal Congress, approached the committee of the Procurement Division in Washington, which is the agency of the Federal Government, acting under the Treasury Department, in charge of purchases and architecture for Government work, and suggested the location of post-office buildings in the metropolitan belt of Baltimore County. After an investigation, Mr. Purdum, Fourth Assistant Postmaster General, and Admiral Peoples, the committee approved the plan and Mr. Simon, chief architect of the Division, took a keen personal interest in designing a building, which would not only harmonize with the more permanent structures in and about the courthouse square, but which would combine with that harmony utility, space, convenience, and safety.

The result is this splendid structure which is not only an evidence of Mr. Simon's distinguished talents and artistic sense but also of the energy and vision of Congressman COLE and the helpful cooperation of the committee.

A pleasing feature of it all is that the building is all Maryland. Campbell & Sons furnished the stone for the exterior from the Texas quarries, the Cardiff quarries, the interior marble from Cardiff in Harford County, and Mr. John Ruff, of Randallstown, is the contractor. As a branch of the Baltimore City post office, all its employees are in the civil service under Postmaster Green.

We are so accustomed to the mail box, to sending and receiving mail, to the postman and the R. F. D. carrier that we take them as a matter of course, and, unless some piece of mail goes astray, think little more of them and pay little more attention to them than to the trees about us or the people we pass in the street in a strange city.

And yet the postal service is one of the greatest marvels of the modern world. Perhaps no other service equals it in drama and romance. It exhibits the highest possible attainment of the human race in organization. It uses for its purposes the land, the sea, and the air, steam, electricity, gasoline, the horse, and man.

It is superior to time and space. It handles daily with rarely an error millions of pieces of mail and carries them to every part of the inhabited globe. Its empire extends from the frozen wastes of the polar seas to the burning sands of equatorial deserts.

In all seasons, in all weather, over mountains, through forest and jungle, in town and country, its carriers go ceaselessly by, wherever men dwell, bringing and taking the millions of messages of hope and friendship and consolation, which soften the pain of separation, and as well other millions of messages which mean life and progress to industry and commerce.

Its mission and its service is a vital factor in all our lives. It is appropriate that its work be done in surroundings worthy of its dignity and its mission.

A real public service has been given, therefore, in furnishing this branch of that great Service this appropriate housing.

ADDRESS BY LOUIS A. SIMON, SUPERVISING ARCHITECT, PROCUREMENT DIVISION, TREASURY DEPARTMENT, AT THE DEDICATION OF THE NEW FEDERAL BUILDING, TOWSON, MD., OCTOBER 28, 1938

As this newly completed building goes into operation for postal and other Federal services, it brings to mind the great changes that have occurred in the matter of Federal-owned buildings from the time many years ago when not more than a score of such buildings represented the number in which the business of the United States Government outside the District of Columbia was carried on; whereas at the present time there are some 3,000 Federal-owned buildings scattered from New York to California and from Maine to Florida.

It is perhaps unnecessary to state that, in the designing of post-office buildings, the first care is to insure a practical arrangement of the floor plans to meet all requirements for postal operations and at the same time to be convenient for the use of the patrons of the office, the general public. With these elements fixed, the further progress on the design enters the realm of aesthetics, and while the architectural expression of a building is governed by principles which in a broad sense are unchangeable under the same conditions, there is, in the application of these principles, still a wide field for differences of opinion about which any group of architects could sit down and argue at great length. However that may be, there would be no difference of opinion that the architectural expression of any building must take into account its surroundings; and when that building is for the United States Government the architectural and historical conditions of the community in which it is built are factors of primary importance. And further, a Government building must express permanence and a dignity worthy of the national ensign that flies from the staff head year after year, in sunshine and shadow.

It was not strange, therefore, that when the design for the new post-office building at Towson was before the Department, the architectural character of the interesting old courthouse should have had a controlling influence in the design of the new post-office building. As a matter of fact, that is just what it did. And without any attempt whatever to slavishly copy the details of the older building, it is felt that the new building does harmonize and take its place with the larger and older one that the citizens of Towson have lived with for so long a time.

In the designing of a public building for any community there exists a situation something like that which obtains when a play is given in a theater; that is, the actors always play better when they feel a response from the audience. In the case of the Towson post-office building the interest displayed in it by the Member of Congress whose home is here, by the people of Towson, and by the Fourth Assistant Postmaster General, gave added incentive to the men of the Supervising Architect's office to design a building that would be a credit to the Government and to the community.

The results stand where all men may see, dedicated to the use of the citizens of Towson in their contacts with their Government for many years to come.

ADDRESS BY ERNEST GREEN, POSTMASTER OF BALTIMORE, MD., AT THE DEDICATION OF THE NEW FEDERAL BUILDING, TOWSON, MD., OCTOBER 28, 1938

Mr. Chairman, distinguished guests, fellow employees, ladies and gentlemen, it is a pleasure and a privilege to participate in the exercises which mark the dedication of this new home of the Towson branch of the Baltimore post office and other governmental activities.

This building which we are dedicating to the postal and other needs of the residents of this community is a monument to the spirit, the enterprise, and the civic character of the men and women of Towson, among whom I have many friends as the result of my service connection with the Baltimore post office over a period of 44 years. This building symbolizes the determination of the Post Office Department to give this community an ever larger and an ever better postal service. You may gaze upon it with satisfaction and with pride. In character and in dignity, in plan and in purpose it ranks with similar Federal buildings elsewhere, and is the first of several buildings to be constructed as stations and branches of the Baltimore post office. Its immediate purpose is, of course, one of service along definite lines, but it typifies as well the relationship which exists between the people of this community and their Federal Government. It links them to their National Capital and reminds them of their national duties and their national responsibilities.

The construction of this building was, in a large measure, brought about by the untiring efforts of your distinguished fellow citizen, the Honorable WILLIAM P. COLE, JR., and in which he had hearty cooperation of the Senators from Maryland and the officials of the Post Office and Treasury Departments.

Meandering through the lore and history of this locality, we find that the community known as Towsontown was by ballot made the county seat of Baltimore County on February 13, 1854, and that its name was changed to Towson on May 27, 1880. The early history of the Postal Service and of the individual post offices comes to us through a more or less hazy mist, largely perhaps because of the fact that there is no record of postal receipts prior to the adoption of postage stamps, authorized in 1840 but not actually placed in use until 1847. Scarff, however, in his famous history of Baltimore, tells us that in 1814 a mail coach left Gadsby's Inn in Baltimore daily at 3 a. m. for York, Harrisburg, and other points north. As Towson was even during this early period a recognized community, there is no doubt that mail facilities were given it by this coach. Thus began that postal service which now reaches every resident of this community.

The post office at Towsontown was established on May 6, 1837, with Benjamin N. Payne as its first postmaster. He was succeeded by George H. Cathcart on December 31, 1846. Benjamin N. Payne entered upon a second term on April 9, 1849, to be succeeded by Lewis Vogel on March 7, 1854. Nelson Cooper, his successor, became postmaster on May 31, 1860, and was succeeded by James Sheridan on April 12, 1865. Nelson Cooper entered upon a second term on August 3, 1866, and was succeeded by Charles A. Conner on June 15, 1869. Adam DeBaugh became postmaster on February 18, 1870, and was succeeded by Mrs. Sarah Feast on March 2, 1877. Mrs. Feast was succeeded by Samuel J. Robinson, who became postmaster on July 21, 1888, and who served in that capacity until the Towson post office became a branch of the Baltimore post office on September 15, 1894. It was at this time that carrier delivery service was established. The first superintendent of the Towson branch was John W. Lee. The present superintendent, Mr. Walter W. Hoopes, was appointed on October 10, 1916. The names are among the landmarks and turning point which trace the course of that progress and that development which have culminated in the great activity which we call the Towson branch of the Baltimore post office, and which forms an important link in the greatest business institution in the world.

Under Postmaster DeBaugh, who was appointed by President Grant in 1870, the Towson post office was located in a store on the York Road above Chesapeake Avenue, where it was also conducted by Mrs. Sarah Feast during her term of office. At that time there were no scheduled hours during which the office was to be open for business. On Saturday nights it was kept open late for the convenience of those patrons who lived at a distance—Brooklandville and such other points. It was then that these folks would come to the post office to get their mail, to meet their friends, and to gossip about the topics of the day.

In 1888 the post office was located on the northwest corner of the York Road and Chesapeake Avenue. When the Towson post office became a branch of the Baltimore post office it was located on the west side of Pennsylvania Avenue in a small room about 15 by 25 feet. On October 1, 1927, it was moved to the Chesapeake Avenue site, where it remained until its removal to the present building. The change from that small room on Pennsylvania Avenue to this imposing building emphasizes, first, the growth in the postal needs of this community and, next, the never-ending determination of the Post Office Department to march on in tempo with these needs.

The rapid development of Towson, its increased business activities and the prospective location of Goucher College within the radius of its postal activity more and more made it clear that larger and more adequate quarters were a pressing need. The result is the building which we are dedicating today and which, it is assumed, will take care of the postal needs of Towson for many years to come.

This building, which is of a semicolonial type and which is constructed of steel and Beaver Dam marble, is especially designed for post-office purposes on the first floor. The second floor is equipped with offices for other governmental activities. It stands on a lot of 13,000 square feet which is owned by the Government, and there are 11,300 square feet of floor space. The lobby is trimmed with Cardiff, Md., green marble and is accessible through ample vestibule space. There is a driveway for vehicles in the rear of the building. The lock-box equipment is of the key type and the exposed surfaces are of aluminum.

The annual receipts of the Towson branch is approximately $90,000. Annually it handles 5,000 pieces of registered mail, 10,000 pieces of insured mail, 1,500 collect-on-delivery parcels, and 140,000 pieces of ordinary mail. It is manned by a superintendent and 14 employees and serves a population of approximately 7,500 persons.

I wish to express my appreciation to those who participated in the exercises today. You have assisted in the dedication of a permanent monument to the Government for which your fathers and mothers worked, prayed, and sacrificed. Let us give the same devotion and loyalty to our Government to the end it may better contribute to the welfare of all our people and thus remain the home of the free and the brave.

As postmaster of Baltimore I accept this building from the distinguished representative of the Post Office Department, the Honorable Smith W. Purdum, and in doing so to express the hope that it may contribute ever more to the comfort, the convenience, and the prosperity of the people of the Towson postal district.

ADDRESS OF SMITH W. PURDUM, FOURTH ASSISTANT POSTMASTER GENERAL, AT THE DEDICATION OF THE NEW FEDERAL BUILDING, TOWSON, MD., OCTEBER 28, 1938

Congressman Cole, Judge Offutt, Senator Radcliffe, and fellow citizens, it is an honor and a real pleasure to be here today to join with the citizens of Towson and Baltimore County in the dedication of your new Federal building and to share your pride and gratification upon the completion of this deserved and long-awaited public improvement in your good city.

At the outset, I wish to thank Congressman COLE most sincerely for the kind invitation which he extended to me to be in Towson today and participate in these dedicatory exercises.

No one can visit this section of Maryland without a feeling of reverence for its institutions and its traditions, and without paying tribute to those hardy colonists who first settled here long ago, carving communities of homes out of an uncharted wilderness. The attributes of industry, courage, patriotism, and sturdy independence which they possessed and which they bequeathed to their descendants have contributed materially to the building of a great State and a great Nation.

These men in the early times helped to lay the foundation of the great Nation under which we live today and under which we are privileged to enjoy "life, liberty, and the pursuit of happiness."

This building is erected in accordance with authorization contained in the act of Congress approved June 22, 1936.

The dedication of a new Federal building is a noteworthy occasion. It is an important event to the citizens of your splendid city, county, and our State, and to our Nation. It is representative of our great Republic, for our people, regardless of creed, condition in life, or party affiliation, gather together and give testimony by their presence and voice to their fidelity, loyalty, and love for our National Government and its institutions. It indicates that within our hearts we feel an appreciation that we are marching on and on rightly and properly, carrying on the work which was planned so well by our forefathers in the years ago.

In dedicating this building, it is proper that credit be given to the public-buildings branch of the Procurement Division of the Treasury Department which supervised the preparation of the plans and the construction of the building, and especially to Hon. Louis A. Simon, Supervising Architect of the Treasury Department, who is with us here today. Mr. Simon is one of the outstanding men in his profession; he has given much of his time in developing the plans for this building, and its very splendid architecture is, in my opinion, due to his efforts; and I congratulate you, Mr. Simon, and join with many in expressing appreciation of your splendid work. Credit is also due to the general contractor, the John K. Ruff Co., of Baltimore, Md., and to the Government's construction engineer, Mr. Arthur M. Burtt. However, I would like to invite attention to the fact that without the hands of labor this building would not have come into being, and this applies not only to the stonemasons, bricklayers, steel workers, carpenters, and mechanics and artisans of every character who participated in the actual construction but as well to the lumbermen in the forest who felled the trees, to the miners, to the men in the stone quarries, and to the workers in the mills and factories who produced and fashioned the materials necessary in making possible this imposing edifice. You see before you the results achieved by the hands of labor. In dedicating this building, let us pay sincere tribute to all those whose physical efforts have contributed to its actual construction.

Towson has long deserved a Federal building, and credit is due to all who carried on the efforts to obtain it. Particular credit is due to your able Congressman and fellow citizen, Hon. WILLIAM P. COLE, JR., who has led the fight for this structure through the years.

At the time of the adoption of the Constitution and the establishment of our present form of government in the United States in 1789 there were only 75 post offices in existence; 13 of these were in the State of Maryland, at the following points: Annapolis, Baltimore, Bladensburg, Charlestown, Chester Mills, Chestertown, Easton, Elkton, Georgetown, Georgetown Cross Roads, Harford, Havre de Grace, and Warwick.

The records of the Department indicate that the post office at Towson was established on May 6, 1837, under the name of Towsontown. Mr. Benjamin N. Payne was the first postmaster for this office, and he was succeeded by the following: George H. Cathcart, December 31, 1846; Benjamin N. Payne, April 9, 1849; Lewis Vogel, March 7, 1854; Nelson Cooper, May 31, 1861; James Sheridan, April 12, 1865; Nelson Cooper, August 3, 1866; Charles A. Conner, June 15, 1869; Adam DeBaugh, February 18, 1870; Sarah Feast, March 2, 1877 (the name of this office was changed to Towson on May 27, 1880); Sarah Feast, May 27, 1880; Samuel J. Robinson, July 21, 1888; John W. Lee, July 22, 1892.

Under a special act of Congress, approved June 9, 1896, Towson was made a branch of the post office at Baltimore.

For the past 5 years Congress has made annual authorizations for public-building construction throughout the country, and in accordance with this authority funds have been allotted for projects in over 1,800 individual communities in every State, Territory, and island possession of our country. These authorizations, totaling $315,000,000, are not only providing enlarged and improved facili-

ties for the conduct of Federal business by all Government agencies, including the Post Office, United States courts, Internal Revenue Service, Customs Service, Department of Agriculture, and others, and effecting substantial reductions in rental expenditures by Federal agencies, but these Federal building projects have been of material assistance in the relief of unemployment in the building trades and allied industries. Over 1,100 projects have been completed or are now under contract, representing an expenditure of over $180,000,000, and it is estimated that this construction has provided more than 200,000,000 man-hours of labor either directly on the job or indirectly in the mills, the mines, the forests, etc.

In setting up our form of government, provision was made for three separate branches—the executive, the legislative, and the judicial. The Post Office Department in serving all the people of our country is one of the supporting columns of the executive branch of the National Government. It is, therefore, important that we who are employed in the Post Office Department put forth our best efforts at all times to see that the people are given prompt, courteous, and efficient service, and that waste and extravagance be not permitted.

The post office service is yours. There is scarcely a home in the entire country that the service does not reach. It carries the joys as well as the sorrows of the world. It reaches into the ambitious hopes of human beings everywhere. We are proud of the record and achievements of the Post Office Department; and we trust that this new building in Towson will be of benefit to all of you in improved efficiency in service. This building is for use by all the people regardless of condition in life, race, creed, or party affiliation.

The building itself is only a structure of brick, stone, and wood, but when it is occupied by loyal and courteous public servants, when it is the medium through which you receive your letters and transact your postal business, it will be more than a material object. It will pulsate with the life of the Nation. The service performed within its walls will give this building a heart and a soul.

It is entirely fitting at this time to refer to the postal employees of the State of Maryland, forming one of the finest groups of public servants anywhere in our land. It is likewise fitting that we mention Mr. Ernest Green, postmaster of Baltimore, who has been in the Postal Service over 44 years and who has risen from the ranks to the position which he now holds. I also make reference to Mr. Walter W. Hoopes, superintendent of Towson branch, and the employees who work under his supervision and who render you courteous and efficient postal service from day to day.

It has been my good fortune to serve in the postal establishment for many years, and I am particularly grateful for the opportunity that has been afforded me to participate in the administration of the Postal Service under the businesslike and humane leadership of Postmaster General James A. Farley. The administration of the Postal Service under Mr. Farley has represented a period of continued advancement.

As part of the executive branch of the Federal Government the Post Office Department can operate only under duly approved laws and within the limits of the appropriations set up by the Congress elected by the people of the country.

We in the Post Office Department bear in mind at all times that we are the servants of the people and that it is our duty to carry out the mandates of the Congress, who directly represent the people, to the very best of our ability.

It is very splendid that Senator RADCLIFFE has joined us here for these exercises. I understand that Senator TYDINGS is unable to be here owing to engagements made sometime ago.

Down through the years the State of Maryland has been ably represented in the Congress of the United States. This is particularly true of your fellow townsman who is the Representative from this district and whose presence honors this occasion today, who has through five sessions of Congress ably represented this district in the House of Representatives and whose service in that representative body has been characterized by sound judgment, straight thinking, and a most sincere interest in the welfare of the people of his district, of our State, and of our Nation. In my contacts with him I have always found him to be fair-minded, forward thinking, and serving no selfish interests. I am happy, indeed, to pay this tribute to a splendid son of our State of Maryland, your Congressman and my friend, Hon. WILLIAM P. COLE, Jr.

My friends and fellow Marylanders, the American people are builders, building for home, culture, security, right, and justice to all.

As Americans we are not forgetful of our traditions, and neither are we forgetful of those great figures in our history who did so much to found and build so as to perpetuate our great Nation. This very spot upon which we stand today has known the tread of men and women who dedicated themselves to the building of a new nation. Some of them made the supreme sacrifice for this cause. It is our duty to carry on the work which was so nobly begun and to inculcate in our children a love and respect for America and its institutions, to the end that this country may continue to be a nation that will be universally respected and looked up to by the entire world.

We are, indeed, fortunate in being able to carry on these efforts today under the leadership and guidance of a great American and a great builder, our President, Hon. Franklin Delano Roosevelt.

Chairman Dies Vs. Founding Fathers

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1939

ARTICLE FROM THE AMERICAN TEACHER OF DECEMBER 1938

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I wish to insert an article from the American Teacher magazine for December 1938 entitled "Chairman DIES vs. Founding Fathers," as follows:

[From the American Teacher of December 1938]

CHAIRMAN DIES VS. FOUNDING FATHERS

WASHINGTON, D. C.—George Washington, Thomas Jefferson, and other "founding fathers" were questioned today by the Dies committee which is investigating un-American and radical activities. The appearance of America's revolutionary heroes created a sensation such as Washington, D. C., has seldom experienced, as it was not thought that a subpena could reach to the other world.

General Washington received a great ovation as he mounted the witness stand in the Capital named after him. Chairman DIES broke two gavels before he could restore order and focus the attention on himself.

Washington was subjected to only the briefest questioning, Mr. DIES asking him if it was true that in negotiating a treaty with Tripoli in his second administration he had assured the Mohammedans that "the Government of the United States is not in any sense founded on the Christian religion."

"That is true," said the general. He also pleaded guilty to the charge that at Valley Forge he had ordered the public reading of Tom Paine's Crisis, as he thought it a good book for pepping up the ragged and undernourished soldiers.

The sensational witness of the day was Thomas Jefferson, who described himself as the third President of the United States and author of the Bill of Rights of the Constitution. He was questioned by Chairman DIES, as follows:

"Is it true, Mr. Jefferson, that you have openly advocated the desirability of revolution?

"Mr. JEFFERSON. I have, sir, and on numerous occasions.

"Mr. DIES. And this was after our Revolution, after 1783?

"Mr. JEFFERSON. Yes.

"Mr. DIES. You were not of Mr. Coolidge's opinion that we had had our Revolution, and that one was enough?"

Laughter broke out in the courtroom when Jefferson asked who Mr. Coolidge was, and on being told, asked if Mr. Coolidge had ever had a revolution. A man in the audience yelled, "Boston police strike!" and was forcibly ejected by attendants.

Mr. Jefferson thereupon assured the chairman that he was emphatically on record as being in favor of a more or less permanent revolution.

"Mr. DIES. Do you recognize the following words as yours, Mr. Jefferson? 'The spirit of resistance to government is so valuable on certain occasions that I wish it to be always kept alive. It will often be exercised when wrong but better so than not to be exercised at all. I like a little rebellion now and then. It is like a storm in the atmosphere.' Are those your words?

"Mr. JEFFERSON. They are. But there is a better passage, if you will permit——

"Mr. DIES. Excuse me, I'm coming to that. Here is a long paragraph in which you incite the people to the spirit of resistance. 'Let them take arms. The tree of liberty must be refreshed from time to time with the blood of tyrants. It is its natural manure.' You are an agitator, Mr. Jefferson.

"Mr. JEFFERSON. I was an agitator, Mr. DIES.

"Mr. DIES. You still are. You may be dead, but these words are still available. They are in the books, in the libraries, accessible to the school children whose tender minds are susceptible to plausible appeals to revolt. That is why we subpenaed you and General Washington and Mr. Madison and the others, because tradition is powerful, and dangerous words and deeds in the past have a way of echoing in the present. It is men like you, Mr. Jefferson, that give the 'reds' aid and comfort. This committee asks you to recant and to make a statement to it and to the press that you have taken a saner view, so as to undo some of the harm you have done.

"Mr. JEFFERSON. Tut, Mr. DIES; let us get on to another passage.

"Mr. DIES. You are a Bolshevik, Mr. Jefferson. Not even a Communist would dare use such language today. How did you get away with it?

"Mr. JEFFERSON. The Bill of Rights which I wrote and put through was still fresh in those days, and there were no Dies committees.

"Mr. DIES. Do not insult the committee, Mr. Jefferson. We are here on a sacred errand, to preserve fundamental American institutions.

"Mr. JEFFERSON. Those are institutions which I helped build, and I am as skeptical of this committee's motives as I am of its abilities in this matter of protection.

"Mr. DIES. This is the twentieth century, not the eighteenth, Mr. Jefferson. Permit us to solve our own problems in our own way. Evidently you lived in bloodier days than ours, as shown by this passage of yours: 'The late rebellion in Massachusetts has given more alarm than I think it should have done. Calculate that one rebellion in 13 States in the course of 11 years is but one for each State in a century and a half. No country should be so long without one.'

"Mr. JEFFERSON. Policemen and company thugs did not shoot down citizens in my day, Mr. Congressman.

"Mr. DIES. Nevertheless, your principles are those of sheer bolshevism.

"Mr. JEFFERSON. They used to be accounted the principles of pure Americanism, as enunciated by the founder of your party, Mr. DIES.

"Mr. DIES. And who is that?

"Mr. JEFFERSON. I, Thomas Jefferson. [Laughter.] May I say, taking advantage of a ghost's privilege to dodge contempt of Congress, that meeting you makes me rather regret having effected the Louisiana Purchase, since it led to the acquisition of Texas, the great State you represent in such a small way. [More laughter.]

"Mr. DIES. You may leave the stand.

"Mr. JEFFERSON (going). You forgot that I also said, 'God forbid we should ever be 20 years without a rebellion.'"

When order was restored in the committee room Mr. DIES called to the stand James Madison, another former President of the United States and one of the framers of the Constitution. Mr. Madison testified that he entertained views concerning economic determinism which were substantially in accord with those expressed by one Karl Marx.

A number of witnesses, among them Alexander Hamilton and Patrick Henry, were called to prove that among the patriot forefathers there were several who held that the Constitution was a very imperfect document.

A rumor which caused considerable stir and anticipation in the committee room was that Benjamin Franklin, John and Samuel Adams, James Monroe, Thomas Paine, Gouverneur Morris, and John Marshall would be put on the stand to establish their attitudes toward wine, women, and song, on the ground that lax moral standards are closely associated with political and social radicalism. But although these heroes were present as if ready to testify, they were not called.

Tomorrow the committee will question Andrew Jackson and Abraham Lincoln. It is understood that the examination of the martyred ex-President will take in the following territory:

1. Charges that he was a "dictator" during the Civil War.
2. Public statement made by him to the effect that labor is prior to and independent of capital, a statement tending to incite class hatred.
3. Letter he is alleged to have written and allowed to be made public just before his assassination, in which he accused the big business interests of conspiracy to undermine "democracy" and destroy the "Republic."
4. Public statement credited to him that people had a right to change their form of government by force, if necessary.

Veteran observers here and sources close to Chairman DIES, who for obvious reasons cannot be quoted, say that an attempt will be made to discredit the founder of the Republican Party as a "red."

Inaugural Address

EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

INAUGURAL ADDRESS OF HON. RAYMOND E. BALDWIN, GOVERNOR OF CONNECTICUT, JANUARY 4, 1939

Mr. MONKIEWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following inaugural address by Hon. Raymond E. Baldwin, Governor of Connecticut, at Hartford, Conn., January 4, 1939:

GOVERNOR'S MESSAGE

Mr. President, Mr. Speaker, and members of the general assembly, 300 years ago representatives from Windsor, Wethersfield, and Hartford met in this part of Connecticut and in the candlelit twilight of a midwinter afternoon completed the Fundamental Orders. Thus they founded a republic upon a written constitution, the first in America, and fixed for all time the principle that the people were, and by Divine right ought to be, the source of all power and authority in government. That is democracy indeed. Knowing that happiness lies in freedom and that freedom is best preserved in democracy, other towns joined the Connecticut Republic, and it grew. Throughout the years since that time people have come over the sea, seeking and finding that ideal of free institutions which the original settlers desired and conceived. Today, in a world of doubt and fear, the people of Connecticut hold fast to our Republic and cherish our rich traditions of freedom. To us for a time they have entrusted them for safekeeping and further fulfillment. In an age of despotism across the sea, it is for us to prove that in America and in Connecticut democracy still fulfills the ideals of those who have struggled for it throughout long years. Let us here resolve that no lust for personal gain or political power shall keep us from serving the welfare of all the people. In the same spirit with those who first established this Republic and with those who have served it faithfully down the years, let us, each one, take up the work there is to do in the days that lie just ahead.

In the face of world-wide challenge to democracy, we believe that free government can best be preserved by a separation of its three great functions and a recognition that such a separation preserves that balance which is essential to individual freedom. You are the members of the legislative branch of the government. While your functions are different, they are equally as important as those of the executive or judicial departments. While we must work together, you can expect that the Governor will recognize and respect your separate function and power and that he will not trespass upon them. On the other hand, the Governor will expect that you will in turn recognize his separate function and power and that you will not deliberately trespass upon them. It is the duty of the executive department of the government not only to administer the laws of the State but to lay before the general assembly problems which require legislation for their solution. It is his duty to make recommendation for legislation generally and to advise you as to his opinion concerning the form which it shall take. The acceptance or rejection of his recommendation or the amendment to it is your function and, being your function alone, is likewise your responsibility. Differences of opinion are bound to arise. In Connecticut and in America each man and woman is entitled to entertain and express an opinion openly, freely, and independently. The floor of the general assembly is the place for open, frank, and public debate, involving not only issues among yourselves as members of the legislative branch of the government, but differences perhaps with the executive department as well. If we all seek to serve the public good as we, before Almighty God, have sworn to do, then our differences of opinion can involve no question of private ambition or personal gain and can only be concerned with how best to meet the public need and solve the public problem.

The story of Connecticut is a story of constant change. Those who lived here before us were for the most part farmers. With the westward expansion of our country many migrated to fields where stones were fewer and smaller and the hills were not so steep. With expanding production and the advent of the machine age Connecticut turned to manufacturing, and now we are not only an agricultural but also an industrial State. We have within our borders the most intelligent, the most skilled workmen in America. Connecticut Yankee ingenuity is a household word. For the past few years, in company with her sister States in the Federal Union, Connecticut has suffered from an economic depression. The most pressing problem has been and still is unemployment—jobs for those who are willing and can do good work. The theory has been announced that we can expect the day when the Government sees to it that one-third of the population, which is at present insufficiently clothed and fed, shall have a decent standard of living. Connecticut has been through depressions, but its citizens have never before and are unwilling now to accept the doctrine that one-third of our people must become permanently wards of the Government. This theory is contrary to Connecticut thrift and ambition. In time of economic stress it is the duty of Government to care for its citizens, to help them, not to become permanent wards of the Government, but to get back to jobs in private business and industry.

The citizens of this State may well make this inquiry: If one-third of the population is at present insufficiently clothed, housed, and fed, is it the duty of the Government or is it the duty of private business and enterprise to fulfill that need? If this be true, there is still room in America for an expanding and increasing production not only to meet the needs of this third but to improve still further the lot of all.

There have been many vociferous prophets of calamity since Jeremiah. Whenever mankind has been unable to adapt himself readily to new forces produced by his own mind and hand some have said that human progress had reached its zenith, and that the existing economy must be stabilized and fixed for all time. Many are preaching that same doctrine today.

America and Connecticut experienced a depression in 1873, and for several years thereafter they struggled with the problem then pressing. There were people then who made the same claim that is being made now, and urged a stabilizing of the existing economy. If they had succeeded in permanently impressing their principles and plan upon the American public and industry the telephone would have been a mere plaything, radio and motion pictures would have been unknown, mechanical refrigeration, modern sanitation in our homes and cities would not have come. The automobile, the airplane, and the modern streamlined train would

have passed us by. We would be meeting this afternoon in light shed by gas jets and coal-oil lamps. When a national economy is stabilized progress is stifled.

We must direct our thought and energy toward improving opportunity to go ahead, to increase and expand our production. In a totalitarian state expanding and increased production is attempted by governmental edict directed at the workmen, the farmers, the scientists, the organizers, the inventors. They are ordered to carry out a government plan. In a democracy progress is accomplished by holding out to the workingman, to the farmer, to the scientist, to the inventor, to the organizer, to all, an opportunity to improve his lot in life, to acquire better things for his family and himself with the promise that when he justly attains them he will be protected in the enjoyment of them. It is the function of government to keep that opportunity within the reach of everyone and to guard it against selfishness and greed. This is the American way of life. The people of Connecticut want to go forward along this way. It is our job to do all that we can to stay on this road, by protecting the fair against the unfair, the honest against the dishonest, the unselfish weak against the selfish strong.

There is no easy road to recovery. There is no scheme that will bring it next week. Recovery depends upon the revival of business confidence and there can be no revival when businessmen, large and small, are badgered and harassed by government. We who hold public office devote our time, energy, and thought to the government of the State, while our fellow men in the private walks of life devote their time and energy and thought to the development of private enterprise. We must work with them to make government and private enterprise go hand in hand. Government must in all things be a friendly, helpful, cooperating force and not an officious, meddlesome policeman. We will need the help of men and women who know the problems of business and agriculture in Connecticut. Government must invite them in and work with them for recovery. By inspiring confidence we can increase and expand our production and create the jobs which bring recovery.

No government can provide permanent employment for all or even a large part of its citizens unless it steps out of the role of democracy and, entering the field of private enterprise in direct conflict with its own citizens, becomes autocratic. In competition with its own citizens government becomes a monopoly which business cannot hope to cope with, because government is bound by laws of its own making and, pursuing the course of monopoly, would eventually stifle private business altogether. In a conflict between government and business class hatred and intolerance are rampant. We must awaken in all of our citizens a new sense of their responsibility toward the country. We need jobs for the unemployed. The citizens of the country must be encouraged to furnish those jobs. They will be encouraged when the Government pursues a program of adherence to constitutional principles, of economy, of friendly cooperation and thus demonstrates beyond doubt that there will continue to be in Connecticut and in America freedom of opportunity to increase and expand production without competition from government and the imposition of ever-increasing taxes and unreasonable regulations.

Connecticut industry suffers because of conditions that exist generally throughout America. It suffers also for lack of protection against foreign goods produced with cheap labor. The watch and clock industry of Bristol offers but one example. Connecticut industry suffers also because seemingly more favorable conditions for some of our oldest industries, such as textiles, have been created elsewhere. Wherein the remedy is Nation-wide in scope our delegation in Congress must protect Connecticut and preserve her equality with the other States. This we know they will do. There is opportunity for us working together here in the general assembly to help Connecticut industry and Connecticut agriculture. We can encourage the industries which we now have to remain and new ones to come here and find a friendly soil for honest effort. We can best encourage business in Connecticut by demonstrating that in the operation of our State government and, indeed, in the operation of our city and town governments, honesty, efficiency, and economy prevail. We must balance our budget and all of the departments of the State must live within that balanced budget.

There is a mortgage on the State, a bond issue, for $25,000,000. The proceeds from these bonds were used to pay off a deficit accumulated during the last 8 years in the amount of $12,172,564.41. The sum of $12,827,435.59 remaining is being devoted to expanding and improving our humane institutions, a proper and needful program, the complete fulfillment of which lies yet ahead. This bonded indebtedness will have to be paid at the rate of $1,250,000 each year. In addition thereto, interest must be paid thereon, decreasing, of course, in amount as the years go by, but in this next biennium at the rate of $396,625 in the first year and $368,750 in the second year. In addition thereto the enlargement and expansion of our humane institutions, nearly doubling in size the plants which the State heretofore has had, will, of course, nearly double the cost of maintenance and operation. The additional cost is estimated by the budget division to be $872,736.45 and $1,792,139.87, respectively, in each year of the next biennium. These obligations as well as others, which will be dealt with more fully in the budget message, are fixed and cannot be avoided. We should remember this principle, however. The tax dollar must be more carefully spent than any other dollar. It is the dollar which the workingman, the businessman, all of us, earn, but which we cannot spend for our wives or our children. It is the dollar which business cannot have to divide fairly between the jobholder and the stockholder. The State spends it for us. The citizen has a right to expect and to demand that it be carefully and honestly spent.

A program of economy will for the time being seem hard to follow. We must always remember this: An increase in the services furnished by the State in developing whatever program you may name is dependent entirely upon the ability of the citizen to pay the taxes necessary to support the State in carrying out such a program. Therefore, unless the citizen is able to pay the increased taxes required (and he will be both able and willing if fairly dealt with), we cannot place any expansion of the present services of the State upon that firm foundation necessary to successful fulfillment. It may become necessary to curtail some of the present services if we are to open and maintain our new humane institutions and pay the interest upon and retire the principal of our mortgage without levying additional taxes. Work upon the budget thus far reveals fixed charges and commitments in the way of grants impossible to reduce without legislative action. The revenue going into the general fund is estimated to be lower than during the last biennium. Two million five hundred thousand dollars in bond retirement, $765,375 interest, and $2,664,877.32 cost of operating and maintaining a greatly enlarged system of humane institutions, all entirely new items of expense which the State has not heretofore had to pay, must come out of the general fund. We begin this administration with lower estimated revenues and an increase of six millions in the cost of government. Any increase in the services now performed by the State must carry with it the necessary appropriation and provide for the necessary taxing or financing to meet that appropriation. The people's representatives must decide whether we will balance our budget, pay our bills, and thus encourage business, or whether we will go along spending and adding new taxes.

Unemployment, jobs, recovery present our most pressing problem. We can do our full share toward a solution if we demonstrate to the people of this State that our State government can and will be run efficiently and economically, that our budget will be balanced, and that our appropriations will not be exceeded. Expansion of government service imposes additional costs, which require additional laws. Prostrate business and industry cannot afford to pay the taxes necessary to meet such increased cost nor can men and women working for reduced salaries and wages and on part time pay the taxes to meet these increased costs either. We can stimulate private enterprise by stopping the ever-increasing cost of government, by keeping those costs within a limit that the taxpayer can afford and by making definite provision for the payment of our bills.

LABOR

The great majority of the people in this State labor for small salaries and for wages. When they are working full time and receive fair pay they create a market. The worker is not only a producer, he is also a consumer. The businessmen, the manufacturers in this State should realize, and many of them do realize, that they not only owe a duty to the stockholders in their companies but to the jobholders as well. We can be proud of our legislation in Connecticut protecting the working man and woman, but we have by no means reached the limit of fair progress. All too often in the past some employers have been unwilling to meet the men who work for them half way. As a result there has been a lack of cooperation which is essential to progress. A belligerent attitude on the part of the employer has been met with a corresponding belligerent attitude on the part of the employee. Capitalists, large and small, as stockholders have a right to organize and pool their interests. Labor has an equal right to organize and bargain collectively through representatives of its own choosing. We will protect and guard the rights of both. We urge cooperation and mutual regard. No government should champion the one as against the other. We can improve our laws with respect to sweatshops and child labor and protect women and children as to hours of work and working conditions.

Legislation should be provided giving to labor a fair anti-injunction bill. The day of unreasonable, unrestricted use of injunctions in labor disputes is gone forever. Fair dealing requires the protection of the employer against plant confiscation and wanton sabotage. Most all of our industries are owned by many small stockholders whose investment represents a saving made at great sacrifice. Property rights are a part of human rights, for most all of the people in Connecticut own property of one kind or another. The Workmen's Compensation Act has, on the whole, been very beneficial. It has been amended and changed from time to time to meet new conditions. The depreciated value of the dollar and the present high cost of living make an increase in the maximum limits payable desirable and necessary at this time. The expansion of the act as to compensable injuries and diseases has produced a problem which was originally unforeseen. Some industries are unwilling to employ men who have reached the age of 45 years or more, because such men are thought to be more susceptible to injury than younger men. Such a practice tends to substitute inexperience for experience and works an injustice in a State where many workingmen who have spent a large part of their lives developing specialized skill and experience find themselves unemployable. A comprehensive, thorough study of this problem is recommended, with action in the present session of the general assembly. Our laws with respect to contracts let by the State for public works of various kinds should be so amended that labor costs are at a decent and uniform standard for all bidders, so that all bidders may enter the contest on equal terms. Legislation to protect labor and materialmen from the fraud of irresponsible contractors needs further strengthening. Our board of mediation and

arbitration has done good work. With added powers, it would function even more effectively to settle and thus prevent labor disputes. Friendly relationship between labor and capital will encourage business to come to Connecticut. With labor and capital in honest, energetic partnership, Connecticut will forge ahead.

AGRICULTURE

We have from time to time added new boards and commissions to our State government. For the most part these boards and commissions have grown up in helter-skelter fashion. You should direct your attention to coordinating the boards and commissions concerning agriculture. These could and should be combined in a single department to foster a unified program and to avoid duplication of effort and consequent added expense. It is, therefore, recommended that the commissions on agriculture, on domestic animals, on dairy and food, and on milk regulation be combined under a board of agriculture.

A regional market should be established in a section of the State best calculated to meet the needs of the farmers. Many of our tobacco farmers will not again undertake tobacco growing. Their lands and farming knowledge may be turned profitably to the growing of fruits and vegetables and a regional market would be a great assistance to them.

THE MERIT SYSTEM

The spoils system is an undesirable and unnecessary byproduct of our political life. Public-spirited citizens demand the recognition of merit in the selection of public servants and a merit system has been put into operation in our State government and in the government of some of our cities. It may prove wise to enact an amendment to the State constitution providing for the principle of appointment of public servants on the basis of merit. Such an amendment would firmly establish the merit principle and would furnish the foundation upon which to build extensions and improvements. The lack of such an amendment does not prevent immediate extension and improvement of the present law. The law should be amended clearly defining those acts which constitute a violation of the law. The section relating to penalties needs strengthening. Abuse in the matter of provisional appointments has been claimed. The selection of any one of the three applicants holding the highest ratings has also been criticized.

There has been a suggestion in some quarters that a civil-service commission be substituted for the present personnel advisory committee. These matters should receive your careful consideration. Workable, effective merit systems should be established in our larger cities and uniform legislation be enacted to that end. It would be well to have a uniform act to meet the needs for civil service in some of our smaller towns and communities. In a republic it is essential that the policy-making officials respond directly to the electorate or to those who appointed them, who are themselves directly elected by the people. It is sometimes difficult to draw the line of distinction between an appointive policy-making official and a purely administrative one. The former must be subject to the political change which belongs to a representative system of government. There is good reason why even some policy-making officials should refrain from political activity while holding public office, although not themselves appointees under the merit system. Commissioners and deputy commissioners are not appointed under the merit system. They are policy-making officials, and for that reason should not be subject to the act. Their subordinates in the departments, however, are for the most part subject to the act. Commissioners and deputy commissioners as political appointees can inject political activity into their departments. Legislation preventing a commissioner or deputy commissioner from political activity while holding office would greatly strengthen the merit system.

Appropriate legislation should be enacted disqualifying any member of the general assembly during his term of office for an appointment in any administrative or judicial office in the State. An array of senators and representatives as judges and administrative appointees after a legislative session is not imposing before the people of the State.

THE COURTS

Speedy impartial judgments in criminal and civil matters are prerequisite to justice. The lengthy investigations and trials of the past year have placed a tremendous burden upon the judges of our higher courts. The ordinary vicissitudes of health often withdraw one or more of our judges from performing active duty during the busiest part of the court year. The number of judges in the superior court should be increased.

During the month of December, in consultation with the Governor, a commission was appointed for the specific purpose of submitting a report for proposed legislation reforming our minor court system. This commission is composed of outstanding judges and lawyers representing each branch of judicial service in the State as well as the bar itself. There is an insistent demand from the people for a reorganization of our minor court system to speed up justice and to avoid abuses concerning which the people have long complained. The commission has been working diligently and expects to submit a bill soon.

Following the adjournment of the last general assembly the Governor made appointments to judgeships in several of the minor courts which, under the law, will expire on the fourth Wednesday following the opening of this general assembly. It is recommended that you adopt legislation extending those interim appointments until July 1, 1939. This will avoid any delay in carrying out other legislative programs of vast importance to the State. We must not devote valuable time at the opening of the general assembly to consider appointments to judicial posts which, upon the adoption of minor court reform, may be greatly altered or abolished.

Juvenile courts should be provided for the entire State. These courts should spend their entire time adjusting the difficult problems of youth with the aid of properly qualified officers. The judges ought to have necessary authority over the parents of juveniles and be enabled to compel proper care and supervision or a substitution of guardianship.

Our probation system has woefully failed. It has never been extended to cover the entire State and many of the probation officers appointed have been unqualified. An adequate probation service must be provided. The personnel should be trained and experienced. Such officials cannot be the subject of political patronage. They are part of the judicial system of the State. All judicial officers, from the highest to the lowest, should at all times be far removed from the will or caprice of politicians.

POLITICS IN RELIEF

The manner in which Federal relief is administered is subject to the final control of the Federal Government. All relief should be administered by an impartial, nonpartisan board. Such a board was set up in 1933 but since abandoned. With the attention now being focused upon politics in relief nationally, we should be enabled to take politics out of relief in Connecticut.

EDUCATION

Time was when few children received any schooling and when the number who obtained any higher education than that offered by the common school of the day was very small indeed. We have made great progress in public education and, fortunately so, because an educated, intelligent citizenry is essential to the success of our Republic. Succeeding generations have brought new problems and added expense in education, as in everything. We want to get the full worth of our tax money.

The four teachers colleges are graduating more young women qualified to teach school than we can find places for. These teachers colleges must be considered as State institutions rather than as local institutions and we must look at the problem as a State, and not as a local, problem. Local pride should yield to the welfare of all of the people.

Our State college has been doing excellent work. It is overcrowded. Many have applied for admission who must be denied admission because they are not qualified to meet the requirements for a State college. You should consider the desirability of retaining two of our teachers colleges for teachers college work and using the others to meet the demand for further and different youth training.

Our highly specialized industries require a continuous supply of skilled artisans. Many of our boys and girls are going to high school and finding that these schools do not offer what these boys and girls need. We could use our high schools partly for prevocational training and then transfer these boys and girls into a school devoted exclusively to vocational training. Under the present law any city or town can build a trade school and require that it be equipped and manned with a teaching staff without regard for any definite preconceived and unified plan. We can work for a better coordination between our high schools and trade schools and thus fill a need now not adequately met and at the same time give a better training. We need men and women of strong character to furnish the backbone of our industries. The dignity of good work skillfully done in the factory is equal to the dignity of good work in the professions, in business, anywhere.

Recently, some of our big industries have asked our State college to furnish, at the expense of these industries and not at the expense of the State, special training for selected men in their employ. This idea is a valuable one and should be developed. It opens the door of opportunity to men working in factories who, having displayed their energy and talent, can thus obtain the added specialized training which may alone be necessary to make them valuable administrative officers in their respective industries.

AMENDMENT OF ELECTION LAWS

Our election laws need a general overhauling. They have grown up piecemeal as the number of voters has increased. A clarification of many of them is essential to the conduct of fair elections. They need strengthening with specific regard to eliminating from the lists those people who have either removed from Connecticut or have died. Every voter has the right to have his vote count and not rendered worthless by technicality or fraud.

MOTOR VEHICLES

The law providing for the periodic inspection of motor vehicles should be repealed. Its effectiveness in reducing the number of automobile accidents by reason of defective vehicles or otherwise has not been demonstrated. It does not warrant the additional expense placed upon the motor-vehicle owner to maintain it. Motor-vehicle fees and gasoline taxes have been expended in improving our State highways and large sums have been devoted in the past to straightening out curves and building cut-offs. These are desirable improvements and have been made in the interest of the safety and convenience of the motor-vehicle owner and operator. The safety of the motor-vehicle operator and to a great extent his convenience could also be served by providing additional highway patrol by increasing the number of State policemen available for this duty to protect the motorist who wants to obey and who does obey the law against him who will not obey the law. Where main highways pass through rural districts many busy intersections are dangerous at night because of poor visibility. The time has come to seriously consider highway

lighting in the interest of safety. Some of the funds heretofore used for straightening curves and reducing grades could very well be devoted to highway patrol and highway lighting. It is urged that you continue the highway safety commission.

AUDITING OF MUNICIPAL ACCOUNTS

A uniform system of periodic auditing and accounting of public moneys in counties, cities, and towns should be established. Periodic auditing either by a town auditor or by public accountants should have some clearing house in a State department. The State collects large sums that are expended in the cities, towns, and counties for local purposes, and it is entitled to know the operation and status of local public finances. It is not recommended that a separate department be created. The work could be done under the direction of the finance commissioner. The auditing should be done by reputable public accountants at the expense of the town. A uniform system of periodic auditing and accounting would be helpful to local officials, the very great majority of whom try hard to do a good job. The reports of those audits should be easily accessible to the public.

LAND PURCHASES MADE BY THE STATE

For the protection of the department head charged with the purchase of land or rights in land as well as for the protection of the taxpayer, it is advisable for you to consider enacting legislation providing that in no case where land is purchased for the State above a fixed minimum value, shall the purchase become final or the consideration be paid to the seller until a judge of the superior court sitting in the county where the land is located, has reviewed the transaction and has entered a judgment for the amount to be paid. Such a procedure would not interfere with open and fair dealing, but it would protect the seller and the State and would go a long way toward avoiding excessive or unfair prices in the purchases of lands or rights in land for the State.

BUILDING PROGRAM

The next biennium will see the substantial completion of the program for increasing and enlarging our humane institutions. These institutions will be practically doubled in size and capacity. The cost of the maintenance and operation will be greatly increased and has already been estimated by the budget division and the commissioner of finance to be approximately $872,736.45 for 1939–40 and $1,792,139.87 for 1940–41. While these institutions have been sorely needed, their maintenance and operation places an increased burden upon the taxpayers of the State. We must direct all our energy and thought to the efficient and economical administration and operation of these vastly enlarged facilities.

It is the intention of the Governor at an early date to submit to you a special message dealing exclusively with the present status of the building program and the building fund, with recommendations concerning both.

WELFARE

The welfare department, in accordance with the report of an examination made under the direction of the Governor, is working to better coordinate the separate branches of the department to promote efficiency and to reduce expense. There is much room for improvement in the administration of welfare work. This is not due to the inefficiency of the department, but it has come about because of the rapid expansion of the services rendered by that department in the past few years. We would be happy indeed to see the county home reduced merely to temporary home until those unfortunate children who require the help of the State could have places in private families found for those suitable to be so placed and the others given proper care in other institutions. Welfare work can best be done with the counties, cities, and towns as the units of organization. Such work, however, requires the right kind of personnel. We need the man or woman who has a view of the object desired, a plan to obtain it, and a fair regard for the taxpayer who must meet the bill. The county, city, and town can be used even more effectively and economically as a subdivision for the administration of relief than it is now being used. Local administration of a unified program under a reasonable amount of State supervision with qualified personnel is the end desired.

Old-age pension payments should be based upon reasonable need. A permanent fund in the nature of a reserve should be established placing funds for old-age pensions beyond the possibility of use for the general expenses of the State. We must be prepared to meet in a reasonable way the increasing demands for old-age assistance lest we be swept off our feet in some future campaign by a plan which requires the payment of sums beyond the range of the taxpayers' purse. No system of old-age pensions is good that will not last. No system will last that is not sound. No system is sound that is not fair to both the aged and the taxpayer.

We should strive to make a substantial beginning with our jail farm program.

Insistent and pressing demands will be made upon you during the next few weeks for an extension of our welfare program. It is right to bear in mind that the State owes a duty toward its unfortunates. No worthy person should go unclothed or unfed or be denied shelter. Proper, loving care must be given to children. We all desire an extension and improvement of our welfare program in every direction toward those who need help. We all want to extend opportunity to the underprivileged. We must realize that any service performed by the Government must be paid for out of taxes. In this present time of economic distress and widespread unemployment and part-time employment we should ask ourselves how we can best place our program for social welfare upon a firm and sure foundation. Can we increase and expand our services and facilities further without considering business and employment? Or should we first consider business and employment, work to get them on a sound and firm foundation, knowing that business improvement and full-time employment will take care of much of our welfare needs?

Just good times, not necessarily prosperity, but just good times, agriculturally, commercially, industrially must be our immediate goal. These obtained, all of our people (and we must remember that all of them, at least a very great majority of them, are taxpayers) will demand and will willingly pay the taxes to supply those things which may next be needed.

RECREATIONAL FACILITIES AND CONSERVATION

The hurricane last fall wrought havoc with our State parks on the seashore. The cost of restoring them has been estimated at $400,000. A W. P. A. project has been asked for, but to date little or nothing has been done. We should anticipate the possibility that the State will be required to restore these parks at great expense. They must be restored so that they can be used during the spring and summer seasons. The primary problem is one of rehabilitation but we must have in mind also the possibility of extending these facilities whenever opportunity offers. When funds are available the completion of the State's holdings at Sherwood Island would be desirable.

The storm did great damage in our State forests. Millions of feet of good lumber now lie on the ground. Plans are being formulated to salvage this timber and make it available for use in the various departments of the State. This will require some financing and proper provision must be made for it.

The storm has created a great fire hazard, particularly in the eastern part of the State. The State forester is building fire lanes so that a forest fire, if started, can be confined within some limit. It is hoped that some Federal funds can be made available. The State may be required to expend as much as $100,000 guarding citizens and their lands against fire. It is most desirable to extend our State forests. Here again, however, with limited means at our disposal the primary problem is rehabilitation and protection with the hope that funds can be later made available for extending our State forests. In many places additional lands can be purchased at reasonable prices which will not only extend our present holdings but help landowners who have not the means to clean up their properties after the storm.

There is widespread dissatisfaction among the hunters and fishermen. These men and women pay a substantial fee and are entitled to have full value for their money. Our woods, fields and streams are not far removed from large centers of population, and consequently natural propagation presents a problem which requires careful study by an adequate program of research. We must release more game and fish to supplement the natural supply. We should be sure that the game and fish which we release can adapt themselves to natural conditions. We could advantageously spend less money for administrative overhead and more money for game and fish. The cooperation of all of those who love the cut-of-doors is needed in an unselfish effort to improve hunting and fishing.

WATERS AND FLOODS

The waters of our State constitute our most valuable resource. We must have a definite, comprehensive policy for conservation of water and protection against floods. The administration of the existing statutes concerning waters which is now distributed among several different agencies, should, for efficiency and economy, be placed under a single agency. The powers of that agency should be enlarged concerning dams, control over streams and allocation of waters. There is no continuing State agency which has authority to deal with flood-control measures. Such an agency should be established or such power given to the State Water Commission at the earliest date possible. Immediate action is necessary to develop and carry forward, with the cooperation of the Federal Government and with Federal funds, a program for flood control, not only in the Connecticut and Farmington valleys, but in the valleys of the Shetucket, Yantic, and Thames, and the Housatonic as well.

ALCOHOLIC BEVERAGES

From its very beginning the Liquor Control Act has been subject to criticism and from time to time changes have been made. This is natural because we have attempted to deal with an old subject in a new way. You can settle the question as to the difference between a tavern and a restaurant and what constitutes a meal by providing for a single license at a single fee for both. We cannot legislate morality with fine legal distinctions. The present law places a tremendous burden upon the Liquor Control Board. It puts the restaurant keeper who tries to live within its provisions and who pays a large license fee, in direct competition with the tavern owner who pays a small fee to sell beer but who can easily and often does violate the law and sell everything.

PUBLICITY COMMISSION

A publicity commission was created in the 1937 session of the general assembly. Although this commission is a very recent one, it has nevertheless done very good work. Provisions should be made for expanding its facilities, so that it might be enabled to attract new industries to Connecticut. There are large numbers of skillful workmen in Connecticut. Many factory buildings are idle, and there are splendid sites available to build new modern

buildings. The publicity commission could expand its work with the interests of no particular locality in mind but with the idea of improving the State as a whole.

HIGHWAYS

Our highways have been improved until we now all boast about a highway system second to none anywhere. We would do well, however, to consider our present and future policy. Should our main trunk lines be designed and constructed to get the out-of-State citizens through Connecticut as fast as possible or should they be designed and constructed to enable our own citizens to get about conveniently and pleasantly? Should they be paid for entirely out of taxes collected primarily, in fact, almost exclusively, from Connecticut citizens or should we ask the user who desires the greater convenience furnished by the short cut of a more direct route to help pay the bill? Before the railroad came into general use each man furnished his own transportation and paid toll for the privilege of driving over a highway constructed by a turnpike company. The expansion and use of railroads and electric-car lines put transportation almost exclusively into the hands of public-utility companies. Today most every family has an automobile, and man is again furnishing his own private transportation. We have embarked upon the construction of costly parkways the use of which has been denied to commercial vehicles. Should a toll be charged for the privilege of using such a parkway?

New England has been more generous than her sister States in not exacting toll. No one grumbles over the small toll fee charged for the use of bridges and highways which increase the convenience and pleasure of the journey so long as there is available a substitute route that can be used free. There is urgent need of another bridge between Hartford and East Hartford. The major problem here will be one of finance. This need and the method of meeting it should have your careful attention and a solution at this session of the general assembly.

RELIEF FOR CITIES AND TOWNS DAMAGED IN THE HURRICANE

Some of our cities and towns sustained very serious damage in the recent severe storm. Public buildings were destroyed, public works flooded and washed out, great numbers of private properties so damaged and ruined that their value on the grand list will be greatly reduced. These cities and towns will need assistance, whether by extension of borrowing limits, by State guaranty of bonds to secure favorable interest rates, or by direct financial assistance from the State or otherwise, will depend upon each specific case.

REFUNDING MUNICIPAL INDEBTEDNESS

With legislative authority some of our cities and towns might be enabled to refund outstanding bonded indebtedness and thus take advantage of the lower interest rates which now prevail.

MILITARY

A reorganization of our military establishment is required for greater economy and efficiency.

LEGISLATIVE COUNCIL

I commend for your careful consideration the report of the legislative council. It contains recommendations with which the general assembly or the Governor, or both, may disagree in principle and detail. It is, however, a comprehensive, valuable report. Some of its recommendations are contained in this message. Others not herein mentioned you may want to consider and adopt. The legislative council offers it work for your help and guidance.

LOBBYING

During the days of your work here men and women will appear before committees to which you have been assigned and will talk with you personally concerning pending legislative matters. It is right and proper that they should do so. Some of them will receive compensation for their services and such practice is legitimate. It is recommended that you all read section 4D of the Cumulative Supplement to the General Statutes of 1937 concerning legislative appearances or lobbying. Fair legislative process requires a strict adherence to the terms of that statute. The day of the paid professional, political lobbyist belongs to yesteryear.

REORGANIZATION OF COMMITTEES IN THE GENERAL ASSEMBLY

Many of the committees in the present organization of the general assembly are outmoded and useless. There could be a combination of the functions of other committees. The number of committees could be reduced, their activities combined so that there would be no duplication and so that every member of the general assembly would be on one committee only and that committee would be an important committee and have important work to do. Where members serve on more than one committee it is necessary that they slight the work of one in order to perform that of another. A reduction in the number of committees and a new method of assigning bills to committees would, it seems, greatly facilitate our work by reducing duplication of effort to a minimum. It would be well to do this at once unless it soon appears that disagreement about the numbers of the committees and their particular functions will delay us all in getting down to business. It is a matter which we should all consider and be prepared to take some definite action on before adjournment so that if not in this general assembly then in the next one, the advantages of such reorganization plan may be put into use.

Time has not permitted the recital of all of the problems that face us, nor a detailed explanation of those that are mentioned in this message. The work laid down before us in the house of representatives, the senate and the Governor's office requires our diligent effort, our patient, thoughtful care, our due respect for the opinions of others, a love for the State of Connecticut and an abiding faith in our institutions. It used to be the tradition years ago that the sessions of the general assembly should adjourn and its members should go home to their farms and their private business when one could stick a cane into the ground, for then the frost was gone and the springtime task of the farmers ready for their hand. The people of the State will appreciate our efforts the more if we can again observe that old tradition.

Equity for Labor

EXTENSION OF REMARKS

OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

ADDRESS BY ALBERT W. HAWKS TO THE CONGRESS OF AMERICAN INDUSTRY

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD I am including the address of the Honorable Albert W. Hawkes to the Congress of American Industry on the subject Equity for Labor and Capital.

Mr. Hawkes, whom I have known for many years is one of the Nation's outstanding industrial leaders. He has the unique faculty of understanding the problems of labor and capital equally well from a standpoint of labor as of management.

I urge that each of my colleagues study this speech for I believe it to be one of the most outstanding addresses on this subject that I have ever read.

The address is as follows:

EQUITY FOR LABOR AND CAPITAL

I have chosen for my subject Equity for Labor and Capital. I purposely put labor before capital, as it is very easily proved that capital or property is the fruit of labor. It might be properly called the "stored up" or "canned" fruit of labor—something that is available for use at times when required to build jobs and keep the human endeavors for life and progress going.

The brand of "canned" capital fruit, known as "surplus" in corporations, is something that makes available "fruit out of season," when the trees of industry are not producing profits. Labor comes first, the same as the tree comes before the fruit—in fact, the tree is responsible for the fruit.

Before I get into my subject I wish to state that I am a believer in our American form of representative Government—the Constitution of the United States, with its included powers of amendment by certain prescribed processes—and in the free enterprise system of economics, which has made this country the greatest place on earth to live. Nothing that I say herein should be construed by anyone as not squaring with sound economics and our American system and way of living.

I believe that the usefulness and happiness of human beings in this country is in the inverse ratio to the amount of paternalism that is shown to people physically able to work and earn a living. The aged, the sick, and the incapacitated are recognized by all right-thinking people as being our charge, and I do not believe this country will ever deny that the fit and capable are their brother's keeper. But I believe in the last analysis the people of this country will resent part of the fit taking care of another part of the fit through any system invoked by any agency along the lines of paternalism.

I am not going to deal with wages or hours, working conditions, wage incentives, bonuses, group, life, and health insurance, vacations with pay, or even some of the fine plans of forward-thinking companies which have devised or are endeavoring to devise plans that give the workers a participation in profits after the payment to the stockholders of a reasonably sound dividend. Those things will be taken care of by other speakers.

A DOUBLE PROBLEM

It has been said that labor is the No. 1 problem of industry and business. I might be permitted to make an amendment to this statement by saying that labor and capital combined are the No. 1 problem in industry and business, because, after all, industry is made up of two distinct factors—namely, labor, on the one hand, and capital and management, on the other. Labor, under our economic system, can do little in establishing a business or making jobs for itself without capital. Capital can do little in establishing a business and making returns for itself without labor. Therefore, labor and capital must find a way to

cooperate wholeheartedly and sincerely to produce satisfactory benefits.

Every man and woman of legal working age in this country is a potential laborer. Some labor with their hands; some with their brains; and some a combination of brains and body.

Many men in industry say they never had any real labor problems. They mean they never had labor problems which they were unable to solve through a fair and honest discussion.

I recall the story concerning a United States Supreme Court Justice, who had just celebrated his fiftieth wedding anniversary. He met a Senator and Congressman just after the celebration, and one of them said: "Good afternoon, Judge. You are certainly looking fine." And the Justice replied: "I am feeling fine, gentlemen. This is my fiftieth wedding anniversary, and we have just had a few very dear friends to luncheon with us. I am a most fortunate man, because my wife and I have lived together 50 years in complete harmony, without a cross word." The Senator then said: "Judge, it is wonderful for you to be able to say that. I wish I could." Whereupon the Congressman interposed and said: "Go ahead, Senator. Why don't you? The Judge said it."

Now, the Justice did not mean by his remark there never had been any differences of opinion or problems, because problems and differences of opinion come to all people in every human relationship in life. The Justice meant that he and his wife had established a relationship based on faith, confidence, and equity, and when problems and differences of opinion arose they were promptly settled and not permitted to grow into a breach.

If labor and capital could deal on the same basis as the Justice and his wife, there would be no need of laws attempting to control their actions. Such laws usually breed class hatred and bitterness, and class hatred and bitterness have never successfully solved a single important problem in the history of the world.

THE RULE OF EQUITY

Common law in itself is crystallized common sense, resulting from the experience of the majority of human beings from time immemorial. The administration of common law is sometimes bounded by hard and fast rules; and statutory law is still less flexible. Equity is more flexible—it is the soul and spirit of righteousness. Equity has been described as "The spirit and the habit of fairness, justice, and right dealing, which should regulate the intercourse of men with men." Justinian, the great Roman Emperor, described equity, "To live honestly, to harm nobody, to render every man his just due." Perhaps the best definition of all is in the words of the Man of Galilee, "Whatsoever ye would that men should do to you, do ye even so to them."

Equity must come from within labor and capital—it must be born, it cannot be legislated. It is born of right-thinking and a good conscience. Equity, the child of these two, should serve as the keystone of cooperative efforts of labor and capital—thereby bringing happiness and satisfaction to those invoking its aid.

Equity must rule human acts so far as humanly possible in this world. This means many new decrees of equity (public opinion) will appear as humanity develops. For instance, humanity has yet to decree that a woman doing a given piece of work as well as a man, should get the same pay Sex should not determine the rate of pay.

The important thing in the procedure of equity is that humanity cannot absorb great changes too rapidly without damaging many of the good things it has accomplished.

Hence, the "tempo" of each change is quite as important as the change itself—as related to the successful system we have produced.

MAKING THINGS WORK

The paramount problem confronting capital, management, and labor today is the same as has confronted human beings through all recorded history—namely, to make things work and to give every man his "just due." The signers of the Declaration of Independence and the makers of the Constitution of the United States had this in view when they summarized in the Declaration of Independence the inalienable rights of men as "life, liberty, and the pursuit of happiness." They then endeavored to so frame the Constitution as to carry this announced principle into effect.

If this great principle of equity is abandoned, human relationships—small or great—fall to pieces, with the result that misery and suffering and chaos are brought not only to those who destroyed this great principle, but to all who live within the boundaries where the destruction takes place.

The world has been looking at the United States of America for more than 150 years, watching the experiment of the American system of representative government. Undoubtedly there have been many who have wished it failure. Many nations have been born and have perished. Dictators have risen and fallen and risen again—but our great country has successfully gone on with its progress in making things work, because the American people have tried to hold fast to the cardinal principle of equity upon which our country is founded, and I believe the great majority of American citizens are interested in giving every man his "just due."

The genius of America has always been to make things work. The steam engine, telegraph, telephone, automobile, radio, airplane, and a thousand other important developments, have been brought into existence for the benefit, comfort, and happiness of mankind.

It is our responsibility now to make things work in human relationship. Just as the engineer is called upon to find out why the engine or machine will not work when it ceases to operate and then to reappraise stresses and strains, considering the particular nature of the work the machine is called upon to do—so we at this time are called upon to make human relationship work satisfactorily.

Labor and capital and management should carefully examine the delicate and intangible thing that holds them together and makes them work, because we are living in a new world era where changes require constant examination and reexamination of those human relationships.

This is our job today—the job of labor and capital and management, as engineers of the human industrial machine of America. Capital cannot function successfully without labor, and labor cannot function successfully without capital. Hence the indispensable cooperation between the two.

WHAT IS A MAN'S JUST DUE?

The first thing management should do is to ascertain as far as humanly possible, What is the "just due" of each grade of manpower employed in an industry? This is a difficult job and all human minds could never be expected to reach precisely the same conclusion. However, if the great majority of men charged with directing the affairs of industry, business, and agriculture will seek earnestly and in the proper spirit for the truth of what is every man's "just due"—I feel that we can develop sufficient patience and tolerance to enable us to proceed in a cooperative way on a basis of mutuality while we are moving steadily in the direction of the objective—namely, equity for labor and capital.

We all have a very heavy responsibility resting upon us right at this period of our lives—and history will record whether we are equal to the task. We must realize that the price of failure will be disaster to all of us and our country. But I say we shall not fail, because I have absolute confidence in the desire of the great majority of those in the industrial and business arena to solve this problem as promptly as possible in a way that is satisfactory to the great mass of the American people. We must and will solve this problem the same as we have solved other problems in the past—the American way, for the common good of all.

No man in this country can successfully act in disregard of public opinion. After all, public opinion creates governments and the form of governments, and it changes them at will when it is sufficiently crystallized.

THE CHARACTER OF LABOR

As I consider the many representatives of capital and management whom I know, and the many laboring men whom I also know, I am sure that a cross section of all human beings is pretty much the same. There is just about as much selfishness in one quarter as another. There is just about as much good in one quarter as another. There is just about as much love of country and our form of living in one quarter as another.

I believe the intelligent workingman who has been taught the story of this country and our enterprise system is strongly in favor of it, and that he recognizes the fact that in every country where the system of free enterprise has been destroyed the rights of "life, liberty, and the pursuit of happiness" have been endangered or taken away. If we can proceed on the basis that the laboring man is just as good a citizen as the capitalist, or those engaged in management—and I believe he is—we will make tremendous progress. After all, the court of equity in this case of cooperation between capital, management, and labor is nothing else than the great American people, who, after hearing the case, form public opinion, which is the decree of equity. Public opinion, with the power of the American public back of it, can and will enforce its decrees upon any group of people.

THE IMPORTANCE OF LABOR

"He who comes into equity must do so with clean hands"—which means to me that neither capital and management, on the one hand, nor labor, on the other, can expect to get into equity unless its hands are clean. Then, when capital and management and labor find themselves before the court of equity, they must follow another cardinal rule, which is that "He who asks equity must do equity."

I believe a small portion of labor and a small portion of capital have been wrong most of the time. But I also believe most of labor and most of capital have endeavored to cooperate most of the time. There is no reason why most of labor and most of capital should not cooperate all the time, if they understand each other thoroughly and completely and each knows that the other is thinking straight, playing the game on the square, and only wants equity—its "just due."

That labor is a dignified and honorable calling will not be disputed by any fair-thinking person. Our great President, Abraham Lincoln, accepted honorary membership in the Workingmen's Association of New York on March 21, 1864, and stated to the committee:

"The honorary membership in your association, as generously tendered, is gratefully accepted."

Then this great man of humility, with malice toward none and charity for all, gave labor a rating of honor and dignity in his speech to them, partly as follows:

"Labor is prior to, and independent of, capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. * * * Capital has its rights, which are as worthy of protection as any other rights. Nor is it denied that there is, and probably always will be, a relation between capital and labor, producing mutual benefits. * * * Again, as has already been said, there is not, of necessity, any such thing as the free hired laborer being fixed to that condition for life. Many independent men everywhere in these States, a few years back in their

lives, were hired laborers. The prudent penniless beginner in the world labors for wages for a while, saves his surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system which opens the way to all—gives hope to all, and consequent energy and progress, and improvement of condition to all. No men living are more worthy to be trusted than those who toil up from poverty—none less inclined to take or touch aught which they have not honestly earned. * * * The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people. * * * Nor should this lead to a war upon property or the owners of property."

And still quoting Lincoln in the same speech to labor:

"Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

CAPITAL AND MANAGEMENT

Now, so much in commendation of labor; and we can turn to a little commendation of capital and management, because, after all, there are thousands of men called captains of industry who by their life's work have demonstrated their love of their fellow men and a square deal in their behalf. We must remember that our American justice is presumed to rest on the theory that it is better that a hundred guilty men should escape than that one innocent man should be punished.

So why should all of labor or all of capital be punished for the sins of a few?

Man can only be custodian of funds. He can only eat so much a day and sleep in a single place at one time, and all of those who have accumulated wealth through our free-enterprise system have found that the very plan of life—brief as it is—makes them custodians of funds in an involuntary trusteeship or stewardship. Hundreds of them have spent a large part of their lifetimes trying to make comfortable jobs that give a satisfactory living standard to the men working for them or for the company they represent.

The Rockefeller interests have spent hundreds of millions of dollars in creating jobs for and to benefit mankind through research and other fields. Endicott Johnson have created thousands of good jobs and used their money wisely for the benefit of the people. George Eastman and many others gave a substantial part of their wealth to the benefit of mankind. B. Altman, right in this city of New York, gave his store to those who helped him build his business.

I could go on with hundreds of others who have done likewise—but there are so many known cases it seems unnecessary to cite them to prove my conviction that most successful men recognize they can only be custodians of funds in the interest of others.

If this be true, as I believe the records prove, then both sides have much to be said in their favor and little to be said against them. Jobs must either come from the use of private capital or from the use of public funds—and from what I know of the history of the world, I have no hesitation in saying I would rather see funds to create jobs handled by private individuals who created the funds, than by politicians who frequently use funds for a short period of time without the responsibility of having created those funds themselves. The individual who created the funds lives with the job he is doing until he gets his "final summons." The politician frequently has a short tenure of office and regardless of his sincerity, does not have that continuing responsibility.

A MUTUALITY OF INTEREST

This means to me that the important problem lying in front of both sides of industry is adopting a policy that is founded upon true mutuality and then working to create the patience and tolerance that are necessary to find the truth and solve the problem on the basis of equity for all. The interested parties in this discussion are so interwoven in their relationship that their objectives must be the same, if either or both are to be satisfied with the results achieved.

I believe capital and management have been wrong many times in assuming that labor in the past has been happy, when it was dissatisfied. This reminds me of a little story of a Negro circuit preacher who was just closing his year with the congregation. He liked his pulpit and his comfortable little home, and the only way he could remain there another year as the pastor of the church was by having the congregation vote that they wished to keep him. So on the last Sunday of the year he said:

"Brethren and sisters, dis am the last Sabbath in the year, and I must move on unless you vote that you wants me as your pa'son for another year. All those in favor of me remaining for another year, please raise their right hand."

Not a hand went up.

"All right, brethren and sisters, all those in favor of me remaining another year will signify by saying 'Aye.'"

Not an "Aye" was heard. Whereupon the parson said:

"Thank you all, very much, brethren and sisters. I's your pa'son for another year, because silence gives consent."

SOME RECOMMENDATIONS FOR MANAGEMENT

I believe a great many of the troubles of the past have come through the assumption that "silence gives consent." Therefore, I recommend that every manufacturer who is interested in the continuance of our enterprise system and our form of government make it his business in the future to do the following things:

1. Regardless of fine wages, working hours, and other conditions—wherever the size of the company permits, see that at least once a year all the employees of the company have a chance to look at you or some of the upper officers to see that you do not have horns. In large companies, I recommend the heads of the subsidiaries or plant divisions carry this policy into effect.

In our company we feel this contact—meeting the men face to face and showing them we are human beings—is one of the important contributing factors to the fine understanding between the management and the employees. This is illustrated by comments individually made by workingmen in one of our plants following a meeting at which several of the officers of our company attended. Here are some of those comments:

J. H. said: "Enjoyed the talk and can see that he (Mr. Hawkes) is as interested in the workingman as in the rich man. Every man I spoke to enjoyed the talk and the party. These men came to us as perfect strangers and in no time at all we saw they were just one of us."

T. H. said: "I was afraid to meet Mr. Hawkes and the other officials. I thought Mr. Hawkes was very tall and fat. After I saw them I enjoyed being around them. They are just regular men like you and me."

E. M. said: "I figured he would come down, say his speech, hello, and get the hell out. Sure surprised me."

J. R. said: "Would like to have his salary (referring to Mr. Hawkes), but not his job. Guys like him work too hard."

These remarks show that the men had a fine, friendly feeling toward the management after a personal visit and enjoyable little party.

2. If your company policies do not square with the progress of human relationship in this country, then square them as far as is possible, based on sound economics, and make it your business to see that your men understand them.

3. Don't mislead your employees by bidding for popularity through doing the unusual or economically unsound thing which cannot last and which damages not only the company that tries it but all industry—because human beings still relate and compare what happens to their neighbors with what happens to them.

4. Be sure that no superintendent, foreman, subforeman, or supervisor attempts to be sharp or shrewd in dealing with the manpower of the company.

5. Be certain that no man between you and the men down the line, breaks the chain because he misunderstands the company's policy or fails to carry through the instructions of management.

6. The definition of a corporation in the past has been, "An invisible, intangible being, existing only in contemplation of law, without heart and without soul." We must prove that a corporation can have the equivalent of a heart and soul and that the representatives employed to direct its affairs serve as an agency of human beings—if it is to remain a useful agency for the conduct of business.

7. Have your men in the plant understand that the laborer of today is the potential capitalist of tomorrow. That his interests of tomorrow may be identical with others of today, and his acts of today should be so measured that he will be willing to have similar acts from others tomorrow.

One of the most interesting experiences the management of our company has had was when we raised wages at a crucial time, the men—of their own volition—sent a committee to the superintendent to inquire if the company could afford to raise wages, in view of competition, low prices, and lesser volume of business.

Think of this interest in the welfare of the company of which they were a part.

WHERE INDUSTRY CAN SERVE

Industrial management should support the fine movements for the dissemination of correct information regarding our free enterprise system to the youth of America. The junior achievement movement, I believe, justifies our support. The plan back of the institute for industrial progress was most excellent. The general educational plans of intelligent, far-sighted business managements in training and educating superintendents, foremen, and the men in their plants all contribute a great deal toward this end.

The fine women of this country can play a most important part in backing up industry and business if they (the women) are convinced industry and business are operating along fair and sound lines. Most of those who know about the businesses in which their husbands are engaged believe in the fairness of those particular institutions, whereas not knowing about other businesses, they frequently are in doubt about them, and being in doubt, are not good sponsors for them.

This avenue, I believe, offers one of the most valuable and hopeful opportunities available to us to bring the truth home to a very large percentage of the population. Women train the minds of youth, and youth of today will be our industry and business of tomorrow.

To keep the Government from stepping into business further than necessary or desired, men must be able to do things by themselves as well as or better than the Government can do those things for them. If men can do the job and labor and capital will cooperate, understand, and respect each other, their combined power will keep government where its founders deemed it could serve its people best. And further, their combined strength will remove from the statute books any bad laws that have been put there and will keep from enactment further bad laws that are incubated in the minds of politicians.

POINTS TO REMEMBER

Remember—next to wages labor is interested in regular work on a permanent job. Management should endeavor to work out such a

system to accomplish this, but that system must square with sound economics or it will fail.

Remember—giving labor its "just due" in wages and working conditions will increase labor's determination to work rather than to be satisfied with relief or relief work.

Remember—workingmen standing with the management will resent the acts of any outside agency or laws that injure business, because they will understand such things injure their interests also. When such understanding arrives bad laws will be promptly corrected or repealed.

Remember—your men should thoroughly understand your company policies, principles, and objectives—don't leave anything to "silence."

Remember—the local community should understand your company principles, policies, and objectives, and, understanding them, should vote the company "a good citizen."

Remember—faith, confidence, and mutual respect must be in the picture with good practices. Faith begets faith and confidence begets confidence. Both lead to mutual respect.

Remember—sharp practice anywhere along the line helps destroy faith, confidence, and equity.

Remember—the public is equity's court and public opinion is equity's decree.

Remember—labor and capital make industry, and with either one removed there is no industry.

Remember—government only derives its just power from the consent of the governed, and, after all, it is nothing but a creature of the people unless it gets out of hand and through force becomes the master of the people.

SIGHT BEING RESTORED

Two verses from the Bible are at this time worthy of consideration by both labor and capital—quoting from St. Luke's, chapter 6:

"And why beholdest thou the mote that is in thy brother's eye, but perceivest not the beam that is in thine own eye?"

And then again this great question:

"Can the blind lead the blind? Shall they not both fall into the ditch?"

My answer is—the blind on both sides are coming into sight and have already begun to read the decrees of equity on the wall of public opinion. Hence, each with sight and patience can help both to keep out of the ditch. The National Association of Manufacturers and other vital organizations are helping tremendously to restore this sight, and labor and capital are showing daily evidence of their appreciation of the necessity of choosing good leaders who believe in law and order.

"He who comes into equity, must do so with clean hands," and "he who asks equity, must do equity." If understanding cooperation is accomplished between labor and capital, I predict both labor and capital will appreciate that no one-sided law can long bring benefits to the side it favors, because that is not equity.

If the President of the United States believes that the great majority of labor is understanding and trying to do equity, and that the great majority of the captains of industry are cooperating and trying to do equity, then I believe a definite and direct word from him to this effect would be most helpful to the country right now.

In closing let me urge that, in true Christmas spirit, we all join in fervently expressing the hope that the days to come will justify man's faith in his fellow being. That his intelligence, industry, and goodness of heart will prevail over the destructive forces that have threatened his civilization. That he will come to the realization that but one heart beats for all, and that mutual love, respect, and understanding will make "life, liberty, and the pursuit of happiness" a glowing reality.

Constructive Thinking of Young America

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

CORRESPONDENCE WITH MISS BARBARA DUELL, OF HAMILTON, N. Y.

Mr. JOHNSON of Colorado. Mr. President, as a splendid illustration of the constructive thinking of young America in this year 1939, I ask unanimous consent to have printed in the Appendix of the RECORD my correspondence with Miss Barbara Duell, of Hamilton, N. Y.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

LITTLE WASHINGTON,
HAMILTON CENTRAL SCHOOL,
Hamilton, N. Y., January 27, 1939.

Mr. EDWIN C. JOHNSON,
The Carroll Arms, Washington, D. C.

MY DEAR MR. JOHNSON: The sixth grade of Hamilton Central School is organized as Little Washington. We have a Mr. and Mrs. Roosevelt, a Mr. and Mrs. GARNER, 9 Cabinet officers, and 22 Senators. We are glad to say that we do not need a Secretary of War, since we are a very peaceful community. We also have a Smithsonian Institution, a Congressional Library, and Botanical Garden.

I trust that you will be pleased to know that I chose to be EDWIN C. JOHNSON, from Colorado, and I am trying to be as good a Senator from Little Washington as I am sure you are for your State and county.

You would make me very happy if you would write me a short note enclosing some tiny souvenir for our Smithsonian Institution, if it is only a pencil which you use. I am also keeping a scrapbook of all the pictures and news items that I can find about you and I would appreciate an autographed picture if you could spare one.

Our organization is teaching us good citizenship habits, and by making our own laws and taking charge of all disciplinary problems we are becoming responsible citizens, not only of Little Washington but of our own community as well.

I realize that you are a very busy man, but I am going to hope to hear from you soon.

Respectfully,

BARBARA DUELL.
(EDWIN C. JOHNSON.)

UNITED STATES SENATE,
January 30, 1939.

Miss BARBARA DUELL
(Senator EDWIN C. JOHNSON),
Little Washington, Hamilton Central School, Hamilton, N. Y.

DEAR SENATOR: Nothing in many days has pleased me quite so much as your lovely letter of January 27. To say that I am very proud of the honor that you have conferred upon me is definitely very much of an understatement. To have a bright little American, whom you have never had the pleasure of meeting, adopt you as her character to impersonate is very flattering indeed. It places a heavy responsibility upon me, though, because from now on I must neither disappoint nor embarrass my little shadow up in New York. Dear Barbara, you may not believe it, but you are going to be a tower of strength to me from this day forth.

I must commend your class for the splendid thing which they are doing. Nothing is quite so important in America as to have the future citizens of this great Nation understand exactly how their Government functions. You and I should love our country more than any other thing after our Deity. When we think of the hungry little fellows who have no chance to go to school in other more unfortunate lands we should in deep humility and gratitude thank God for George Washington and the other patriots who gave to us the United States of America with all of its freedom and opportunities for living clean, wholesome lives. Senator, it is up to you and me to keep America in the right path, so that the boys and girls who will soon take our places may have the same grand privilege of living in the free country that we enjoy.

You must have a very interesting school and a good, sensible, practical teacher and your class in good citizenship must be absolutely fascinating. You are not only learning about good citizenship and its advantages but you are living good citizenship, which is a thousand times better. The way to learn how to do things is to do them.

I am mailing you under separate cover a little token from my office for your Smithsonian Institution.

Sincerely,

EDWIN C. JOHNSON.

P. S.—Senator La Follette, Sr., once said, "I look upon the United States Senate as a great university wherein I am enrolled as a student." I feel the same way about it, so you see I am attending school also.—E. C. J.

Bas-Relief in Honor of Senator Glass

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1939

ADDRESS OF HON. HENRY B. STEAGALL, OF ALABAMA, DECEMBER 23, 1938

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Representative STEAGALL, of Alabama, on the occasion of the unveiling of a

bas-relief honoring my distinguished colleague [Mr. GLASS] in the Federal Reserve Building, December 23, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Twenty-five years ago yesterday the chairman of the Banking and Currency Committee of the House of Representatives, in presenting the conference report on the Glass-Owen bill, expressed the view that the measure embodied legislation which had been sorely needed for many years. The passage of the Federal Reserve Act did not represent any hasty or immature judgment.

The necessity for currency reform had been recognized by advance thinkers throughout the Nation. The country had become accustomed to periodic money panics, resulting in disastrous disturbance to agriculture, industry, and commerce, and special congressional committees had made repeated studies in search of a remedy. During these unfortunate periods the people found themselves without the supply of credit and currency indispensable to the normal flow of trade and commerce. At such times it even became necessary to resort to barter and the issuance of scrip with which to meet the requirements of business. An illustration of which I have personal knowledge is to be found in the case of many banks in small communities that were unable to secure payment in currency of their deposits in the large banks in financial centers. Under these conditions, the large banking interests were in control of the Nation's supply of credit and currency, virtually holding the power of life and death over every other business interest in the Nation. The situation demanded fundamental reform and the passage of the Federal Reserve Act was the answer of statesmen to that demand.

The party then in power had declared that banks existed for the accommodation of the public and not for the control of business, and the Congress proceeded to make that principle a living reality.

Happily for the Nation, the people had summoned to the office of Chief Executive a man with a vision unclouded by selfish interest and with an unwavering devotion to the public weal. The task was so stupendous that it presented a challenge to the leadership of the President and required leadership in Congress possessing the same lofty patriotism, superb courage, and consummate skill.

At that time a modest, unobtrusive, self-styled "country editor from Virginia" was chairman of the Committee on Banking and Currency of the House of Representatives and leader in the House in all matters of legislation touching banking and currency. During his years of service in the House he had quietly and studiously acquired vast stores of information useful to his committee in meeting the problems confronting it. It is no exaggeration to say that deeper or more painstaking study was never given to any measure than was given to the Federal Reserve Act by the chairman of the House Banking and Currency Committee. Of course he was ably supported by his associates, but his was the responsibility, his the task of piloting the legislation through his committee and to final passage in the House. This was accomplished. The historian of the future, looking back over the period encompassed by the passage of this act, will be amazed not only at the wealth of information brought to bear at all critical stages but at the consummate ability with which the chairman of the Banking and Currency Committee of the House met the onslaughts of opponents, both within and without the Halls of Congress.

It is doubtful that any great measure ever encountered more stubborn and relentless opposition than was arrayed against this proposal, both in the Congress and in the big-business circles of the country. A horde of powerful lobbyists such as seldom seen gathered in Washington, filling the air with dire predictions of confusion and chaos to follow the passage of the act.

The chairman of the Banking and Currency Committee of the House, now the beloved Senator from Virginia, with the consummate courage that has characterized his entire career, undaunted and undisturbed by the clamor of the hour, pursued the even tenor of his way until he achieved the goal that ushered in the dawn of a new day of freedom for the legitimate business interests of the Nation. No measure was ever presented to the House of Representatives by any chairman of a committee with a more comprehensive grasp of the measure in hand and of all pertinent information that could be desired by the House. The masterly manner of presentation has never been surpassed in the history of the House. Objections were met with devastating facts or reason. Opponents became supporters, and the final vote was a triumph of a leadership seldom equaled in the House.

The Federal Reserve System afforded a supply of currency and credit adequate to the growing demands of the country. The volume of industrial production increased by 30 percent in 2 years following the inauguration of the System, with corresponding improvement in agriculture and expansion in trade and commerce During the same period the national income increased approximately $15,000,000,000. The System supplied facilities for financing the Government during the period of the World War. The volume of Government securities handled through the Reserve banks during that period amounted to approximately $50,000,000,000. The System enabled us to finance the Great War and to hasten its conclusion. It is today the greatest instrumentality of the Government for meeting the problems of the present. Strange as it may seem, if at any time after the System had been tested by experience a proposal had been offered to repeal the law, it would have encountered even more strenuous opposition and from the same sources that opposed the original measure and indulged such dire predictions of disaster to follow its enactment.

The part played by the illustrious Senator from Virginia in connection with the establishment of the Federal Reserve System made him the choice of the President for Secretary of the Treasury, in which capacity he rendered most able and conspicuous service. This does not by any means complete the story of his career. Senator GLASS, as chairman of the Committee on Banking and Currency of the House of Representatives, gave profound study to the subject of farm credits, and the Federal Farm Loan Act was sponsored by him and passed under his leadership.

Since the passage of the Federal Reserve Act he has been its constant defender and protector, and as Senator has sponsored and supported new legislation to strengthen the system and to enlarge its service to the public—always in conformity with the original purposes of the act. Senator GLASS saw the evils and dangers attending the orgy of speculation during the period preceding the great depression and under his constructive leadership legislation was enacted that terminated many of the evil practices which obtained and brought about the desired improvement since recognized. He is the accepted authority in the Senate in matters of legislation relating to banking and currency. His activities cover a wide range and have left deep and lasting imprint on the Nation's financial structure. His lofty patriotism, great learning, and superb courage have endeared him to all his associates, as well as to the people of the entire Nation.

A great Roman said that he would rather posterity would ask why he had not held public office than to inquire why he had. The historians in the years to come will wonder why Senator GLASS was not made the nominee of his party and elevated to the Presidency of the United States following the Wilson regime. His name will have a place in history such as coveted by the great Roman.

We know not how long this building or this tablet will survive the vicissitudes of time, but the name and fame of CARTER GLASS, of Virginia, will endure to enrich the annals of the Republic.

Senator GLASS, we unveil this tablet placed here as a testimonial to your distinguished public service and as an expression of esteem and admiration of those who know and love you.

The National Health Bill

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, February 1), 1939

RADIO ADDRESS BY HON. ROBERT F. WAGNER, OF NEW YORK, JANUARY 30, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by my colleague [Mr. WAGNER] during the National Radio Forum on the subject of The National Health Bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, tonight, in hundreds of halls throughout the land, the American people are celebrating the fifty-seventh birthday of President Roosevelt. The occasion represents much more than a birthday tribute to the beloved leader of a great democracy. Underlying the pomp and the merrymaking is a profoundly serious purpose. New cases of infantile paralysis arise each year in about 7,000 American households, leaving in their wake ruined hopes, twisted bodies, and twisted lives. Since 1934 the President's birthday has been devoted to fostering a Nation-wide movement to control and stamp out this scourge of mankind.

This humanitarian movement reflects the growing national sentiment for better coordination of our efforts in promoting the health security of the entire population.

Year in and year out, in good times and in bad, sickness takes a staggering toll. On the average day, 5,000,000 persons are disabled by illness. Sickness is responsible for the loss of over a billion dollars a year in workers' wages. Sickness had incapacitated at least one out of every three persons now dependent upon public relief or private charity.

The United States has already made tremendous strides in the advancement of national health and standards of medical care. But while we boast of the world's finest resources of medical knowledge, equipment, and personnel, we are still sadly deficient in bringing those resources within the reach of all who need them.

While many hospital rooms stand vacant in the private hospitals of large cities there is an over-all deficiency of 360,000 hospital beds, especially in smaller cities and rural counties. While many

practitioners wait in vain for patients, over a quarter of a million mothers do not have the care of a physician at childbirth. In some areas infant mortality is as high today as it was 20 years ago. The general death rate among the poor of our large cities is the same as the national death rate 50 years ago. The situation is summed up in the statement that low-income families spend a higher proportion of their incomes for medical care, yet receive far less medical service than families more favorably situated.

These deficiencies are all the more shocking because they could be largely eliminated by the application of techniques and knowledge already available. At least one out of every two mothers who die in childbirth, for example, could be saved if properly cared for.

Environment, education, geographical distribution of population and of medical facilities, all play their part. But the core of the problem is the inability of those in need of medical care to purchase it at a price within their means to pay. The 40,000,000 persons in the lowest third of our population who need medical care most are least able to pay for it, and consequently receive it least of all. An even greater proportion of the population, higher in the economic scale, could budget against the average cost of medical care, but cannot meet the unpredictable and calamitous costs of serious illness in individual instances.

Unstinted praise is due the members of the medical profession for their superb altruism and spirit of service, often at great personal sacrifice. In all fairness we cannot continue to saddle upon them a burden that should be borne by society at large.

The day has long since past when Government's responsibility for the health of the population ceased with sanitation, quarantine, and asylums for the insane. The expanding health activities of Federal, State, and local authority is an index of the increasing emphasis of medical science upon preventive measures, as well as the awakened social consciousness of our people as a whole. Today medical care is tax supported to the tune of a half billion dollars a year. This is one-sixth of the national health bill paid from all sources. Eighty percent of the total continues to be paid by the patients themselves. Even as a cold business proposition, bearing in mind the extent of preventable losses and the public drain of dependency, little additional outlay would be needed to make available to all groups of the population a minimum of adequate medical care. We will be repaid many times over in renewed national vigor and human contentment.

What we require above all is to give impetus and direction to the sum total of our present expenditures and efforts, public and private. A carefully considered national health program has just been transmitted for the consideration of Congress in a special message by the President. I am now drafting legislation to make this broad-gaged plan a national reality.

The program would proceed simultaneously on several well-defined fronts. It authorizes Federal grants to the States for various public-health services, for maternity and child care, for the construction and maintenance of needed hospitals and health centers, and for general programs of medical service. In addition, workers who become temporarily or permanently disabled through illness would be insured against loss of wages.

This program presents the minimum essentials for bringing the blessings of modern medical science to every man, woman, and child in America. It was not framed in haste, but only after exhaustive studies and investigations. It is not intended to be made effective in haste, but only after careful building over a period of 10 years.

Under no circumstances will the Federal Government go into the business of furnishing medical care or interfere with the States in the licensing of medical or other practitioners. State plans would be established only after consultation with the medical professions, who would also be fully represented on advisory councils. In short, the bill would forge technical and financial sinews to help the States, and through them the professions, to bear more effectively the burden which they have so long carried alone.

The initial costs of the program have been kept within the limits of our immediate resources. I am exploring every possibility of providing temporary as well as permanent disability benefits without increasing the pay-roll taxes already authorized by the Social Security Act. As for the grants-in-aid to the States, authorizations in the first year will not exceed $90,000,000 in the aggregate. This sum, gradually increasing over the years, will be made available on the basis of matching formulae, which take into account the special health needs and financial resources of the several States. Federal aid will thus improve the general level of health work throughout the country and at the same time reduce the wide variations which now exist.

It is imperative that a beginning, however modest, be made now. States considering plans of medical care should have clear indication of the help and cooperation contemplated to be tendered by the Federal Government.

Again and again I have been asked: "Do you propose a plan of compulsory health insurance?" To my mind, the projection of this question to the forefront of discussion emphasizes controversial issues to the exclusion of matters on which there is universal agreement. Millions of consumers of medical services want compulsory health insurance; the medical profession, on the other hand, is divided as to the wisdom of compulsory features. But there is substantial agreement among all groups and all classes on every other aspect of the program, including provisions for public health, maternity and child care, disability insurance, and medical care for the needy.

The question of compulsory health insurance arises only in connection with State plans of general medical care. The answer is simple and clear: The bill will not impose a Federal strait jacket upon the development of State plans. Subject to necessary basic standards, each State will be at liberty to set up a plan of its own choosing and geared to the needs of its own people. The plan may be supported by contributions from beneficiaries or by general taxation, or both. It may be limited to some phases of medical care or be more inclusive. It may cover only the relief population or include other groups higher in the economic scale.

The States will be free, however, to establish compulsory health insurance if they choose to do so. It is important that this election be left open to them.

Health insurance is entirely compatible with American concepts. Old-age insurance and unemployment insurance are familiar analogies. And in the history of our own country, there are ample precedents for health insurance itself.

The very first step taken by the Federal Government in the field of health was to create in effect a compulsory health insurance system for seamen in the American merchant marine. Established in 1798 and administered through the Marine Hospital Service, this plan of medical care was supported for three-quarters of a century by regular monthly deductions from the wages of seamen.

A better and more widely known American precedent is workmen's compensation, the first type of social security adopted in this country for industrial workers at large. This is essentially a form of health insurance, now largely compulsory in almost every State in the Union. Every one of our workmen's compensation laws provides for medical care, as well as cash benefits, for workers injured in the course of their employment. Medical benefits are given in over 97 percent of all compensation cases, and cash benefits in only 3 percent. The prompt provision of medical care enables injured workers to return to their jobs, thus carrying out the basic preventive purpose of social insurance.

Insurance against industrial accidents operates throughout the country to the advantage of industry and worker alike, and with the complete endorsement and approval of our medical profession. There seems no reason why similar systematic safeguards should not be established against a risk nine times as great.

In recent months voluntary plans for the prepayment of medical bills have been widely discussed. All these plans in effect recognize two things: First, that insurance principles are applicable to the costs of medical care; and, second, that the systematic organization of plans for that purpose involves no impairment of the personal relationship between physician and patient.

These voluntary plans are undoubtedly steps in the right direction. But experience both here and abroad shows that voluntary plans will not reach a sufficient proportion of the people in need of insurance protection. None of the many nations of the world adopting compulsory health insurance has ever abandoned it in favor of a voluntary scheme. On the contrary, most of those that began with voluntary plans later found it necessary to substitute compulsory insurance.

Experience under the British health-insurance system offers an instructive lesson. The Honorable David Lloyd George, who in 1911 pressed that measure to enactment in the British Parliament, has recently declared:

"In the quarter of a century which has elapsed since it became law this once-abused scheme has become one of the most popular elements in our administrative system. The Nation would as soon think of abandoning it as it would of abolishing the post office. * * * It has become the keystone of our social structure for the maintenance and improvement of the Nation's health."

The British Medical Association has taken the lead in advocating the extension and improvement of the health insurance law. Only 10 months ago the association reiterated a detailed national plan which, in their own words, "would ensure for all who need it every kind of treatment available for the cure of the sick and prevention of disease and would utilize for this purpose every class of medical practitioner."

The National Health Conference held in Washington last year disclosed overwhelming sentiment for an American health program no less broad. I am confident that with the advice and active cooperation of the medical profession the States will work out programs of medical care suited to the requirements of our own people and safeguarding the best interests of all concerned. We can help them to make a substantial beginning by enacting a national health bill such as I propose. That step we ought to take for the benefit of the happiness and the economic security of our own and future generations.

Inquiry on Mexican Affairs

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, on Wednesday, February 1, 1939, I introduced in the House, Resolution 78,

which proposes an inquiry into our relations with the Mexican Government, and I am anxious that every Member of the House read the complete text of my resolution, which follows:

Resolved, That the Secretary of State is hereby instructed to furnish the House of Representatives, within 15 days from receipt thereof, answers to the following questions:

Is it true that the Mexican Government bartered oil from American and British properties expropriated for German, Italian, and Japanese products, and is increasing such barter arrangements?

Exclusive of oil, have not American investments in Mexico been eliminated, or decreased enormously in value, since 1929, and has not this process been vastly accelerated since President Cardenas took office?

Have reported loss of American investments in many fields led to reductions in United States-Mexican trade?

Is it true that the Mexican Government has just appointed a Minister to Berlin after the post has been vacant since 1937; that Japanese Government fisheries experts have served as honorary commissioners of the Mexican Bureau of Fisheries recently and Mexican youths are being sent to Japan for free fisheries educations; further, that Japanese engineers constructed the Jalapa (Mexico) Vera Cruz highway, and that Japanese have Mexican officials fishing concessions on the west coast?

What has the State Department done to obtain adequate compensation for American holders of bonds in the Mexican national railroads expropriated in 1937?

Does the State Department have any evidence that Germany, Italy, and Japan had an agreement to absorb Mexican oil, including that now being shipped to the German and Italian navies, before expropriation of American and British properties? Did not such shipments start almost immediately after expropriation?

Is it true that Mexican real wages have fallen in the past 2 years?

Did the Ambassador inform the State Department beforehand that the railroads and oil properties would be expropriated or was that as Mr. Josephus Daniels was publicly quoted as saying later "a bolt from the blue"?

Has the State Department a full record of the American Ambassador's speeches and public remarks in the period prior to and after the recent major expropriations, and does it endorse these?

What was the complete text of all speeches made by the American Ambassador to Mexico on the subject of expropriation, and also the complete text of all his reports to the Secretary of State on this subject and on the subject of Mexico's relations with Germany, Italy, and Japan, as well as reports from other sources on the same subjects?

Is it satisfied that the American Ambassador in Mexico City is now taking steps to protect the remaining American investments in Mexico on a fair basis?

Did the State Department, as publicly reported, agree to the expropriation of any American-owned property in Mexico after the recent United States-Mexican agreement to adjudicate land claims was signed, and was any such property expropriated?

The 1940 Outlook

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, Fcbruary 2 (legislative day of Wednesday, February 1), 1939

ARTICLE BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the United States News of January 30, 1939, by Representative CHARLES A. PLUMLEY, on the subject of The 1940 Outlook.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the United States News, January 30, 1939]

REPRESENTATIVE CHARLES A. PLUMLEY, OF VERMONT, MEMBER, HOUSE COMMITTEES ON APPROPRIATIONS AND WORLD WAR VETERANS' LEGISLATION, FORMER PRESIDENT, NORWICH UNIVERSITY, ANSWERS

I am just leaving for Vermont, and I can only take time, hurriedly, to comply with your request. I realize I ought to have plenty of time to consider carefully, any answer I might make. However, I have some definite notions and ideas, and, such as they may be, you are welcome to them.

We have, and under our form of government will continue to have, a two-party system. Under such a system of government for 130,000,000 people living under varied and different geographic and economic conditions, there will always be minorities of dissenters—left-wingers, right-wingers, et al.—within the ranks of each of the major parties. Of necessity, it must be so.

THE 1940 OUTLOOK

There is today, nevertheless, far greater unanimity among those calling themselves Republicans than among those who vote the Democratic ticket, and this will be disclosed most forcibly in the next, the 1940, campaign in the impending contest for the nomination for the Presidency.

Now, the truth is that the alleged dissensions in the Republican Party have been deliberately and grossly overemphasized and magnified for purely partisan propaganda purposes by paid publicity servants of the present administration. They are only surface deep, and the body politic is not affected by the superinduced political eczema and consequent localized irritation of a few individuals.

This is fully evidenced by the vote on November 8. The people are perfectly competent to judge as between the voice of Jacob and the hand of Esau.

NO BASIC DIVISIONS

It is true that many men of many minds have different and divergent ideas and theories with respect to how such objectives as restoration of public confidence in our institutions and an opportunity for private business to take up the slack in unemployment may best and most rapidly be reached and accomplished. There are, however, no fundamental differences either as to the basic principles for which the party stands or as to its general policy.

The policy of the Republican Party will not be determined, as some would seem to think it may be, by any "policy committee," nor by the Republican National Committee, as such. It is relatively unimportant, so far as the people of the United States are concerned, who constitutes the Republican National Committee; the real policy of the Republican Party will take positive and definite shape in the form of constructive action to be taken by those persons whom the people themselves have elected to represent them in the Congress and at the capitols of the several States.

Someone has said it is time to develop a national program for economic recovery—an American platform—which shall confine the Government to its proper functions under the Constitution and insure preservation of the American system of free private enterprise.

The one who said it fails to realize the fact that such a plan, and absolutely such a program, the Republican Party, through its representatives in Congress, has over and over again outlined in detail by its insistence on the balancing of the Budget the revision or repeal of legislation such as the capital gains and undistributed-profits tax, the establishment of just relations between labor and capital, insisting upon constitutional guaranties of the rights of person and property, the right of the worker to work, of the owner to possession of his property, and of every man to enjoy in peace the fruit of his labor; by its opposition to the New Deal's policy of competition with private enterprise and private savings; by favoring competitive system as against either private or governmental monopoly.

FOR LOCAL SELF-RULE

One has only to examine the record to find that the Republican Party, as it is represented in Congress, is living in the present and has stood, and still stands, for State and local control, home rule, and local self-government; for a reduction of the number and amount of those Federal, State, and local taxes which are responsible for the notorious spread, for instance, between the prices paid farmers and the prices paid by consumers for their products.

We Republican Members of Congress have insisted that food, clothing, and shelter should be provided adequately, but that it should be done economically by the removal of petty partisan politics from the relief program and in an effort to encourage the revival of individual self-reliance and the return to self-dependence.

The Republican Party has been a party of opposition because of its minority position and opposition to all the un-American, unconstitutional theories with which it has been confronted. It has insisted, and it continues to insist, upon economic and efficient local, State, and Federal governmental administration, the elimination and avoidance of duplication in public service, and the protection of the taxpayer.

The Republican Party was born because of a principle, and has lived and grown because of vital governmental principles and policies, for which it has stood and for which it now stands; too sound to be permanently overthrown, too deep and underlying to be effaced.

Industrial Alcohol Users

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, February 2 (legislative day of Wednesday, February 1), 1939

ADDRESS BY CAPT. JAMES P. McGOVERN AT THE CHEMISTS' CLUB, NEW YORK CITY, JANUARY 24, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Capt.

James P. McGovern, of Washington, D. C., General Counsel of The Industrial Alcohol Institute, Inc., at the Chemists' Club, New York City, on January 24, 1939, on the subject of a proposed Council of Industrial Alcohol Users.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, the organization of a Council of Industrial Alcohol Users having been suggested by me, it is fitting and proper that I should review the reasons and motives which prompted the proposal. Needless to say, the idea of bringing together another tribe to join the pilgrimage through the wilderness in search of the promised land was not a sudden impulse, but was based on careful consideration of recent events and the reluctant conviction that an association of the kind indicated is essential to the preservation, if not advancement, of the objectives already attained. There is no cause for panic, and the present call to the chemical industry is not an S O S. While there is much in the record of accomplishment that is reassuring, it must be apparent to all that the decentralization of liquor control under the twenty-first amendment as construed by the Supreme Court has imposed many new and additional burdens on users of alcohol which are ominous and foreboding.

We may start out with the premise that the alcohol with which we are concerned is a commodity essential to the industrial life of the Nation. Addressing the United States Senate January 16, 1939, on the subject of The Nineteenth Anniversary of the Eighteenth Amendment—of which he was the author—Senator MORRIS SHEPPARD, of Texas, said:

"Alcohol as an ingredient in manufacture has a vital place in the industrial life of the Nation; its value in this regard is increasing constantly. We are dependent upon it now for great advances in our industrial progress, and we will become constantly more dependent upon it as we develop the chemical industries that are founded in part upon its use."

In a volume published by the United States Treasury Department on June 30, 1932, entitled "The Uses of Alcohol as an Essential Chemical in the Arts, Sciences, and Industries," the subject was introduced by the following question and answer:

"Why is the manufacture of alcohol classified by the United States Government as a key industry in time of war? Because, with water and sulphuric acid, it is one of the three absolutely indispensable compounds entering into the manufacture of almost all essential products."

In that connection it may be interesting to recall the following excerpt from an article written by Hon. John G. Capers, United States Commissioner of Internal Revenue, entitled "How Europe has Developed Industrial Alcohol," which appeared in Harper's Weekly (edited by George Harvey), October 3, 1908, over 30 years ago and approximately 6 years prior to the outbreak of the World War. That official, accompanied by Chief Chemist Crampton, of the Bureau, had visited Europe during the summer of 1908 for the purpose of investigating and reporting upon the experiences of foreign countries with respect to the production, distribution, and use of industrial alcohol. Commissioner Capers said:

"* * * It would be difficult to find an individual in any walk of life who does not make personal use of not only one, but of many manufactured articles into which alcohol * * * enters to a considerable extent.

"Germany has made the most conspicuous progress of any nation in the direction of the use of denatured alcohol as a source of heat, light, and power. This prominence is partly due to national pride and interest in the movement, partly to the bonus of 5 or 6 cents a gallon the German Government pays as a bounty on the denatured alcohol, partly to favorable economical conditions, alcohol being relatively cheap and petroleum products relatively dear, but mainly to governmental organization and effort in promoting the domestic use of the product. The German Emperor takes a personal interest in the industry, and there are frequent exhibitions of apparatus, machinery, etc., and appeals to individual effort are made in many ways, both by the Government and by cooperative enterprises.

"We cannot hope to attain the full development or success in the production of denatured alcohol which is peculiar to Germany, and for several reasons. In the first place denatured alcohol is a matter of nearly as much concern to the Empire as its Army or Navy. In fact, the older Emperor inaugurated the industry for the primary purpose of having a source of light, heat, and power within the German Empire independent of the petroleum products, of which Germany has none. The wise old Emperor, realizing that some day his Empire might be forced, in time of war, to be self-dependent and resourceful within its own borders, determined to be independent of petroleum products, all of which were and still are shipped into Germany from other countries, and an elaborate paternal system was inaugurated to insure, as the government's alternate safety source of light, heat, and power, the alcohol which could be produced from the German potato, now so carefully cultivated for that purpose, as it has been for nearly 40 years."

As representatives of various industries requiring the use of industrial alcohol, ethyl as well as denatured, in their business, it is needless for me to emphasize the chaos which would ensue if its use were curtailed or denied. Appreciating in full degree the many complications responsible for the general depression in all branches of business, I am not, at the moment, primarily interested in the economic questions involved, although I do feel that if alcohol, as such, could be regarded more as a necessity and less as a luxury, a decided improvement in the industries dependent upon such commodity would certainly follow. The present problems relating to alcohol to which I would direct your attention are political and, unfortunately, moral.

What is this commodity which arouses our interest and concern? The term "industrial alcohol" unquestionably relates to alcohol used for "industrial" purposes, as distinguished from beverage purposes. As defined by statute (act of October 28, 1919, title III, sec. 1), "the term 'alcohol' means that substance known as ethyl alcohol, hydrated oxide of ethyl, or spirit of wine, from whatever source or whatever processes produced." It clearly alludes to a definite chemical substance, and it is this "substance" which is the subject of the internal-revenue tax imposed on "distilled spirits" and to which the tax attaches "as soon as it is in existence as such, whether it be subsequently separated as pure or impure spirit, or be immediately, or at any subsequent time, transferred into any other substance, either in the process of original production or by any subsequent process" (sec. 3248, R. S.; 26 U. S. C. A. 1150–c). The percentage of this "substance" in all classes of distilled spirits, otherwise known as "proof," determines the amount of tax due. The purity, quality, and strength of alcohol itself is based on "proof." Absolute, pure, chemical alcohol is 200 proof. It is a long step between 100-percent or 200-proof alcohol to the one-half of 1 percent or 1-proof alcohol which fixed the intoxicating character of beverages during the prohibition era. Spirits "bottled in bond" are required to be bottled under Government supervision at 100 proof or containing 50 percent of this "substance," alcohol. Liquors containing alcohol may be alcoholic but they are not alcohol. It is most important that this distinction be kept in mind, for in many sections the propaganda aimed against whisky, gin, rum, and other spiritous beverage liquors is directed against alcohol on the misguided theory that all liquors are alcohol and that "alcohol" is the general term applied to all liquors. Such tactics are unwarranted and unfair and a council of industrial alcohol users can do much to counteract and stop the abuse. Alcohol, as such, is never behind the wheel of an automobile; it is, however, in its radiator antifreeze solution and should be in its motor.

The identity of alcohol to be used industrially is established and jealously guarded by the supervision and control exercised by the Federal Government over its production and distribution. That the Government is not primarily interested in the tax on such alcohol but in the promotion of its industrial use is forcibly indicated by the policy of denaturation. Of the 196,878,568 proof gallons withdrawn during the fiscal year ending June 30, 1938, 164,263,210 gallons were withdrawn free of tax for denaturation and 1,849,899 for hospital and scientific use. This alcohol is in fact and practice produced and withdrawn from Government custody at 190 proof, whereas under the law it may be withdrawn at not less than 160 proof. The law, however, recognizes that such alcohol may be fit for use as an intoxicating beverage for, when denatured, it is required to be rendered "unfit for use as an intoxicating beverage" (title III, sec. 10).

While alcohol has generally been included in the statutory definitions of liquor, it is believed that this was done to gain control of its uses and to prevent its abuses. Concededly it is most improbable, if not impossible, to consume 190 proof or even 160 proof alcohol as a beverage; it would burn the mouth of an ordinary human being long before it passed the esophagus. One can sympathize with the chemist whose devotion to his art will permit him to look upon alcohol only as a chemical but who nevertheless enjoys his toddy. There can be no hope of destroying the dual character of alcohol by legislative fiat. We must, therefore, concentrate our attention on its uses for industrial purposes, and who are better qualified to do this than those directly affected—the industrial alcohol users themselves?

It will have been noted that of the quantity of alcohol withdrawn during the previous year (196,878,568 proof gallons), by far the greater proportion (164,263,210 gallons) was for denaturation, completely and specially. The policy of denaturation was established for the sole purpose of relieving alcohol from the heavy tax which at that time (1906) was $1.10 per proof gallon (act of August 27, 1894), now $2.25 per proof gallon (Revenue Act of 1938). Under the original Denatured Alcohol Act of June 7, 1906, alcohol was permitted to be withdrawn free of tax "for use in the arts and industries, and for fuel, light, and power." The use of the alcohol so denatured was not confined to fuel, light, and power, but was extended to all "the arts and industries." There was, however, no direction that such use should be "promoted," as contained in the present act (title III, sec. 13). The alcohol was required to be denatured with methyl alcohol or other denaturing materials, or admixture of the same, suitable to the use for which the alcohol was withdrawn and which destroyed its character as a beverage and rendered it "unfit for liquid medicinal purposes" (act of June 7, 1906, sec. 1). Under the present act, the alcohol is required to be denatured "by the admixture of such denaturing materials as shall render the alcohol, or any compound in which it is authorized to be used, unfit for use as an intoxicating beverage" (title III, sec. 10). The restriction in the original act that the alcohol be rendered "unfit for liquid medicinal purposes" does not appear in the present act, title III. It should also be noted that, under the original act, the denaturing materials were to be "suitable to the use for which the alcohol was withdrawn," whereas under the present act (title III, sec. 10), the denaturing materials are such "as shall render the alcohol, or any compound in which it is authorized to be used, unfit for use as an intoxicating beverage." If, therefore, "any compound" can be thus rendered unfit by the addition of "denaturing materials" to the alcohol used, it would appear that tax-free alcohol when so denatured is, under the statute, authorized. Under the original act the denaturing materials were to render the

alcohol unfit, while under the present act the denaturing materials are to make the alcohol or the ultimate compounds or finished products unfit. The denaturation of alcohol is an important privilege incidental to the promotion of the use of the alcohol itself. Alcohol denatured continues to be alcohol. Although rendered "unfit for use as an intoxicating beverage," it is made fit for industrial purposes. Such status is recognized by the Liquor Law Repeal and Enforcement Act, approved August 27, 1935, which provides (sec. 4) that any person who shall produce, withdraw, sell, transport, or use denatured alcohol, or articles containing denatured alcohol, in violation of laws or regulations, becomes subject to all provisions of law relating to alcohol that is not denatured, including those requiring payment of tax, and the person violating such laws or regulations is required to pay such tax.

The payment of the tax on alcohol causes no chemical, mechanical, pathological, or physiological changes in the alcohol. It is not required to be withdrawn free of tax as a condition precedent to its industrial use. Who will dare say that the use of alcohol in the manufacture of medicinal, pharmaceutical, or antiseptic products and in flavoring extracts, sirups, and food products is not an industrial use? Such industries are among the most important industries in the country and it is unfortunate that the use of tax-free alcohol, so denatured as to make such products unfit, is not recognized and allowed, especially as such products are acknowledged to be unfit for beverage purposes. When prohibition was in effect, permits to use tax-paid alcohol were, by regulation, required to be issued under title II of the National Prohibition Act relating to "prohibition of intoxicating beverages," instead of title III relating to "industrial alcohol." This procedure was unnecessary and unjustified, for permits could have been prescribed by regulations issued under title III and tax-paid alcohol accorded the protection and recognition contemplated thereby. Had this been done, the status of tax-paid "industrial alcohol" would be in a much stronger position today.

The Federal Alcohol Administration Act, approved August 29, 1935 (amended May 15, 1937), relates to distilled spirits "for nonindustrial use" and the definition of such "distilled spirits" includes ethyl alcohol, hydrated oxide of ethyl, spirits of wine, and all dilutions and mixtures thereof (sec. 17–a–6). Under regulations No. 2, issued by the Administrator, the following uses of "distilled spirits" (alcohol) are regarded as "industrial," viz: (1) Uses of tax-free alcohol by any governmental agency, State or Federal, or any scientific university or college of learning, or by any laboratory exclusively in scientific research, or by any hospital or sanatorium. (Under the Liquor Tax Administration Act of June 26, 1936, the right to withdraw alcohol tax free was extended to include its use by any clinic operated for charity and not for profit, including use in compounding bona fide medicines for treatment of patients outside of such clinics, and not for sale); (2) use of alcohol which has been lawfully denatured or otherwise rendered unfit for beverage use; (3) use of distilled spirits (alcohol) in the manufacture of (a) medicine, pharmaceutical or antiseptic products, including prescriptions compounded by retail druggists; (b) toilet products; (c) flavoring extracts, sirups, or food products; or (d) scientific, chemical, mechanical, or industrial products, provided such products are unfit for beverage use. The fact that such regulations recognize the above uses (in some of which tax-paid alcohol is used) as "industrial" is significant and persuasive. Such regulations, however, regard the use of distilled spirits (alcohol) in the manufacture, rectifying, or blending of alcoholic beverages, and as a medicine, as "nonindustrial."

Under section 13 of title III, the Commissioner of Internal Revenue is required to issue regulations "to place the nonbeverage alcohol industry and other industries using such alcohol as a chemical raw material or for other lawful purpose upon the highest possible plane of scientific and commercial efficiency consistent with the interests of the Government, and which shall insure an ample supply of such alcohol and promote its use in scientific research and the development of fuels, dyes, and other lawful products." The manufacture and sale of intoxicating liquors "for beverage purposes" is no longer prohibited and liquors are now lawful products. I am not reluctant to admit that the use of alcohol in the manufacture of intoxicating liquors can properly be regarded as an industrial use, although such use in rectification, blending, etc., is considered "nonindustrial" under the regulations issued pursuant to the Federal Alcohol Administration Act.

At the risk of exhausting your patience with observations which may be considered elementary, the status and uses of alcohol have been reviewed in detail to emphasize the nature of our obligations. Under the twenty-first amendment the problems of liquor control have been shifted from the central Government at Washington to the respective States. The problems accordingly have become and will continue to be more extensive, diversified, sectional, and local.

The extent of the powers now possessed by the States under the twenty-first amendment, as very recently construed by the Supreme Court in *Indianapolis Brewing Co., Inc.*, v. *The Liquor Control Commission of the State of Michigan et al.* and *Joseph S. Finch & Co. et al.* v. *Roy McKittrick, Attorney General of the State of Missouri, et al.*, decided January 3, 1939, includes the "right to prohibit or regulate the importation of intoxicating liquor" into the States and the exercise by the States of such right is not limited by the commerce clause or the equal-protection clause of the Federal Constitution, even where such right is exercised by one State in retaliation against a sister State, as contended in the Indianapolis Brewing Co. case. The exercise of unlimited police powers internally, together with the additional power, recently acquired, of regulating or stopping the interstate commerce in liquors, is enough to give us serious concern and apprehension. "It can't happen here" must not be the philosophy to guide our deliberations. The twenty-first amendment has returned the problem of liquor control to the folks back home, and the folks back home, who are users of industrial alcohol, must be prepared to carry on in the communities in which their business is conducted. This will, as heretofore, require a vigilant lookout for all laws and regulations proposed or adopted by the State and a preparedness to take prompt and concerted action when necessary.

The situation also demands a program of local education to counteract any prejudice and antagonism which may exist or hereafter arise against the uses of alcohol for industrial purposes. If there is to be a break-up or break-down of liquor control because of various systems of enforcement now found necessary, "industrial alcohol" must suffer no collapse or slackening of the cohesion which under Federal control has given it universal distinction. The use of tax-paid alcohol in the manufacture of flavoring extracts or medicines in Maine is as much an industrial use as the use of tax-free denatured alcohol in the manufacture of paints and varnishes in California. There should and must be a strengthening and tightening of the coordination and cooperation of all users of all kinds of industrial alcohol all along the line if its identity and integrity are to be preserved and maintained. A council of industrial alcohol users would afford this medium of united effort. The strong must assist the weak, for all are in the same boat, and the boat must be kept on an even keel through local storms and showers. No occupant should be permitted to rock the boat, and all hands must be employed in holding it to its course. The council should be devoted exclusively to the cause of industrial alcohol and in no sense attempt to intrude upon or usurp the functions of those splendid and distinguished associations with which users are already affiliated and which have rendered such valuable services in the past. The task is to coordinate their services to be utilized and applied in each State and local community where industrial alcohol is affected, for the recognition and protection of a privilege common to all—the use of alcohol for industrial purposes.

I have stated that aside from the economic questions the problems involving industrial alcohol are political and moral. There is still another—a patriotic problem. If the power to control interstate commerce was essential to the organization and functioning of the Federal Government, which no one can deny, I am apprehensive of the effects, economic, political, moral, and patriotic, of divesting the Government of such power as to intoxicating liquors. If it develops to have been a mistake, how interesting it would be if industrial alcohol could be the example of the advantages claimed for Federal control! In any event, the arteries of commerce must be kept open for the distribution of alcohol if the industrial heart of the Nation is to continue to beat. Industrial alcohol must not be affected with arteriosclerosis.

When Sam Adams, of Boston, sent out his call for the organization of committees of correspondence in 1772, which perhaps contributed more than anything else to the rallying of patriots throughout the Colonies against aggressions imposed by England in taxes and regulations of commerce, he concluded his summons in language that might be applicable to the situation which confronts us today:

"Let us converse together upon this most interesting subject and open our minds freely to each other. Let it be the topic of conversation in every social club. Let every town assemble. * * * The country claims our active aid. Then let us roam, and where we find a spark of public virtue blow it into flame."

In conclusion, I wish to put at rest any thought or suspicion of a selfish motive behind the suggestion of this council. It is possible that, in view of any reputation I may have acquired as a scrappy Irishman on the battlefields of Washington, an impression may have arisen that I might be seeking greater and wider fields to conquer. Such, definitely, is not the case. I have devoted 38 years of my life to the cause of industrial alcohol, and if those efforts have contributed to the recognition it has unquestionably obtained, there has been reward enough. In some respects, I claim it as my baby, a startling admission from an old bachelor. However, it is all dressed up and has many places to go. Although it has reached maturity and must now venture forth in new lands, I am resigned to entrust its care to the guidance of its devotees.

Proposed New Federal Seed Law

EXTENSION OF REMARKS

OF

HON. HARRY B. COFFEE

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1939

Mr. COFFEE of Nebraska. Mr. Speaker, I have just introduced H. R. 3366, a bill to regulate interstate and foreign commerce in seeds; to require labeling and to prevent misrepresentation of seeds in interstate commerce; to require

certain standards with respect to certain imported seeds; to curb the spread of noxious weed seeds and for other purposes. H. R. 3366 is a comprehensive revision of the three previous measures on this subject—H. R. 8288, H. R. 9846, and H. R. 10816—which I introduced during the last Congress. The objective has been to reach a satisfactory, enforceable substitute for the present ineffective Federal seed law, that would protect our agriculture and the legitimate seed dealers against the flood of falsely branded and misrepresented seeds sold in interstate commerce.

Knowing the intricacies of the seed industry and its importance to the Nation, I requested the cooperation in the development of this bill of the United States Department of Agriculture, the Legislative Counsel, the seed trade, farm organizations, State seed analysts, State commissioners of agriculture, and all others interested. With the assurance that full hearings would be requested to revise, if necessary, any of the provisions to obtain a sound and workable seed law that could be enforced, splendid cooperation has been received from all of those interested in the preparation of this measure.

Following the introduction of the first bill, Chairman JONES of the House Committee on Agriculture appointed a subcommittee to hold hearings. After the hearings numerous conferences and deliberations on the complex relationships of seed distribution and the possibilities of constructive Federal seed legislation were exhaustively reviewed. Recognizing the fact that an effective law must have the full support of the vast majority of the people concerned, I have made every effort to bring all groups into agreement compatible with the objective of securing sound legislation. The first seed bill I introduced, H. R. 8288, included the principles of truth in advertising and branding and required that statements accompany seed shipments in interstate commerce giving the origin, adaptability, purity, and germination of certain seeds. It gave greater power covering the control of the importation of field seeds in general and prohibited the introduction of certain noxious weed seeds, and further strengthened the hands of the Federal Government in the control in interstate commerce of noxious weed seeds by supporting the seed laws of the States in regard to noxious weed seed prohibitions.

The bill applied only to field seeds and its introduction was followed by a request from the American Seed Trade Association and the United States Department of Agriculture that the law be made applicable to vegetable seeds also. The present seed law does not control in any way imports and interstate commerce in vegetable seed distribution. I, therefore, requested the Secretary of Agriculture to call together representatives of the seed industry, farmers' organizations, and others interested to make suggestions pertaining to the improvement of the bill as introduced and for the inclusion of provisions relating to vegetable seeds. The Secretary of Agriculture appointed a Seed Policy Committee to devote the necessary time to this service. As a result of these conferences, I introduced H. R. 9846 on March 14, 1938, revising H. R. 8288.

When this bill was made available and studied by all interested parties, it was found that sufficient agreement had not been secured on all provisions, among others the vegetable seed clauses of the bill. Hence I again requested and secured the assistance of the Seed Policy Committee appointed by the Secretary of Agriculture to assist in preparing the highly technical features of this bill by continuing discussions with the various interested groups. Following a series of conferences, H. R. 10816 was introduced on June 6, 1938. The reception of this bill indicated that marked strides had been made in the development of a practical measure. However, there were some major objections raised to some of the provisions which indicated further conferences were necessary to arrive at a proper solution.

With the concurrence of Chairman JONES, of the House Committee on Agriculture, I again requested the Secretary of Agriculture to enlist the aid of his seed-policy committee in ironing out these complex and technical provisions in an effort to reach a harmonious solution to the objections raised. As a result of this request representatives of the seed trade, farmers' organizations, State commissioners of agriculture, State seed analysts, and others interested met together and discussed means of meeting these variations in opinion and of arriving at a satisfactory basis for a sound and practical law. I received a full report of the suggestions offered at these discussions and conferences. As a result of these efforts I now present H. R. 3366, a revision of H. R. 10816, which I introduced in the last Congress. I am confident that this measure, if enacted into law, will fulfill a serious need for adequate seed legislation. The present Federal seed law is inadequate and unenforceable. This fact is recognized by all who are familiar with the subject.

A sound seed law has the backing of the best elements of the American seed trade and the farmers of this country. At the recent annual meeting of the American Farm Bureau Federation in New Orleans the following resolution was passed:

> There has not been a single successful prosecution under the existing Federal laws for the misbranding, adulteration, or false advertising of seeds because of insufficient provisions of law.
>
> We urge enactment at the next session of Congress of effective legislation that will require adequate standards and information with respect to the origin, adaptability, purity, and germination of seeds, and the percentage and variety of noxious weed seeds, so as to assure adequate protection to farmers against misbranding, adulteration, or false advertising of seeds.

I am in full accord with this resolution of the American Farm Bureau Federation and trust that the Seventy-sixth Congress will enact H. R. 3366 into law, with such modification as the Committee on Agriculture may deem necessary after further hearings, in order to give to American agriculture and the sound and progressive elements of the American seed trade the protection needed.

Why I Am Against Continuing the Dies Committee

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

Mr. VOORHIS of California. Mr. Speaker, from time to time it is necessary and proper that investigation be made into activities and organizations existing in the Nation that seek to undermine our constitutional democracy and substitute for it some form of dictatorship. Especially is it important for us to know the extent to which foreign governments are financing movements or organizations in America.

But it is equally important for the people of the Nation to be protected against the destruction of their faith in one another and for investigations of this kind to be conducted in the most careful, dignified, and judicial manner that is possible.

It is very important that we should know, factually, of the tactics of groups which may not wish this Nation well. The best defense against "boring from within" is knowledge; and certainly it is worth knowing, as the Dies committee has brought out, though not for the first time, that there are organizations which, acting under the orders of a foreign dictator, propose, when a crisis comes, to fight to impose their kind of government on this Nation. Evidence to that effect concerning Nazi activities has been brought out by the committee, in addition to evidence regarding Communist activities upon which the greater emphasis has been placed. Personally, I believe that there should be no secret political organizations in the Nation, but that the business of every recognized political party or group in the country should be required to be an open book for all to read. If this were done, we would need fewer investigations.

I have read the report of the Dies committee and the hearings. There is important information contained therein, but, unfortunately, there is also a great lot of so-called

evidence which is pure hearsay, and some which is absolutely false. The reason I cannot vote to continue this committee and why I therefore hope another committee can carry on this important work instead of the present one is because I do not believe the Dies committee has been careful, nor always fair, and because it has certainly disregarded completely certain fundamental rules of evidence. The most important result of its work so far seems to me to have been the creation of a great confusion in the public mind whereby all sorts of progressives and liberals have been lumped together with Communists.

As I see it, the work of an investigation of this kind is so important and evidently so filled with deep and bitter feeling that every effort should be made not to stir up hatred or suspicion unnecessarily and not to permit the character of any innocent person to be called in question The reputation of people for patriotism and love of country are at stake and frequently, in highly emotional matters of this kind, even a false accusation may condemn a person particularly if the committee fails to make available every reasonable opportunity for the accused person to make reply. Frequently, when the most serious charges have been made before this committee there has been, as the hearings will show, no real effort to get the witness to substantiate his statement or show by what right he made it.

Charges and testimony before such a committee are not primarily intended for newspaper copy, but should be carefully sifted by the committee in charge to the end that injustice be not done to anyone. This so far as I can discover has not been the practice of this committee.

No matter what your views may be—whether or not you agree with any of these people—makes no difference. If you are anxious to keep liberty in this country, if you really want to preserve democracy as you say you do, you cannot put your stamp of approval on failing to accord an American citizen his most elemental right to be heard in his own defense. If I voted to continue this committee I would feel that I was putting my stamp of approval on that very thing. Either there will be fairness and justice for all, either everyone will be considered innocent until proven guilty, or else in the course of time no one will enjoy such rights and our liberty and democracy will be no more.

The task of building this democracy in America was a slow and painful one. It cost the earnest struggle of great men, the patient forbearance of great groups of men. That democracy can be destroyed far more easily than it was built. It can be destroyed in three ways: First, by the subversive activities of groups devoted to other and diametrically opposite forms of government; second, by too long a continuance of unnecessary poverty and industrial stagnation; and, third, by the destruction of the spirit that alone enables democracy to live. What is that spirit? It is the spirit of tolerance, the spirit that distinguishes between treason and disloyalty on the one hand, and legitimate concern over the welfare of the people on the other; the spirit that requires that every person accused be allowed a full and fair opportunity of self-defense, the spirit that grants that many people of many different kinds can disagree with one another on many points and still be loyal to the same flag.

If, by an attempt to expose subversive activities—a worthy thing to do, and necessary—we turn loose forces which destroy the very spirit and substance of democracy, then we have gained nothing.

Therefore, I cannot vote to continue this committee, although I stand ready to vote an investigation of un-American activities by a new committee to be appointed by the Speaker or chosen in some proper way.

On the eve of the recent election all of the major Democratic candidates for political office in California were accused before the Dies committee of either being Communists or near-Communists. True, they denied these false charges as best they could, but the damage had been done. The press continued to carry such comments as this:

> It is true that the Democratic candidates have denied these charges, but they nevertheless stand accused before the Dies committee of communism.

And the case against them was thereby supposed to be closed. The chairman of the Democratic Party in California, as fine and patriotic a citizen as breathes American air, was accused of being a member of the Communist Party, yet he was elected unanimously to his position by the Democratic convention in California.

Such men as Bishop Francis J. McConnell, of the Methodist Church, Prof. Paul H. Douglas, Stuart Chase, and other of the most able and devoted people in all America have been dealt with before this committee in such manner as to call their very patriotism in question. Such things are so serious that a congressional committee should never allow them to pass unless they are certain of the credentials of the person peddling such testimony, and unless they do everything in their power to prevent false testimony from going unchallenged. I cannot find that the committee has been at all careful about these things.

And as an example of the sort of testimony to which I am objecting we have the charges that James Roosevelt did not make a proper amount of contribution to the church. Religious liberty, and presumably liberty in the matter of religious contributions are part of the fundamental structure of American life and it is hard to understand what this testimony has to do with un-American activities.

WHAT I WOULD DO INSTEAD OF CONTINUING THE DIES COMMITTEE

It is a mistake to assume that we must either continue the Dies committee or have no investigation of un-American activities at all.

Already at least one resolution to set up a new committee to carry on such an investigation is before the House. It has occurred to me that the Judiciary Committee might well be constituted to do the job. In any case, it is, I think, a certainty that should the Dies committee not be continued another will be set up in its place, and certainly I will vote for it.

But more important to me is that, instead of waiting for another 2 years of careless investigating to be done, we should take action now on the basis of what we already know. To this end I have introduced two bills. One will require the registry and the licensing by the President and Secretary of War of all civilian military organizations except such as have been authorized by act of Congress or by one of the States. The bill defines a civilian military organization as any group which meets together for the purpose of drilling or engaging in any military or semimilitary activities, or which exists for the purpose of denying or attempting to deny constitutional liberties to any other group by force or violence. Such a bill would bring out into the light of day every organization of a sort which we really need to fear. In effect the bill says, "Carry on your work of attempting to remake America if you must, but carry it on in an American way, granting to all other people their constitutional rights." The method of the private army or the method of taking advantage of democratic liberties to destroy the freedom of others is barred. With such a bill in effect we could say with all our hearts that the advocacy of any measure by any group is a part of that group's rights so long as they propose to use constitutional means, and these alone to attain their ends, and so long as they abide absolutely by majority rule.

And I have also introduced a bill to provide for deportation of aliens, after a fair hearing, if it is found that they advocate that any American citizen or alien permanently admitted to the United States owes fealty to any other government.

Naturally, I should like to see these bills passed. I should like to see it done quietly and quickly and then I should like to see us turn to the real business at hand—the business of improving the conditions of life for the 99 percent of the American people who will never even know that such laws are in existence because nothing they will ever do will run counter to them.

In the declining years of every civilization there have been scapegoats—groups of people upon whom all the ills of the time were blamed. I need only mention the Christians in imperial Rome, the outcasts of India, the Jews of Germany, "political enemies" in Russia. Are we looking for scapegoats in America today? Will we find them in the migratory laborers of our farms, the unemployed, the members of a particu-

lar religion, or those perhaps who carry their religion to its logical conclusion and seek in a strife-torn world to establish the beginnings of brotherhood? Or will we find our scapegoats by branding as Communists all who question the eternal rightness of anything in the economic status quo and calling down upon their heads the blind wrath of the very people they have sought to help?

God forbid that we should look for scapegoats or fail each one of us to take his just share of the burden and the blame. God forbid that we should do otherwise than build upon the start thus far made a finer America than we have yet beheld.

Meanwhile I believe it is important that we draw a clear distinction between real disloyalty to the United States on the one hand, and divergent views on economic policy upon the other. Disloyalty consists in believing America is fundamentally no good, that some other nation—Russia, Germany, or Italy, for example—is the nation to which one should give fealty and allegiance, and in seeking to overthrow by force and violence the democracy of this Nation. But it is not disloyalty for a man to love his country enough to want with all his heart to see her perfected. It is not disloyalty for him to be dissatisfied with seeing the older citizens of the Nation in want and insecurity or seeing millions of people unprotected from the debilitating ravages of unemployment. It is not disloyalty for him to want to do something about these things.

It is a sign of weakness in our national life when we fight our political battles by accusation instead of by argument.

I am convinced that the cure for all these extreme movements of either right or left in this country is just one cure—the release of the productive energies of our businessmen, our farmers, our workers—I do not think that can be done in this day without Government help. I do not want to believe that particularly, but I can come to no other conclusion on the basis of facts at my command. We can produce abundance if we want to. And until we do, until we quit clinging to an artificial scarcity we are likely to have distress and suffering and consequent fear and unrest.

I am for the maximum amount of freedom for the maximum number of people.

If to preserve the freedom of small-business men it is necessary to interfere with the license of monopolists, I am willing to do that; if to preserve the freedom of the farmers it is necessary to interfere with the license of those who gamble in futures, I am ready to do that; if to preserve the freedom from want of our older people it is necessary to levy taxes, I am for doing that; and if to make our economy function smoothly and at something like full capacity it is necessary for government to take back to itself the right to bring money into circulation and through some appropriate agency to control its volume, then I am for that.

Some 6 years ago there came to the Presidency of the United States a new President with a new spirit and a new hope for the American people. History will inevitably record his administration as one of the periods of greatest progress in the history of our Nation. I say these things without pretending that either he or his followers have been free of human mistakes and blunders. And I say it without reference at the moment to the specific details of what has been done. Suffice it to say that three or four fundamentally right policies have been followed with rare consistency through these years. One is that as a measure of national safety as well as justice, whenever millions of people find themselves without employment, it becomes a proper function of government to put them at useful labor. Another is that the preservation of a democratic structure of society demands that those who must sacrifice much of their freedom by becoming parts of a great industrial mechanism and by dependence for their livelihood upon tools owned by other men shall have the right to regain some of that freedom by organizing together for mutual protection and a place of dignity and responsibility in society.

Another fundamental policy has been that it is a proper function of Government to protect agriculture, the basic industry of man, from destruction. Whether or not one agrees with the methods used—and in some important respects I do not—is at the moment beside the point. The principle remains. Still another fundamental policy has been that where credit could not be obtained from ordinary credit agencies by those who needed it for legitimate purposes, then that credit should be made available by Government agencies. And so on. Mistakes have been made of course. Misunderstanding has arisen. Bitter things, unfortunately have been said. But through it all runs a thread—that American Government still remains, government of the people, by the people, and for the people.

A systematic attempt is now and has been for some time under way to destroy the President, discredit his administration, and defeat in the public mind the validity of the idea that Government does have the right to act constructively in defense of the basic rights of the people. I shall not go over much of it, for this attempt has deep roots and they run underground for long distances and send up shoots in strange places. Fundamental to this whole Rooseveltian philosophy has been the idea that when the people had no buying power, through no fault of their own, then Government should act to give them work and the means of life. Agricultural benefits have been one method, W. P. A. another, C. C. C. another, and Social Security another. I am not at the moment defending in detail any of these methods. I am saying that they have constituted a bulwark for America against suffering far greater even than it has been. I am compelled on the basis of the evidence to conclude that the Dies committee has been, in very important respects, the willing or unwilling tool of this movement to discredit the national administration. For clearly if liberal movements and progressive people as sincere as the conservatives in their devotion to America are by the carelessness—if nothing more—of this committee to be branded as unpatriotic and the tools of communism, then immediately every attempt to protect the poor or the unemployed becomes suspected and the whole philosophy of government represented by liberal democracy is under attack. I think this would be a tragedy—at least as great a tragedy as if the Republican Party and its philosophy came to be regarded as a "front" for Hitler. Instead of continuing the Dies committee let us set up a new committee to carry on this work.

Social Security Act

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

EDITORIAL FROM THE HOWARD NEWS, CHICAGO, ILL., JANUARY 26, 1939

Mr. CHURCH. Mr. Speaker, the Ways and Means Committee has just begun public hearings on the Social Security Act and possible amendments to it. While I do not know what the committee will ultimately recommend by way of amendatory legislation, there is no question in my mind that much can be done to improve this program.

One of the most objectionable features of the social-security program as now administered is the use of those particular funds to defray the ordinary operating expenses of the Government. It amounts to a fraud on the employees and the employers for the Federal Government to tax them for social-security purposes and then proceed to use the money thus raised for other purposes. For a long time I have protested against this practice.

Under leave to revise and extend my remarks, I call your attention to an editorial which appeared in the Howard News on January 26. The editor and publisher of this newspaper, and several other newspapers in Chicago, is Thomas

F. Myers, Jr. His views are worthy of your special consideration, not only because of the scholarship of Mr. Myers but also because of his known progressive attitude. I might add that he has been a loyal supporter of the administration, and serves with distinction on the park board of Chicago. He writes not as a partisan but with sincere convictions and an unquestionable interest in all our people.

[From the Howard News, Chicago, Ill., January 26, 1939]

PAY-ROLL TAX GIVES NO SECURITY—RETAILER HARD HIT—KILLS PURCHASING POWER

The social security pay-roll tax not only does not offer security but it is a vicious concealed sales tax, with the heaviest burden on those least able to pay.

It cuts the purchasing power of the worker. It brought the second depression and is retarding recovery.

Cutting purchasing power reduces the retailer's volume. Manufacturer's pay-roll tax is passed on to him plus the profit mark-up on the goods he buys. He cannot pass on the social-security tax he pays. So he's caught where the tax prevents his expansion and store improvement. His customers must buy less with the same money. His merchandise inventory goes up on the same goods, with the tax and manufacturing profit added, or he carries less stock. He buys less capital goods. His customers buy less consumer's goods and that many more self-supporting workers are idle.

The social-security tax is called the social-security "reserve swindle" by the eminent financial analyst, John T. Flynn, in Harper's magazine this month.

"An angry howl of disappointment will rumble through the country in January 1942," he says. Then the man or woman who paid this "security" tax will be forced to leave his $100 a month job at 65 to pauperize himself and get $17 a month. He will get the horse laugh from charity pensioners, who can get as much as $30 a month now without ever having done a lick of work or contributing a cent.

The workers will not and do not get it because it's being spent by the Government for everything else except the one who pays. The I O U's from the workers' money and an investing margin of small business are piling up. By 1980, $47,000,000,000 will have been extracted from pay rolls that the worker and business will never get. This is the social-security "reserve swindle."

The worst government policy is that of taxing in the name of one thing and spending for another.

This editorial is not the voice of partisanship or a Republican protest on the Democrat New Deal. We have consistently supported Mr. Roosevelt's policies.

This social-security tax violates the fundamental principles that we believed the New Deal stood for under Mr. Roosevelt's leadership.

Our business suffers from it. The tax would buy us a new press that would give the hard-pressed heavy capital-goods industry a measure of better times and make employment, and because we wish to pay off a mortgage we get another "bang" with the excess-profits tax.

These hardships and dwindling margins seemed a patriotic duty to endure until at last we analyze. They then appear fraudulently applied. Dishonest policies of government.

The Government collected $2,067,000,000 for social security in the first 6 months of 1938 and gave in benefits from it $282,000,000. Of this $1,785,000,000 disappeared for something else. This $1,785,000,000 was withdrawn from the purchasing power of the workers. In the year and a half of the existence of "social security" $130 of purchasing power was withdrawn for each dollar of benefits, states Abraham Epstein in The Nation.

One-quarter of 1 percent tax would pay the benefits until 1940, when one-half of 1 percent would be needed, says Flynn.

This is where relief should start now. Lift the "swindle tax."

Commencement Exercises

EXTENSION OF REMARKS

OF

HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

ADDRESS BY HON. WILLIAM F. BRUNNER, FORMER MEMBER OF CONGRESS, JANUARY 25, 1939

Mr. BARRY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address made by former Member of Congress William F. Brunner at the graduation exercises of Public School 44, Queens, Rockaway Beach, N. Y., Wednesday, January 25, 1939:

It has become a rather common, and to my mind somewhat of a boring, practice on the part of speakers at commencement exercises to give assorted advice to those who are either completing lower or higher school courses.

However, it is not the intention of those who speak to graduates to laden their minds with advice and suggestions as to what they should do in order to succeed in life, but rather to explain how they might avoid the mistakes which others have made—not willfully, of course, but because of the lack of general experience.

Therefore, in addressing you on the occasion of your commencement exercises here today I am merely trying to give some hints as to what you might expect in life and how you might cope with the problems which confront you. I am not going to give you advice on what you should do or what you should be, for neither your teachers, parents, or, for that matter, anyone else can design your future for you; all they can do is to guide you for your ultimate career must be of your own making. But no matter what profession or business you choose as a career, your success is entirely contingent upon the persistent effort you make to improve yourself, increase your knowledge, and achieve the highest degree of perfection through practice, study, and the determination to succeed.

As I speak to you boys and girls today my mind is carried back 36 years ago next June, when I graduated from this grand old schoolhouse. There were only two schools in the Rockaways then, this one here and the Far Rockaway Public School, in which was also housed the Far Rockaway High School. We had, if I remember correctly, about 36 in our class, and we were just as pleased as you are to have completed the first lap in the great race of education. I refer to education as a race in a serious vein, because it is only those who put forth their greatest energies to cover the great track of knowledge, to absorb the largest amount of experience and training, and to achieve perfection who come in first.

Yes, boys and girls, education is a race and success is the reward for those who take it seriously and utilize their best efforts to run the full course not rapidly as most races are run but steadily, conscientiously, and with a determination to win regardless of what obstacles may stand in your way, no matter who may be running against you.

In the United States today we enjoy a most liberal system of government under the competent leadership of one of the greatest Presidents in history, Franklin D. Roosevelt. The backbone of this Government is freedom and liberty, equal opportunity for all, regardless of race, creed, or color. As we look at the world we should be proud of our statesmen and their capable leadership, their interest in the protection of their people from social and economic abuses, and the safeguarding of our shores from invasion by unfriendly powers.

If any man has ever been an inspiration to the American student it is our President. Battling against prejudices, certain class legislation, and other conditions affecting the economic life of millions of people who have not been endowed with a surplus of worldly goods, President Roosevelt has given to countless millions today the means of employment, lower working hours, and decent minimum wages. By fighting to wipe out child labor he is trying to give adults with families the right to work at decent wages and give to millions of children like yourselves the right of a fair education so that they might be capable of taking their places in the varied professional and commercial fields.

Cognizant of the fact that education is so essential in a world of keen competition with thousands of students being sent out of colleges each year, each equipped with a training in different fields of endeavor, President Roosevelt has had numerous surveys conducted into measures of providing employment for those who seek it. At the same time our distinguished and beloved chief State executive, Governor Lehman, is also leaving no stone unturned to see that every possible path is paved to give to the boys and girls of this State the maximum in education and every opportunity for employment.

It is easy for people to criticize those statesmen who are working to help those who are not as fortunate as others, but since no one has thus far offered a constructive plan to take care of unemployed and the vast numbers of students graduating from college each year, I believe that both our President and Governor are to be warmly commended for the progressive steps they have taken to provide such employment.

After leaving here today, you will take the next step in higher education which will have a most important bearing on your future careers. Remember boys and girls, we all can't be great doctors, lawyers, or other masters of professional life. It has been a sad practice on the part of so many parents to insist upon specified careers for their children to follow merely because they think they are fitted for such work. And so I say to you parents, let your boys and girls decide for themselves. Guide them to the best of your ability, but let them develop their own vocational inclination. If your boy gives an indication of liking carpentry, steamfitting, or some other trade, let him develop it because I'd rather have a competent craftsman any day than an incompetent professional artist, regardless of what field he or she may be in.

The restricted fields of employment today make it particularly important to have mastered your craft. Discontented men and women driven into fields in which they have never been interested can hardly be expected to be successful. Therefore, I say to you parents to let your children decide their careers, and to you, boys and girls, I say no matter what field you choose, be sure that you make every effort to become not just another member of that particular craft or profession, but a master, whether it be a surgeon or a carpenter, a teacher or an office secretary, an attorney or a policeman.

In conclusion I want to congratulate you and wish you Godspeed and the best of luck.

Amendment of the Farm Act

EXTENSION OF REMARKS
OF
HON. NEWT V. MILLS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1939

STATEMENT BY N. C. WILLIAMSON BEFORE THE COTTON CONFERENCE OF THE AMERICAN FARM BUREAU FEDERATION, NEW ORLEANS, LA., DECEMBER 12, 1938

Mr. MILLS of Louisiana. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following excerpts from a statement by N. C. Williamson before the cotton conference of the American Farm Bureau Federation, New Orleans, La., December 12, 1938:

A popular slogan of farm organizations and farm leaders throughout the Nation is "The American market for the American farmer." If the American market is to be preserved for the American farmer, there must be some assurance that the products grown by peasant labor in foreign countries will not be sold in this country in competition with American farmers. Import duties upon such farm products coming into this country seems the only protection for our farmers who produce crops consumed in American markets.

We must keep in mind, however, two simple yet fundamental facts about this agricultural problem when we consider national legislation for its solution.

First, there are two classes of farm commodities grown on American farms for market; those produced in the United States in excess of domestic consumption, a large part of which must be sold in foreign markets if sold at all; and those produced for domestic consumption alone.

Second, that the same plan may not work to the advantage of farmers producing export crops as that applied successfully to farmers producing crops consumed wholly in our home markets.

The major farm crops producing exportable surpluses such as cotton, wheat, tobacco, corn, and rice would naturally be considered as a group coming under the same class and might be treated broadly under the same general legislative program.

While cotton is the outstanding export farm crop produced in America, the cotton farmers cannot, and do not, expect special legislation for their relief that does not apply to farmers producing other export crops. If American agriculture ever receives its proportionate share of the national income, it will be brought about through the combined efforts of a united South and West on the part of farmers, because the major exportable farm crops are produced in these two regions and there should be no conflict of interests between farmers in these areas.

There exists a fundamental national necessity that the South continue to grow cotton not only to supply domestic needs but for foreign markets as well. A little more than one-third of the six and one-fourth million farmers in the Nation are cotton farmers and 35 percent of the entire farm population lives on cotton farms. The number of acres of farm land per capita in the South is smaller than in any other section of the United States, and the income of cotton farmers is the smallest of any group of our American citizens.

During the year 1936 cotton farmers received approximately 10 percent of the national farm income, although 35 percent of the farm population lives on cotton farms. This income was just half that received by practically the same number of dairy farmers in America. The same ratio holds true at the present time.

American cotton farmers no longer produce a major portion of the world's supply of cotton, therefore American cotton no longer controls the price of that commodity. We can no longer curtail cotton production at home in sufficient amounts to raise the price materially without seriously unbalancing our farm program nor without serious financial injury to cotton farmers.

Any policy which maintains a higher domestic price level for our cotton than the world price encourages the use of competing fibers and at the same time gives the producers of cotton in foreign countries a decided advantage over us in foreign markets.

It is obvious that if we maintain our foreign markets for cotton and produce cotton to supply these markets we must sell at competitive prices and also offer a quality of cotton which is as good or better than that produced in other countries.

If we grow cotton in competition with peasant farmers and slave labor in fifty-odd different countries of the world in order to maintain a well-balanced national agricultural program in America, our cotton farmers should be compensated at least partly for the cost of the tariff if they are to receive an income necessary to provide a decent living for themselves and their families.

Alexander Hamilton recognized this fact 150 years ago when he recommended to Congress that the revenues derived from import duties should be used to compensate groups of our citizens who would be penalized as a result of a tariff system.

The cotton producers, buying what they need in protected markets and selling the products of their labor in free world markets, have become poorer and poorer until the South is now classed as the Nation's No. 1 economic problem.

In order that we may have an up-to-date picture of the cotton situation, let me summarize briefly a few facts which we cannot ignore in attempting to work out a sound solution of the cotton problem.

Crop control of cotton has been in effect for 6 years, commencing with the plow-up campaign in 1933.

Acreage reductions during the 6-year period have ranged from 22 percent to 39 percent.

Loans on cotton at or above the market value have been made by the Government in 4 of the 6 years.

As of the end of this fiscal cotton year, the Government will have financed and withdrawn from the market approximately 11,000,000 bales.

The surplus of all growths as of August 31, 1938, was approximately 5,000,000 bales greater than ever before—American, 13,600,000 bales; foreign, 9,700,000 bales.

The average annual production of American growth for the 5-year period ending July 31, 1938, amounted to 12,934,000 bales, as compared to 14,667,000 bales for the 5-year period ending July 31, 1933.

The average annual production of foreign growth for the 5-year period ending in 1938 was 15,826,000 bales, as compared with 10,887,000 bales for the 5-year period ending in 1933.

The average exports of American growth for the 5-year period ended July 31, 1938, amounted to 5,903,000 bales, as compared with 7,750,000 bales for the 5-year period ending in 1933.

World consumption of American growth for the 1937–38 season was 10,930,000 bales, as compared with 14,385,000 bales in the 1932–33 season.

World consumption of foreign-growth cotton during the 1937–38 season amounted to 15,500,000 bales, as compared with 10,266,000 bales during the 1932–33 season.

The world in 1929 produced rayon and other synthetic fibers equivalent to the weight of 925,513 bales of cotton. In 1933 the production was increased to 1,446,056 bales, and in 1937 world production had increased to 3,783,975 bales.

These figures indicate several points to which I should like to call your special attention:

First, since the American cotton farmers no longer produce the larger portion of the world's supply of cotton, we cannot control the world price.

Second, if we sell our cotton in foreign markets we must sell in competition with all the farmers in other nations producing cotton, and at competitive prices.

Third, if price levels in America are maintained by artificial methods above world prices we encourage the use of substitute materials for cotton, increase the price of cotton goods to American consumers, and automatically curtail consumption here in the United States as well as abroad.

Fourth, the rapidly increasing use of rayon and other substitute materials for cotton makes the world less dependent upon cotton from year to year.

Fifth, some plan for disposing of the 11,000,000 bales of cotton under Government loan at the end of this season is essential to a solution of the problem and should be determined upon and announced at the earliest possible date together with a program that will insure us against a repetition of the same trouble.

Secretary Wallace made the statement several years ago that cotton growers must choose between domestic consumption only, at higher price levels, or a continuation of production for export to foreign markets as well as sales to domestic markets at lower price levels.

As I see it, the American cotton growers have no choice as between these two alternatives, because it is obvious that the two and one-fourth million cotton farmers, with their families and other labor constituting 35 percent of the farm population of the Nation, cannot sustain themselves by producing only six or seven million bales of cotton annually. The price of such a small amount of cotton would have to be so high to provide an adequate income to the producers that substitutes for cotton would be used at lower prices and the demand for cotton would be constantly diminishing, making it necessary for our farmers to turn to the production of other crops in order to make a living.

No business can endure following the policy of constantly restricting its operations and cutting down its output while the number of people depending upon its income is constantly increasing.

On the other hand, a policy of sound and conservative expansion, more efficient production at lower cost and aggressive fight for more business at competitive prices has proved successful in practically every line of business enterprise.

Everyone who has given even casual thought to this problem agrees that American farmers cannot produce cotton on a competitive basis with peasant and slave labor of foreign countries and earn an income sufficient to provide them a decent standard of living.

It is, I believe, generally accepted as a fact that cotton farmers are penalized to a greater extent by the tariff system than any

other group of our citizens and that in any equitable farm program cotton growers should receive compensatory tariff payments in order to place them on a parity with other groups of farm people. This principle of parity payments is recognized in the farm bill under which we are now operating, as being fair to all groups of farmers; the idea being to maintain, as nearly as possible, the same relative price level for the major farm crops.

* * * We have learned a lot since 1933 and as practical business people we should profit by these varied experiences in mapping our course for the future.

Among other things, we have learned that Government loans on cotton only to frequently fix the price, resulting in the accumulation of large amounts of cotton by the Government.

We have also learned that cheap cotton does not necessarily mean greater world consumption, because there are so many other factors entering into the ability of would-be consumers to buy cotton at any price.

We have learned, too, that if the price of American cotton is pegged by a loan, or any other device, that our foreign competitors undersell us and consequently take away our foreign markets.

The natural question arises, what are we, as cotton farmers, going to do in order to save our own industry and prevent, at the same time, a policy that will unbalance our American agriculture by turning our cotton farms into dairying, the production of beef cattle, corn and hogs.

With all the facts before us, it seems that a sound plan might be assured by amendments, where necessary, to the present farm bill, covering the following general provisions:

1. That we definitely establish a program covering a period of not less than 5 years so that farmers will know how to plan their operations in advance.

2. Continuation of the soil conservation program with details of payment definitely established for the period so that farmers may receive such payments more promptly than is possible if plans are changed from year to year.

3. Continuation of acreage control along reasonable lines, as suggested by Secretary Wallace many times, with authority given the Secretary to increase the acreage as in his judgment might be justified, because of increased consumption or by decrease of the present large carryover. I believe practically everyone admits that we have reached the limit in decreasing acreage.

4. Cotton price adjustment payments, to the extent of the difference between parity value, or such percentage of parity as may be agreed upon, and the market value at the time of sale. The parity value, or percentage of parity, to be decided upon at the time the program is adopted and subject to change only at the beginning of each crop year.

5. The annual liquidation of 2,000,000 bales for the 5-year period (if 5 years is the period agreed upon) of the Government financed cotton, following the plan adopted by C. C. C. for the liquidation of the 10- and 12-cent loan cotton during the years 1936 and 1937. If a longer period than 5 years is agreed upon, a proportionately smaller amount of the cotton on hand to be marketed annually.

6. Remove discriminatory tax laws, both Federal and State, against the products of our cotton farms and support the policy of trade agreements between America and the other nations of the world, so that cotton and other export crops can be bought by foreign as well as domestic customers who need our surplus stocks.

7. Provide for the sale of cotton on net weight so that farmers may wrap their cotton in cotton wrapping without being penalized by the present wasteful system of gross-weight sales. This would provide a possible outlet for some 150,000 bales of cotton annually.

This plan, if followed, would remove the necessity for any loan on cotton by the Government, because the farmers' income would not be jeopardized in any way whatsoever. The price would seek its own level, possibly at a considerably lower value than at present, and the cotton would move into consumption through the regular channels of trade without any interference whatsoever and the Government would accumulate no more cotton.

Of all those expressing an opinion, whom I consider well informed, none think the price level would be lower than 6 cents per pound.

This naturally raises the question of finances. Members of Congress tell us if agriculture is to receive any more money than is now available we must provide the means of raising additional funds.

There seems to be no limit to the amount Congress is willing to appropriate for relief in its varied and sundry forms, yet we are told money cannot be appropriated which would increase the income of farm people, making relief measures unnecessary.

It is conservatively estimated that it would cost the Government less over a period of 5 years to carry out such a program than the present loan policy with the losses entailed in carrying the large stocks and disposing of the loan cotton.

Notwithstanding the fact that we know it is unfair to further tax cotton in order to provide funds to compensate farmers who produce it, and fully realizing the justice in Mr. Hamilton's recommendation that the revenue derived from import duties be used to compensate those who would be penalized by higher prices of things they buy as a result of the tariff, we will even agree to a processing tax on cotton, provided competing materials are likewise taxed, in order to assure a continuing fund sufficient to properly and adequately assure the farmer's income.

The Trend of Events in Washington

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

COMMUNICATION ADDRESSED TO NEWSPAPERS OF SECOND CONGRESSIONAL DISTRICT OF GEORGIA

Mr. COX. Mr. Speaker, under leave to extend I insert in the RECORD copy of communication of present date addressed to the newspapers in my congressional district, as follows:

Conditions in the Nation and the state of affairs in the world have created a situation in which full cooperation and complete confidence between the Congress and the executive departments of government are of vital importance.

Any impression, in the Congress or out of it, that the legislative branch is working in opposition to the executive department simply to be opposing must be dispelled. Any impression that the executive department of government does not trust the Congress to cooperate in working out the solutions to the problems which face us must be eliminated.

If this Nation is to be piloted through the dangerous shoals of international diplomacy and kept free from those entanglements which may involve us in the armed conflicts among other nations, there must be the fullest confidence on the part of the Chief Executive and his administrators in the good intentions of the Congress to go along with every reasonable, sound policy designed not only to keep us aloof from these foreign quarrels and conflicts but also to build up a national defense adequate for any reasonably conceivable circumstances which may arise in the future.

If we are to solve the grave domestic problems which confront us, equal candor and cooperation are necessary between the Chief Executive and the Congress.

There is no question but that industry in this country has been given a new optimism by the fact that the Congress is demonstrating its intention to fulfill its constitutional functions instead of abdicating these duties and functions in favor of the executive department. There is no reason why the Congress, in thus resuming its full constitutional functions, cannot cooperate to the greatest degree with the executive department and do so with much greater efficiency than heretofore. Neither is there any reason why the executive department, in fulfilling its constitutional functions, must clash with or be opposed by the legislative branch if reason, justice, moderation, and a devotion to the welfare of the Nation motivate both departments.

If old frictions are forgotten and the Congress and the Executive meet on the common ground of the common good of our common country, there can be any amount of disagreement, discussion, and compromise as to particular policies or methods without producing any divisions in the parties or bringing about any stalemates between the two great governmental branches.

There is no reason why the people of this country should be caught up in prejudices or passions, frictions or fights, between the two constitutional departments of the Government. In every case we all should submerge political considerations, personal aggrandizements, or the satisfaction of piques to the one objective of restoring the Nation to safety, security, and prosperity.

There is not the slightest doubt that reasonable differences and divergences of views as to methods of achieving the solution of problems can be resolved if the desire to be reasonable is present at all times in the minds of both the Executive and the legislators.

This attitude must obtain herceforth.

THE DIES COMMITTEE

The congressional select committee investigating un-American activities, commonly referred to as the Dies committee, undoubtedly will be given more funds by the House of Representatives and its operations continued for at least another year.

Regardless of whatever criticism has been made against the latitude the committee has allowed witnesses heretofore, the fact remains that such an avalanche of evidence of un-American activities has come to the committee that it would be unwise to try to end the committee's operations at this time.

There is a very narrow line of demarcation between communism, fascism, and other alien "isms" as political philosophies, and the actual doctrine of sedition which would advocate the overthrow of our Government by force. One might be a Communist or a Fascist within his constitutional rights of free conscience and free speech, because he might seek a change in our form of government by means of the orderly ballot; but when Communists or Fascists become active in an attempt to change our form of government by force of arms instead of by ballots, they have entered upon the

ground of sedition and treason, and therefore are guilty of high crimes against this Government.

Evidence of a convincing nature and great volume has come to the Dies committee that there are working in this country many Communists and Fascists—some of them with access to high places in Government—who are seeking the forcible overthrow of this Republic, not by means of ballots but by force of arms. Clearly, all such are seditionists, and if they are aliens, they should be deported to the countries of their origin. We certainly should no longer harbor them here. If any of our own citizens, whether in high place or low, are participating in any plots or plans forcibly to seize and overthrow this Government, they should be apprehended, exposed, and punished as seditionists.

No harm can come, under a fair inquiry, to any disciples of communism or fascism who are confining their efforts to persuading a majority of the people to vote for a change of governmental form. But it is highly important that all organizations and associations in this country and all individuals as well who are engaged in propagating communistic or fascistic doctrines should be known and the extent of their activities determined.

EFFICIENCY IN RELIEF

There is every probability that the investigations into the use of relief funds for political purposes have not ended. On the contrary, the very fact that we are faced with what probably is a problem that will persist for several years, demands a thorough scrutiny of relief administration from the standpoint of making relief as efficient and economical as possible. The relief rolls should be purged of every individual who does not rightfully belong on them. The strictest economy and efficiency should be invoked in order that the greatest amount of every relief dollar will go for its primary purpose of relieving the unemployed without partisanship or favoritism having any place in the administration of the relief funds.

NEUTRALITY

Recent developments disclosing that there has been some move to build modern military airplanes in this country for sale to France in event of a European war have brought to the fore in the Senate demands for an inquiry into the administration's foreign policy.

Such an inquiry ought not to be conducted in any attitude of hostility to the administration but rather in order to ascertain the facts. Conditions have come about which require that the President give the Congress a frank and clear view of his foreign policy. No one can say with justice that the administration's foreign policy is either wrong or mistaken until the President has advised the Congress just what that foreign policy is. It is to be hoped the Chief Executive will do this, and there is no reason to believe he will not.

Any difference of opinion which might develop between the Congress and the executive department as to foreign policy ought to be frankly discussed and worked out, with the sole object in view of adopting the best possible policy on the part of this Nation to keep us free of foreign conflicts.

Meanwhile, the part of wisdom would indicate that no rash statements be made in the Congress—or even in the press—until a frank discussion of foreign policy has taken place between the proper committees of the Congress and the proper representatives of the executive department.

Lift the Spanish Embargo

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

ADDRESS BY HON. LEE E. GEYER, OF CALIFORNIA, JANUARY 24, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to insert an address given by me at the Masonic Temple in Washington, D. C., on January 24, 1939, as follows:

Coming to Washington as a freshman Member of Congress, I bring you the message that my people in the Seventeenth District of California are united in their desire for peace I have spoken to my colleagues in the House, and I know that from the Pacific coast to the eastern seaboard, from the Canadian border to the Gulf of Mexico, in the Rocky Mountain States, on the prairies and in the cotton patch, there is no war spirit among Americans. War in other parts of the world has intensified the devotion to peace which is traditional with our people. The spread of war has strengthened our determination to keep the United States out of war. Some people think it enough to "keep out of other people's wars." That seems to me too easy. I am concerned primarily with keeping out of a war which, by menacing our sovereignty as a nation and the life of our democratic institutions, may start as "other people's war" but becomes our own war.

In his opening message to the Seventy-sixth Congress, President Roosevelt brought home to us the fact that the desire for peace is no guarantee of its attainment. Reporting on the state of the Nation, the President was obliged to tell us that today the peace of the Nation is menaced. He said only what every literate person who reads the newspapers knows to be the fact:

"All about us rage undeclared wars—military and economic. All about us grow more deadly armaments—military and economic. All about us are threats of new aggression—military and economic."

And he made it clear that we cannot ignore the threat these wars hold to our own peace and national security, except at the cost of surrendering to the war-makers, first the security of our Nation, and in the end peace itself.

"The world has grown so small and weapons of attack so swift," said President Roosevelt, "that no nation can be safe in its will to peace so long as any other single powerful nation refuses to settle its grievances at the council table."

Not one powerful nation, but three—Italy, Germany, Japan—refuse to settle their grievances at the council table. The Rome-Berlin-Tokyo axis is a triple threat to our safety. Yet there are some Americans who still tell us we ought to "mind our own business." Peace is our business. And if we want peace we must make it our business to work for peace.

There is a war in Spain, a war of aggression and invasion. In January 1937, during the early months of the Spanish conflict, many of us thought that what happened in Spain was not our business. And, ironically enough, in the name of "minding our own business" we took sides in Spain. We legislated something we called "neutrality" in something else we called a "civil war." Our "neutrality" permitted us to sell arms and ammunition to Italy and Germany under the pretense that they had no part in the Spanish war. At the same time we refused to sell to the democratically elected Spanish Government. But what we called a "civil war" was not a civil war any more than what we called "neutrality" was truly neutral. The war in Spain was and is a war of foreign invasion, and Italy and Germany, whom we supply with arms, are the invaders.

Far from being neutral in a matter that was none of our business we betrayed our own national interests and conducted our own business very badly.

Spain is one front, an important front, in the undeclared wars that rage all around us. If Franco wins, Spain will become a base for new aggression, military and economic. It will bring the threat of aggression nearer to our shores. If we do not act to save Spain, we shall have lost an important strategic position. We shall have strengthened the powers which threaten military and economic aggression against the United States. And we shall have suffered the equivalent of an important military defeat, all the time pretending that that defeat was "none of our business."

We cannot simply shut our eyes to facts and declare like stubborn children that Spain is none of our business. Whether we like it or not, the war in Spain has become our war. Those who tell us otherwise point to the Atlantic Ocean as the barrier that separates and protects us from Europe. But a Franco victory would mean the conquest of the Atlantic by the Fascist powers and open it as a Fascist-controlled highway to the Western Hemisphere.

The ill-equipped army now so heroically holding the lines before Barcelona is as much our army as was the ragged soldiery at Valley Forge. It is no mere rhetoric to say that Barcelona may rank in American history with Concord, Lexington, and Gettysburg.

Two years ago we did not see this so clearly. But only the willfully blind can fail to see it now. From all sections of the American people come increasing proofs that the lesson of Munich has been learned. Munich showed us how powerful democratic nations, like France and Great Britain, can sign their own death certificates as first-class powers, all the time protesting that they have given up nothing, that they are minding their own business, and that they are serving the interests of peace. Munich showed us that the Great Britain of Neville Chamberlain cannot be trusted to hold the Atlantic for democracy, either England's or our own. Munich, which put Spain on the agenda after Czechoslovakia, pointed the Fascist threat straight at the Western Hemisphere.

Immediately after Munich the President and his close advisers showed that they recognized what Munich meant to us. The aftermath of "peace in our time" was a feverish rearming to whose implications the United States could not remain indifferent.

Following the President, patriots from every class, religious faith, and political party came to realize that Spain had become the first line of the United States defense. It is now no longer a question of taking sides in Spain. It is now only a question of taking sides for or against America. Will you defend our interests as a sovereign nation? Or will you betray those interests to the Fascist aggressors?

We have just had a stirring example of true patriotism transcending narrow party lines. Henry L. Stimson, former Secretary of State under the Republican President Taft, has written the President, urging that the Spanish embargo be lifted. In his fine statement Colonel Stimson declares that his reasons for believing the embargo must be lifted "depend solely on the interest of our own country toward the Spanish conflict and its results."

A lawyer as well as a distinguished statesman, Colonel Stimson is convinced that the President has power to lift the embargo by Executive action. He says:

"The change in the international situation during the past 2 years would justify such action by him. The embargo, which, by the terms of the law authorizing it, was intended as a protection against conditions which would endanger the peace of the United States, is now shown by the events of the past 2 years to be itself a source of danger to that peace."

Many Members of the House and Senate have expressed, privately or publicly, their agreement with Colonel Stimson. The Gallup poll of a few months ago showed 76 percent of the American people in sympathy with the loyalist side in Spain. Large as that majority is, it would have been even larger had the question been more correctly posed. I am convinced that only a fraction of 1 percent of our people would today favor keeping the embargo—if they realized that to do so is to side, not with a Spanish faction but with the Fascist aggressors who menace our own security and peace.

Among my constituents on the west coast the fear of war, which grows daily more acute, turns our eyes toward Japan. And Colonel Stimson's concern has always been primarily with the far-eastern situation. But we in California, no less than Colonel Stimson, remember that Rome and Berlin are in military alliance with Tokyo. We know that the war axis is no stronger than its three component parts, and that to strengthen Italy and Germany by the surrender of Spain is to strengthen Japan as well. That is why we see in a Franco victory a menace to American security on the Pacific as well as on the Atlantic coast. That is why California looks upon the defense of Barcelona as a link in its own defenses.

Millions of Americans want the embargo lifted. Millions of Americans support President Roosevelt's triple program for national defense—armaments, a positive peace policy, and expansion of the New Deal's policies at home. But we must not ignore the organized and vocal minority which opposes all these defense measures—from lifting the embargo to appropriation of adequate relief funds.

Our swiftly moving world has brought some strange new alignments. The jingoes of yesteryear are the new bedfellows of the pacifists. Senator VANDENBERG and Congressman FISH no longer want a big navy. Progressives used to attack these gentlemen as the spokesmen of American imperialism. But now VANDENBERG and FISH have taken up the cudgels against "imperialism" and are asking "who in the world wants to attack the United States?" That professional patriot and monopolist of the yellow peril alarm, Mr. William Randolph Hearst, is no longer afraid of Japan. The Japanese invasion of China seems to have put all his old fears to rest. Today Mr. Hearst can see only one peril—the peril in the White House.

President Taft's former Secretary of State, Colonel Stimson, declares that the embargo must be lifted. But President Taft's son, Senator TAFT, carries his party politics past the water's edge. Speaking over the radio on Sunday night, Senator TAFT called for keeping the embargo. And it is no accident that in the same speech he attacked the administration's whole defense program, revision of the Neutrality Act, and the New Deal's domestic policies.

Joined with the followers of Herbert Hoover, whether they call themselves Republican or Democrat, are the munitions makers and the financial interests of Wall Street. They want to keep the embargo, too. No, the world is not standing on its head, and the munitions makers have not become pacifists. Lifting the embargo is a blow against the war makers and therefore an act of peace. Those who got us into the last war have not changed their spots. They hope to get us into another profit-making war—and that's why they oppose lifting the embargo.

In this company of reactionary politicians and captains of finance we find also Father Coughlin. We must regard his presence here as further proof that Father Coughlin belongs with the German Bund, the Silver Shirts, and other un-Americans whom the Dies committee failed to investigate. Cardinal Mundelein has already repudiated Father Coughlin as a spokesman for the Catholic Church on the question of anti-Semitism. I am sure that he does not speak for the Catholic people on the question of Spain. Catholics are Democrats and loyal Americans. Their interest in peace and democracy coincides with the interests of other Americans. And they have not failed to understand that their personal liberty and freedom of worship will receive no better treatment from Hitler anywhere in the world than they have received from him in Germany, Austria, Czechoslovakia, or the Basque country in Spain.

The battle now raging in Spain may decide the issues of our own security as a nation. Yet we are not called upon to send an expeditionary force into that battle, nor to contribute one drop of American blood. We are called upon merely to take those steps "short of war" to which the President made reference in his opening message. The price asked of us for peace and security is not great. We have powerful moral and economic weapons in our arsenal. We may still buy security and peace by using those weapons, and those weapons only. We may still tip the scales against aggression and war, tip them for democracy, national safety, and peace—by lifting the embargo.

On our side, on the side of peace and national defense, we have the overwhelming majority of the American people, led by our great President. Against us are the enemies of the President and of the people, the traitors to democracy and to the national interests of our country. They are few in number, but organized and powerful. Our job is to beat them by uniting as they are united and working for peace as grimly as they work for war.

I am sure that other speakers this evening will read the paragraph from the President's message which has been so much quoted in the past few weeks. Let me nevertheless read it now:

"At the very least, we can and should avoid any action, or any lack of action, which will encourage, assist, or build up an aggressor. We have learned that when we deliberately try to legislate neutrality, our neutrality laws may operate unevenly and unfairly—may actually give aid to an aggressor and deny it to the victim. The instinct of self-preservation should warn us that we ought not to let that happen any more."

We cannot repeat those words too often. We must keep on repeating them until their meaning sinks in and reaches every man and woman in the United States, every Member of Congress. By the embargo against Spain we now encourage, assist, and build up the aggressors. Lack of action in lifting the embargo now means to continue that suicidal course. The instinct of self-preservation tells us that we must act, and act quickly. It is not too late—only those who do not want us to save ourselves tell us that it is too late today—as they told us it was "too late" last month and a year ago. It is not too late, but we are in a race with time and we cannot delay much longer. Let the lawyers decide how the embargo is to be lifted, whether by congressional or by Executive action. The injustice that was so quickly done can be as quickly undone.

I myself believe that the President has the power to act, and I shall give him all my support if he uses that power. If he does not invoke his executive powers and the question is left up to Congress, then I shall do all I can to work for congressional repeal of the embargo, and I know that many of my colleagues will work with me.

The big job, however, must be done by you and by the American people. Throughout the country the echo of the President's words must sound, gathering volume, until millions of voices are heard in Washington. The instinct of self-preservation will not save us unless that instinct leads to action. Let America call for action with one voice: "Lift the embargo now!"

King Cotton Has His Back to the Wall

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

ADDRESS BY DR. CLAUDIUS T. MURCHISON, PRESIDENT OF THE COTTON TEXTILE INSTITUTE, AT NEW ORLEANS

Mr. PACE. Mr. Speaker, every southerner is deeply concerned over the cotton situation and the future of cotton production and the cotton farmer. Every American should be equally concerned, as the future welfare of millions and millions of our citizens is involved, as is also the future foreign trade of this Nation.

Dr. Claudius T. Murchison, of New York, is president of the Cotton Textile Institute. Possibly his viewpoint is influenced by the interest of textile manufacturers, but he delivered an address before the Cotton Consumption Council in New Orleans a few days ago which at least presents most forcefully some of the important features of our cotton problem today.

I invite your attention to that address, which was as follows:

If the cotton grower is to be saved as a farmer, cotton must first be saved as a commodity. Up until now, acreage restrictions, marketing quotas, Government loans and the payments on benefits to farmers have all been directed toward the farmers' immediate welfare, while the welfare of cotton as an object of commerce and a commodity of consumption has been left to shift for itself. Under this arrangement foreign cotton has prospered mightily, but American cotton has proved wholly unable to care for itself and now faces the prospect of virtual extinction unless there is an early change in Government policy.

Cotton as a material of industry and trade does not need subsidies. It asks nothing more than an equal competitive advantage with foreign growth and with the substitute materials which are striving to displace it, and all too successfully, both at home and abroad. Although the present surplus supply of American cotton is the greatest in all history and constitutes a crushing financial burden on the Government of the United States, it does not have an open road to those who would use it. On the contrary, it is impounded within barriers which prevent its flow into consumption possibly more effectively than our tariff walls prevent the importation of foreign goods into the United States. The disadvantage under which it labors applies with equal force to the domestic market and the foreign market.

CITIES EXPORT LOSSES

Of these self-imposed barriers to American cotton, the most effective from the immediate short run view is the Government loan policy. The amount of the loan per pound of cotton is predicated largely upon the conception of a fair return to the farmer,

which is within itself wholly praiseworthy. But unfortunately, this does not take into account what world consumers are able and willing to pay. The American farmer naturally will not sell his cotton except at a price which is considerably in excess of its loan value. Thus on January 26, the last day for which figures were available for this paper, the average price of ⅞-inch Middling cotton actually sold to the mills was 9.42 cents per pound; 1-inch Middling was selling at 10.07 cents per pound, and 1¼-inch Middling at 16.12 cents per pound. These actual spot prices apply to exporters as well as to domestic mills.

These prices are far higher than the customary differentials between American and foreign cotton. As a result our cotton exports have dropped at an alarming rate. During the first 5 months of the present crop year, August 1 to December 31, which is normally the period of heaviest movement, our total cotton exports were only 1,896,000 bales, as compared to 3,185,000 bales for the similar period of 1937. During the month of December just past we exported only 361,000 bales which was less than one-half the number exported during December 1937.

In contrast to this, other cotton-producing countries during 1938 increased their cotton exports by approximately 10 percent. Thus, while other countries have been growing cotton for actual sale and processing, America has been growing cotton to fill the gigantic maw of a Government loan fund which has already drawn from the National Treasury over $500,000,000 and brought about the accumulation of a virtually inaccessible surplus which is bursting the warehouses of the country at an annual carrying charge of approximately $45,000,000.

FOREIGNERS ENCOURAGED

Our policy not only has solved the surplus problem of other countries, it has also given direct aid and encouragement to the expansion of foreign acreage and to the development of substitute materials. The action of the United States in attempting to regulate cotton production and to establish virtual minimum prices for cotton has no doubt given impetus to the policies of the totalitarian states relative to the development of synthetic fibers.

We are all aware of the tremendous progress of synthetic fiber production as a result of State support in Germany and Italy, but the extent of similar occurrences in Japan is not generally known. Preliminary figures now available indicate that rayon production in Japan in 1938 exceeded 550,000,000 pounds, which is approximately twice the volume of American production. This means that Japan has doubled her rayon capacity within a period of 2 years and is now virtually 100 percent ahead of the second largest world producer. With respect to all these changes, the entire burden of the loss is imposed on American cotton Furthermore, it is a loss of the type which cannot readily be regained, if ever.

Within the American market the situation is almost equally ominous. The advance of cotton substitutes is taking place with amazing swiftness. American cotton consumption declined by almost 20 percent in 1938, but rayon consumption continued to expand and reached in that year a new high record. Epochal discoveries relative to the processing and to the chemical composition of synthetic fibers which have been made during the past few months promises to accelerate rapidly the forward movement of rayon.

Technical improvements in paper manufacture and in the adaptation of paper products to industrial and home uses have resulted in another formidable competitor of cotton. At least 10 percent of American cloth production is at the moment seriously endangered by the competition of paper. This competition is purely on a price basis and at current levels the odds are against cotton to win. Paper wrappings and containers are in the front line of assault, but paper towels, sheets and pillowcases, and table covers are following close behind.

Against these encroachments of synthetic fibers and paper, cotton cannot hold its own except on a competitive price basis. It is clear from the experience of the past year that parity incomes for the cotton farmers must be drawn in less degree from the sales of the cotton itself if the customary volume of cotton production is to be maintained. If cotton is to continue as an important American export commodity, its price must be competitive with that of foreign growths. It is equally apparent that the continuance of normal cotton consumption in the United States requires a price for the raw material which is competitive with synthetic fibers and paper.

URGES NEW USES

The reasoning which I have followed in reaching these conclusions is based on current realities. Any hope for a different conclusion is conditioned upon the appearance of new realities. If left to the winds of chance, these new realities may be long in coming. The values at stake are too great to justify any such waiting. Those whose lives and fortunes are invested in cotton are too numerous and their importance in the national economy is too great to permit a policy of inaction.

We must pursue the double objective of new uses and lower costs. On the scientific side, laboratory research and experimentation must be relentlessly exploited. On the consumption side, we must explore every nook and cranny of industrial and individual want. Such efforts, well organized, well financed, and persistently followed, have an excellent chance to produce startling results both on the side of uses and of cost. Only by this road can we disperse the all-pervading gloom that prevails today. It requires no prophet to see that cotton as a commodity must be saved if there is to be a long-run salvation of the cotton farmer.

Statement of Hon. Harry R. Sheppard, of California, and Statistical Analysis on H. R. 11, Known as the General Welfare Act

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1939

Mr. SHEPPARD. Mr. Speaker and Members of the House, I want to express my appreciation to my fellow Members of the House for their cooperation and courtesy to the proponents of H. R. 11, which I introduced and which is now before the Committee on Ways and Means.

The occasion for the introduction of H. R. 11 was caused by certain facts from which stem many of our current legislative problems today, of which that of a national, uniform old-age pension is paramount.

Proof of its primary importance lies in this fact: That today in the United States there is an estimated total of 12,450,000 senior citizens over the age of 60. By contrast there were 10,385,026 persons over 60 years of age in the United States in April 1930, according to the Bureau of the Census.

We must conclude from these figures that the number over 60 is increasing more rapidly in the total population because of the increased average age of the population.

Cognizant of this fact and adding to it the economic depression years, it is easy to understand the necessity for a national old-age pension.

This increasing total in that age group over 60, which numbers an average increase since 1930 of 248,000 senior citizens a year, is the norm from which the paradoxical and often tragic conditions begin among our aged.

With this rapidly increasing portion of our population faced with economic problems definitely their own and the apparent lack of emphasis placed upon it legislatively, it was imperative that a bill be introduced which would tend to ameliorate this condition.

I introduced, in consequence, H. R. 11, which is a bill known as the improved General Welfare Act, to provide for and promote the general welfare of the United States by supplying to the people a more liberal distribution and increase of purchasing power; enabling certain aged citizens to retire from gainful employment; improving and stabilizing gainful employment for other citizens; stimulating agriculture and industrial production and general business and alleviating unemployment and the hazards of insecurity of old age; to provide a method whereby citizens shall contribute directly or indirectly to the purchase of and receive a retirement annuity; to provide for the necessary revenue to be placed in a general welfare fund to operate a continuing plan therefor; to provide for the appropriation and expenditure of such revenue; to provide penalties for violation of the act, and for other purposes.

For the past 10 years I have been interested in the philosophy that is generally evidenced in H. R. 11. Observation definitely indicated that technological development and a general contraction of credit throughout the entire Nation caused an accumulative pyramiding of unemployment among our citizens within this Nation. As this pyramiding increased the elderly citizens of our Nation were very rapidly placed in a position of economic insecurity.

Further, my observations definitely indicated that out of this group our elderly citizens were apparently being placed in a more hazardous position than the younger generation, if that is possible.

Many of them, as you and I know, lost their lifetime savings by investments in institutions in which they had every right to have confidence and through the lack of regulations governing certain types of financial and investment institutions.

This constantly cumulative condition did of necessity create a definite chaotic condition, not only pertaining to the elderly citizens of the Nation but to the younger generation as well.

I readily appreciate that there are many differences of opinion as to how the condition with which our Nation is confronted originated, but in my opinion, gentlemen, we have reached a stage where it is highly imperative that greater security through purchasing power be given to the citizens of this Nation.

During the Seventy-fifth Congress I secured the services of a clipping bureau and accumulated some 520 public addresses and public releases from outstanding industrialists, economists, and educational leaders, and while 289 of them definitely incorporated in their address the fact that our Nation to have recovery must provide means of greater purchasing power, none of them suggested a method whereby that purchasing power would become operative, and I sincerely feel that in H. R. 11 we have an equitable and consistent proposal of legislation that will to a reasonable degree furnish that purchasing power and at the same time will provide not only feasible economic security to the elderly citizens of 60 years or more but will create an economic condition whereby the younger generation will have greater opportunities of sustaining themselves and enjoying the home life that means so much to our general social welfare.

Our purchasing power in this Nation is, in my opinion, a definite principle upon which sound economic philosophy must be based, and this subject is one that should not be approached without due regard to our laws, our traditions, and our needs and in which cold facts should overbalance politics.

I wish to pay tribute to the President of our Nation for originating and having enacted into law the Social Security Act. I think it was a splendid approach to a situation that essentially needed correction, but, in my opinion, the Social Security Act is not broad enough to cover the general economic welfare of the citizens of our Nation. It is not uniform in either pensions or administration. It has a means test forcing our senior citizens to pauperism, and it has not at this time an equitable tax, but rather one that takes money to be invested in capital goods and wages in industry out of business activity and freezes it in a reserve known as the old-age reserve account.

The principles of H. R. 11, I believe, are in accord with the majority of authorities on social security in the United States and abroad. It provides for a uniform national old-age pension which is administered uniformly. It provides for the elimination of the means test, which today is proving one of the greatest problems in the cost of administration of the Social Security Act. It provides for a ceiling on pensions of $60 monthly for all those over 60 years of age.

It further provides as a means of paying such a pension a gross income tax of 2 percent. These four principles make up in essence H. R. 11.

It is admittedly a complex and cumbersome task to administrate anything as huge as a national social-security law. Consequently, it is pertinent that the greatest care be given to the types and forms of administration. A uniform system of administration would obviously cost considerably less than a system which varied with each State and sometimes with each county in that State.

The elimination of the means test is not only humanitarian and definitely in accord with the American spirit of independence which is our heritage but is economically sound.

At the present time one of the major costs of the administration of the Social Security Act, particularly in State as compared to Federal overheads, is the expense of investigating and recording the humblings of pride and independence of many of our senior citizens. From this aspect alone the means test is untenable. I am informed by competent sociologists that it is such administrative mechanics as the means test which disintegrate character. This problem I know we of the administration have attempted to solve and keep uppermost in our programs for the general welfare since 1932.

Economically elimination of the means test cuts the expense of administration by an estimated 40 percent. The importance of this cannot be overstressed in legislation wherein the two major points for consideration must be, from the lawmakers' viewpoint, the tax involved and the administration at the least cost.

When in addition to this complex problem a national old-age pension which is not uniform is administered, the injustices and inequitabilities of the problem become very apparent. This is why the principle of uniformity as applied to the administration and to the amount of a national old-age pension has been provided in H. R. 11.

It is manifestly unfair for a senior citizen in Mississippi to receive from the State an old-age pension of $4.02 when a senior citizen in New York receives a pension amounting to $21.42 monthly.

The problem here is based on need as well as a reward for past services rendered. Of necessity we are forced to the conclusion that the senior citizen in Mississippi needs $21.42 just as much as the senior citizen of New York. This exemplifies the paramount necessity for enacting a pension which will be nationally uniform.

The introduction of a gross-income tax as a means of income with which to pay a uniform national old-age pension is peculiarly pertinent at this time. The gross income tax, which I will define later in my statement, is admittedly in economic theory a tax not based upon the ability to pay. It is, however, a tax which so broadens the tax base as to materially reduce the total amount of taxes paid by an individual citizen if enacted. There were two reasons for introducing the gross-income tax. It was necessary in order to provide an adequate old-age pension to find a tax that would bring sufficient revenue to the Government to do so. The corollary to this was to find a tax equitable, easy to understand, and which would not place a burden in the form of a concentrated or specialized tax on any one group.

In principle there is possibility that Arthur J. Altmeyer, Chairman of the Social Security Board, agrees with this tax for at the present time the pay-roll tax, which is in essence a gross-income tax, is already in operation under the Social Security Act. However, in its enactment it is to be observed that, though it is a form of gross-income tax, it tends to concentrate and raise the tax base. This is because it applies to one group whereas application of the same principle nationally will lower the tax base.

Interpreting "gross income" as meaning the total gross revenue directly or indirectly received or credited to any person, partnership, firm, association, or corporation or any legal entity whatsoever, I wish to submit the following tables to show the total gross income of the Nation for 1934 and for 1936, which have been furnished me by Mr. Robert R. Nathan, Chief of the Income Section, Division of Economic Research of the Bureau of Foreign and Domestic Commerce, United States Department of Commerce. From these tables we can determine what a 2-percent gross-income tax would approximately produce in revenue:

Gross income, 1934

From security transactions	$47,000,000,000
From sale of tangible goods (including real estate)	118,000,000,000
From sale of intangible goods (telephone services, insurance, professional services, etc.)	21,500,000,000
Government tax receipts	9,500,000,000
Income from wages, salaries, and interest	50,000,000,000
Miscellaneous income	25,000,000,000
Total gross income, 1934	271,000,000,000

Gross income, 1936

From security transactions	$125,000,000,000
From sale of tangible goods (including real estate)	202,000,000,000
From sale of intangible goods (telephone services, insurance, professional services, etc.)	25,000,000,000
Government tax receipts	10,000,000,000
Income from wages, salaries, and interest	62,000,000,000
Total gross income, 1936	449,000,000,000

Assuming that the gross income of our Nation for 1939 will be equal to that of 1936, we then would proceed on the basis

of levying a 2-percent gross-income tax on $449,000,000,000 minus a total represented by the exemptions contained in H. R. 11.

The first exemption in H. R. 11 is that on gross incomes of $100 per month or less.

The National Resources Committee has estimated that 24.69 percent of the aggregate net income of the United States in 1935–36 was paid to families which received less than $1,250 per year.

Since the Department of Commerce reports our aggregate net national income for 1936 as being $62,056,000,000, it is safe to assume that exempting gross incomes of $100 per month or less will mean eliminating approximately $15,265,000,000 from our theoretical taxable total gross income of $449,000,000,000, which leaves a theoretical balance of $433,735,000,000.

Our next exemption is that of gross income to any governmental agency as defined in H. R. 11. Our latest source of information on total tax income is that made available by the Twentieth Century Fund and submitted to me by Herbert E. Gaston, assistant to the Secretary of the United States Treasury, indicates an estimated total of $12,500,000,000, of which $5,500,000,000 was estimated as Federal taxes, $2,700,000,000 as State taxes, and $4,300,000,000 as local taxes. Twelve billion five hundred million dollars therefore must be deducted from our taxable total. Deducting $12,500,000,000 from our total theoretical taxable balance of $433,735,000,000 we now have a taxable balance of approximately $421,235,000,000.

Our next exemption is that to the employer, who would deduct from his taxable gross income all items paid by him to employees in return for services.

The total private pay roll in the United States for 1937 equaled $37,368,000,000, according to N. H. Engle, Acting Director of the Bureau of Foreign and Domestic Commerce, Department of Commerce.

We now subtract this total of $37,368,000,000 from our theoretical taxable balance of $421,235,000,000, which leaves a theoretical taxable balance of $383,867,000,000.

Our next exemption is that to every "person," as defined in H. R. 11, for taxes paid any political subdivision. In other words, every taxpayer would deduct from their taxable gross income any amounts paid out for taxes.

We can for this purpose use the total taxes collected by Federal, State, and local governments in 1937 as estimated by the Twentieth Century Fund and furnished me by Herbert E. Gaston, Assistant to the Secretary of the United States Treasury, which estimate totals $12,500,000,000.

Subtracting the sum of $12,500,000,000 from our theoretical taxable balance of $383,867,000,000, we have then a theoretical taxable balance of $371,367,000,000.

Our next exemption is made to all "persons," as defined in H. R. 11, for interest paid on obligations. In other words, the taxpayer would deduct from his taxable gross income those sums paid out for interest on obligations. To determine the total interest paid on obligations by individuals and corporations, the best source information seems to be the Treasury Department's Statistics of Income, furnished me by Herbert E. Gaston, Assistant to the Secretary of the Treasury. In 1936, according to this source of information, individuals paid $554,900,000 in interest, while during that same year corporations paid $3,080,700,000 in interest. This totals $3,635,600,000 in interest paid out during the year of 1936.

These figures on interest are known to be incomplete because, first, interest paid by individuals not filing income-tax returns is not included; second, interest paid by individuals but included with business deductions is not available; and, third, data from partnership and fiduciary returns are not included.

It is safe to say that we must deduct $4,000,000,000 from our theoretical taxable balance of $371,367,000,000, leaving a theoretical taxable balance of $367,367,000,000.

The other minor exemptions in H. R. 11 are of such a nature that no sound source of information is available on which to base a total to be deducted by reason of these minor exemptions.

It is safe to say that they will not total more than $5,000,000,000, which would leave a theoretical tax balance of $362,367,000,000 on which to determine our income.

A 2-percent gross income tax on $362,367,000,000 would provide revenue totaling $7,247,340,000.

H. R. 11 provides that an annuity shall be paid to every citizen of the United States who has attained the age of 60 who is not engaged in gainful pursuit and who otherwise qualifies as provided for in the bill.

Our 1930 census indicates a total of 10,385,026 persons in the United States 60 years of age or over. The Census Bureau estimate of July 1938 indicates a total of 12,450,000 60 years of age or over.

The number over 60 is increasing more rapidly than the population because of the increased average age of the population.

W. L. Austin, Director of the Bureau of the Census, states that his Bureau estimated a total of 4,106,588 persons 60 years of age or over were having gainful occupation in November 1937.

Assuming that every person 60 years of age or over qualify and apply for the annuity, we must then divide our tax-income of $7,247,340,000 by the total of 12,270,000, which would provide approximately $582 annually, or approximately $48 per month.

It is safe to assume that not more than 10,000,000 persons would qualify, and on this basis our theoretical tax income would produce approximately $724 annually or approximately $60 per month.

H. R. 11 provides for a minimum annuity of $30 per month and a maximum of $60 per month.

I should like to file for the record a table covering the statistics I have submitted:

Gross income, 1936

(a) From security transactions	$125,000,000,000
(a) From sale of tangible goods (including real estate)	202,000,000,000
(a) From sale of intangible goods (telephone service, insurance, professional services, etc.)	25,000,000,000
(a) Government tax receipts	10,000,000,000
(a) Income from wages, salaries, and interest	62,000,000,000
(a) Miscellaneous income	25,000,000,000
(a) Total gross income, 1936	449,000,000,000

Exemptions in H. R. 11

(b) Gross incomes of $100 per month or under	$15,265,000,000
(c) Gross income to Government (1937)	12,500,000,000
(d) Gross-income exemptions to private employers on pay rolls	37,368,000,000
(c) Gross-income exemptions to "persons" on taxes paid	12,500,000,000
(c) Gross-income exemptions to "persons" in interest paid	4,000,000,000
Miscellaneous exemptions	5,000,000,000
Total exemptions	86,633,000,000
(a) Total gross income, 1936	449,000,000,000
Total proposed exemptions in H. R. 11	86,633,000,000
Theoretical taxable balance	362,367,000,000

A 2-percent gross-income tax on $362,367,000,000 will produce in revenue $7,247,340,000.

(e) 1930 census indicates total persons 60 years of age and over	10,385,026
(e) Bureau of Census estimated number of persons 60 years or over July 1938	12,450,000
(e) Bureau of Census estimate in November 1937 of persons 60 years of age and over gainfully employed	4,106,588

Assuming that every person 60 years of age or over would qualify, $7,247,340,000 divided by 12,450,000 equals $582 annually.

Assuming that 10,000,000 persons 60 years or over would qualify, $7,247,340,000 divided by 10,000,000 equals $724 annually.

Public Welfare Assistance Payments

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1939

Mr. BRYSON. Mr. Speaker, a resolution "memorializing Congress and the President of the United States to appropriate funds for the public welfare assistance payments on the basis of 66⅔ percent by the Federal Government to 33⅓ percent by the State of South Carolina" reached me yesterday afternoon, and I hasten to call the attention of the Congress to the same. The resolution is as follows:

House resolution memorializing Congress and the President of the United States to appropriate funds for the public welfare assistance payments on the basis of 66⅔ percent by the Federal Government to 33⅓ percent by the State of South Carolina

Whereas the total estimated revenue for general purposes in the State of South Carolina amounts to $10,576,533.10; and

Whereas for the year 1939–40 the appropriations recommended by the South Carolina State Budget Commission amount to $10,534,970.29 exclusive of any appropriation whatever for the social security program in South Carolina; and

Whereas if these appropriations recommended by the South Carolina Budget Commission are enacted into law, there will be either no funds for the purpose of granting old-age assistance payments and other payments under the public-welfare program of South Carolina, or there will be a necessity for levying new or additional taxes on the over-burdened taxpayers of South Carolina; and

Whereas the average per-capita income for the State of South Carolina is among the lowest in the United States; and

Whereas it is a well-recognized fact throughout the Nation that the ability of South Carolina to care for its aged needy is far below that of most other States; and

Whereas the National Government has recognized through the enactment of social security legislation the responsibility of the United States to its aged and needy: Now, therefore, be it

Resolved by the House of Representatives of the State of South Carolina, That the President and the Congress of the United States be, and they are hereby, memorialized to provide at this session of the Congress funds for public welfare assistance payments on a basis of 66⅔ percent on the part of the Federal Government to 33⅓ percent to be appropriated for public welfare assistance payments by the State of South Carolina; be it

Resolved further, That copies of this resolution be sent to the President of the United States, the two Senators, and to each Member of Congress from the State of South Carolina.

WASHINGTON, D. C., *February 2, 1939.*

Mr. JAMES E. HUNTER, Jr.,
Clerk of the House, South Carolina General Assembly,
Columbia, S. C.:

I have just received a copy of a resolution, "memoralizing Congress and the President of the United States to appropriate funds for the public welfare assistance payments on the basis of 66⅔ percent by the Federal Government to 33⅓ percent by the State of South Carolina," which was adopted by the South Carolina House of Representatives, January 31, 1939. I shall direct the attention of the Congress to this resolution from the floor of the House today, requesting that the text of this resolution be inserted in the daily CONGRESSIONAL RECORD for careful study and consideration by each Member of the National Congress. Copies of these CONGRESSIONAL RECORDS containing a reprint of the resolution together with my remarks on the subject will be forwarded to you at an early date. I am in complete accord with the recommendations of the South Carolina House of Representatives, and shall do everything within my power to secure enactment of the necessary and desired legislation.

JOSEPH R. BRYSON,
Member of Congress.

The merit of this resolution is readily apparent. The National Government has recognized through the enactment of social-security legislation the responsibility of the United States to its aged and needy. The only remaining question is to what extent should the National Government participate in this program of social security?

The thought suggested by the foregoing is typical of the circumstances confronting the more economically distressed States. It will be observed that under the present program the unfortunate who live in the richer States are receiving much larger benefits from the Federal Government than those who reside in the poorer States. Under this policy many an unfortunate person is being penalized and is given but a pittance due to no fault of his own.

Since we are one Nation and one people, is it not fair to tax the property where it is and provide for the needy where they are? There must be greater uniformity in the distribution of benefits to the needy.

In view of the urgent need for a revision of the "matching" features of the present Social Security Act, I endorse the suggestion contained in the foregoing resolution and hope that this Congress will make more equitable provisions for the unfortunate.

The Civil Aeronautics Act of 1938

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1939

ADDRESS BY COL. EDGAR S. GORRELL, JANUARY 17, 1939

Mr. RANDOLPH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by Col. Edgar S. Gorrell, president, Air Transport Association of America, at annual convention, National Aeronautic Association, St. Louis, Mo., January 17, 1939, entitled "The Civil Aeronautics Act of 1938 and Self-Government in Industry":

"* * * Though they may sometimes have a set-back for a time, they will soon rebound and take a fresh start * * *." (Sir James Caird, Prairie Farming in America (1859), 94.)

This observation was made of Americans nearly a century ago by an alien to our shores who was witnessing our efforts to scramble out of one of our recurrent depressions. Our capacity to rebound and start afresh has been the wonder of the world, and our faith in that capacity has been the core of our national business character.

Recently, however, that faith has been shaken, and no longer can observers speak so certainly of our recuperative powers. We have faced a staggering industrial break-down for an entire decade and we find that the rebound and fresh start do not come merely by wishing. Indeed, after herculean efforts, we are today deeply puzzled to know just how a prolonged rebound is accomplished.

Rightly or wrongly, in recent years there has been a growing tendency to accept two principles as fundamental to a rebounding economy. Many persons feel that the application of these principles may lead us back to vigor. The first principle is that to permit absolutely free competition in all cases may invite chaos and immeasurable waste. The second is that government must be the agency for introducing the controls that are necessary to avoid the evils of laissez faire.

The evils to be avoided were abundantly demonstrated during the dark days of the late twenties and early thirties.

Economists of a generation or so ago had assured us of the divinity of laissez faire by almost mathematical demonstrations that among free competitors the submarginal enterprise was unsound and would be eliminated in a natural and inevitable competitive purge. The competitive purge, we are told, would keep our system always in approximate balance and all would be well if only we kept our eyes tightly shut and permitted absolutely free competition to operate our economy.

Despite these assurances, we found to our sorrow that absolutely free competition can too often be a means of swift economic suicide. The relatively strong competitor, when the business curve falls, can cut prices and wages and resort to other means of battle, whereas the relatively weak enterprise may find itself deep in the submarginal class, which means extinction. The logic of the matter is either that the strong will ultimately approach monopoly, or that we will endure colossal waste through the repeated births and deaths of the weaker enterprises. Those forced out of business by inability to survive the onslaughts of more fortunate competitors in depressed times are not necessarily uneconomic enterprises. They are in fact often needed. And the strong competitor will either reach out and occupy their place—which means monopoly—or new interests will enter the field, finally to struggle and die, as did their predecessors, in a vicious cycle of waste that does incalculable harm.

Conscious of the danger in this process of free competition, leaders in industry and government have for some years seen that there must be means for providing controls and curbs which will make the competitive process work in a more orderly manner. As the President recently said, "Competition, of course, like all other good

things, can be carried to excess." (S. Doc. No. 173, 75th Cong., 3d sess., p. 5.)

The ancient prohibitions of the common law against deceptive and dishonest methods of competition are usually not enough to introduce the needed sound order. Nor has it sufficed merely to supplement the common law with certain additional statutory prohibitions. The problems of modern industry are too varied and complex to be dealt with by a general code of morals. Each business has its peculiar problems, changing from day to day, and the requisite controls and curbs must be as varied and as changeable as the problems which make them necessary.

Obviously the Government must play a cardinal role in making provision for a saner economic system. The propriety of governmental concern with affairs of business has, indeed, become so generally recognized that many are tempted to suggest that government may itself provide all the controls and curbs which are needed. However, were government to go so far, we would soon have a dual organization, with government paralleling industry, which would become utterly unwieldy.

It would appear therefore that the role of government must be restricted to the most vital things, and that industry itself must be enabled to shoulder much of the burden of providing the regulation which it needs. How this can best be accomplished for industry generally it is difficult to say. One suspects that there is no ready formula which can be applied to every business. But Congress has recently taken a step designed to meet the needs of one important industry, and this step we may well consider with some care.

In the Civil Aeronautics Act of 1938 Congress provided that the air carriers may reach agreements among themselves, submit them to the Civil Aeronautics Authority, and if the Authority approves an agreement the carriers are freed of any legal impediments, including the antitrust laws, which otherwise would prevent them from carrying out that agreement (secs. 412, 414). Thus Congress has invited the air carriers to take the initiative in attacking the economic ills which may from time to time beset them, and to decide upon and inaugurate such self-regulation as may be best. In this process the role of government is that of overseer or censor; the privilege of freedom from legal inhibitions which otherwise would stand in the way of such cooperative action by the carriers is to be afforded only so long as the Government does not find that this privilege would not be in the public interest.

The nature of this provision and its significance to the air-transport industry is best illuminated by a contrast between it and the N. R. A.

In the report of the committee appointed by the President to study the operation of the N. R. A., it was said:

"N. R. A. was a rather radical experiment in incorporating interested economic groups as agencies of government." (House Doc. No. 158, 75th Cong., 1st sess., p. 186.)

By vesting the air carriers with a qualified privilege of self-government, the Civil Aeronautics Act likewise represents something of an innovation. But Congress took care in this case to avoid certain characteristics of N. R. A. which largely contributed to the difficulties which made the task of successfully administering that statute well nigh insuperable. (Idem, p. 183.)

In the first place, under N. R. A. the aid of Government was offered in the enforcement of the policies of the majority upon the minority of an industry. (Idem, p. 127.) Under the Civil Aeronautics Act a minority cannot be compelled to do the bidding of a majority. There can be no imposition of a code—the law permits agreements only, and each carrier is free to agree or not to agree to any proposal as it sees fit.

In the second place, under N. R. A. a violation of standards contained in a code was punishable by the criminal law. (Idem, p. 9.) Under the Civil Aeronautics Act there is no power granted to the Government to enforce agreements. The carriers may themselves determine how they shall be dealt with if they violate their agreements.

In the third place, under N. R. A. there was "excessive delegation of power" (idem, p. 183) concerning which the President's committee said:

"The result was the making of rules to govern the economic conduct of private individuals by subordinate and irresponsible members of the administrative staff and by code authorities unrestrained by the obligations of public office." (Idem, p. 188.)

Under the Civil Aeronautics Act there is no delegation of power to make and impose rules of conduct. The carriers merely submit their proposals to the Authority for approval.

Of course, it should not be overlooked that the Civil Aeronautics Act vests government with the traditional regulatory powers, notably rate regulation, but there remains a large area where intelligent controls can be applied with advantage to all, and in that area the Congress has adopted a means which is notably free of those features which plagued the administration of N. R. A. The value to be derived through permitting agreements instead of imposing codes was recognized by the President's committee when, in concluding its report on N. R. A., it was said that any future legislation "should be permissive rather than mandatory" and added:

"We also think that the experience of N. R. A. indicates that if such rules (regulating competition) are to be formulated, they should be initiated by the industries—that is, by the men who know most about the problems of the industry and who have to apply them in actual practice." (Idem, p. 192.)

Thus in the Civil Aeronautics Act Congress has applied the lessons of experience. With the best of legislative measures, however, no progress can be made toward meeting the challenge of economic problems unless wise use is made of the opportunity afforded. Government, on the one hand, and industry, on the other, can sabotage the most perfect statute.

The function of the Civil Aeronautics Authority in determining whether to approve or disapprove an intercarrier agreement is of crucial significance. It is clear that if the Authority were to attempt to decide whether an agreement is economically sound or whether some alternative would more effectively accomplish the purpose, much of the value of this machinery will be lost. For to do so the Authority would be compelled to stand in the shoes of management and to reach a decision as though Government were itself operating the air carriers. The peculiar virtue of leaving the formulation of trade practices to the industry affected, rather than attempting, as was done under N. R. A., to vest Government with this function, would be lost if the Authority were to approve an agreement only when it found the agreement to accord with its ideas of what seems sound and economical for the industry.

Government, unless it is actually operating an industry, cannot possibly reach decisions on any such basis. Successfully to apply purely managerial judgment requires an intimate, hour-to-hour experience in the affairs of an industry which no regulatory governmental body can possibly have. The myriad inarticulate judgments of the businessman—the "hunch," if you please—are the essence of the managerial function and are born only of close contact. In the very nature of things, this essence is lacking in government. The fact that it is lacking is one of the primary reasons for private ownership. When government assumes that it can make management's decisions more soundly than management, management becomes the mere servant of government and the sham of nominal private ownership might better be torn away altogether. The freedom to make mistakes is a privilege vital to management. The loss of that freedom would spell the loss of private initiative.

However, there remains to the Authority a role of great importance. It should not approve an agreement which would constitute an oppressive combination against a minority. It should see that agreements do not unreasonably discriminate against localities or classes of traffic. It should stand fast against any effort to overreach the traveling public. It should guard against any attempt to escape the responsibilities of furnishing an improving and expanding transport system suited to the present and future needs of the country. These are appropriate and well-understood objects of governmental concern, in the pursuit of which a governmental agency should be painstaking and persistent.

Upon the carriers there rests a responsibility even greater than that imposed by the statute upon the Authority. They have been given a special privilege, with the expectation that that privilege will be used and used fully. Many are the problems of air transport which are common in their nature and susceptible of cooperative treatment. The good to be gained by this treatment is incalculable. Savings in the elimination of needless duplication of efforts and facilities, the coordination of services in a way to promote the convenience of the public, the conservation of the industry's resources, and, above all, the pooling of experience and of judgment in working out a sane and orderly regime for the industry—these are the objects to which management will devote its efforts.

In a trenchant discussion of the present railroad situation, the Interstate Commerce Commission, in its fifty-second annual report, recently pointed out how the railroads had failed to effectuate many economies that might have been attained through cooperative action. The Commission said (p. 16):

"If the railroads were in the exuberant health of youth and the dominant factors in transportation which they used to be, such opportunities (for cooperative action) might be ignored. But that day has gone, and the choice for the railroads is between continued retrogression and the marshaling of all sources in an endeavor to progress * * *."

May the air carriers weigh well the implications of that statement; may they preserve, instead of waste, the health of youth by using the privilege granted by the Civil Aeronautics Act to promote cooperative endeavor now.

We are all familiar with the complaint that the full application of the antitrust laws enshrouds with uncertainty many attempts at wise cooperative endeavor and thereby deters much that would be good as well as what might be bad. President Wilson recognized the harm that comes from the uncertainty of the antitrust laws and sought a way to improve them.

"Nothing hampers business like uncertainty," he said,

"Nothing daunts or discourages it like the necessity to take chances, to run the risk of falling under the condemnation of the law before it can make sure what the law is" (CONGRESSIONAL RECORD, p. 1963, vol. 51 (January 20, 1914)).

Despite boisterous analogies drawn between the antitrust laws and ineffective laws against dispensing vice or liquor (Arnold, The Folklore of Capitalism (1937), 208–209), we are told that the Sherman Act and its supplementary statutes have made it nearly impossible to carry out any extensive program of stabilizing competitive relationships by cooperative action. For years various courses have been suggested at least to narrow the area of doubt in the application of those laws; some have been tried, and some have been abandoned. (Tippetts & Livermore, Public Control of Business (1932), 680–700; Note, 45 Harvard Law Review 566 (1932).) No one yet seems to have hit upon the means for effecting a desirable reform, for in almost any proposal there are inherent defects which have seemed to many persons to outweigh possible advantages. In any case it seems reasonably clear that, whatever action may sometime be found desirable to suit the antitrust laws

more satisfactorily to the needs of business, ample provision must be made for the peculiar requirements of different industries. As Walton Hamilton recently observed:

"The simple uniformity of the older acts may have to give way to an accommodation of public oversight to the varying needs of different trades." (The Problem of Antitrust Reform, 32 Columbia Law Review 173, 177 (1932).)

This accommodation of public oversight to the needs of air transport is provided for in the Civil Aeronautics Act. Whether the method applied in this case would be appropriate in any other, we can hardly say, and the question is, in any event, academic. The important point for our consideration is that a vital part of this industry, in which we are all so deeply concerned, is offered a way to be relieved of some of the uncertainties and complexities which have created so many baffling issues in other instances.

It is too early for us to predict what the results of this privilege will be. It is, however, altogether possible that it may forestall the future accretion of complicated legislative measures regulating the air-transport industry. Indeed, it may obviate any need for the Authority to exercise some of the powers granted it in the present act. There is never reason for legislative or administrative regulation if problems can be satisfactorily dealt with in some other way. And if the air-transport industry can use its privilege to enter into agreements, and to provide its own enforcement procedures for the maintenance of those agreements, so as to prevent abuses and maladjustments, the task of government will be enormously eased. Whether this will happen depends, of course, upon the willingness of the Authority to give the industry an opportunity to perform the task, and upon the intelligence and foresight of the industry in availing itself of the opportunity.

The test, therefore, is ahead of us. It is a test of statesmanship of a new order in a new field. Upon the outcome of the test rests the future of air transport. If government and the industry fail, the clinging fog of multiplying regulations obscures our course. If they succeed, a clear skyway opens before us.

Handling a Case Under the New Federal Rules

EXTENSION OF REMARKS

OF

HON. ALFRED L. BULWINKLE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1939

ADDRESS BY JUDGE JOHN J. PARKER BEFORE THE VIRGINIA STATE BAR ASSOCIATION, AUGUST 6, 1938

Mr. BULWINKLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Judge John J. Parker, of Charlotte, N. C., before the Virginia State Bar Association at Hot Springs, Va., August 6, 1938:

Some lawyers who have had little or no practice in the Federal courts are opposed to the new rules of practice because they mistakenly imagine that the old Conformity Act made the State practice in civil cases applicable in those courts. Those of us who are reasonably familiar with Federal practice know that this was not true and that the Conformity Act, instead of producing real conformity, resulted in a hybrid practice full of pitfalls for even a skilled practitioner. The Conformity Act did not touch the practice in equity causes, and the Federal courts followed their own practice in this branch of jurisprudence, a practice different in many respects even from the equity practice of those States in which the distinction between actions at law and suits in equity had not been abolished. In law actions the Conformity Act was held not to apply to the discharge of the separate function of the judge. The result was that whenever the State practitioner came into the Federal courts he was confronted with a mass of technical and unfamiliar rules with which he had to familiarize himself by special study before he could feel assured of his ability to handle his case properly.

The purpose of the act of 1934 was to abolish technicalities in the Federal practice and to provide a practice so simple that any lawyer of ordinary ability could handle a case in the Federal courts without difficulty and without danger to his client's rights. Two fundamental reforms were made the basis of the attempt: First, to abolish the procedural distinction between actions at law and suits in equity; second, to regulate procedure by simple rules of court. The rules adopted by the Supreme Court embodying these reforms should not be considered as a new technical procedure worked out by the Federal courts for the regulation of a peculiar practice. They are the product of the best thought of the American bar and have been devised by lawyers from all sections of the country to give those courts an ideal code of practice adapted to modern conditions. They embody a practice which is better and simpler than anything heretofore achieved either in this country or in England, and which might well be adopted in the interest of expedition and efficiency in all courts, State as well as Federal.

The opposition which has arisen to them in some quarters is due, I think, to the inherent conservatism of the professional mind, a conservatism which in the time of Oliver Cromwell led the lawyers of the temple to oppose the use of the English language instead of "law French" as the language of the court records. One of the remarkable things about the law is that, while the substantive law, which deals with the rights of individuals in the community, has always kept pretty well abreast of the needs of the times, the adjective law, which deals with the practice of lawyers in the courts, has been woefully backward in its development. The reason of this is that the customary procedure seems simple to the good lawyer, for the reason that anything seems simple to the man that understands it, and the good lawyer, therefore, does not realize the necessity of change. The man who is not a good lawyer does not have a sufficient understanding of the subject to propose needed changes, and so nothing is done until popular clamor forces reform. As a result of this attitude we have seen a large part of the proper business of the courts taken over by lay agencies and administrative tribunals, which cannot handle it as well as the courts could if they had a procedure in keeping with modern conditions.

The new rules give the Federal courts such a procedure. It is free of technicalities and so simple that any lawyer of ordinary ability who understands any system of procedure can familiarize himself with it sufficiently in one sitting to handle any ordinary case. For the handling of unusual situations, as to which the lawyer would consult the books in any event, it provides a simple handbook of rules of less than 100 pages, well indexed, in which he can, in a few moments, find the rule applicable. My purpose this morning is to point out the ease with which an ordinary case can be conducted under these rules. I shall not enter into a discussion of technical matters which seldom arise, nor shall I discuss the genesis of the rules or compare them with other forms of practice. Such a discussion would tend to complicate matters and lead to the impression that there is difficulty where no difficulty in fact exists. I wish to point out the broad outlines of the practice and to tell you in simple fashion how, in my opinion, an ordinary case should be conducted under it.

BEGINNING SUIT
